ROYAL COMMISSION ON OPIUM.

VOL. II.

MINUTES OF EVIDENCE TAKEN IN INDIA BETWEEN 18TH NOVEMBER AND 29TH DECEMBER 1893, WITH APPENDICES.

TABLE OF CONTENTS.

LIST OF WITNESSES.

	Page		Page
1893.		DECEMBER 1ST, SEVENTEENTH DAY'S EVIDENCE:—	
NOVEMBER 18TH, SEVENTH DAY'S EVIDENCE:—		The Hon. D. R. Lyall (further ex-	
The Hon. Sir David M. Barbour	2-11	amined) - - - - -	123
Surgeon-Major-General Rice	11-15	Mr. K. G. Gupta (further examined)	123-127
NOVEMBER 20TH, EIGHTH DAY'S EVIDENCE:—		Mr. E. V. Westmacott - - - - -	127-131
Bishop J. M. Thoburn - - - - -	15-21	The Hon. Sir John Lambert	131
Mr. J. G. Alexander	21-26	Mr. F. Wilcox - - - - -	131-132
NOVEMBER 21ST, NINTH DAY'S EVIDENCE:—		Mr. H. Dawson - - - - -	<i>ib.</i>
Mr. J. G. Alexander (further examined)	26-38	DECEMBER 5TH, EIGHTEENTH DAY'S EVIDENCE:—	
NOVEMBER 22ND, TENTH DAY'S EVIDENCE:—		Mr. J. F. Finlay (further examined)	132-135
The Rev. W. B. Phillips	38-43	The Hon. A. S. Lethbridge	135-138
Mr. Sita Nath Roy - - - - -	43-46	Sir Edward Buck - - - - -	139-141
NOVEMBER 23RD, ELEVENTH DAY'S EVIDENCE:—		The Maharaja of Dinajpur - - - - -	142
The Rev. T. Evans - - - - -	46-51	DECEMBER 6TH, NINETEENTH DAY'S EVIDENCE:—	
Mr. J. H. Rivett-Carnac	51-59	Mr. H. S. Howard - - - - -	142-143
NOVEMBER 24TH, TWELFTH DAY'S EVIDENCE:—		Mr. Shrager - - - - -	143-144
Mr. J. F. Finlay - - - - -	59-60	Mr. A. E. J. Abraham - - - - -	144-145
Mr. Ram Durlabh Mazumdar - - - - -	60-63	Mr. R. M. Cohen - - - - -	145-146
The Hon. D. R. Lyall - - - - -	63-67	Messrs. Lin Sin Khoo, Iyak, Eup Ate,	
Mr. J. L. Hopkins - - - - -	67-69	Pin Yen, Assowi - - - - -	146
Surgeon-Captain F. P. Maynard	69-70	DECEMBER 7TH, TWENTIETH DAY'S EVIDENCE:—	
NOVEMBER 25TH, THIRTEENTH DAY'S EVIDENCE:—		Mr. J. Munro - - - - -	147-150
Surgn.-Col. R. Harvey - - - - -	70-75	Mr. S. M. Gibbon - - - - -	150-152
Surgn.-Lieut.-Col. A. Crombie - - - - -	75-81	Mr. S. E. Peal - - - - -	153-155
Surgn.-Lieut.-Col. O'Brien - - - - -	81-82	Mr. J. Wilson - - - - -	155-156
Surgn.-Lieut.-Col. F. P. McConnell	82-83	Mr. W. H. Ryland - - - - -	156-158
Surgn.-Lieut.-Col. R. C. Sanders - - - - -	83	Mr. D. Zemin - - - - -	158
Brigade-Surgn.-Lieut.-Col. Purves - - - - -	83-84	Mr. T. N. Mukharji - - - - -	158-159
Surgn.-Lieut.-Col. E. G. Russell - - - - -	84	DECEMBER 8TH, TWENTY-FIRST DAY'S EVIDENCE:—	
Surgn.-Major R. Cobb, M.D. - - - - -	84-85	Mr. R. Steel - - - - -	160-161
Surgn.-Captain J. H. Tull Walsh - - - - -	85-86	Mr. W. H. Cheetham - - - - -	161-162
Surgn.-Lieut.-Col. Crombie (further ex-		Mr. F. Schiller - - - - -	162
amined) - - - - -	86	Mr. Nil Ratan Sircar - - - - -	162-165
Mr. J. G. Alexander (further examined) -	<i>ib.</i>	Mr. Heramba Chandra Maitra - - - - -	165-166
NOVEMBER 28TH, FOURTEENTH DAY'S EVIDENCE:—		Mr. H. M. Rustomjee - - - - -	166-167
Dr. Kailas Chunder Bose - - - - -	87-90	Mr. Nil Comul Mookerjee - - - - -	167-168
Dr. Juggo Bundo Bose - - - - -	90-92	Rai Sheo Bux Bogla Bahadur	168-169
Dr. Surji Coomar Surbadhicari - - - - -	92-93	DECEMBER 9TH, TWENTY-SECOND DAY'S EVIDENCE:—	
Dr. Hira Lall Ghose - - - - -	94-96	(a.) Calcutta Section—	
Miss L. Hamilton - - - - -	96-97	Maharaja Bahadur Sir Narendra Krishna	169-170
Rai Bahadur Kanny Lall Dey - - - - -	97-99	Maharaja Durga Churn Law - - - - -	171-172
Mr. Khurgeshur Bose - - - - -	99-100	Maharaja Sir Jotendro Mohun Tagore	172
NOVEMBER 29TH, FIFTEENTH DAY'S EVIDENCE:—		Raja Peary Mohun Mookerjee - - - - -	172-174
Dr. D. Morison - - - - -	100-105	Rai Rajkumar Sarvadhikari - - - - -	174
Dr. G. R. Ferris - - - - -	105-108	Babu Saligram Singh - - - - -	174-176
Kabirajes Ganga Prasad Sen Gupta,		Dr. Mahendra Lall Sircar - - - - -	176-178
Bijaya Ratna Sen, and Peary Mohun		The Hon. Gonesh Chunder Chunder	178-179
Sen - - - - -	108-109	Mr. J. P. Hewett - - - - -	179
NOVEMBER 30TH, SIXTEENTH DAY'S EVIDENCE:—		(b.) Rangoon Section—	
Mr. Sudam Ch under Naik - - - - -	110-112	Mr. C. G. Bayne - - - - -	180-183
Mr. Gouree Sunkur Roy - - - - -	112-113	DECEMBER 11TH, TWENTY-THIRD DAY'S EVIDENCE:—	
Mr. Bhagban Chunder Dass - - - - -	113-114	Mr. A. M. B. Irwin - - - - -	183-186
Dr. Ram Moy Roy - - - - -	114-117	Surgn.-Major P. W. Dalzell	186-188
Dr. James Robert Wallace - - - - -	117-121	Mr. G. L. Weidemann - - - - -	188-191
Mr. K. G. Gupta - - - - -	121-122	Surgn.-Captain Davis - - - - -	191-192
		Capt. G. R. MacMullen - - - - -	192-193
		Mr. F. Bradley - - - - -	193-194
		Mr. C. Findlay - - - - -	194-195

DECEMBER 12TH, TWENTY-FOURTH DAY'S EVIDENCE :—	DECEMBER 20TH, TWENTY-NINTH DAY'S EVIDENCE :—
The Rev. Dr. Cushing - - - - - 195-198	(continued).
Mr. Cheng Taik - - - - - 198-200	Mr. Dwarkanath Ganguli - - - - - 248
Mr. Park Chan - - - - - 200	Mr. Krishna Kumar Mittra - - - - - 249
Mr. Ah Nam - - - - - 200-201	The Rev. K. S. MacDonald - - - - - 249-253
Mr. Tan Kyu - - - - - 201	Nawab Syud Ameer Hossein - - - - - 253-254
Mr. Sit Kaung - - - - - <i>ib.</i>	DECEMBER 21ST, THIRTIETH DAY'S EVIDENCE :—
Mr. Sit Hon - - - - - 202	The Hon. D. R. Lyall (further ex-
Mr. Kum Loang - - - - - <i>ib.</i>	amined) - - - - - 254-255
Mr. Ah Chew - - - - - <i>ib.</i>	Rai Lal Madhub Mookerjee, Bahadur - - - - - 255-258
DECEMBER 13TH, TWENTY-FIFTH DAY'S EVIDENCE :—	DECEMBER 22ND, THIRTY-FIRST DAY'S EVIDENCE :—
Mr. P. M. Madooray Pillay - - - - - 203-204	Mr. Krishna Kumar Mittra (further ex-
Maung Hpo Hmyin, K.S.M. - - - - - 204-206	amined) - - - - - 259-261
The Sawbwa of Thibaw - - - - - 206-207	Mr. J. J. S. Driberg - - - - - 261-262
Surgn.-Lieut.-Col. Hugh Johnstone - - - - - 207-208	Mr. Upendro Nath Barooah - - - - - 262-264
Mr. Leong Shian Tuck - - - - - 208-209	Mr. Goonabhiram Barooah - - - - - 265-266
DECEMBER 15TH, TWENTY-SIXTH DAY'S EVIDENCE :—	Mr. Trinoyan Barkakoti - - - - - 266
Surgn.-Major Dantra - - - - - 209-212	Mr. Haribalas Agarwala - - - - - 266-267
Mr. J. E. Bridges - - - - - 212-214	DECEMBER 23RD, THIRTY-SECOND DAY'S EVIDENCE :—
Mr. Law Yan - - - - - 214	Mr. Dwarkanath Ganguli (further ex-
Mr. Sidney Jennings - - - - - 214-216	amined) - - - - - 267-269
Haji Shamshuddin - - - - - 216	Mr. Kali Sankur Sukul - - - - - 269-271
Mr. Yang Fu and Mr. San Tu - - - - - 216-217	Mr. W. Raju Naidu - - - - - 271-272
The Rev. M. B. Kirkpatrick - - - - - 217-221	Mr. S. Somasundram Pillai - - - - - 272-274
DECEMBER 16TH, TWENTY-SEVENTH DAY'S EVIDENCE :—	DECEMBER 27TH, THIRTY-THIRD DAY'S EVIDENCE :—
Saw Maung, Ex-Sawbwa of Nyaunggywe - - - - - 221-222	Mr. J. J. S. Driberg (further examined) - - - - - 275-280
Kam Swe, Amatgyök of Southern Theinn - - - - - 222-223	Mr. J. D. Anderson - - - - - 280-282
Mr. F. R. Bagley - - - - - 223-224	Surgn.-Major Edwin F. H. Dobson - - - - - 282-285
Mr. H. S. Guinness - - - - - 224-225	DECEMBER 28TH, THIRTY-FOURTH DAY'S EVIDENCE :—
Maung Aung Min - - - - - 225	Mr. J. J. S. Driberg (further examined) - - - - - 286
DECEMBER 19TH, TWENTY-EIGHTH DAY'S EVIDENCE :—	Mr. Satyanath Borah - - - - - 286-288
Mr. D. M. Smeaton - - - - - 225-240	Mr. Jadab Chundra Ghose - - - - - 288
Mr. Kum Low Fong - - - - - 240	Mr. Lalit Mohun Lahiri - - - - - 288-291
Mr. F. W. R. Fryer - - - - - 240-242	Mr. R. C. Haviland - - - - - 291-293
DECEMBER 20TH, TWENTY-NINTH DAY'S EVIDENCE :—	Mr. E. P. R. Gilman - - - - - 293-294
Mr. Abul Fazl Mahomed Abdur Rahman - - - - - 242-244	Mr. Ernest Bridge - - - - - 294-296
Prince Jahan Kadar Mirza Mahomed	Mr. Jagannath Barooah - - - - - 296-299
Wahid Ali Bahadur, the Hon. Maulvi	Babu Mohendra Nath Phukan - - - - - 300
Abdul Jubbar, Khan Bahadur, Shamsul	DECEMBER 29TH, THIRTY-FIFTH DAY'S EVIDENCE :—
Ulama Maulvi Ahmad, and Maulvi	Mr. J. J. S. Driberg (further examined) - - - - - 300-301
Syud Muhammad Khan Bahadur - - - - - 245-247	Mnnschi Rahamat Ali - - - - - 301-302
Prince Wala Kadar Syed Hussein Ali	Babu Madhav Chandra Bardalai - - - - - 302-305
Mirza Bahadur - - - - - 247	Mr. Radhanath Changkakoti - - - - - 305-308
Suja-ul-Mulk Asaf-ud-Dowlah Nawab	Dr. James L. Phillips - - - - - 308-311
Syed Zainul Abdin Khan Bahadur	Mr. Atool Krishna Datta - - - - - 311-312
Feroz Jung - - - - - <i>ib.</i>	Mr. J. J. S. Driberg (further examined) - - - - - 312

LIST OF APPENDICES.

Page	Page.

		L. Further papers regarding the use of opium by Burmans (<i>vide</i> Appendices XXXVIII. and XL.) -	537

THE INDIAN OPIUM COMMISSION.

At the Council Chamber, Writers' Buildings, Calcutta.

SEVENTH DAY.

Saturday, 18th November 1893.

PRESENT :

THE RIGHT HONOURABLE LORD BRASSEY, K.C.B. (CHAIRMAN, PRESIDING).

SIR JAMES B. LYALL, G.C.I.E., K.C.S.I.

THE HON'BLE SIR LACHHMESWAR SINGH BAHADUR,

MAHARAJA OF DARBHANGA, K.C.I.E.

SIR WILLIAM ROBERTS, M.D.

MR. R. G. C. MOWBRAY, M.P.

MR. A. U. FANSHAWE.

„ ARTHUR PEASE.

„ HARIDAS VEHARIDAS DESAI.

„ H. J. WILSON, M.P.

MR. J. PRESCOTT HEWETT, C.I.E., *Secretary.*

The SECRETARY read the order of reference.

The CHAIRMAN :—In opening the work of this Commission in India it may not be unfitting that I should offer one or two observations from the chair. First, I desire to refer to the circumstances which have led to the appointment of this Commission. The subject-matter of our inquiry, which is the manufacture, sale, and consumption of opium, has been repeatedly brought to the notice of Parliament at home. More than half a century ago the affairs of the East India Company formed the subject of an inquiry by a Select Committee of the House of Commons. That Committee was called upon, among other things, to consider the opium question, and chiefly in relation to the trade with China. The traffic at that time was contraband, yet the Committee gave their express sanction to its continuance. A few years later, in 1840, Lord Shaftesbury, then Lord Ashley, made a vigorous attack in the House of Commons on the opium trade. Coming down to a much later period, in the course of the inquiries of the Select Committee of the House of Commons on East Indian Finance, extending over three Sessions, the subject of the opium traffic was frequently brought up. Turning to the latest phase of the question in Parliament, a Resolution to the effect that the opium revenue is morally indefensible was passed in the House of Commons in 1891 by 160 votes to 130. Many prominent members of the present Government voted with the majority. In the list we see the names of Messrs. Asquith, Fowler, Mundella, Burt, Majoribanks, Sir Edward Grey, and Sir Charles Russell. The late Government, the Government of Lord Salisbury, while unwilling to accept the proposal actually brought forward in Parliament by the representatives of the Anti-Opium Association, were anxious to show themselves, at least in some measure, in sympathy with their views. It was stated by Mr. W. H. Smith that the policy of the Government of India had been greatly to reduce the acreage under poppy cultivation, and he promised that that policy would be continued. Lord Cross also pledged himself to certain important changes. The smoking of opium was no longer to be allowed in the premises where it is sold. In Bombay the condition that the licenseholder should undertake to sell a certain quantity of opium was no longer to be imposed. I now come to the present year. In the last Session of Parliament the subject which has been referred to us was again brought forward in a motion introduced by Mr. Webb and supported by Sir Joseph Pease, the President of the Anti-Opium Association. That motion was to this effect :—“That having regard to the opinion expressed by the vote of this House on the 10th April 1891, that the system by which the Indian opium revenue is raised is morally indefensible, and which urged the Indian Government to give practical effect to the opinion by ceasing

to grant licenses and by taking measures to arrest the transit of Malwa opium through British territory, and recognizing that the people of India ought not to be called upon to bear the cost involved in this change of policy, that oppressive taxation and the stoppage of expenditure necessary for the welfare and progress of the Indian people must be avoided, this House is of opinion that a Royal Commission should be appointed to inquire, both in India and in this country, and to report as to (1) what retrenchments and reforms can be effected in the Military and Civil expenditure of India; (2) by what means Indian resources can be best developed; and (3) what, if any, temporary assistance from the British Exchequer would be required in order to meet any deficit of revenue which would be occasioned by the suppression of the opium traffic." That was the resolution moved in the House of Commons, and it is certain that, if the present Government had moved a direct negative, they would have sustained a Parliamentary defeat. That result was only averted by Mr. Gladstone throwing himself into the breach with a vigorous speech and with a counter proposal for the appointment of a Royal Commission with more limited powers. Looking at the state of opinion in England, where we find men in the position of Archbishops and Bishops and men like the late Cardinal Manning supporting the Anti-Opium movement, yet admitting themselves to be painfully ignorant of the facts, and urging the Government to give them the light of an exhaustive and impartial inquiry, it must be recognized that the decision to appoint a Royal Commission was inevitable. I understand that a suggestion in that sense had gone forward some time ago from the Indian Government. In conclusion, I would urge that the active concern which has been shown in England in the opium question should be accepted as evidence of the deep interest which is taken in England in all that concerns the good government of India. Never has that feeling of interest in India and sympathy with and regard for the people of India been more strongly felt than at the present time. In any action which may be taken on the subject before us, our Commission is expressly charged with the duty of ascertaining the opinions and the wishes of the natives of India. To those engaged in the weighty task of governing this country, I can give an assurance on the part of the Commission that we have no desire to be unduly meddlesome, and that, in common with our fellow countrymen at home, we admire and recognize to the full the admirable qualities for which the Civil Service in India is so justly renowned.

*Sir David
Barbour,
K.C.S.I.*

18 Nov. 1893.

The Hon'ble SIE DAVID MILLER BARBOUR, K.C.S.I., called in and examined.

2050. (*Chairman.*) How long have you served in India?—I came to India in December 1863, consequently I have served nearly thirty years.

2051. In what parts of India have you served, and in what capacities?—I have served in the Patna Division of the Bengal Province where opium is grown; and also for a short time in other Bengal districts. Altogether I have served in Behar and Bengal about eight years, during which time I was employed partly in judicial work and partly in connection with the collection of the revenue; and for the rest of my service I have been employed in or under the Financial Department chiefly or almost entirely.

2052. Have you had any special opportunities of watching the poppy cultivation in India?—When I was in Behar, I lived among the people who grow the poppy for the production of opium. For the last five years I have been in charge of the Finance Department as Member of the Governor General's Council; and all business connected with opium which comes to the Government of India comes to that Department.

2053. What, in your view, would be the effect of the prohibition of the poppy cultivation? Would such a step be likely to occasion grave discontent among the cultivators?—I think I ought to observe that my actual personal experience of the value of the crop in Behar is now about twenty-two years old. At that time it certainly was a valuable crop; but I believe that, owing to improved means of communication, which enable other more bulky produce to be sent out more cheaply than was formerly the case, and possibly owing in a measure to the depreciation of silver, the crop in Behar (and the same would apply, no doubt with more or less force, to the Benares

Agency in the North-Western Provinces) is probably not so valuable as it was twenty-five years ago. But still it is a valuable crop; and I imagine that if the cultivation of the poppy were prohibited, there would be a serious loss to the ryots and zemindars. I cannot speak from recent experience on this subject: no doubt you will get evidence from men who reside in that province at the present day. I may mention that I believe (though I have no personal knowledge of it) that the crop is much more valuable to the ryots in Malwa than in Behar, because, owing to peculiarities of climate and soil, there is no other specially valuable crop to substitute for it in Malwa.

2054. Have you formed any opinion as to the physical results from the use of opium?—I have lived thirty years in India, and I admit that I have not had special means of seeing the effects of opium, but practically no evil results have come under my notice. I have lived in the opium-growing districts. I was stationed for some years in Patna, where there is a very large city and where a good deal of opium is believed to be consumed. I cannot call to mind more than one or two cases in which men were said to suffer from the effects of consuming opium, and in the case of those men all I noticed was, that they used to be rather stupid and sluggish in the morning until they had had their allowance of opium. These were cases of men who were supposed to take opium immoderately; but, practically, I may say that no evil results from the consumption of opium have come under my notice. At the same time I must say that I only know a limited portion of India. There is no man alive who knows all India. It is impossible for any man to know all India. I speak, therefore, of that part of India with which I am acquainted,

and of the class of people with whom I have come in contact.

2055. Taking the population of India as a whole, those who consume opium, whether moderately or immoderately, are a small minority of the whole?—They are a small minority of the whole. In the evidence I have just given I was speaking from my personal knowledge. I have formed a belief from the papers I have seen and the persons I have talked to, and I believe, taking India as a whole, the evils arising from the consumption of opium are certainly not serious. Opium is consumed more largely in some provinces than in others.

2056. Have you any opinion with reference to the physical effects of the opium habit in China?—I have not been in China myself, and I have no personal knowledge on the subject, but I have spoken to one or two persons who have been there. I may mention that I have spoken to Mr. James, now Commissioner in Sind, who travelled some years ago in Manchuria. Travelling in Manchuria—be practically travelled as a Chinaman would, moving about with carts or mules from place to place and stopping at the same hotels or sarais as the people stopped at. I think his impression was that many of the people who consumed opium were remarkably fine men physically—unusually fine;—that they took their opium as a matter of course, and that it did not seem to do them any harm. I think he also mentioned to me that he had come across one or two people who seemed to have suffered very much from opium—at any rate they were suffering very much from something, and they did consume opium. I have read statements made as to the evil effects of opium in China, but I think they are very much exaggerated. I have no doubt that there are cases of abuse of opium there, and possibly the consumption of opium may amount to a considerable evil; but, on the other hand, I have heard very strong statements made to the effect that the consumption of opium is often beneficial. A friend of mine visited some tin mines in a very unhealthy locality in the Straits where a number of Chinese were employed, and also people belonging to other countries, and he told me that the hospitals there were full of people belonging to other countries, but that remarkably few of the Chinese had to go to hospital. That result was ascribed to the fact that the Chinese regularly took a little opium. Of course as regards China you must only take my opinion for what you consider it is worth. I have never been in China.

2057. You have had the opportunity of consulting with men who have been there?—Yes; and I have read many reports on the subject.

2058. I will now ask you to turn to that very important aspect of the question which has been referred to us, and with which from your position in the Government, you would be more particularly called upon to deal, namely, the financial aspect of the question. It is a fact that, to the various objections that have been urged to the opium-revenue, the Government of India have always put forth in reply, among other arguments, that the revenue derived from opium is in the present condition of the finances of India, indispensable. I need hardly remind you that Mr. Gladstone, in resisting the motion of the last Session of the House of Commons, which led to the appointment of this Commission, insisted chiefly on the financial argument. He said, "You cannot give a pledge for the further contraction of the opium traffic without being possessed of the operative means." Can you give us any statement showing the amount and fluctuations in the opium-revenue, and showing the degree of your dependence upon that financial resource?—I have not got such statements with the intention of putting them in: they can be put in hereafter. I have not got the statistics in detail, but papers have been prepared, which will be put in for the information of the Commission. The total revenue derived from the consumption of opium in India is about Rx. 1,000,000. The net revenue derived from the export of opium is much larger and may be taken at about Rx. 5,000,000 in the present year. The revenue derived from the export of opium has materially fallen off in recent years. This is mainly due to the growing competition of opium produced in China, but it is partially due to temporary causes, such as poor crops of opium in recent years in India, and probably in some degree to the introduction into China of the system under which a consolidated rate of duty is levied on import in place of the likin or transit duties. We may fairly take the total net revenue from opium at Rx. 6,000,000 yearly at the present time. I have no hesitation in saying that it would be impossible to carry on the

administration of India if the revenue was reduced by Rx. 6,000,000. As it is, there is considerable difficulty in making revenue balance expenditure; and for my part I would positively refuse to attempt the task if the revenue were reduced by Rx. 6,000,000. Some revenue could, of course, be raised by additional taxation, but not Rx. 6,000,000. I have no doubt that the people in this country would bear some additional taxation, if the taxation were imposed in consequence of some disaster which we could not have avoided; but the imposition of heavy or perhaps of any considerable amount of taxation on the people of India, in order to make good the loss of revenue caused by interference with the consumption or export of opium, would cause most serious discontent among the people of India. I should be most unwilling to face the consequences of taxation imposed for such a purpose. Of course, this Rx. 6,000,000 does not represent the total loss to the country that would be caused by the prohibition of the production of opium; but it represents the loss of revenue to the Government. Certain Native States, if the production of opium were prohibited, would lose very heavily, and the peasants and cultivators in many places would suffer severely if deprived of the opportunity of cultivating a specially valuable crop. I am aware that it has been said or suggested that any loss of opium revenue might possibly be made good by a reduction of the home charges on account of the British troops serving in India. For my own part, I am unable to see any connection between the two questions. If the home charges are too high, they should be reduced without any reference to the opium question. If this Commission or the Home Government are in a position to announce positively on behalf of the British Government that the home charges will be reduced, I can take that fact into consideration and allow for an improvement *pro tanto* in the financial position. But if they are not in a position to do so, I cannot take into account any possible decrease of expenditure due to this cause. The Government of India have represented that the home charges ought to be reduced, and I believe there has been some consideration of the expediency of appointing a Commission to inquire into the subject; but, on the other hand, I understand that the War Office and the Treasury hold that, if anything, the charges made against India on account of British troops serving in this country are lower than they might fairly be. There is one other consideration that has been put forward as regards the loss of revenue, that if the export of opium from India were prohibited, the measure might be spread over a series of years, say, thirty, so that the loss of revenue would be gradual and Indian revenue and expenditure would have time to adjust themselves to the altered conditions. Against that proposal I desire to protest in the strongest terms. It would throw on posterity a burden which we are unable and unwilling to take upon ourselves, and there is no good reason to suppose that posterity will be in a better position to bear the burden than we are. No man can tell what the history of India will be during the next thirty years. It may be that the country will be financially prosperous thirty years hence, or it may be that it will be in great financial difficulties. We are in serious financial difficulties at the present time, and the financial burden of to-day would be simply intolerable if our predecessors had decided thirty years ago to gradually stop the export of opium, and if our revenue were at this moment Rx. 5,000,000 less than it actually is.

2059. Turning to what you have said about military charges, the reasons for opposing any modification in the present system of dealing with opium being partly, indeed, I may say, essentially, financial, it is impossible to exclude altogether from view the general consideration of the various charges which the Government of India has to meet. In a speech in the House of Commons in support of motion which led to the appointment of the present Commission, Sir Joseph Pease made a special reference to the rapid increase in the military charges. He pointed to the fact that the military charges had increased from 1881 to the time when he was speaking by Rx. 8,500,000. He mentioned that the number of British soldiers had been increased from 63,000 in 1883-84 to 71,000 in 1891; and he pointed to the increase of the native army from 126,000 to 149,000 in the same period. I believe there has been a large increase in the expenditure on military works. Have you any reason to apprehend a further development in the same proportion of the military expenditure for the external defence of India?—Nobody would be better pleased than I should, if it were found possible to reduce the military expenditure in India; but there are different opinions held on the subject. It would

Sir David
Barbour,
K.C.S.I.

18 Nov. 1893.

Sir David Barbour, K.C.S.I. depend very much on the course of events whether the charges should increase or not.

18 Nov. 1893. 2060. You are not in a position, because you are here as Financial Officer, to form any anticipation of the military necessities of the future?—Going back to what Your Lordship has already said, my objections to the prohibition of the production of opium are not by any means purely financial. If every rupee that India would lose directly or indirectly were to be made good to the Government of India, I would still say that it is a mistake to prohibit the production and consumption of opium, because I think that no extreme measure like that should be forced on people who do not want it, unless it should be found to be necessary to adopt that expedient in order to get rid of evils of the most serious character. Looking at the question from a financial point of view, it is quite true that some charges may be reduced; it is quite true that it may be possible to reduce the military charges of this country. On the other hand, it is equally possible that the home charges may not be reduced, and that the military charges in this country may be increased. It is conceivable that we might have a war on the frontier which would certainly be a source of financial embarrassment; again it is conceivable that we might have a famine. We may have great difficulties to meet in connection with the attempt to introduce the gold standard in this country, and I can say that the actual financial difficulties of the present time are serious; the financial future is clouded and uncertain, and I am not prepared to take into consideration a possible increase of revenue or reduction of expenditure unless it can be put forward on more definite grounds than have yet been shown to exist. I admit that if the home charges were reduced, the financial position would be improved; but I have no guarantee as to reduction of expenditure or increase of revenue, and I can form no estimate on which it would be safe to rely. I should be very glad if the military expenditure could be reduced.

2061. If military advice of a character so weighty that no Government, whether of England or India, could afford to disregard it, had been tendered, recommending certain preparations for the defence of the frontier, and if it had been financially impossible for the Government of India to carry into effect this recommendation in such a contingency as that, would it not have been incumbent upon the Imperial Exchequer to deal with the defence?—I should say so, or at least I hope so, but the Imperial Exchequer has never shown any special readiness to help us in these matters.

2062. In such a contingency as I have suggested, we know what the public feeling in England would be?—I have little doubt, at least I hope, that when things came to the worst we should get assistance. There is one matter on which I should like to say a few words, that is, as to the feeling of the people of India with regard to the prohibition of the consumption of opium in India. I hold a very strong opinion that the prohibition of the consumption of opium in India would of itself excite the gravest discontent in many parts of India, and I think it would be simple folly for such a Government as ours to attempt to enforce prohibition on the people. It is a different thing possibly where everybody has a vote, and a great majority of the people have come to the conclusion that the use of a certain article should be put down. You may be able to enforce prohibition under such circumstances, but where such a thing is done on the fiat of the Government and in opposition to the general wish of the people, or of a large section of them, I think the consequences might be very serious.

2063. That contingency was provided for by Parliament and the Government when this Commission was appointed and, as you will have noticed, we are specially charged under the order of reference with the duty of travelling through the country and putting ourselves in personal contact with those races in India who are the consumers of opium to test their feeling on the point?—I merely mention the opinion I have formed as the result of my experience, because the Commission, I apprehend, will find it very difficult to take the opinion of all these races. There are a great many parts of the country, and to visit them would be a work of great time and labour. I am not aware that the Government of India have any right or authority to prohibit the production or consumption of opium in Native States. I am sure there are many Native States that would resent in the strongest manner any attempt to coerce them in this matter. The amount of revenue derived from opium is very great in Central India.

2064. Perhaps we might not inappropriately glance at one aspect of this question on which I think you are prepared to give us your opinion, that is, with reference to the

situation in relation to China. What is your view as to the feeling entertained by those who govern in China with regard to the opium traffic?—I have no special means of saying what the feeling of the Government of China has been in the past, or what it is at the present time. I have no doubt the Commission will find other witnesses who can give them a much better opinion on the point than I can; but I am quite satisfied that the Government of China could not prevent the consumption of opium in that country, even if they wished to do so: I think that they would find it impossible.

2065. Supposing that a large increase in the duty imposed by the Chinese Government were agreed to, what is your view as to the probable effect of such an increase of the duty levied in the Chinese ports with reference to smuggling?—We know that the Chinese are the most adroit smugglers in the world, and I presume that the higher the duty on imports into China, the greater the temptation to smuggling would be. But the Chinese seem to prevent smuggling tolerably well now. I rather think they have an agreement with the Hong-Kong Government to prevent smuggling from Hong-Kong.

2066. That was arranged by Sir Thomas Wade, I believe?—I think they have such an agreement, and I am inclined to think that they could prevent smuggling, unless the temptation was very great indeed. You must take that opinion for what it is worth.

2067. As a matter of fact, we know that the management of their customs is now in the hands of Europeans?—I know that it has been under Sir Robert Hart; and for some years they have levied a large revenue on imported opium, and I apprehend they can only do so by checking smuggling in a tolerably effective manner.

2068. I should like to direct your attention to a point which seems to me of considerable practical importance. Looking at the matter on behalf of Government you would naturally desire, if you could, to conciliate and to meet the objections of those who do object to the opium revenue?—Certainly.

2069. Particular exception has been taken to what may be called the Bengal monopoly system. In his speech in seconding the motion in the House of Commons in the present Session, Sir Joseph Pease, the President of the Anti-Opium Association, expressed himself in words which I think it would be proper that I should read: "The position of the Indian Government is a position which is terribly unique. The Indian Government licenses every poppy plant that is grown; the Indian Government subsidises the whole of the cultivators of the crop; they frequently have as much as £2,000,000 out in subsidies on the crop. The Indian Government are the people who were responsible for this. They are the people who license and who decree more or less growth according to the exigencies of the trade. It is a position which, as I have said, is perfectly unique. They subsidise the grower, they buy the crop, they manufacture the drug, and they sell it by auction at Calcutta. This is the position of a professing Christian nation. We do license public houses, but we do not carry on a trade in public houses. We are not the manufacturers of all the whisky used in this country; and if we were, we should hesitate before trying to force our whisky crop according to the exigencies of the trade. As a moral and a Christian nation, we have no right to trade in that which does others harm, and which is one of the greatest causes of misery to the human race. That is the simple point I endeavour to make." That was the position taken by Sir Joseph Pease, and I wish to bring it prominently forward for the consideration of those who govern this country. Then we have another view of the same kind from an authority even more weighty—that of Lord Hartington when Secretary of State for India. In a despatch addressed to the Government of India, June the 16th, 1881, he expressed himself as follows:—"The two points on which the position of the Government has chiefly been attacked, are (1) their direct connection with the trade; and (2) the policy pursued towards the Chinese Government in relation to it. As regards the first, it can scarcely be contended that the subjects of Native States, or, indeed, our own subjects, should be entirely prohibited from growing opium for exportation, or that an export duty on such opium is not a legitimate source of Government revenue. But it is obvious that Government are placed in a very different position, when, as in Bengal, they are manufacturers and dealers in a drug which is at least capable of great abuse, and which is, in the opinion of many persons, the cause of much misery and evil." Then we have the views of the Anti-Opium Association so far as I have been able to collect them, and as put forward more particularly in a pamphlet which they have published on

Sir William Muir's Minute of 1868. In that Minute reference is made to the recommendation of Sir Charles Trevelyan in favour of the appointment of a Commission—I suppose a Commission under the Government of India—for the consideration of the expediency and practicability of extending or introducing the Bombay system in Bengal. Among other arguments urged by Sir Charles Trevelyan was that argument of the large amount locked up in advances to the cultivators. That and other objections were discussed in Sir William Muir's Minute, and among other references there was a reference to the opinion of Mr. Wilson, who was, I suppose, Finance Minister in India at that time, and whose objection to the change which has been proposed in Bengal was almost limited to this, that if you had the Bombay system in Bengal you would no longer have a Government brand on the opium chests, and that the opium would therefore sell less advantageously in the market. To that it was answered that the Malwa opium did not bear the Government brand and nevertheless commanded a rather better price than the Bengal opium. The main argument for the change urged by Sir William Muir was put in this way:—“*Prima facie* the change proposed would remove a blemish from the Administration without imperilling the finances. That cannot be an edifying position for the Government to occupy, in which it has year by year to determine the quantity of opium which it will bring to sale, in which there is a constant inducement for it to trim the market, and in which its haste to secure wider harvests and larger returns has repeatedly recoiled upon the trade, stimulated baneful speculation and gambling in Central India, and ended in much misery. I do not speak of the undignified aspect of the British Government growing, manufacturing, and selling the drug—performing, in fact, all the functions of producer and speculator.” This was taken up by the Anti-Opium Association. They reprinted Sir William Muir's minute, and they put in conclusion the argument which they founded upon that minute. This is what they say in reply to those who on behalf of the Government wish to sustain the monopoly. “The argument is, that when evil will be done, it matters not who is the doer of it. It is the same thing morally, whether the Government permits private persons to carry on a noxious trade or itself embarks its own capital and energies in that trade. This argument is so monstrous that even when fortified by the qualification in the minute of Sir William Muir that Government must be ‘sufficiently despotic to effect a total prohibition of the trade in question’, it could only find acceptance with minds predisposed to welcome any argument favouring a foregone conclusion. What but the most audacious impiety will venture to assert that the permission of evil is exactly equivalent to the causation of evil when evil occurs in the dominions of the only absolutely omnipotent sovereign. Have we never heard on the highest authority that ‘offences must come: *but woe to that man by whom they come.*’ To descend to lower levels for our illustrations, every human Government refrains from interference with a vast variety of evils which, nevertheless, no sane man would advocate that the Government should itself promote. Gambling and prostitution exist in England. Would our State be no worse if the Houses of Parliament were to create branches of the public service to conduct gambling houses and brothels, in order to divert the profits of those vices from private individuals to the public treasury? It would be waste of time to occupy more in exposing this false principle. If evil must needs be, better, incalculably better, that the evil should not be the work of the Sovereign, the Government, the Magistrate, but that of private persons, who at least do not compromise the dignity of the Crown, the sanctity of law and justice by their wilful proceedings.” I thought it well to put before you the arguments which have been addressed to the British public and have so far prevailed with them as to produce that parliamentary position which has led to the appointment of this Commission. It seems to me that the point on which the assault is most seriously directed is the question of the Bengal monopoly. I am aware that the despatch of Lord Hartington, from which I have read an extract, was met by a very able Minute on the part of the Government over which at that time Lord Ripon presided, and that reasons of a cogent nature were urged in defence of the Bengal monopoly. But as I have shown by the quotation from the speech of Sir Joseph Pease, he at least is still impressed very strongly with the objections to the Bengal monopoly. I should, therefore, like to ask you what your view is on that point, and specially with reference to this, that Sir William Muir in his Minute recognizes the utter impossibility of any sudden change. He says that the new system would of course be substituted gradually for the old. Then he suggests that it might be treated experimentally, and that districts should be selected in which the Bombay system could be tried. The Government, he says, might withdraw district by district. It might,

for example, for the present stop advances in the district of Cawnpore and westward. That would give time for testing, and if the results were such that Government could not accept them from a financial point of view, and if further it were found by experiment that smuggling was stimulated and that the result might be to increase rather than to diminish the growth, then the experiment would have been tried and the result must be accepted. At any rate, the consideration of this Bengal monopoly is pressed very strongly upon us, and I should be glad to hear your views.

(*Witness.*) The arguments which you have read are no doubt plausible, and I have no desire to speak otherwise than with respect of those who have used them, and of their conviction. At the same time I must say that I think those arguments, when examined, will prove to be entirely unsound. The primary question is this—Are you or are you not going to abolish the production of opium in Bengal? If you are going to abolish it absolutely, there is no use discussing whether you should have a monopoly system or whether you should have a system of what perhaps may be called free-trade, at any rate of production and trade open to the general public. The question then resolves itself into this: assuming the production to be continued, which system gives the best results, taking everything into consideration, the monopoly system or the system which it is proposed to substitute for it? I must say that I think that Sir Joseph Pease has put the argument unfairly when he talks of us as subsidizing and encouraging the growth of opium. The natural course of the Government would be, as regards the poppy and opium and every other article, to leave it to the people to produce as much or as little as they pleased. The result of the monopoly system is to very largely reduce the area in which the poppy would otherwise be cultivated, and the cultivator is paid a smaller price than he could get if there was absolute free-trade. Under those circumstances, I do not think the Government is fairly open to the charge of stimulating or encouraging the consumption of opium. The truth is, that the monopoly system materially limits the cultivation of the poppy and the production of opium, and regulates the trade for the purpose of raising as large a revenue as possible and for the purpose, or with result of, checking the immoderate use of opium in India and other countries. Take the case of England. There is a very large consumption of spirits there. If the Government decided to adopt a system such as I believe has been advocated elsewhere in another form—that of making over the production and sale of spirits to local bodies—and if the Home Government reduced the quantity of spirits produced every year, to say one-fifth of the quantity now consumed, would they be fairly charged with stimulating the consumption of spirits? No doubt such a measure would seriously check the consumption of spirits. What the Government of India do in the case of opium is to limit the production and consumption of opium and to raise a large revenue from it; and I think if you adopt any other system you will get worse results. At present under the supervision of the Government officers the poppy is cultivated and opium is produced and brought to the central factory and there manufactured, and the production is limited. If you had a different system, a system of what I may call free-trade, Government would still have to license the cultivation of the poppy and the production of opium; it would still employ officers to supervise the crop from the time it was sown till the time when the opium was manufactured; it would still have to levy duty: but I think it would do all these things in a less effective way. The persons who embarked in the trade would make advances to the opium cultivators instead of the Government, and they would require to have their officers to manage the business; they would expect a higher rate of interest on their capital than Government would accept; they would require to keep up their own establishment, and at the same time the Government would require to keep up an establishment. There would be a double establishment and a higher charge for interest by the persons engaged in the trade. Those persons must also make their profits; and the result would be that opium could not bear as high a rate of taxation as at present, because all that expenditure would have to come out of the selling price of the opium. On the other hand, I think it will be admitted that the door would be opened to smuggling when there were two sets of officers looking after the opium,—one on behalf of the Government, and the other on behalf of these traders, because Government could not exercise the same control and supervision as when the matter was entirely in the hands of its own officers. It would also be impossible to restrict and define the area of cultivation in the manner now adopted. I also think the opium would not fetch so high a price on account of its being at present

Sir David
Barbour,

Sir David
Barbour,
K.C.S.I.
18 Nov. 1898.

of a uniform brand. Reference has been made to Malwa opium. That is produced in a different place and under different conditions, and it is a slightly different article. I think a chest of Malwa opium contains 20 per cent. more opium than a chest of Bengal opium of the same weight, although it is nominally the same thing. In commercial opium there is not only the pure opium, but there is a certain amount of moisture, and there is more moisture in the Bengal opium than in the Malwa. I am, therefore, of opinion that it might be a serious thing to allow general cultivation of the poppy under license. Probably its growth would be extended over a much larger area, and in that case there would certainly be a greater risk of smuggling, because smuggling specially prevails wherever the poppy is cultivated, and I do not see how the same amount of revenue could be raised except by a considerable increase of the cultivation which would necessarily be accompanied by increased production and increased consumption. Therefore I think on all grounds the monopoly system, even from the point of view of the Anti-Opium Association, is preferable to the system of open trade. No doubt the Commission have seen the despatch of the Government of India on the subject.

2070. (*Chairman.*) I had contemplated asking you one or two questions as to the Home charges, but you have already given us in your statement your general view, and I think it is hardly necessary that I should occupy your time or that of the Commission in eliciting the obvious admission that you would be very thankful to see those Home charges reduced, and that you would not refuse to entertain the belief that on grounds of equity something might be done in mitigation of the present burden which India has to bear at home. Those points are obvious, and it is also obvious that if anything is to be done in pleading the cause of India with the British public, it is not particularly the work of this Commission, though some of us may return home in the belief that in another capacity it might be our duty to move in the matter. Have you anything further to add?—There is one point upon which I should like to make a few remarks. It has been said that we should give up our Treaty rights with China as regards the importation of opium into that country, and that we should prohibit the export of opium to China in the interests of the Chinese people. It seems to me that to justify any interference of that nature, it would be necessary to prove, first, that the consumption of opium in China was such an overwhelming evil as to make it our duty to interfere in the interests of humanity, and, secondly, that our interference would be attended with such benefits as to outweigh the undoubted loss of revenue to India which would certainly follow. Of course it is for this Commission to come to a conclusion whether the consumption involves evils of such a character as to justify our interference. In my opinion this is not the case. But I have never been in China, and, as I have already said, my opinion can only be taken for what it is worth. On one point, however, I have no doubt. If we abandon our Treaty rights in China and allow the Chinese to impose any import duty they please on Indian opium, the whole, or practically the whole, of the Indian revenue from the export of opium to China will be lost to India. We sell yearly a certain quantity of Bengal opium to the highest bidder, and every additional rupee of taxation imposed on it on import into China will involve a corresponding reduction in the price paid for the opium in Calcutta, and every such reduction in the Calcutta price means the loss of an equivalent amount of Indian revenue. The Malwa opium trade has been in anything but a flourishing condition for some years. The export has fallen off, and the trade with difficulty sustains the taxation it now bears. Any increase in the taxation in China must be met by a corresponding reduction in this country, unless we are prepared to see the trade destroyed. The destruction of the Malwa trade would be a most serious blow to the States that produce that opium, and to the inhabitants, because opium is their especially valuable crop. On the other hand, the imposition of a higher rate of duty on import of opium into China would in my belief have no effect upon the consumption in China. It would not affect the total taxation on Indian opium, because Indian opium already bears the highest rate of taxation which it is possible to impose upon it, and any increase in China would be followed automatically in the case of Bengal opium by a corresponding decrease in India; whilst in the case of Malwa opium the Government of India would be forced, as I have said, to reduce the export duty in order to save the trade and the interests of the Native States concerned. Even if we assume that the Government of India are prepared to see the Malwa trade extinguished or materially reduced, the total consumption of opium would not fall off in China. The place of Malwa opium has already been largely taken in China by indigenous opium, and, to some

extent, by Persian opium, and the progress of substitution is still going on. Its progress would be merely accelerated by a decline in the quantity of Malwa opium exported to China. In my opinion the financial consequences to India of doing away with the whole, or the greater portion, of the Indian revenue derived from the export of opium, would be of the most serious character. Apart from the question of losing revenue, which at present I can see no means of replacing, the destruction, or serious reduction, of one of the most valuable articles of our export trade would have consequences on the rate of exchange which might prove disastrous at a time when we are attempting to introduce a gold standard into India. The success of that measure depends very largely on the proportion which is maintained between Indian exports and imports, and anything which would materially reduce our exports would have injurious consequences, and might produce evils which would prove irreparable. It is conceivable that the consumption of opium might be the cause of such evils in China as to make it desirable for us in the interests of morality and humanity to wash our hands of the whole business at any cost, but I deny that this is the case. I have served for thirty years in India; I have been connected with the Finance Department for more than twenty-one years; I was a member of the Royal Commission on Gold and Silver which sat in England for two years, and I have made a special study of the Exchange question; and I wish to give this Commission the most solemn warning as to the probable consequences of destroying the Indian opium revenue. I can see no justification for measures involving such a result, and I am confident that those measures would not produce any benefits in the case of the people of China. My connection with India and with the Government of India will come to a close before another week has passed, and I desire to place this deliberate opinion on record as the outcome of experience which I think, I may fairly say, is of its kind not surpassed by that of any other living Indian official.

2071. It will be our duty to weigh carefully the statements you have made. I am sure they will have our attentive consideration. Speaking of the matter generally in relation to China, I suppose we may take it to be your opinion that whatever view may be held of the relations between England and China in regard to opium matters in the past, at present those relations would be governed by the declaration of Sir James Fergusson in the House of Commons to the effect that public opinion would never sanction any exercise of force on the part of the British Empire to compel the Chinese to receive our opium. That declaration is before the Chinese Government for them to act upon as they may think discreet. It would seem to me, as I think I have already suggested in a question that I put, that in considering the expediency of any re-opening of negotiations with reference to the tariff, the action of the Chinese Government must be governed by the following consideration. If a great increase were made in the duty levied in Chinese ports, it must necessarily lead to increased smuggling. Considering the nature of the Chinese administration, the character of the navigation on their coasts, and so on, it would be exceptionally difficult for the Chinese Government to put a check upon smuggling if the temptation offered by an excessive duty were sufficient to stimulate smuggling operations. That seems to be obvious?—These are questions for the consideration of the Commission. I have given my opinion as to the possible consequences of a loss of Indian revenue, and I have given it to the best of my ability.

2072. (*Sir James Lyall.*) If a saving of home charges for military expenditure could be effected, and if no crisis occurred, such as war or famine, is it not still the case that there are many urgent claims on the Indian revenue which would be so set free, in the way of money wanted for canals, the salt tax, etc.?—Nobody knows better than I do that the claims on the Indian Government for good and useful purposes are indefinite in amount. A great many things are wanted in this country which ought to be provided if the money were available. My whole career in recent years has been that of occupying the unfortunate position of refusing to provide money for objects which I admitted were important.

2073. In the last letter to Lord Kimberley from the Anti-Opium Association, which is said to represent the present case of that body, it is said that the stoppage of the Indian trade in opium in China would in all probability have a very beneficial effect on the silver exchanges by putting an end to the drain from China to India in payment for opium, thereby enabling the Chinese to substitute the use of silver for their present cumbrous coinage; that it would thus tend to check the depreciation

of silver which at the present time is so serious an embarrassment to the finances of India. Do you think there is any truth in this theory?—I think there is no foundation for it at all. I have heard many strange arguments in connection with the currency question, but that is one of the strangest.

2074. Do you think it would have any effect either way, or that it would have a bad effect?—That if we do not export opium to China the Chinese would abolish their present system of currency and have a silver coinage. I do not see the connection between the two things. Moreover, we have no longer got a silver standard, and the reduction of our exports would injuriously affect the exchange.

2075. It is also said in the same letter that if the trade in opium from India to China were stopped, in all probability the trade in other products would be greatly increased, which would tend to the benefit of India?—I imagine that if the cultivation of the poppy for the production of opium were stopped in India, whether for export or import, the land would not lie fallow, other crops would be put in, but certainly nothing nearly so valuable to India as the present opium cultivation. We now export about Rs. 10,000,000 worth of opium. If that were stopped, we would fail to pay our foreign debts by that amount, and we must export something by which to pay these debts. I apprehend that the way an adjustment would be brought about would be by the exchange falling until the exports were increased and the imports reduced. I know no other way in which the account could be adjusted.

2076. You think the result would be the exchange falling?—Decidedly. If you take away ten crores from our exports, you may depend upon it that the exchange will fall considerably.

2077. (*Mr. Fanshawe.*) The Resolution of the House of Commons on the 30th June 1893 presses on the Government of India a continuation of their policy of greatly diminishing the cultivation of the poppy and the sale of opium. I should like to ask for an explanation of the Government policy at the present time as regards its real objects and the practical limits within which it is contemplated the diminution should be carried out?—The policy of the Government of India in regard to opium, I imagine, has varied somewhat at different times according to the views of the members of the Government for the time being. For a great many years its policy in regard to internal consumption has been to raise the taxation on opium as high as possible without giving rise to smuggling. The object of this policy would be, I should say, to raise the revenue and at the same time to check the excessive consumption of opium by increasing its price. As regards the export of opium from Bengal, the policy has been for some time to sell about the same amount every year, neither diminishing that amount nor increasing it. This means of course that the average area under cultivation would remain about the same, rising or falling a little according to circumstances. I may also mention that the policy of the Government has not been quite the same in every province. In some provinces, such as Burma and Assam, it was believed that opium was consumed to an excessive extent, or that its consumption had specially injurious effects, and in those provinces special restrictions were imposed, both by raising the rate of duty and by limiting the number of the shops. I am not sure that that policy was not carried too far in both cases. As regards Malwa opium the policy has been to raise as high a duty as the trade will bear, raising the duty when practicable and reducing it when the trade was depressed and exports fell. It may be a question whether the Resolution has rightly described this policy, but, in any case, the policy has been what I have stated.

2078. That is to say, that a great diminution as regards exports is not a necessary part of the present policy of the Government, speaking generally?—Nor can I say that it has been in the past. My attention has been called to a statement made in the House of Commons by the late Mr. W. H. Smith, but I think he has described the policy he mentioned as the policy of the Home Government. I was not aware that that was the policy of the Home Government until the statement was made. The policy of the Government of India has been what I have stated, and I can say that from personal knowledge.

2079. (*Mr. Mowbray.*) Among the subjects referred to the Commission is the amount of compensation to be paid. Does that mean the compensation to Native States or compensation to cultivators?—I suppose it must mean compensation generally?—I have not sufficient means to make an estimate of the total amount of compensation, but the serious

amount of compensation would be the compensation payable to Native States and to the inhabitants of those States. As you have no right to stop the cultivation of the poppy there, I suppose the amount of compensation would be a matter of bargaining with the States. It would be a large amount certainly, but I could not pretend to say what it would be, nor can I say what the States would accept. Opium is grown in a great many Native States, and I have no doubt it is grown in States of which I even do not know the names. It would be a large amount, several crores of rupees I should say. A crore of rupees is ten millions of rupees.

2080. Would you consider that there would also be compensation to the cultivators who had been in the habit of cultivating under the Government of India?—That is a difficult question. If the cultivators lost their profits, and the landlords lost their rents, I suppose it would be a question whether they ought not to be compensated. If the loss was small, it would be unnecessary, but if the loss was serious, I should think that something would have to be done. I could not give any estimate of what the probable payment would be, but I do not think it would be anything like so large as the compensation payable to the Native States and to the inhabitants of those States.

2081. I believe there are other products of the poppy besides the opium drug?—Yes; the poppy seed is of considerable value. There is a good deal exported and a good deal used in this country.

2082. Another point mentioned is the cost of the necessary preventive measures. Assuming that it would be impossible to prohibit growth in the Native States, and assuming, as you put it, that the Government would have a right to prohibit the growth in British territory for the consumption of the people of India, do you think it would be possible with all the resources of the Government of India, to stop the export trade (an illegitimate export trade) to China or elsewhere?—I think a good deal could be done in the direction of stopping very large exports to China, because the opium sent to China is of considerable bulk, and it would have to go down the coast and be embarked on steamers and so forth. It might be sent no doubt to small vessels and transferred afterwards to steamers, but on the whole, I think, the export to China could be practically stopped; but I am confident that the whole resources of the Government of India would be unable to prevent smuggling from the Native States into British India. The States are interlaced with British territory, and the total boundary line between the Native States and British India is of immense extent, so that the prevention of smuggling from Native States into British India would be beyond the resources of the Government of India. I have no hesitation in saying so.

2083. But you cannot give the Commission any evidence on the subject in default of the necessary information?—I can give no estimate, but you would require a large army of preventive officers, and even with that army you would not succeed in preventing smuggling.

2084. With regard to any possible alteration in the monopoly system in Bengal, I believe you have in the Punjab a system of acreage duty. Has that experiment been tried on a sufficiently large scale to enable you to speak with any certainty as to its effect?—The system is peculiar to the Punjab, and the circumstances there are totally different from what they are in Bengal, but I believe it will be found that the amount of taxation imposed on opium by that acreage duty is very much lighter than that levied on opium grown in Bengal. But other officers will be able to give accurate evidence on the subject.

2085. (*Mr. Wilson.*) Did I understand you to say in reply to a question put by Mr. Fanshawe that the policy of the Government of India was hardly the same as that declared in the House of Commons by the late leader of the House, Mr. William Henry Smith?—What I said was that the policy of the Government of India was what I have explained in my answer. It might be a question whether that policy, as I explained it, was accurately described in the recent Resolution; but whether it was or was not the policy of the Government of India has been what I stated.

2086. The language of Mr. W. H. Smith was this: "The course which this Government has taken, and which all Governments have taken during the last few years, has been to diminish the area of cultivation in India"?—I should hardly say that he is speaking there of the policy of the Government of India: I should say that he was speaking of the policy of the Home Government, and I must say that I was not aware until that statement was made that it was the policy of the Home Government. I wish to add something more to my answer. I do not know whether your attention was called to a question that was asked in the House of Commons on a subsequent date—April 23rd, 1891,

*Sir David
Barbour,
K.C.S.I.*

18 Nov. 1893.

Sir David
Barbour,
K.C.S.I.
18 Nov. 1893.

by Mr. Maclean. Perhaps it is as well that I should read the question.

"Mr. Maclean (Oldham). I beg to ask the Under-Secretary of State for India whether the India Office has any evidence to show that the recent reduction in the area of poppy cultivation in Bengal is due to the intention of the Government of India to do away with the opium revenue little by little, and not to the commercial necessity for reducing production in order to keep up the price in face of the increasing competition of opium grown in China; and whether the policy of the Government of India, with regard to this source of revenue, is correctly expressed by Sir David Barbour, the Indian Finance Minister, who in introducing his Budget for the year 1891-92 said—'The opium revenue has no doubt fallen largely, and at this moment there are no indications of a recovery. On the other hand, the fall up to date has been discounted, and provision made to meet the consequent loss of revenue. As the fall has been so great, we may fairly hope that for the present we have seen the worst.' That remark was taken from the Financial Statement which I delivered in 1891-92. You will observe that I did not then contemplate any progressive reduction of the opium revenue, because I said we might fairly hope that for the present we had seen the worst. Sir John Gorst's answer was,—'The reason given for the reduction of the area of poppy cultivation in Bengal is that the reserve stock of opium had become unduly large.' Mr. Smith's statement might be taken to mean that it had been intentionally reduced in order to get rid of the production. The real reason was that we had had very good crops for a number of years and, as we did not want to sell more than a certain amount and a considerable quantity of opium had accumulated in the reserve, it was not necessary, in order to supply the ordinary amount, that the usual area should be put under cultivation. Sir John Gorst added,—'The statements of Sir D. Barbour, no doubt, do correctly express the policy of the Government of India.'"

2087. It really comes to this, that Mr. Smith was scarcely correctly informed as to the policy of the Government of India when he made that statement to the House of Commons?—I think some allowance must be made for Mr. Smith, who unfortunately is not here to defend himself. Mr. Smith was not Under-Secretary of State for India, and India is a very large country, composed of a great many Provinces, inhabited by great many races. There are a great many complicated questions connected with its administration, and it is not to be wondered at that members of the Government at home should not be perfectly informed of the facts concerning questions that may be raised in the House of Commons.

2088. Has your attention been directed to part of a speech by Sir James Fergusson on the same occasion?—He was speaking on behalf of the India Office, and he used these words:—"I freely admit that the Government of India have never denied that it would be very desirable that this source of revenue should be altered. They have taken means to reduce it; they have diminished the number of licenses; and they have diminished the area on which the poppy was grown. One hundred thousand acres less are now under poppy in Bengal than ten years ago?"—The amount of reduction may, as a statement of fact, be correct; but I think it was shown in that answer of Sir John Gorst's that the area was reduced because we happened to have a large stock of opium at the time. Therefore, to keep up the usual supply, it was not necessary to have so large an area under cultivation. In point of fact, the area was reduced. As I said in my evidence, it sometimes rises a little, and sometimes falls, according to circumstances. If there are bad crops for a number of years, the ryots are not so willing to grow the poppy.

2089. Taking the statement of Sir James Fergusson as representing the India Office, and the statement of Mr. W. H. Smith, who was the leader of the House of Commons, I think you will agree with me that they can hardly have conveyed a correct impression to the House of Commons?—I cannot say what the impression on the House of Commons may have been, but I believe that on various occasions inaccurate impressions have been conveyed to that House.

2090. On the question of fact to which you referred just now, was it quite correct to say that the reduction was 100,000 acres?—I cannot give you exact figures, but they will be put in. I dare say I have the figures here somewhere.

I will hand you the book,—*"Finance and Revenue Accounts, and Miscellaneous Statistics relating to the Finances of British India,"* published in Calcutta, 1891.

The figures are given on page 43. I have the cultivation here for the last ten years,—the area under cultivation.

2091. I find when Sir James Fergusson was speaking about the 100,000 acres that the amount for the year 1891 was a little over 500,000 acres?—Yes, I have that figure for 1891.

2092. If you take it precisely, the ten years that he has stated, that is to say, going back to 1881, it was 536,000 acres?—Yes, I have no doubt that figure is correct if you find it in that book. I have not got it here.

2093. So that taking ten years strictly it was 36,000, and not 100,000?—I think that corroborates my statement that inaccurate observations are sometimes made in the House of Commons.

2094. But if you take it in a different way and compare it then with what it had been a short time before, taking an average of two or three years, it was no more than a reduction of 35,000 or 36,000?—I have ten years' figures, and they corroborate what I said,—that the production sometimes rises a little, and sometimes falls a little. I do not think you will find any very great fluctuation.

2095. On the whole, it has been rather rising?—Of late years I think it has rather fallen off. For 1892-93, I find it is down at 456,000 acres.

2096. It is substantially now just about the same as it was ten years ago?—I do not think there is any material difference.

2097. In 1882-83 it was under 500,000?—Yes.

2098. In 1889-90 it was under 500,000, so that it is practically the same?—I think the fluctuations are not due to any definite policy; but it is a fact that in very recent years we have rather avoided any appearance of increase because we were liable to be attacked on account of the increase. We were liable to have it said of us that more opium was being grown, and that we were stimulating production and consumption, and therefore during the last few years we have rather avoided any increase of the cultivation.

2099. On the same page of the same book there is a statement of the average produce per bigha?—Yes; it is customary to give the average produce per bigha.

2100. The general appearance of the table rather goes to show, I think, that the produce is falling off per bigha. Do you know if that is so?—That is a question which was very much discussed a number of years ago, probably twenty years ago. There was a considerable falling off, and a theory was started that the soil did not produce the same quantity of opium as it used to do; that it was deteriorating for the purposes of opium cultivation, but just about the time we thought that theory was established, a change in the seasons took place, the produce became very large, and we had a series of very good years. Recently we have had a series of bad years: therefore I am not prepared to say that the power of the soil to produce opium has or has not fallen off. You cannot base that conclusion on the results of only a few years. Certainly the last few years have been bad years. Formerly we had good seasons, and before that we had bad seasons; perhaps we may have good seasons again.

2101. You are aware that Sir Cecil Beadon gave evidence before the Select Committee on East India Finance in 1871?—Yes.

2102. Do you know what his official position was then?—I fancy he had left India before that date. I do not think he was connected with the Government of India then.

2103. He had been Secretary to the Board of Revenue, Secretary to the Government of Bengal, and afterwards Lieutenant-Governor of Bengal?—He was Lieutenant-Governor of Bengal, I know, in 1863.

2104. I wish to ask you how far you agree with the statement here. He was asked this question—No. 3393:—"Then the action of the Government has been, while encouraging the use of opium in other countries, to discourage the use of it among their own subjects?" He answered, "Certainly." Would you agree with that?—If you limit the production of an article by saying it shall only be grown in a certain area, and impose a high rate of duty on it, and only allow it to be sold in a limited number of shops, and charge a heavy license fee, and say that it should only be sold between sunrise and sunset, and so forth, I should say you distinctly discourage the consumption of that article.

NOTE.—Mr. Wilson regrets that questions 2095-9 were put in rather loose and perhaps misleading terms, as on further examination of the table in question he finds that the average quantity of land under poppy during the five years 1889-92 (the last in the table) is less than the average during the five years 1878-82 by nearly 32,000 acres, being a reduction of more than 6 per cent.

2105. I will read you two or three more questions and answers.—“3397: What is the reason for that?—The object of the Government has been simply a fiscal object, to get as much revenue out of opium as it possibly could. It therefore sells opium to its own subjects at as high a rate as possible, and it also endeavours to derive from the sale of the opium for exportation as large a price as it can obtain. 3398: But in a fiscal point of view is it indifferent to the Government whether it is consumed by their own subjects or by the Chinese?—Not quite. The profit upon opium sold for exportation is very much greater than the largest profit which we obtain on opium sold to our own people. We only sell the opium to our own people, in order to prevent them from attempting to smuggle opium and to sell it without payment of duty?”—From a fiscal point of view you ask whether it is the same if opium is exported or sold for consumption in the country. Of course the aggregate revenue received from opium exported is greater than the aggregate revenue received from opium consumed in the country; but certainly in many provinces, I should say in a large number of places, the profit per pound on opium sold for internal consumption is greater than the profit on opium sold for export. I should say that the profit on a seer of opium sold in Burma was much higher than on a seer exported to China, but it is a matter of calculation which can be worked out without difficulty. The rate of duty on opium for internal consumption varies in different provinces. In some provinces the consumption is comparatively small, and in others there are great facilities for smuggling. In those cases we do not charge so high a rate of duty as, for instance, in such a Province as Burma or Assam.

2106. (*Chairman.*) In Burma the Government have decided, have they not, to put restrictions upon the sale of opium?—There always were stringent restrictions; but, as a matter of fact, it has been decided, I do not say by whom, that the consumption of opium by natives of Burma should be absolutely prohibited. I think that measure has just come into force, making, of course, an exception in the case of persons who have been accustomed to use opium in the past.

2107. (*Mr. Wilson.*) The next question that was asked, was this: “But it has been the wish of the Government not to encourage the consumption of opium among their own subjects.” And he replied, “I do not think that the consideration has had much weight with the Government as far as I know. I think their object has been to get as much revenue out of the consumption of opium as they possibly can.” “And the Government would have been quite ready to see it consumed by their subjects as well as by the Chinese?—I do not think the Government have ever regarded the subject in that point of view, but only looked upon it in a fiscal point of view, and endeavoured to get as much revenue out of it as they possibly could.”—That is the opinion of Sir Cecil Beadon, who, no doubt, had the means of knowing what the policy of the Government was at the time; but he is giving evidence as to a state of things which has long passed. I suppose his evidence refers to what actually took place about or before the year 1860. I should say that in the past, and especially in the first instance, when the opium revenue began to be collected in this country, the point that was looked to at that time, possibly almost exclusively, was the raising of the revenue. At the same time it must be remembered that the raising of the revenue had also the effect of checking the consumption, although that may not have been the object of the Government. The raising of the revenue does not stimulate consumption: it diminishes consumption. I am inclined to agree with Sir Cecil Beadon as regards the policy of the Government some years ago, that they looked mainly to the revenue question, and that the question, whether the consumption of opium was a great evil and ought to be checked by the Government was not raised, or not raised in a form that forced it upon the attention of the Government. That would be my impression, but I have not got personal knowledge of the facts.

2108. Then he was asked, “Therefore you may say generally that your sales of opium in India as well as in China are adjusted to obtain the utmost revenue possible.” And he said, “yes.” Probably your answer would be the same?—I should say decidedly, that at present our desire is to obtain the maximum revenue from the opium consumed in India: but it would certainly be incorrect to say that that is the only consideration before the Government at the present time either as regards India or China. As regards India, as I have said, we do take special measures in provinces where the consumption of opium is believed to be

excessive. I am not at all sure now that those measures have not been carried too far, but they have been adopted to a great extent in deference to English public opinion. As regards China, the question of the opium revenue derived from the export of opium to China being under discussion, and the system being very strongly attacked by men whose opinions are entitled to every consideration, the Government has by force of circumstances rather adopted the policy of preserving the *status quo*, that is to say,—We will go on as we are, we will grow about the same amount of opium and sell it every year: we will not largely increase the cultivation, because we shall be attacked if we do so; on the other hand, we do not think it necessary to diminish it; we have adopted a middle course and preserved the *status quo* with reference to the China trade.

2109. Did I understand you to say that you thought that, probably at the time to which Sir Cecil Beadon was referring, the question of the consumption of opium as a great evil in the country had not been raised?—I will not say that the question had not been raised, but at any rate it had not been so strongly raised, or raised with such effect as to force it on the attention of the Government of India. There is no doubt that the pressure brought to bear by the Anti-Opium Association or by Parliament is very much greater than it ever was before, and that it has become a much more serious question; therefore this question of the checking of the consumption of opium has been much more forced on the notice of the Government of India in recent years than was formerly the case.

2110. Sir Cecil Beadon was asked this question; “I understand you to say that opium is grown in India simply for purposes of revenue; no moral consideration at all influenced the Government?” And his reply was: “The Government only regard opium as a means of obtaining revenue.” Then he is asked, “If, for instance, they thought they could obtain more revenue by doubling the cultivation of opium in India, they would do so, and would not be deterred from adopting such a course by any consideration, as to the deleterious effect which opium might produce on the people to whom it is sold,” and he replied, “Probably not.”—Sir Cecil Beadon no doubt had personal knowledge of the matters on which he gave evidence, and it would not be for me to contradict him as regards the times of which he spoke; but I can say confidently that no consideration of revenue would have induced the Government of India to attempt to double the cultivation of opium in recent years. I am quite certain that if the Government of India had attempted any such thing the Home Government would have prevented it—that is the India Office; and I am sure that, if the India Office had permitted it, Parliament would not have allowed it. Therefore, in fact, we never dream of such a thing as doubling the cultivation of opium. I may add that it is doubtful if doubling the production of Indian opium would increase the revenue. We should have to pay a higher price to the cultivators, and we should doubtless receive a lower price for Indian opium.

2111. You have referred to the revenue as being five millions?—The net revenue from the export in round figures is Rx. 5,000,000.

2112. Are you aware of a statement made in the House of Commons this year by Mr. Russell that that was not likely to be realized by Rx. 600,000?—It is certainly doubtful if we shall get as much as Rx. 5,000,000 this year. The amount of revenue varies from year to year. We had a bad crop this year, and had not to pay for so much opium; that is a gain, but on the other side the price has fallen. We may take it this year at five millions. It will be somewhat less unless the price rises, but probably it may be something more next year. At present the export revenue may be taken to be five millions. I would not depend on getting more than that. Of course it is liable to fluctuation; you may get a million or two millions more or less; but five millions is a very fair estimate—probably it will be something under in the present year.

2113. Mr. Russell said: “We now expect a reduction of Rx. 600,000 in the net receipts this year”—When the estimate was made for this year, we expected a rather better crop than we have got, and we expected a rather higher price than we have got. The poor crop is a gain to us for the time, because we paid less for it. I cannot give the exact figure, but probably Rx. 400,000 would be the temporary saving. On the other hand, when the coinage of silver was stopped, the price of China opium fell at once, and we lost very heavily. I think we lost Rx. 130,000 or Rx. 140,000 in one sale alone, certainly Rx. 100,000. The price has since risen, but is still much below the original estimate. Mr. Russell may have given that estimate, and it may have been a good one at a time, but it was very difficult

Sir David
Barbour,
K.C.S.I.

18 Nov. 1893.

*Sir David
Barbour,
K.C.S.I.*

18 Nov. 1893.

to make an estimate immediately after the Indian mints were closed. Possibly the revenue may be less this year by Rs. 500,000; but you may take it that Rs. 5,000,000 is about a fair average at the present time.

2114. Mr. Russell would not be likely to put forward a more gloomy prospect than he could help or than the circumstances at the time justified?—The price of opium has improved since he made that statement. I can get the figures for past years. The average used to be Rs. 8,624,000. It was afterwards Rs. 6,907,000, and later Rs. 7,000,000. The budget estimate this year was Rs. 5,970,000 including internal consumption; but as Mr. Russell stated, that probably may not be realized, by how much we cannot say. Last year the net revenue was Rs. 7,392,000, so that, in one year, there was a falling off of Rs. 1,400,000. Probably it will be a little more than Mr. Russell's estimate when the accounts are made up, but I should expect a considerable proportion of any loss to be recovered next year.

2115. (*Chairman.*) It is a very considerable reduction upon the average of the last forty years?—Five millions is much less than the average of recent years. Six millions is the total revenue; five millions from exports. In the preceding year the revenue instead of being six millions, at which I put it, was Rs. 7,392,000, and in the year before Rs. 7,155,000, and in the year before that Rs. 6,693,000, and in the year before that Rs. 7,949,000. It varies from year to year. Five millions for export on an average is a low estimate.

2116. (*Mr. Wilson.*) Are you aware that the Anti-Opium party in England have regarded the payment of any deficit that may arise as a payment that ought to be made by England as part of their policy and programme?—If measures are taken which do away with the opium revenue to any material extent. I really think that England would have to pay, and, of course, in so far as England pays, the financial objection is removed. I myself would not recommend the abolition of the production of opium, even though England were to repay every penny lost, because I do not approve of the measure in itself.

2117. That was hardly my question. I asked you if you were aware that that was part of the programme of the Anti-Opium party?—I know there are members of the Anti-Opium party who are distinctly in favour of England paying if the production of opium is abolished. I cannot say what the policy of the party as a party is; but if you say it is the policy of the Anti-Opium party that England should pay, I accept the statement. I know nothing to the contrary.

2118. In the Debate of 1891 Sir Joseph Pease, who is the President of the Society, stated that in the House of Commons?—In so far as England will meet the total loss, direct and indirect, due to any change of policy, so far the financial objection falls to the ground. There can be no question about that.

2119. (*Sir James Lyall.*) So far as it is permanently met?—Of course I mean the whole cost. There is no question about that.

2120. (*Mr. A. Pease.*) I think it is true that the revenue accounts for the last few years do not accurately represent the returns of each year, because there has been a considerable reduction of stocks; is not that so?—There has been a considerable reduction of stock; in fact there is no reserve now, I think. But the revenue accounts show accurately the amount of revenue actually received in each year.

2121. In 1888-89 there was a very considerable reduction of area under cultivation?—There was a reduction about that time.

2122. Was any compensation given to the owners of the soil or cultivators when licenses were refused them in those years?—There was a reduction in the cultivation; but whether or not licenses were refused to men who applied I cannot say: I never heard of any compensation. Nobody would think of proposing compensation for such a reduction. I was at home in England at the time, but my belief is that the reduction was made under the orders of the Government of India; but what the precise nature of those orders was, I cannot say. I may mention that had I been in India at the time, I should have recommended that the area should not be reduced.

2123. You mentioned that there was a considerable revenue to the Native States from the cultivation of opium; have you any figures you could give us upon that point?—The figures will be put in if possible. I cannot give the figures myself, but we are preparing what figures we can. No doubt the officers of the Native States will give

evidence. I think, however, they raise their revenue mainly by charging a very high rent upon the land that grows the opium. You will be able to ascertain the facts; I cannot give any definite figures myself. You will find a great difficulty in getting accurate figures, but the best information available will be obtained from the Native States.

2124. That is rent on land belonging to the Government?—It is difficult to say to whom the land belongs. The land system here is different from what it is in England. In one sense the whole land belongs to the State. I fancy all the land in the Native States practically belongs to the Government or the State.

2125. (*Sir James Lyall.*) In theory?—In theory. The cultivators have certain rights: that is to say, as long as they pay their rent, they have the right to cultivate.

2126. (*Mr. A. Pease.*) Have you any information with regard to the revenue obtained by the Chinese Government from the import of opium?—It must be very considerable, but I cannot give you the figures. I think they charge 30 taels as import duty, and I think they charge about 80 taels as a consolidated likin duty. You can easily get the figures with regard to the import.

2127. Have you any information with regard to native-grown opium?—I have none, and I doubt if you can obtain it. I have always understood that the Chinese Government get a larger rate of revenue from the imported opium than from the native-grown opium, and I have further understood that the Central Government had a difficulty in getting into its own hands the revenue collected on the opium grown in China, because the money had to pass through the hands of the local Governors, and they appropriated as much as they could of it for the purposes of their provinces. I have no knowledge as regards the actual amounts.

2128. In your view the consumption of opium is harmless in by far the majority of cases. Under these circumstances, do you think it is the right policy of the Government of India to discourage the consumption of opium?—It is certainly the right policy to discourage to a reasonable extent any immoderate use of opium. It is a drug that is undoubtedly liable to abuse.

2129. (*Mr. Fanshawe.*) In answer to Mr. Wilson's questions as to the Government of India regarding the production and sale of opium, so far as the people are concerned, as solely a matter of revenue, do you intend it to be understood that the moderate and beneficial use of opium has never received consideration on the part of that Government?—Of course it has.

2130. I understood you to say in answer to Mr. Wilson that you admitted that in the past the Government had looked on the question entirely as a matter of revenue. I would ask you whether that is your meaning,—that the moderate and beneficial use of opium by the people has not also received consideration, at any rate of late years, by the Government?—I understood Mr. Wilson's question to refer to the state of things disclosed by the evidence of Sir Cecil Beadon. Sir Cecil Beadon was an official who had special means of knowing, and I apprehend his answers with regard to the time to which they referred, and so far as his experience extended, were correct. But it is certainly the case that moderate and beneficial use of opium has been brought to the notice of the Government in recent years. Formerly, I do not think the case was inquired into. I must say that until the last two or three years, I myself was not aware of the extent to which opium was consumed in moderation with beneficial effects: but on inquiring into the subject, I have been surprised at the amount of evidence forthcoming to show that it is consumed in moderation and with beneficial effects.

2131. May we take it that it has received the consideration of the Government in recent years?—Yes; of course every branch of the subject has received consideration of late years. But I think I may say that I, like other European officials, started with a very decided prejudice against opium, and that when I came to this country I, like many others, thought the consumption and production of opium was one of the greatest evils in the world. But now, however, I have honestly and fairly come to the conclusion, and specially within recent years, that I had greatly exaggerated the evil. That there are evils from the improper and excessive use of the drug I do not deny.

2132. (*Sir James Lyall.*) In answer to Mr. Wilson's question about Sir Cecil Beadon's evidence, you admitted that probably he correctly described the policy which had existed down to about 1860. Sir Cecil Beadon's knowledge on the subject, I suppose, was confined to Bengal, but my recollection is distinct that in the Excise Manuals, which were issued in Northern India, under the name of

Thomason's Directions to Collectors, and in the circulars which were issued by the Punjab and North-West Provinces Governments long before 1860, the moral obligations of so managing the internal sale as to check the consumption of opium in India was plainly asserted. Have you ever had to refer to these manuals?—Never, and these manuals would not come before me in the course of business. Sir Cecil Beadon's experience would no doubt be mainly, perhaps entirely, confined to Bengal; but in so far as he spoke of matters coming under his own observation, I think his evidence is as good as that of any other person; it is impossible that he could speak with equal authority as regards

the North-West Provinces or the Punjab. So far as his personal experience went, there could be no better authority.

(*Chairman.*) It remains for me on behalf of the Commission to thank you very much for your attendance and for the very clear manner in which you have made us acquainted with your views. There is only one part of your evidence to which, in closing, I should refer, that is the statement that you are about to leave this country. I am quite sure that the Government of India will sustain a great loss in your departure, and I am none the less clear that we at home shall greatly gain by your presence among us.

*Sir David
Barbour,
K.C.S.I.*

18 Nov. 1893.

The witness withdrew.

Surgeon-Major-General RICE, C.S.I., called in and examined.

*Surgn.-Maj.-
Genl. Rice,
C.S.I.*

2133. (*Chairman.*) You are at the head of the Indian Medical Department?—Yes.

2134. I understand that you have been a member of the Indian Medical Service, Bengal establishment, for thirty-seven years?—That is so.

2135. During thirty years of that time you have been employed as a Civil Surgeon in the Central Provinces?—Yes.

2136. And about twenty-eight years you have been in medical charge of District and Central Jails?—Yes.

2137. For the last twenty-two years you were in charge of the Central Jails, and for several years you were Superintendent of Jails?—Yes, as well as in medical charge.

(*Chairman.*) It is evident that you have had great opportunities of gaining professional experience with reference to the questions referred to us. As we have the great advantage of the presence of an eminent member of your profession on the Commission, I will ask him to conduct the examination on the medical points on which you are prepared to give us information.

2138. (*Sir William Roberts.*) I think it was your duty to examine the state of health of the prisoners that came into the jail?—Yes, every prisoner that came into the jail was brought before me for that purpose.

2139. What was the number?—The average number of natives passing through the jails in the year was about 1,300 or 1,400.

2140. You had this charge for a large number of years?—I should say twenty-eight years.

2141. What was the social condition of the prisoners?—Being mostly of the criminal classes they had no social position.

2142. You were dealing not only with the lowest kind of criminal classes but those in the worst possible state of health?—Yes, it was always my duty to examine into the state of health of every prisoner on coming into the jail and when he was discharged. I estimate that about 1,300 or 1,400 prisoners passed through the jail every year on an average. For the 22 years that I was in medical charge of a central jail, it was occupied by long-term prisoners from eight civil districts. In those days prisoners were transferred without any regard to the state of their health, so that I was dealing not only with the lowest kind of criminal classes, but with those in the worst possible state of health, for which with them the standing means of relief was opium. Being medical officer I was held responsible for any undue sickness and mortality that occurred, so that it became imperative on me to appraise carefully the state of health of every prisoner on admission, and, by a personal examination of every one of them at least once a week, to see how they kept their health during their imprisonment. So that I came, for a long series of years continuously, to be intimately acquainted with the health-characters of a not inconsiderable body of individuals who from their mode of life are most prone to become addicted to the abuse of opium.

2143. What do you mean by saying that they were a body of individuals who from their mode of life were most prone to become addicted to the abuse of opium?—The lower classes of India, speaking generally, become criminals when they are unable to earn their livelihood. The more general cause of their inability arises from sickness and the effects of a malarial and tropical climate on the human constitution. Then they naturally fly to this drug, which is more or less at their hand. It was an important part

of my inquiries to ascertain the extent to which they were addicted to the use of it; for several reasons, one of which was to enable me to determine the nature and extent of the labour which should be allotted to them in each case, a duty which in all cases rested with me; and also to enable me to advise the Magistrate as to the degree of culpability attaching to the prisoner when he failed to perform the full task awarded. I may explain that when a prisoner failed to complete his allotted task he had to undergo a trial, and he was punished if it was found that he failed through carelessness or culpability of some sort. From my general knowledge of the people, as well as of these prisoners in particular, I became impressed with the fact that, when deprived of his daily dose of opium, a man habituated even to the moderate use of it would fail to complete his full task, and in consequence it devolved upon me to state whether I thought this occurred from the above deprivation or from a vicious perverseness in the individual. In common with tobacco, alcohol, hemp drugs, luxuries in diet, etc., opium was forbidden as an article of ordinary use, under the prison rules.

2144. Except for medical use?—I was always at liberty to prescribe it medically. It is a fact of which I have no doubt whatever that never from the very first years of my service did I recommend opium to be given to a prisoner as a special case in the form in which he had used it when free. That did not prevent my giving it in an ordinary pharmacopœial form if I thought he required it. As far as I can estimate, I should say that in no more than two cases in the year were men imprisoned who were suffering from the abuse of opium, and in those cases I was able to satisfy myself that this abuse was owing to pre-existing disease.

2145. That is, out of the 1,300 or 1,400 cases annually passing through your hands, you only saw two or three per annum who seemed to be suffering?—Two or three. In most of those cases the men had been previously suffering from repeated attacks of malarial fever, or dysentery, or diarrhoea, or severe rheumatism—diseases which are very prevalent in the provinces in which I served at the time,—the Central Provinces. In the Central Provinces, malarial fevers with severe ague and dysentery and diarrhoea, and, I should add, rheumatism, are diseases with which the people are afflicted. In these, muscular pains, nervous irritability, griping, and tenesmus are common and persistent, symptoms causing an amount of depression and inability to exert oneself that can only be appreciated through actual suffering.

2146. I presume that your experience is entirely confined to the Central Provinces?—During the last six or seven years, since I have come into the administrative charge, my experience has been extended beyond those Provinces. I have experience in the North-West Provinces. It may, I think, be safely stated that not ten per cent. of the population all over India ever consult medical men of any nationality practising the European system of medicine.

2147. Nevertheless, I presume there is a dispensary system?—Yes, there is a large and extensive dispensary system. There is a strong prejudice against the European system of medicine, and I think I am right in saying that not twenty per cent. of the population ever see a medical man practising on that system. Practically, therefore, the great majority of the population are beyond the reach of such advice. The consequence is that either they consult Hakims or Vaidis who invariably administer opium for these torments, or they have discovered its beneficial effects, and take it themselves. They soon have to take to it regularly, for these pains are ever present in one form or another and seriously hinder the people in their work. The

*Sarim-Maj -
Genl. Rice,
C.S.I.*
18 Nov. 1893.

effect in such cases is magical: a man literally disabled from these ills, after a dose of a quarter or half a grain of pure opium, in a few minutes begins to become a new man, and is able to do a full day's work. He knows that if he cannot do this he and his family must starve. Even in the cases of Europeans who do not suffer anything like the hardships and exposure natives do, this drug is often called for, and in my hands has been equally successful. When the European gets well he stops the drug and, as the causes of his ailments which obliged him to resort to it are in his case only occasional, he is not called upon to recur to the use of it soon again. Not so the native: he is always exposed to these causes and the results never leave him, and as, for the reasons I have above stated, the use of opium is the only relief available, he must resort to it continuously or die prematurely of disease or starvation. Taken in small quantities—

2148. What do you mean by small quantities?—Probably about half a grain. When the native takes it to relieve his pains on beginning to work in the morning, he takes a little pill about the size of half a grain. That is the form in which opium is taken—a solid form—under the name of madak. From long experience he takes a little pill, and he probably measures it out most accurately—half a grain, or a grain if he is one of those who require more.

2149. How many times a day will he take it?—I cannot say accurately. He will take it as often as he wants it.

2150. Do many take it half a dozen times a day?—Yes, just as one man may take half a dozen cigars while another will only smoke two. Taking it in small quantities,—and, as a rule, it must be in small quantities, for opium is dear and the native too poor to indulge in it unnecessarily,—the individual leads a healthful and if not a vigorous or robust life, certainly one in which he is enabled to maintain himself and his family in tolerable prosperity. In these remarks I am dealing with what is called the bulk of the people. I do not profess to describe what a wealthy native gentleman would be. I am talking of the poor people with whom professionally I have most been brought in contact.

2151. All the evidence you are giving bears on the habit of taking opium in malarial districts among the lower classes who are really suffering under what one may call a malarial constitution?—Quite so. But a small percentage suffer so severely from the effects of the diseases I have named that they must resort to the drug in steadily increasing quantities, and I presume it is from those individuals that pictures of the injurious effects of opium are drawn.

2152. Is it your suggestion that dysentery, rheumatic conditions, diarrhoea, and malarial trouble increase in some cases in spite of the opium?—Yes.

2153. Therefore they take it more and more?—Yes, they increase the dose according as the effects of the disease become more severe.

2154. It is your suggestion also that if they were not to increase the dose they would be in a still worse plight?—Considerably, certainly.

2155. That is distinctly your suggestion?—That is distinctly my suggestion.

2156. The unconscious exaggerations and pictures of the effects of opium taken in excess have been somewhat misinterpreted?—They have no general applicability.

2157. In spite of the opium?—In spite of the opium.

2158. If a man is suffering from malarial disease or organic disease tending to go from bad to worse, if he takes opium for the relief of suffering his disease will go on and he will have to increase the opium, but the symptoms are the symptoms of the disease and not of the opium that he takes?—That is my experience.

2159. You do not seem to have had any experience of the opium habit except in the case of persons suffering from some ailment—no experience of the habit among perfectly healthy people?—I do not think I can say that, because a number of those persons had the appearance of being perfectly healthy. They may have had attacks of malarial fever and dysentery; still I could not pronounce them unhealthy.

2160. You still think that the malarial influence is about them?—Those diseases suggest the use of opium. I think it may be stated that there is no native of India who does not at one time or other suffer from malarial intermittent fever,

2161. You make so general a statement as that?—I think there is no native of India who does not at one time or other suffer from malarial intermittent fever.

2162. Have you ever been to Rajputana?—No: I do not know anything about it. I am talking of the Central Provinces, except for the short time I was in the North-West. They are a malarial people in the Central Provinces, and they also suffer severely from dysentery, diarrhoea, and rheumatism. Without this remedy at their hands and readily accessible, the sufferings of the people would be very great. As I have stated above, it may be accepted that medical relief for the great bulk of the people is non-existent, and I regard it as most providential that such a remedy as opium is within their reach.

2163. You are aware that a new plan has been introduced for supplying quinine?—Quinine will not cure dysentery or diarrhoea, and the charge is so high for it that it is a good deal beyond the reach of the poorer classes of the people even at 3 pies a dose. A man with an attack of intermittent fever has to take at least three doses a day for four days, and perhaps one dose a day for eight or ten days subsequently. Then he may not only have to procure it for himself but for his wife and all his children. It is not uncommon to see a whole household down with intermittent fever at one time. Quinine is a good deal beyond the means of the very poorer classes, in Bengal especially.

2164. Am I to understand that, dear as opium is, an effective dose of it is cheaper than an effective dose of quinine?—It is cheaper for a great number of diseases. It is practically of no use as a curative of intermittent fever. Bearing in mind that there are a number of diseases the painful effects of which it relieves, besides malarial fever, it is more generally useful.

2165. (*Mr. Fanshawe.*) You know that the system of selling Government quinine at post offices has been introduced?—I know it in Bengal. To be of any use you must give three doses of five grains a day for four days.

2166. The system has only just been introduced?—I am aware of the circumstances.

2167. (*Sir William Roberts.*) You know that the demand for it is much increasing?—Yes, I admit that. Although there are a number of people too poor to buy it, there are a number who would be only too glad to get it.

2168. Opium is still cheaper than quinine?—Practically, because I have an idea that a good deal of opium is used in India that has not paid revenue; therefore they get it cheaper. The recollection is familiar to me of prisoners declaring that their inability to perform their allotted tasks was owing to their being deprived of their small daily dose of opium. It was also well recognized among the jail officials that, no matter how successful they may be in excluding tobacco, spirits, or other forbidden articles, they were never sure of being able to keep opium out of the jail. Most people believed that, owing to its small bulk and the ease with which it would be concealed, it was constantly being smuggled in and in free use among the prisoners.

2169. That is your experience with regard to prisoners mainly?—Yes.

2170. But your experience is wider than that?—In singling out my experience among prisoners, it must not be understood that my experience lay altogether among persons of this class. It should be recollected that during all the years named above I have had to deal with native infantry and cavalry soldiers, policemen, and some hundreds of thousands of patients resorting to charitable hospitals and dispensaries.

2171. All those cases were within those malarial districts?—Yes.

2172. You have spoken of soldiers. Have you had experience of Sikh regiments?—I have never had a Sikh regiment.

2173. Your general experience among the native infantry soldiers, policemen, and patients in hospital confirms your views with regard to the effect on the prisoner?—Quite so. My general experience with the latter classes confirms me in my opinions as to the mode of use and effects of opium among the former. It should also be recollected that there is a sort of popular idea among Government officials of all classes and nationalities that any unusual slackness or inactivity in the performance of their duties, or sickness, the prominent signs of which was lethargy, on the part of their subordinates, was due to the abuse of opium, or to an occasional debauch with it. In consequence it was a common occurrence with me to have my attention directed to the possibility of this being the cause

of the individual's temporary incapacity. But the result of my inquiries was just the reverse: the sluggishness was due to his inability from one cause or another to procure his usual dose.

2174. Your impression is that it was the secondary effect of opium rather than the primary that was the cause?—Yes, it was the secondary effect—the want of the accustomed stimulant.

2175. It has been brought before the Commission by several witnesses that it is a marked peculiarity of opium as compared with other dietetic stimulants that the want of the dose is more severely felt than in the case of alcohol and tobacco?—That has been my experience.

2176. Much more pronounced?—Much more pronounced. I am talking of the generality of people who use opium. There are exceptional cases, but, ordinarily speaking, a man can more easily go without alcohol and without tobacco than he can without opium.

2177. I suppose you have no suggestion to give us why that should be the case?—I have not.

2178. You take it as an ultimate fact?—I take it as a fact, but I can offer no reason.

2179. Suppose you had a prisoner who had been an opium-eater and unable to perform his allotted task, how long would his inability continue—his inability for the want of his customary stimulant?—That is so uncertain that I could not give an answer.

2180. A week?—It is too conjectural for me to give an answer. I do not know.

2181. How soon would a man recover?—I could not say. Men are different. It would vary. Perhaps one man would take a week and another a month.

2182. But he would recover?—Yes, he would recover; and if I could only be sure that he did not get opium surreptitiously I should say that he recovered from withholding it from him. But I was never sure that he would not get his dose surreptitiously. The improvement in jail in a great many cases was due to regular habits, regular diet, regular clothing, and no excessive work.

2183. The habitual use of opium did not seem to produce permanent damage?—No; I mean, of course, in the generality of cases among the great masses of the people.

2184. I think you stated that the alleged causes of insanity from opium in asylums are few, and that even when those few have been inquired into, they have broken down?—Yes. I was twenty-two years medical officer and superintendent of a lunatic asylum.

2185. As far as your personal experience goes, people in these malarial districts take to opium first as a remedy rather than protective?—Quite so.

2186. And perhaps, in some cases, from the increasing stress of their ailments, they take it so that it becomes an evil; the opium itself is taken in such quantities that they suffer from the opium as well as the disease?—Only in those few exceptional cases that I mentioned in regard to the prisoners, not the general body; they do not suffer until old age comes, when they suffer in common with other people.

2187. I suppose you are aware that the doses you have told us about are very small as compared with the dose of many opium-eaters?—Of course, but they take it several times a day; how often I cannot say; I have no personal knowledge of that.

2188. Three to five grains a day?—Probably, but I have no personal knowledge, and I do not wish to state anything that I do not know personally. One of the reasons I had for mentioning these details is to show what means I had, or was obliged to resort to, of ascertaining the effects of opium on the people as it is used by the great masses of them. If such use of it as they now resort to were even restricted only, it would be productive of a considerable amount of suffering from the consequences of residence in malarial tropical climates, for which I know of no other single remedy, of the nature of food, drink or drugs, that could be substituted for opium. Quinine, besides being expensive, is useful only in malarial fevers, and has little or no effect in relieving the torments of dysentery, diarrhoea, rheumatism, etc. It will be noticed that on the maxim that "two wrongs will never make one right," I abstain altogether from defending the use of opium on the grounds that it is not nearly so demoralizing as alcohol, and that we should look at home (I mean England) as to the effect of the latter before going abroad to trouble ourselves with the former. I do not look

upon this as at all a satisfactory line of argument. To me it appears that the fact of our not being able to prevent the abuse of alcohol is no reason at all why we should leave opium alone, if it is anything like so destructive, physically and morally, as it is represented to be.

*Surgn.-Maj.-
Genl. Rice,
C.S.I.*
18 Nov. 1893.

2189. I presume that you must draw a distinction between the use of opium as it occurs in these districts, which is scarcely more than medicinal, and the cases we hear of persons taking opium in very much larger doses, not for any disease but as a dietetic stimulant?—Certainly, I recognize that difference.

2190. May I assume that you really have had no experience of the effect of opium when used as a dietetic stimulant in healthy persons?—I should not say that. My idea was that, although they used it as a dietetic stimulant, they selected it because of the relief it gave from the pains and torments I have described.

2191. They really take it for medicinal purposes?—Yes, if you choose to put it in that way.

2192. You would not say that of the Chinaman who takes his opium pipe?—How can we say that the Chinaman does not take it under the same influence as the Indian does and for the same purposes?

2193. You do not recognize the use of opium as a dietetic stimulant in the same category as tobacco and alcohol—not taken for disease, but as a pure restorative, or comforter, or stimulant?—That is a question that requires a good deal of consideration. I am not at all sure that either alcohol or tobacco is necessary as a dietetic stimulant.

2194. Not necessary, but they are taken by millions?—They are taken by many, but the question is whether, instead of calling them dietetic stimulants, they are not taken to relieve malaises and discomforts which may or may not arise from dietetic errors. Why should we not say that people take tobacco or opium from causes which are pretty much of the same nature as those resulting from residence in a malarial climate, such as the discomforts attendant on some derangement of the health? A man takes a cheroot after breakfast.

2195. But he is not ill?—He may have dyspeptic feelings and be uncomfortable.

2196. You scarcely recognize alcohol and tobacco as a comforter for perfectly healthy people?—Why do they resort to them?

2197. Because they get comfort?—What do they want comfort for?

2198. There is nothing in the world that we look for so much as comfort?—But something must create the want.

2199. The man wants it to promote an enhanced sense of well-being?—If he is a perfectly healthy man, he has as much well-being as is good for him. I have seen it stated that the natives of India are by nature much more tolerant of the action of opium than those of China or Upper Burma. I really believed this is only a general popular notion for which there are no substantial or rational grounds, except the one that Indians have been accustomed to opium from time immemorial, and in their case a constitutional tolerance may have been developed. I have no experience with Chinese, but I have had a goodly number of Burmans under my medical charge in jail, and I did not perceive any more or less toleration of the drug when administered medicinally on their part as compared with the Hindustani prisoners. Besides, I have satisfied myself in my professional practice that Europeans are more tolerant—*i.e.*, require larger doses of opium—than natives, bulk for bulk. Yet the former have acquired no tolerance of it as a race. It may be said that the Indians having been accustomed to the use of opium from time immemorial, a constitutional tolerance may have been developed in the course of ages; but this cannot be said of the Europeans.

2200. You say that Europeans require a larger dose?—I have found it so,—to produce the same medicinal effect. I mean that to produce the same effect from a medicinal dose of opium in a European you would have to give a larger quantity of it than you would to a native; and it may be said in answer to that, that it is because the European has acquired a tolerance of it; but we know he has not acquired any racial tolerance.

2201. Do you mean that the tolerance was there before,—that the European came into these malarial districts with that tolerance?—What I wish to say is that the Europeans have no tolerance of opium—no more tolerance than a native, although they require a larger dose to produce the same effect. I will put it in this way. A European requires a larger dose

Surgn.-Maj.- of opium than a native to produce the same effect.
 Genl. Rice, It may be answered, then, that the European has acquir-
 C.S.I. ed a tolerance; but it will be generally admitted that
 18 Nov. 1893. Europeans have not acquired a tolerance as a race.

2202. Is it a congenital tolerance?—Yes; and the point of my remark is that if Europeans require a larger dose, or take a larger dose, of opium to produce the same effects, and they cannot be said to have any tolerance of it, so also the Indians may be said to have no tolerance, although they may take a larger dose as a race. The point I want to show is that the Indian is not more tolerant of opium than a Chinaman or a Burman.

2203. With regard to the medicinal use?—Yes. In this connection it may not be amiss if I mention that in the early years of my professional practice I learned that to produce the full beneficial medicinal effects of opium, much larger doses of it were necessary than is laid down in books or than were prescribed by my brother medical officers in India. As time and experience gave me confidence in this direction, I became what may be called a fearless prescriber of the drug; doubtless timid persons would describe me as a reckless one. But this never deterred me; it was sufficient encouragement to me that my patients got well of their diarrhoea and dysentery within short periods. My practice lay in districts where these bowel complaints are yearly very prevalent and very fatal, being especially harmful to young European children. They occurred mostly in the rainy season—a time when the rivers being in flood there was no getting away from them for change of climate as can be done now with so much facility in these days of railways. I enter into these otherwise trivial details in order to convey some idea of the extent to which I became familiar with the various uses and effects of opium, and of the yeoman's service it did me during thirty years of extensive professional practice.

2204. Has it not struck you that your experience of a more fearless use of opium was due to the fact that you were practising in malarial districts, and that the people were more tolerant?—It may be so. In regard to young children not more than a year old, of course I do not say that they might not come under the malarial influence too; it may be so—I do not deny it.

2205. You never have prescribed opium except for a complaint?—No, never.

2206. Therefore it might have been a complaint touched with malaria?—Yes.

2207. That may be the explanation?—It may be so.

2208. With regard to the whole of your experience it seems to be an experience in the medicinal effect of opium and not in the effect of the opium habit?—It is none the less a habit, although it may be acquired from being taken medicinally.

2209. It seems in your experience to be connected with illness from malaria, or malarial influence?—I believe that is the first thing that induced the people to take it. There is one other fact I ought to mention, and that is the habit of mothers among the poorer classes in India giving a little opium pill to their children when they have to leave them to go about their household duties, or go away from their houses for any little time. They have no nurses or other people to look after the children in their absence, and if the children are awake they wander about and tumble into wells, or have some other mischance. The mothers give the children this little pill of opium to keep them quiet during their absence. Probably in that way they have acquired the habit of taking opium in their childhood.

2210. Have you any idea of the quantity given under those circumstances?—It looked about the size of a pill, one-eighth grain of pure opium. I may also tell you that the opium these people use is largely adulterated. It is mixed with foreign substances, probably of a harmless nature.

2211. (Mr. A. Pease.) I understand it to be your view that there is no more necessity for Indians to consume opium than for Europeans?—A greater necessity for Indians.

2212. Under the same circumstances?—They are not under the same circumstances.

2213. You say the natives are more susceptible to the influence of opium than Europeans, that is, a smaller dose will produce the same effect upon an Indian, bulk for bulk?—Yes, given medicinally.

2214. (Mr. Wilson.) I notice that you have expressed a certain amount of disagreement with some of your professional brethren in your early years with regard to the use of

opium. Does that difference of opinion continue?—I cannot say that I have spoken to my professional brethren upon that point. I do not think I have any experience which would justify my giving an answer one way or the other. I have not made inquiries; but it is a curious fact that one medical officer, speaking to me yesterday, mentioned that he also had found it necessary to prescribe larger doses of opium in this country than were prescribed or laid down in the Pharmacopœia.

2215. (Sir William Roberts.) Where was his experience gathered?—He was in Calcutta chiefly.

2216. (Mr. Wilson.) You have expressed some little difference of opinion as to practice from some of your professional brethren; does that difference of opinion continue?—I cannot say.

2217. Do you know Russell's book on malaria which relates particularly to Assam?—I have heard of the book, but have not read it. I have never been in Assam.

2218. Dr. Russell uses this language: "The opium-eater enjoys considerable immunity from malarial affections in the early stage—the first few years of indulgence in the habit before the organic visceral changes are set up, and the general shattering of constitution results, which prematurely break down the consumer of opium, and render him an easy prey to diseases of every kind"?—My experience does not coincide with that. In my opinion the disease from which the man suffered arose from other causes,—from climatic causes in spite of the opium.

2219. Then Dr. Russell deals with prisoners in jail. He says—"No work can be got out of a long-confirmed opium-eater. He can digest nothing but light food—milk or soups. On ordinary diet he suffers from diarrhoea, tending to rapidly run to dysentery. His system has very slight heat-making power, he is extremely susceptible to any changes of temperature, and cannot stand cold; he thus is specially liable to both chest and bowel disorders."—I have no experience of that in the Central Provinces.

2220. (Dr. Russell further says): "The emaciation of the opium-eater is characteristic and extreme. Eventually after having been a source of infinite care, after repeated courses of medical and dietary treatment, after having caused large expenditure in sick diet, extras, etc., he perishes, usually of a chest or bowel disorder, or, perhaps, from practical starvation from eventual inability to digest any kind of food, even the lightest and most delicate"?—My experience in the two or three cases *per annum* which I have mentioned always enabled me to detect the disease as the cause of death, and not the opium habit. The disease went on and progressed to a fatal issue, in spite of the use or abuse of opium. It was the disease that killed the man, and not the opium. I differ from the conclusions drawn in that book.

2221. Further on it is said—"The observations of several surgeons, of extensive experience in opium-eating regions, confirms the popular belief that the opium-eater, in the early stages of the habit, while as yet not constitutionally broken, by its long continuance, does, as a matter of fact, enjoy considerable immunity from malarial affections." It would appear from the whole tenor of this that Mr. Russell thinks that in the earlier years of a man it affords some relief, but that afterwards it breaks him down, and, I take it, leaves his later state worse than his first?—He and I are in agreement, until the disease has so far made progress that the man gets worse and dies in spite of the opium. I say the man dies from the disease; he says he dies from the opium.

2222. (Mr. Haridas Veharidas.) You say that the prisoners were not allowed to take opium?—No, it is prohibited according to the jail rules.

2223. Did you give them something instead until they got rid of the habit?—No, except in the case of these two or three men a year, who, I found, were extremely weak and suffering from the abuse of opium. I treated them for the specific ailment from which they were suffering, which was generally bowel complaint, chronic diarrhoea, or chronic dysentery. I am bound to add that opium entered largely into my treatment of their cases.

2224. When they got rid of the habit in jail, were they as healthy and strong as those who entered the jail not taking opium?—They were not so healthy and strong because they were constitutionally weak and feeble from pre-existing disease. But I was never sure that they were not getting opium surreptitiously through the prison warders. I could not give a positive answer, because there was always a suspicion that opium was being surreptitiously introduced.

2225. (*Mr. Fanshawe.*) You spoke of the malarial districts. I think you have had experience in eight different districts in the Central Provinces?—I was referring to the eight districts from which the prisoners were transferred.

2226. You spoke of malarial districts?—Not particularly malarial districts, but having the ordinary surroundings of malaria which are so common in this country. You meant it in that sense?—In that sense.

2227. All the districts of which you have practical experience in the Central Provinces?—Yes.

2228. Has it been your experience that opium-eaters who live in these malarial surroundings continue the habit which you describe without a tendency to increase the dose largely, or to increase it at all?—I am not sufficiently acquainted with the quantities they take to enable me to give an answer from personal observation. It is generally understood that they have to increase the dose; but I have no personal knowledge whether they do so or not.

2229. You state as the result of your experience that a moderate use of opium in these districts is, to some extent, general among the people?—Yes.

2230. That is what I understood to be your meaning?—That is my meaning.

2231. That the moderate habit of eating opium among these people is fairly general and well established?—Quite so.

2232. (*Sir James Lyall.*) As you have had some administrative experience, you may be able to answer the question I am going to put. You have said that opium is greatly used as a medicine and stimulant by the people of India. Can you conceive any practical system whereby opium could be provided all over the country for medical purposes without facilitating or allowing its use as a stimulant or an intoxicant? Can you conceive any system by which it could be done?—As far as the Medical Depart-

The witness withdrew.

Adjourned to Mouday, the 20th instant, at 10-30.

At the Council Chamber, Writers' Buildings, Calcutta.

EIGHTH DAY.

Monday, 20th November 1893.

PRESENT:

THE RIGHT HONOURABLE LORD BRASSEY, K.C.B. (CHAIRMAN, PRESIDING).

SIR JAMES B. LYALL, G.C.I.E., K.C.S.I.
THE HON'BLE SIR LACHHMESWAR SINGH BAHADUR,
MAHARAJA OF DARBHANGA, K.C.I.E.
SIR WILLIAM ROBERTS, M.D.
MR. R. G. C. MOWBRAY, M.P.

MR. A. U. FANSHAWE.
" ARTHUR PEASE.
" HARIDAS VIHARIDAS DESAI.
" H. J. WILSON, M.P.

MR. J. PRESCOTT HEWETT, C.I.E., *Secretary.*

Bishop J. M. THOBURN called in and examined.

2238. (*Chairman.*) Will you kindly state to us your profession and occupation?—I am a Missionary. At present I am Bishop of the Methodist Episcopal Church for India and Malaysia.

2239. How many years have you been in the East?—Thirty-four years.

2240. In what part of the East have you had personal experience?—Only in India and Malaysia.

2241. In what parts of India?—In all parts; my present duty is to superintend all the missions of our church in the Empire. We have missions among thirteen different races, and I am expected to visit all these sections every

ment in India is concerned it is impracticable. The agency *Surgn-Maj-Genl. Rice, C.S.I.* is not sufficiently extensive.

2233. Would the agency be trustworthy?—The bulk of the agency would be untrustworthy. The temptation to sell or to make use of it privately would be too great. 18 Nov. 1893.

2234. (*Mr. Wilson.*) There has been some evidence that the opium is sometimes, or frequently, taken for the purpose of exciting and stimulating sexual passion: do you know anything about that?—I have no knowledge of that from personal statements by patients. A man in my position is not likely to come into relations of that sort as regards the use of opium for stimulating the sexual passions on the part of the natives. I have no experience of that. I have heard it said, but I have no experience.

2235. (*The Maharaja of Darbhanga.*) You have said that one of the reasons why people in the malarial districts take opium is that the Hakims and Vaidis, their practitioners, are in the habit of prescribing opium for diarrhoea and dysentery; and you consider that opium is the cheapest medicine? Do you not think that there are other medicines besides opium,—more popular ones,—which are admissible for diarrhoea and dysentery, vegetable substances?—Those vegetable substances prescribed alone are not nearly so efficacious as when a little opium is added. I do not say that opium was the only thing prescribed.

2236. Do you not think that generally in cases of diarrhoea and so on the Hakims and Vaidis prescribe more of vegetable extracts like the bael fruit?—Undoubtedly they prescribe bael fruit, catechu, and kino. Other indigenous astringents are prescribed moderately. They also prescribe opium. I did not say that it was the sole drug.

2237. Do you not think that bael fruit is more popular and more usually prescribed in cases of diarrhoea and dysentery than opium?—It is very popular; but my experience is that it is not nearly so efficacious as when prescribed with opium added to it.

Bishop J. M. Thoburn.
20 Nov. 1893.

Bishop J. M. Thoburn.
20 Nov, 1893.

In my early life I was constantly among the people, spending a great deal of my time in the villages, making tours among the villages and towns, and I think I enjoyed the confidence of the people sufficiently to have the opportunity of understanding their views and feelings upon public questions generally.

2245. What were the conclusions at which you arrived with reference to the opium question?—In the main I have for many years been convinced that it is a very great evil; not so much, however, to India as to China. I have had opportunities of seeing this at Singapore and Penang, where the Chinese population is in the majority. In every place I regard the opium habit as a very bad habit and very dangerous to those who indulge in it; but it is very much more hurtful among the Chinese than it is among the people of India.

2246. You would not say that the opium habit exists to such an extent in India as to cause what you might call a general demoralization and degradation of the people?—In many parts of India they do not use opium at all. I have been in provinces where I never met a man who used opium; in other parts it is a very prevalent vice. It is worse in Rajputana and in parts of the Punjab than it is in Rohilkhand; while in Kumaun and Garhwal I never met a case. Although there might have been some there, I never met them.

2247. Take the Punjab. Is the condition of the people physically and in general ways otherwise than satisfactory?—Their physical condition is very satisfactory, unless they are victims of this or some other habit. The Punjabis are a very fine race.

2248. They compare favourably with the populations of other parts of India where the opium habit does not prevail?—They are a finer race naturally.

2249. What would you say of the people of Rajputana as compared with other races in other parts of India?—The lower classes of Rajputana are an inferior class. There are many classes in India; and sometimes living in the same village or in the same city, you will find one class who make a very fine appearance, and another class who appear to much less advantage. The lower classes of Rajputana I have generally found a very inferior class.

2250. Is the opium habit as generally prevalent among the people of Rajputana as it is among the people of the superior classes?—I think it is more so.

2251. Have you anything to say to us with reference to the hold that the opium habit gains upon people?—There is a very great difference in individuals. Some people, apparently, can use opium and give it up again without very much trouble; with others, however, it is nearly impossible to give it up. Among the Chinese beyond a doubt it has a fascination that is peculiar. Intelligent Chinese have told me down at the Straits that it has a fascination for their race that alcohol has not. Still, among the people of India, there are also a very large number who cannot give it up without extreme suffering. An ordinary opium-user, after he has become confirmed the habit, is simply terrified if you propose to put him in a place where he cannot get opium.

2252. Is there a marked difference between moderate and excessive consumers; and can you form any judgment as to the proportion which the excessive consumers bear to the total number of persons who make use of opium?—It would be very difficult to form an estimate, but as a general rule you can tell when a man begins to use it to excess. He shows it on his countenance very quickly. It would have to be a mere guess if I were to be asked how many do use it to excess. I should say that among those who have money enough to get it, at least one-half would use it to excess, and among the poorer classes about one-tenth.

2253. Can you tell us what proportion of their income the habitual consumers spend on opium?—The very poor people spend about one-eighth; that is, the minimum which a labouring man uses,—one pice a day. The maximum sum that a man belonging to the labouring class who has become a habitual user of it would spend would be four pice a day. These men earn from eight pice to twelve pice a day. At the lowest a man spends one-eighth of his income on opium. The highest labouring classes spend from one-third to one-half: it is very common to have them spend one-half. Then as he earns only, say, three annas a day at the highest, in my opinion one of the very worst features of the opium habit is that it starves the children. There are from forty to fifty millions in the Empire who have insufficient food as it is.

When you take one pice out of the earnings of a man who only gets eight pice a day, and who already has not enough for his family, you must cause suffering among the children. I think that the worst evil of the habit to-day is that it is starving millions of the children of India.

2254. Would that apply to the district of Rajputana more particularly?—It does apply to Rajputana to my certain knowledge.

2255. What would you say about the Punjab?—Much the same among the poorer classes. Those classes in India which we call the "depressed classes" are the same in all parts of India.

2256. Can you give us a general view as to what in your experience are the results of the opium habit,—whether viewed physically, mentally, or morally?—Physically, where it is used at all to excess, it undoubtedly weakens the constitution after a very few years. That differs in natives, however. Some can use it for many years without much apparent harm; but if you take fifty confirmed opium-smokers and look at them, you will find that forty are physically wrecks; they show it at a glance. With regard to those who eat opium the effects are not so bad. There is a very great difference in my opinion between eating, and smoking, and drinking. They take it in all three forms.

2257. In the Punjab, is opium chiefly taken in the solid form?—In the solid form. Sometimes they mix it with their drinks, but I think that is more common in Rajputana.

2258. Among the Chinese it is chiefly smoked?—The Chinese prefer smoking; but recently, about three years ago, somebody introduced morphia into Singapore, and it became very popular; so much so that two years ago it seriously affected the revenue. But a Chinaman told me last April that he thought morphia was becoming less popular.

2259. Have you any experience as to the value of opium as a protection against attacks of fever, especially in malarial districts?—I think that it is a popular delusion. I have never met a doctor in my life in India who would prescribe opium in any form, either as a preventative or as a cure. The Natives of India, especially the more ignorant classes, are subject to all manner of notions. They believe, as, indeed, most people do in the world, that anything that makes a man feel more comfortable is doing him good. When they are more or less shaken with fever, they take opium, and it undoubtedly makes them feel the effects less; but that it cures there is no reason to believe whatever. I have been in districts where the natives will expose their children perfectly naked in the rain in order to cure measles; and nothing will persuade them that that is not a good cure. I never heard of a case in my life of an intelligent doctor using opium in any form in treating fever.

2260. Upon this particular point you give your opinion to the best of your ability as a layman?—Certainly as a layman. I ought to say, however, that I have had experience in the most sickly belt of jungle in India where they use no opium at all; and in sections of Bengal where they do use opium, and where some of our Civil Surgeons affirm that it does protect them from fever, they do not seem any more exempt than in other sections where they do not use it at all.

2261. Have you any experience as to the value or otherwise of opium as enabling people to bear an unusual amount of bodily toil?—I have given some attention to that subject. They can carry heavier burdens when under the influence of opium,—perhaps 50 per cent. heavier,—and they can do a larger amount of work in a given time, but they cannot endure as much. It gives strength, but not endurance. It inevitably tends to break down the system. Coolies have told me that if they carried, for instance, 80 lbs., an opium pill would give them abnormal strength—sufficient to enable them to carry 120 lbs. But in Singapore, where we have 10,000 men who draw jinrickshaws, and where it is commonly said that they could not do the work without opium, we have quite a number of Christian Chinamen who work with the others, who do not use opium, and yet can put in their full day's work apparently without difficulty. But the reaction that is caused by the taking of opium must in the nature of the case, and as a matter of fact undoubtedly does, break down the constitution. An intelligent Chinaman in Singapore, and a man who is connected with the Opium Revenue, told me last April that in his judgment the 10,000 jinrickshaw men do not live on an average more than seven years. I asked an intelligent physician if he thought that was correct, and he said he would not like to say without

statistics, but undoubtedly it shortened their lives very much.

2262. Have you anything to tell us with reference to the light in which the opium habit is regarded in public opinion from a moral point of view?—It is considered as a public vice generally. In sections where the use is more common it is in less disfavour. Wherever the Hindustani language is spoken the term "aphimi" is used as a term of abuse. There is a certain sting about the term "aphimi" which does not belong to the epithet "drunkard." The opium-user is always a man who is untruthful,—that is, if he is a confirmed opium-user. Many of them will steal. They will do anything to get the drug. Hence it is looked upon as disreputable.

2263. Are you prepared to say from your own personal knowledge that persons who consume opium are generally unreliable and dishonest?—Unless they are well-to-do men. If they have money, they are like other men; but if they have not money and they have become confirmed in their habit, they must have it. Hence I would not trust one of them. I never think of trusting their word. With regard to the ordinary people, I cannot say that it makes them dishonest or untruthful. But in the main a man who gets the reputation of being addicted to the use of opium, even if it is not a besotted case, undoubtedly suffers in reputation.

2264. I believe in China it is a matter of common knowledge that many of the natives in China who are employed in confidential positions in mercantile houses and banks are more or less consumers of opium?—I do not doubt that. As illustrating what I have said, I went to the shop just up the street a few weeks ago, and I stood and watched the people buying. The man who sold told me that the highest quantity any man bought was 2 oz. a day. That costs a rupee and a half. When a man must have a large quantity and he is a poor man, there is only one way to get it; but the class of persons that Your Lordship speaks of in China are not poor men who are driven to any such necessity.

2265. With regard to the licensing system, do you consider that the existing system of granting licenses for the sale of opium tends to the spread of the habit, or do you think it may be regarded as a restrictive influence?—I should say that anything which is put on sale publicly will have its use increased. No matter what the article is which is exposed for sale freely, it must in the very nature of the case have its use increased. People generally think that because it is under Government restriction it is literally a Government interest. That also tends to help it. I do not think any article can be sold publicly without increasing its consumption. That would hold true of sugar.

2266. (*Sir James Lyall.*) What do you mean by opium being sold publicly and sugar not sold publicly?—They are both sold alike at present.

2267. One is free to be sold in any number of shops, the other only in a limited number of shops and subject to a heavy duty?—Every shop increases the use. There is a better chance for sugar, perhaps, but both have a chance.

2268. The restriction of opium to a very few shops is a restriction, surely?—Of course every shop that is closed is so much in favour of public morality, but as long as you keep enough to supply the public, in the nature of the case the use of opium will continue to increase.

2269. (*Chairman.*) If the Government adopted the policy of prohibition, naturally the sale would be much more restricted than it is under the system of licenses, but the system of licenses, to a certain extent at any rate, operates as a restriction as compared with the permission of free sale without license by anybody who chooses to offer the article?—Certainly, as in the case of liquor. The outstill system was much more pernicious than the limited system. Anything that reduces the number of shops is better than free trade.

2270. Can you tell us whether the closing of shops for the consumption of opium on the premises has been fully carried out in the localities with which you are acquainted, and if so, how long that change of system has been in force?—I think it is carried out as far as I know everywhere now. It has been carried out in Calcutta since last April—I think about that time—perhaps March.

2271. Have the results of this change been in your experience beneficial?—Undoubtedly they have. Some private clubs have been set up, I am told, in the city, but I think they will do much less harm than the public opium dens which we used to have.

2272. Do you consider it desirable to prohibit the sale of opium altogether, excepting for medical purposes?—I do.

Bishop J. M. Thoburn.

20 Nov. 1893.

2273. Would public opinion be in favour of such a measure?—I should say in answer to that question that if you will take a million of people from the higher classes, and about thirty to fifty millions from the lowest classes, putting them out of consideration, the balance of the people of India would be overwhelmingly in favour of closing all the shops. Many of those men who are intelligent enough to understand the political bearings of the question would be opposed to closing the shops, and I should think many of the lowest classes would think it a great hardship. But the rank and file of the people, what you might call the general average of the Indian people, would be overwhelmingly in favour of closing.

2274. Do you recognize any exceptional difficulties in the enforcement of such a measure by a Government constituted as is the British Government of India?—I see nothing very difficult. I think they would have to consider the question of the confirmed opium-users; at least I should be very willing as an individual to see some consideration shown in those cases.

2275. You recognize that the British Government in India is especially desirous of giving consideration to native opinion in all that it does?—Certainly; but native opinion is overwhelmingly on the other side.

2276. That is as far as you are able to judge?—I have had some opportunities of ascertaining in all parts of the Empire; it is my opinion.

2277. You can only give us your opinion. Supposing that prohibition were adopted, how would you propose that the loss of revenue resulting from such prohibition could best be made? Do you feel prepared to propose additional taxation for that purpose? Does your experience enable you to suggest economies, or any other way of meeting the difficulty?—I am not a British subject, and naturally feel a little hesitancy in expressing opinions upon some of these questions. I might say that the people of India are extremely sensitive about any increase of taxation. If they were to be assured that there would be no increase of taxation in any form, I think they would be unanimously in favour of doing away with the business. Perhaps I may be allowed to make a suggestion or two. If tobacco were put in the place of opium, I think it could be made to yield almost the same revenue, certainly it would yield one-half of it; and then if the Home Government were to take into consideration the fact that the heaviest military expenditure at the present time is in the North-West (the North-West Frontier question is a European and not an Indian question—Constantinople is the objective point and not Delhi)—if the Imperial Government would pay part if not all the military expenditure of the North-Western Frontier, this question would disappear in a moment.

2278. There are two more general questions that I would like to ask you. Do you think it is possible that the bad repute in which it is alleged the opium trade is held is owing to the persistent representation of missionaries in India and China?—That view has been put forward in some of our Indian papers recently, but I think it absurdly improbable chiefly for the reason that the question is just the same now as it was a century ago. At the impeachment of Warren Hastings, one of the articles of impeachment arraigned the opium traffic in quite as severe terms as any missionary has done in modern times. At that time there was not a Christian missionary in China, and only about a dozen in India. The question has not changed. I think the unanimous opinion of the missionaries on the subject is owing simply to its moral bearings.

2279. You are aware, are you not, that by a recent declaration of the representative of the British Foreign Office in the House of Commons, the position now taken by the British Government as regards the opium trade in China is that it is free to the Government of China to adopt any policy they may think fit with regard to the importation of opium?—I am aware of that.

2280. It has also been represented on the part of the Government of China in conferences with Sir Thomas Wade—I may also say in the correspondence and negotiations that have more recently taken place between the Marquis Tseng and Lord Granville and Lord Salisbury—that at the present time the Chinese Government seemed disposed to treat this question rather as a fiscal question.—I have heard of those representations. The missionaries who regard the whole trade as immoral would naturally hold their former views. That is a political phase of the question upon which I do not feel competent to express an opinion.

Bishop J. M. Thoburn. 2281. You naturally regard this matter, and fitly so, as a moralist?—Certainly.

20 Nov. 1893. 2282. Do you think that there is any practical danger of the opium habit spreading among the Indian people generally?—I think if the present policy is pursued, probably it will. I think there is very great danger, because the people are slowly becoming more prosperous all over the country. If they have the means, and if the sale of opium is in their reach, I think there is great danger that it will spread to all parts of the Empire, and become a very common habit.

2283. Do you know anything of the statistics of the consumption in India?—I do not.

2284. You are not prepared to say that there are statistics which show an increased consumption per head of the population in recent years?—I have not had opportunities of collecting such statistics. I had not expected to appear before the Commission until recently. I am travelling all the time, and I have not had opportunities.

2285. (*Sir William Roberts.*) I think you said that the belief in the good effects of opium as a prophylactic in malarial districts was believed in some districts and not in others?—Yes.

2286. I presume you speak rather of what medical men have told you?—No; I speak from personal observation.

2287. From what the natives told you?—Certainly.

2288. Do you know of any districts in India where there is not a belief in the useful power of opium—any malarial districts?—It was India I referred to.

2289. Could you mention any districts?—In the Tarai Districts of Rohilkhand. I have not been there for some years; but when I was there some thirty years ago, I never heard of any opium being used at all, and that is the most malarious district in all India.

2290. It is a sort of negative evidence, as I understand, that you did not hear it spoken of as a prophylactic?—I think I certainly would have discovered it if it had been there.

2291. Is that the only district where you did not hear it spoken of?—I am told that in some parts of Lower Bengal it is not used: but I cannot say so from personal observation.

2292. You were speaking about the expense of the opium habit to the very poor. Of course you have heard it said that opium enables a man to do with less food?—Yes.

2293. I presume that is scarcely an opinion you would endorse?—I believe it does. I believe a man eats less who uses opium.

2294. And can do with less, so to speak?—If you call it "doing," he can.

2295. Of course you are also aware that the belief in the prophylactic power of opium in malaria is not confined to ignorant people?—I am aware of that.

2296. And that it is believed in by high medical authorities?—When I first came to India nearly all your doctors taught me, and taught us all thirty-four years ago, that we could not live in this country without alcoholic drinks. Now the majority of doctors say otherwise.

2297. Do you regard drinking as bad a vice as opium?—I always think that question is like asking which is the worse, a cobra or a krait; they are both so bad. I should say the alcoholic habit is more violent and creates more disorder. Parents who use alcoholic drinks are very willing to have their children learn the habit; but I never met parents who used opium who were willing that their boys should learn the habit. I never met a man, who even apologised for the use of opium, who was willing that his children should learn the opium habit.

2298. The smoking habit?—Yes, or any other.

2299. I presume you are aware that it is a common custom among the natives to administer small doses of opium to their children—to their babies even?—I am glad you have mentioned that. It is a very pernicious custom, and it is regarded as a vice by the people generally. Only two weeks ago one of our own teachers was complained of to me because he allowed his wife to administer opium to his children. The natives generally regard it as a vicious practice. It leads to the death of a good many children, and it certainly injures a great many of them permanently. I knew of the case of one of our own missionaries whose infant, about a year old, had been dosed in this way by a native nurse, and the child almost lost its life. It is a very dangerous practice.

2300. Of course you are aware that the tolerance of native infant and of an European infant would probably be different?—But the native infants undoubtedly suffer, at very least that is the common opinion. I made inquiries about that yesterday.

2301. (*Mr. A. Pease.*) Do you confirm the statement made by Sir William Roberts just now, that your observation would show that there is a difference of tolerance between a native infant and European?—No, I have not noticed any difference.

(*Chairman.*) It is very much a professional question.

2302. (*Mr. A. Pease.*) Are any members of your churches opium-consumers?—We do not admit any person who uses opium.

2303. If a person becomes a consumer of opium, does he remain a member of the church?—He would be put under discipline.

2304. Can you give us the reason?—As I have said before, the use of opium in my opinion is inconsistent with a correct Christian life. It creates certain vices that no other habit does that I know of. I once asked the Commissioner of Police in this city why it was he closed the opium shops at six o'clock in the evening, at sunset, and left the liquor shops open until nine. He replied that all the bad characters in the city would be found congregated in the opium shops, and he did not dare to have them open. The whole practice is looked upon as a vice.

2305. I gather from what you say that there is less susceptibility to moral and religious influences in those who consume opium than in those who abstain?—Undoubtedly. It takes the moral stamina right out of a man.

2306. (*Mr. Wilson.*) I am anxious to understand the exact position of the Methodist Episcopal Mission in this country. I think your head-quarters are in America?—Yes.

2307. Am I right in believing that the Methodist Episcopal Church in America is one of the largest Christian denominations in the United States?—It is the largest.

2308. Is it numerous?—It is numerous.

2309. Your missionaries here are sent from the United States?—Yes.

2310. I am not sure whether you told us how many missionaries you have in this country?—I could not say at this moment. I should think about eighty,—that is, foreign missionaries.

2311. Do you know the number of native missionaries?—We have a very large number of native preachers of all classes: I suppose we have over a thousand.

2312. Are some of your missionaries medical missionaries?—Quite a number.

2313. You refer to the Rajputs. What is a "Rajput"?—A Rajput is the descendant of the ancient warrior caste in India. They have settled in what is called Central India. They are remnants of the old warrior caste, and occupy that territory.

2314. Are they what I might call a kind of aristocracy?—They used to be. I should say they are at the present time. For the most part, their Native States are very much reduced, but still I should say they are regarded all over India as forming a kind of aristocracy.

2315. In that part of the country does the term "Rajput" refer to the people at large or to the upper classes?—I should say it would refer to the upper classes. It is a caste term. In many parts of India you meet the term of "Rajput": that refers to caste. But the country is called Rajputana, and I should say that most persons when they use the term "Rajput" refer to the people belonging to that caste.

2316. I thought you said in reply to Lord Brassey that you never knew a doctor who used opium in cases of fever?—I said so.

2317. Afterwards I rather understood you to qualify that in reply to Sir William Roberts, and that you said you were aware that a good many people use it?—I did not intend to say so. I did not think that question was asked.

2318. You had referred to a popular opinion of ignorant persons?—I simply understood Sir William Roberts to say that many doctors held that doctrine; but as a matter of fact, I never knew of one using it in his practice. I have been told by medical men that it does good, and that it does serve as a preventive; but I never found one who used it for that purpose himself, and I have asked many.

2319. Does he recommend it to his patients?—Never. I regard the whole thing as a myth.

2320. You were asked a question as to whether this opium was regarded as disgraceful. As far as India is concerned, were you referring to smoking, eating, or drinking?—Every form.

2321. Alike?—No, not alike. Opium-smoking is held in worse repute than opium eating or drinking. Opium-smoking is regarded more unfavourably than opium-eating. But in any form of it, when a man gets a reputation of being a confirmed user of opium, it undoubtedly injures his standing.

2322. Am I right in thinking that opium-smoking is most common in China, and that opium-eating is most common in India?—You are perfectly correct. Opium-smoking in India, as far as I have observed, is confined to cities and towns. When I have been down at the Straits I have been told by Chinamen that they always prefer smoking.

2323. You referred to a large number of races in India with which your missionaries are more or less connected. Are you at all of opinion if an action took place, or any alteration was made, that it would be practically possible or desirable to discriminate in any way between one part of the country or another, or between one race and another?—I do not think it would; not under the present circumstances. Everything in India is becoming cosmopolitan now. All the different tribes and races and languages are mixed together in such a way that I think it would be impossible to draw a line.

2324. You referred to what had been represented, I think you used the expression, "by some of our Indian papers." May I ask what class of papers you referred to as "Indian papers"?—The *Pioneer* of Allahabad was the leader in the matter. It took that position. I think one of the Bombay papers followed. I cannot say how the others went. I only see the papers in the section of India where I may be; but the *Pioneer* started the discussion by representing that the whole thing could be traced to the opposition of the missionaries, especially in China.

2325. Have you any general knowledge of the attitude of the native papers printed in the Indian language?—Not sufficient for me to form an opinion. I have not read any paper recently. I think, as I said before, they would be largely influenced in their views with regard to the question of taxation.

2326. When you used the expression "our Indian papers" you really meant Anglo-Indian?—Anglo-Indian.

2327. You referred to the use of opium being worse than alcohol in its promotion of certain vices. May I ask you to what you referred?—I was told in Singapore by a gentleman who had gone in disguise through the city that there was not a public woman in the city of Singapore who was not an opium-smoker. I have often been told that it undoubtedly does lead to immorality in the sexual sense of that word.

2328. Would you say that it was taken for that purpose, or that that resulted?—It was an accessory to the vice. I believe it was kept for that purpose.

2329. Do you know anything about the cultivation of the poppy?—Not very much.

2330. You do not care to say much upon that subject?—I have not had a chance to live in districts where they cultivate the poppy to any great extent.

2331. (*Mr. Mowbray.*) You have told us that a large number of children are actually starving in consequence of the waste of money spent on opium by their parents?—I mean they are receiving insufficient food.

2332. Have you any reason to think that if the parent spent less upon the opium, if it were possible to prohibit the use of opium, those same parents would not waste their money on ganja or alcohol or any other form of stimulant?—If they could get it, they probably would.

2333. Therefore, in order to prevent the evils which you have pointed out as arising from opium, it would be necessary to go a great deal further and prohibit those other things besides?—Ganja ought to be prohibited anyhow. It is probably more harmful than opium. And the liquor habit produced the same effect to my certain knowledge in Bengal at the time of the outstill system. The worst evil that resulted from it was the starvation of children.

2334. (*Mr. Haridas Veharidas.*) Have you ever visited Gujarat, Kathiawar, or Kutch?—I have not been in Kathiawar; I have been in Gujarat, but not in Kutch. I have been in and about Baroda. I have been at Ahmedabad also, but only to make one visit.

2335. Did you see the same thing about opium as you saw in the Punjab and Rajputana and other places?—I cannot recall any instance where I saw anything whereby I can speak from actual observation. With regard to Gujarat my knowledge is limited. *Bishop J. M. Thoburn.*
20 Nov. 1893.

2336. (*Mr. Funschawe.*) Will you kindly tell me in what provinces your actual experience has been? You said Northern India generally. Do you mean in the Punjab and the North-West Provinces?—I lived first in Kumaun and then in Garhwal, then in Rohilkhand, then in Oudh. Then in more recent years I have frequently been in the Doab between the Ganges and the Jumna.

2337. Have you had any practical experience in the Punjab of the Sikhs?—Very little.

2338. It is mainly in the North-West Provinces and Oudh that your experience has been?—Yes; but I have constantly met Punjabis.

2339. You say the opium habit is starving millions of children. To what province does that apply? In which province do you wish us to understand that the poorer classes so largely consume opium that millions of children are affected by it?—As I remarked before, the classes that we call the "depressed classes,"—the term given by the Census.

2340. In which provinces?—In all of them.

2341. You are not speaking them from your own knowledge: your knowledge is in the North-West Provinces and Oudh?—As far as I have seen, the conditions being the same in other provinces, the result would be the same.

2342. Is the opium habit now so widely spread in those provinces that millions of children can be said to be starved,—even accepting your view?—Not millions in those provinces, but I speak of the 284 millions of India.

2343. You are generalizing from what you know in the North-West and Oudh?—And Bengal. I have lived twenty years in Bengal.

2344. You spoke generally of the general average of Indian people, and said that their opinion was overwhelmingly in favour of entire prohibition of the sale of opium. What provinces would that apply to?—I was speaking of all India.

2345. I want to get it a little more in detail. As regards the Punjab, there is the Sikh population which is supposed to eat opium as a racial matter; then there is the Rajput, who is supposed to eat opium as a racial matter; do you wish it to be understood that in those particular provinces there would be an overwhelming opinion against eating or smoking opium?—I am not prepared to admit that it is a racial matter with all the Sikhs.

2346. I am only asking you to which provinces you wish your statement to apply?—I refer to the whole of India. I have been in contact with the people sufficiently to enable me to speak, that is in the provinces in which I have lived, with a population of 125 millions. Speaking from observation among these 125 millions, I should say, with regard to the whole Empire, that my estimate is a very moderate one.

2347. Then here, too, you are generalizing from your experiences in two provinces. Do you still say that the general average of opinion amongst the natives would be entirely in favour of total prohibition?—I should say in six or seven provinces.

2348. Meaning the North-West Provinces, and Oudh, and Bengal?—The North-West Provinces, Oudh, Bengal, and Behar. It is about half of India.

2349. Then as regards Rajputana, I wanted to bring out one point with reference to Mr. Wilson's question. Is not the term "Rajput" used generally to cover the whole of the residents in Rajputana? There are Rajput cultivators and Rajputs occupying other positions in society?—I think you would offend a Rajput in Rajputana if you spoke of a Chamar as a Rajput.

2350. You seem to distinguish between the lower classes and the upper classes: there are Rajput cultivators, are there not?—Yes, plenty.

2351. You have expressed an opinion that smoking opium is more deleterious than eating it. You said the objections did not go so far as regards eating opium?—That is my opinion.

2352. I think you also said your own view was that smoking opium was regarded generally by the natives as being objectionable, or more objectionable than the other habit?—Yes, I did.

Bishop J. M. 2353. As regards the provinces which you know, is it the case that smoking is generally regarded by the natives as distinctly objectionable?—Yes.
Thoburn.

20 Nov. 1893.

2354. With reference to the poorer classes who eat opium, is it a fact that they go on eating for some time without increasing the dose? You spoke of poor men spending an anna a day, or two pice, do you wish it to be understood that they go on for a period of years spending money to that extent, or is there a tendency to increase the dose more and more?—If they can get money enough they increase it: the majority cannot get money.

2355. Is there a habit of eating a moderate dose over an extended period?—I am told that there is with those who are able to get about two pice worth. Those who get one pice worth have to do it intermittently. They cannot help themselves. After they get up to one anna the tendency is for all of them to increase the dose.

2356. You do not know that of your own personal experience. Has it been your experience that this opium-eating habit prevails in the rains and in the cold weather (not in the hot weather) in districts where there are malarial conditions, or that it continues all through the year?—It continues all through the year. I have never noticed any difference.

2357. (Sir James Lyall.) You said that the term "aphimi" is considered a greater term of abuse, more than "that of drunkard." I should like to know what is the native term which people use for the word "drunkard"?—It differs—"matwalla" is common.

2358. Do you deliberately say that the term "matwalla" is a less term of abuse than the term "aphimi"?—I think so. I have made inquiries.

2359. Among respectable people?—Respectable people do not use abusive language so much as others. I made inquiries last week about it among the Hindustani people themselves.

2360. It is quite different from my experience.—It is my observation. I inquired last week among the Hindustani people.

2361. Does not the term "aphimi" in talking among natives practically apply to what you may call an "opium sot," like the word "drunkard"?—It corresponds with the term "drunkard," but it has a sting in it that the word "drunkard" has not.

2362. Does not that term apply to an opium sot and not to a moderate eater, just as the word "drunkard" does not apply to a moderate drinker of wine or spirits in England?—I cannot speak of England, but I am speaking of India, where we have them side by side.

2363. We know that the term "drunkard" in England applies, not to the person who drinks wines and spirits moderately, but to the man who uses them excessively. Is it not the case, with your knowledge of India and your familiarity with the colloquial use of words in India, that the term "aphimi" applies as the term "drunkard" does in England?—I used it in that sense, I think, because I compared it with the word "drunkard."

2364. Is it your experience that opium-consumers in India generally do not use spirits or hemp drugs, that is, that the man who uses opium as a stimulant usually confines himself to it, with the exception of, perhaps, some very depraved characters, and does not consume spirits or hemp drugs?—He does not consume spirits, but he is very likely to consume ganja, and ganja in many cases breaks the opium habit.

2365. If the use of opium as a stimulant were stopped, would it not be likely that the poor people, who now stint their children to buy opium, would spend as much money or more in buying spirits or hemp drugs?—I should say that the same policy should be applied to ganja and spirits.

2366. And that you would have a general system of prohibition?—I think that all these drugs and drinks must in the case of these very poor people prove a scourge.

2367. And the same reason exists for a general system of prohibition, except for medical use, of liquor, opium, and hemp drugs?—Among the very poor people, certainly.

2368. That is practically what you have in your own church?—Yes.

2369. You said that in your church if a convert was found to take opium you brought him under discipline?—I did.

2370. I suppose that equally applies to hemp drugs or spirits?—It does.

2371. Did you sign the memorial to the Viceroy by the Missionary Conference of the 30th of September: I believe you were Secretary to that Conference?—I am not quite sure. I was not in Calcutta at that time. I think, perhaps, I have not signed it.

2372. Have you signed it?—If I have signed it at all it must have been some months ago. I was not in Calcutta for four months, and I think I never saw the memorial and did not sign it.

2373. You cannot give any opinion; you have not examined the authorities quoted in it to see if the extracts given fairly represent the opinion?—I could not at all.

2374. I think you know that opium is immensely used in India, particularly by the common people in the villages, which form the great part of India; it is greatly used among the people themselves for medicine, for themselves and for their cattle too: you propose that the use of opium should be prohibited except for medical purposes: have you ever tried to think out how opium could be readily supplied for medical wants, and yet its use prevented as a stimulant or intoxicant?—I have thought a little on the subject. I do not think it would be an insuperable difficulty; of course it would be a difficulty. I have seen it applied in our own country in States where they have prohibition. When they have to supply alcoholic drinks, it is always attended with difficulty, but they succeed in doing it.

2375. Alcoholic drinks are not used as medicine in anything like the extent opium is used in India by the country people themselves, by Hakims and Vaidis, and that sort of people?—I do not know that: I should rather think it is used quite as much.

2376. Spirits?—Some forms of alcoholic drinks are in constant use for medicinal purposes in the prohibitive States.

2377. The difficulty in administration always is to get reliable instruments. If you give an ordinary native of India some power or discretion, I am sorry to say he generally tries to make money out of it?—I understand that.

2378. You know our State dispensaries and all that sort of thing are mere points scattered about in the country?—I do.

2379. Even if they were to be relied upon to carry on a sort of brisk trade in opium without degenerating into opium shops, have you thought how you could possibly work a system by which opium would be readily available, and not too dear for medicine, and yet not available as a stimulant?—I think it would be no worse than it is in many parts of the country. I have just been in Garhwal where they have no opium whatever, and they get along very well without it. I think it would be no worse in other parts.

2380. Garhwal is a very healthy country?—Not very.

2381. It is a cold climate?—It has been scourged by cholera more than any other district in North India during the last few years.

2382. Not malaria?—I do not value opium very much as a medicine if I may be allowed to say so. Speaking as a layman, I do not think it is what would be called a medical necessity among the common villagers. There must be a multitude of villages where they never see it.

2383. Speaking of how the financial difficulty might be met, you suggested that a tax might be put upon tobacco, which would raise as much money as the opium does. Are you aware that an attempt to put a tax upon tobacco by the Shah of Persia, who is a pretty despotic ruler, led to a revolt about two years ago?—I should not think that the Shah of Persia could be mentioned in the same connection with the Governor General of India.

2384. You think we are more despotic?—I think the Governor General of India could do a thing without difficulty that the Shah would not dare to try. I should not have ventured to make that suggestion if it had not been that I originally read the suggestion in a work by Sir John Strachey. I think he estimated that they could get a revenue of two millions from it.

2385. Are you aware, though the thing has often been considered, that it has always been thought so unpopular a suggestion, that it has been abandoned on that ground?—I remember Sir John said it was unpopular, still he said it was practicable, or rather possible.

2386. Do you think that the English Government in India has so much popularity that it could afford to take the risk of adopting such an unpopular measure?—I am very glad you have asked me that question. People often talk confidentially to me because they know I am not an

Englishman. I believe that with the same people I spoke of a little while ago, the average people of India, leaving a million at the top and from 30 to 50 millions at the bottom out of consideration, the English Government is exceedingly popular.

2387. And that popularity would hear the putting on of additional taxation?—On tobacco it would.

2388. (*Mr. Wilson.*) I have not got it quite clear about these Rajputs. I understand that Rajputs live in Rajputana. What I want to get, and what I did not quite get, was this, what proportion of the population of that part of the country are properly called Rajputs?—That I could not say; but I should say that a very large minority are not properly Rajputs.

2389. Do you think that the missionaries in this country over whom you have superintendence would, speaking generally, agree with the opinions you have expressed?—I think so, perhaps without exception: on some details they might differ.

The witness withdrew.

Mr. JOSEPH G. ALEXANDER, LL.B., called in and examined.

2395. (*Chairman.*) I believe you are the Secretary of the Anti-Opium Association?—Yes. I may remind the Commission that I have already given a little formal evidence. I appeared before the Commission in London, and put in a few documents which I thought might be useful at that stage, reserving further evidence. I need only repeat that I am Secretary of the Society for the Suppression of the Opium Trade, and have been so nearly four and a half years. But I had for a much longer period been a member of the Executive Committee of the Society, and taken great interest in its work.

2396. You are a Barrister-at-Law?—Yes, but I have not been in practice since I became Secretary.

2397. We may take it from you that you have been actively concerned in bringing the case which you wish to present to the consideration of the Commission to-day under the notice of Members of Parliament, and also before the public in England, at public meetings, by pamphlets, and otherwise?—That is so.

2398. I think it is your wish that we should regard the last memorial presented by your Society to Lord Kimberley as containing in brief your case for the suppression of the opium trade?—That is so. Not strictly the last memorial, but our last general memorial. We have since had occasion to address His Lordship about Burma.

2399. Your last general memorial is a general statement of your case?—Yes.

But before entering upon the consideration of the points in that document, I should like to say a few preliminary words as to the tone which the Society desires to adopt towards the Indian Government in this matter. I wish to take the opportunity of adopting on behalf of the Society the very appropriate words with which Your Lordship closed your opening address the other day: "To those engaged in the weighty task of governing this country, I can give an assurance on the part of the Commission that, in common with our fellow countrymen at home, we admire and recognise to the full the admirable qualities for which the Civil Service in India is so justly renowned." I wish to say in that connection that our Society is composed of gentlemen who would be very sorry indeed to take up anything like a hostile position towards the Government of India. We differ from them on this very important question, but we are very anxious not to impute evil motives. We know that men differ on great questions of morality and policy from various circumstances. Speaking personally, speaking on behalf of our President and on behalf of the Executive Committee especially, I am sure it is far from our desire to take up any position which would assume that those who are responsible for the Government of India are not actuated by the highest motives in their desire to fulfil their duty towards the people of India. In support of that I would mention that we have in connection with our Society a number of gentlemen who have spent a good part of their years in the service of the Government of India. The venerable Sir Arthur Cotton, now more than ninety years of age, is one of our Vice-Presidents and one of our most ardent supporters. I will not say that he is proud of what England has done in India, but the way in which he has expressed it to myself and others is that he feels intensely thankful to God for the wonderful providential way in which, as he believes, England has been permitted to discharge its duty towards India. Then we have on our Executive Committee Lieutenant-General Tremen-

2390. Have you missions in the Central Provinces?—We have. *Bishop J. M. Thoburn.*

2391. In Southern India?—We have.

20 Nov. 1893.

2392. I suppose I may take it that during your earlier years in India you came into personal contact with the people?—A great deal.

2393. Since you have been Bishop you have probably had more intercourse with the missionaries themselves, and not direct intercourse with the people?—That is correct from the nature of the case. I am travelling all the time and superintending. I cannot often get opportunities of going into the villages.

2394. Therefore the opinions you have given us, especially as regards late years, are very much those of missionaries from whom you have gathered this information?—I think that most of the missionaries have stronger views on the subject than I have.

heere, who was for some years Administrator of Sindh, and who was also at one time the Chairman of our Executive Committee; and Brigade-Surgeon Pringle, who has spent 30 years in the Medical Service of India. We have also two other members of the Committee who have sons in the Indian Civil Service. It will therefore be seen that we are not likely to wish to take up any attitude of general hostility to the Government of India. Our attitude is that, admiring that Government, and rejoicing in what it has done for the people of India, we want to remove from it a stigma which we believe rests upon it at the present time in connection with its opium traffic.

2400. Turning to the general memorial, I notice that in the first paragraph reference is made to the vote taken in the House of Commons on the 10th of April 1891, when by a majority of 31 it was resolved: "This House is of opinion that the system by which the Indian opium revenue is raised is morally indefensible, and would urge upon the Indian Government that they should cease to grant licenses for the cultivation of the poppy and sale of opium in British India, except to supply the legitimate demand for medical purposes, and that they should, at the same time, take measures to arrest the transit of Malwa opium through British territory." Have you any observations to make upon that part of the memorial?—I should like to point out that we have adopted a somewhat careful wording with regard to the action of the House of Commons. The House adopted the resolution "in principle." A good deal has been made of a somewhat technical point, owing to the way in which resolutions have to be submitted to the House of Commons on Friday evenings. The motion was not an affirmative motion; it was an amendment to the motion to go into Committee. The actual vote was taken on the question whether the words "That Mr. Speaker now leave the chair" should stand as part of the question. Sir Robert Fowler had given notice of an amendment dealing with the financial question; and the result was that, whilst the vote was taken on the main question, it was technically only a vote not to go into Committee of Supply. At the same time, practically, as the Members of the House of Commons will recognise, it was an adoption of Sir Joseph Pease's words.

2401. In your second paragraph you allege that the use of opium brings misery to countless millions in China, and that whereas we in England subject the sale of opium to great restrictions, and it is recognised, as you allege, by the entire medical profession as a dangerous poison, on the other hand, in our dealings with China we did in past years endeavour to force the importation of opium into China by acts of war; and you represent the opposition which was taken when we were at war with China in relation to opium to be what you call a "continuing fact." You point to the repugnance of the English people to the whole system as being evidenced by resolutions passed at hundreds of public meetings almost always with complete unanimity; and you refer to the large number of petitions which are constantly being presented to Parliament in support of the views of the Anti-Opium Association. I think that that is a fair summary of your second paragraph. Have you anything that you wish to say to us further with reference to China?—I need scarcely point out that those wars are old history, and you will recognise that the attitude of the Government is substantially changed, as is clearly proved by the speech of Sir James Fergusson, so often referred to, and by the speeches of Mr. Smith, Lord Cross, and other representative public men?—With regard

Mr. J. G. Alexander,
LL.B.

Mr. J. G. Alexander,
LL.B.
20 Nov. 1898.

to that question of the China wars, I should have been disposed to say exceedingly little, looking upon them as past transactions, had it not been for the evidence produced before the Commission in London. As the members of the Commission who were in London will remember, we had three gentlemen—Sir Thomas Wade, Mr. Lay, and Dr. Lockhart—all alleging that England never forced the opium trade upon China. It seems to me that one can hardly allow such an allegation as that to pass unchallenged, because, as we put it here, the fact of those wars and the fact that, as we believe, opium was by those wars forced upon China, impose upon the British nation a greater degree of responsibility for this trade than it would have had if China had from the beginning voluntarily accepted the trade. I am afraid, therefore, that I shall have to trouble the Commission with some attempt to show that the statements of Sir Thomas Wade, Mr. Lay, and Dr. Lockhart are really not well founded. In the first instance I should like to refer to a pamphlet published by my predecessor, the first Secretary of our Society, Mr. Storrs Turner. As I told the Commission in London, he was very ill at that time, and was unable to give evidence, as I had hoped he would. In one portion of that pamphlet he has dealt very carefully with this question of the wars, and I think he has made a very full reply. The pamphlet was written in connection with the debate at the Society of Arts meeting last year, when Sir Thomas Wade made a speech very much to the same effect as the evidence he gave before the Commission. Mr. Lay not only made these statements, but he handed in a Note on the Opium Question. I think perhaps it would be more satisfactory if, instead of attempting to reply to that pamphlet in detail, I should go through the history briefly, and put forward my own view and the view of the Society on the question.

2402. That would be the more convenient course.—I have here a book which may be looked upon as an authoritative history of China. I have seen the statement that the book, Williams' "The Middle Kingdom," is adopted officially by the diplomatic service in China as a text-book of Chinese history and Chinese questions generally. It is written by Dr. S. Wells Williams, who was at one time a missionary in China, and who is an American, not an Englishman, so that he may be supposed to look at the question from an impartial and outside point of view as between England and China. The early history of the opium trade is best told in Dr. Edkins' pamphlet which has been already put before the Commission and will be printed as an Appendix; but Dr. Edkins has omitted one point which Dr. Williams here refers to. Dr. Williams says: "The use of opium amongst the Chinese two centuries ago must have been very little, or the writings of Romish missionaries, from 1580 down to the beginning of the nineteenth century, would certainly have contained some account of it." That point is still better brought out by Dr. Dudgeon, of Peking, another very high authority on Chinese questions. In an article which was printed in the *Friend of China* for 1892, page 195, he says: "The absence of any reference by the Jesuit missionaries who resided in all parts of the country to either opium-smoking or poppy cultivation is very remarkable. All other sources of information are equally reticent, whether it be travellers, diplomatic agents, or missionaries. Barrow and Staunton, who describe China most minutely and correctly in their visit in 1793, only remark that many of the higher mandarins smoke tobacco with other odorous substances, and sometimes a little opium." There is also a book containing a description of Lord Macartney's mission, which travelled through a considerable district of China to Peking, and had a botanical gentleman attached to it. It contains a careful and accurate notice of the plants met with, but it has no mention whatever of the poppy as having been grown, that is at the end of the last century. Dr. Dudgeon has also pointed out that Dr. Edkins does not sufficiently and clearly bring out the fact that the early use of opium in China appears to have been merely medicinal. Some of the earlier extracts given by Dr. Edkins refer only to the medicinal use, and not to what one may call, by way of distinction, the sensual use. Dr. Dudgeon further points out that the decree of 1729, which was for the first time brought to light by Dr. Edkins, and which was the first Chinese decree against opium, was not a general decree applying to the whole country, but simply to the island of Formosa, where apparently the opium-smoking habit was first known in China. A few years later, as I am informed by Dr. Dudgeon, there was a decree generalizing that, because it was found that the use of opium-smoking had spread to the mainland.

Then I pass to the position which led up to the China war. Dr. Williams states that the first war with England

arose out of the ceasing of the East India Company's commercial privileges in 1834; and he deals with the mission of Lord Napier which followed that change. He comments upon Lord Napier's ill-advised proceedings in his attempt to set aside the rules of the Chinese Government, which ended in a somewhat tragic way by his death before the question was settled. I now quote a despatch from Sir G. B. Robinson, who succeeded Lord Napier as Superintendent of the British trade: "On the question of smuggling opium I will not enter in this place, though, indeed, smuggling carried on actively in the Government boats can hardly be termed such. Whenever His Majesty's Government directs us to prevent British vessels engaging in the traffic, we can enforce any order to that effect, but a more certain method would be to prohibit the growth of the poppy and the manufacture of opium in British India; and if British ships are in the habit of committing irregularities and crimes, it seems doubly necessary to exercise a salutary control over them by the presence of an authority at Lintin." Dr. Williams, commenting on that despatch, says: "There is not the least evidence to show that the Court of Peking was not sincere in its desire to suppress the trade, from the first edict of 1800 till the war broke out in 1840. The excuse that the Government smuggled because its revenue cruisers engaged in it and the helpless provincial authorities winked at it is no more satisfactory than to make the successful bribery of custom-house officers in England or elsewhere a proof of the corruption of the treasury department." I might apply that argument in India. When I was passing through the Central Provinces, I was told some stories about smuggling from the Native States, said to be carried on with the connivance of the Government Police. I think it would be just as appropriate to say that the Indian Government is not sincere in its desire to suppress the smuggling of opium into its territories because some of its police officers are, or are said to be, bribed, as to say that the Chinese Government were not sincere because some of its officers were bribed. I therefore strongly object to that phrase, which I think was quoted either by Sir Thomas Wade or Mr. Lay with approval, that it was not properly to be called smuggling because there was so much official connivance with it. Then Dr. Williams goes on to recount a remarkable proposal made to legalise the opium trade by Hu Nai Tsi. Some quotations were made from his memorial in the evidence which was put forward in London, as if those were the views of men who did not recognise the evils of the trade. I think to any one who reads through those memorials it is clear that these men did recognise the great evils of the trade; only they thought it was hopeless to attempt to stop it, and it was better to legalise it. But those memorials were replied to by statesmen on the other side. One of them says: "It has been represented that advantage is taken of the laws against opium by extortionate underlings and worthless vagrants to benefit themselves. Though the law should sometimes be relaxed and become ineffectual, yet surely it should not on that account be abolished." I venture to think that these arguments may have some application in India at the present day as they had in China then. The result was that the Court of Peking decided not to legalise. Meanwhile Captain Elliott had expressed himself in despatches home as confident that legalisation was about to take place. The contrary actually took place. There is one point I should like to mention which I find in two of these memorials. They suggest that the purpose of the English in introducing opium into the country has been to weaken and enfeeble it. That was in the memorial of Chu Tsun. A Sub-Censor supported him, and in the abstract of that memorial Dr. Williams says: "The Sub-Censor agrees with Chu Tsun regarding the designs of foreigners in doing so, that they wished first to 'debilitate and impoverish the land as a preparatory measure, for they never smoked the drug in their own country, but brought it all to China.'" It is interesting to compare those views, expressed more than half a century ago, with the evidence given by three or four missionaries before this Commission in London, that a precisely similar impression is at present largely prevailing in China, and that among some of the best classes in China it is said that England had the purpose of introducing opium into China in order to weaken and debilitate the Chinese nation, so that we may ultimately conquer the country. Of course we know that it is not so, but we can understand how such a view has arisen. Then Dr. Williams again refers to the question of sincerity. He says: "It is unjust to the Chinese to say, as was argued by those who had never felt these sufferings, that all parties were insincere in their efforts to put down this trade, that it was a mere affectation of morality, and that no one would be more

"chagrined to see it stop than those apparently so strenuously against it. This assertion was made by Lord Palmerston in Parliament, and re-echoed by the Indian officials; but those who have candidly examined the proceedings of the Chinese, or have lived among the people in a way to learn their real feelings, need not be told how incorrect is the remark. The highest statesman and the debilitated, victimised smoker alike agreed in their opinion of its bad effects, and both were pretty much in the position of a miserable lamb in the coil of a hungry anaconda." (That is a very favourite metaphor with the Chinese on the subject of opium. A friend showed me not long ago a little model which he had received from some missionary friends in China representing the opium vice in that way. It was not an anaconda, but it was a outtle-fish or octopus destroying the man.) As is well known, the result was that the Emperor sent down to Canton Commissioner Lin in order to put a stop to the trade. Before Commissioner Lin arrived some measures had been taken. Dr. Williams says: "There can be no reasonable doubt that the best part of his people and the moral power of the nation were with their sovereign in this attempt. Hu Nai Tsi was dismissed for proposing legalisation, and three princes of the blood degraded for smoking opium; arrests, fines, tortures, imprisonments, and executions were frequent in the provinces on the same grounds, all showing the determination to eradicate it. The Governor of Hukwang, Lin Tseh-su, was ordered to proceed to Canton, with unlimited powers to stop the traffic. The trade there was at this time almost suspended, the deliveries being small and at losing prices. Many underlings were convicted and summarily punished, and on February 26th Fung A-ngan was strangled in front of the factories for his connection with opium and participation in the affray at Whampoa. The foreign flags, English, American, Dutch, and French, were all hauled down in consequence. The entire stoppage of all trade was threatened, and the Governor urged foreigners to send all their ships from Chinese waters. Commissioner Lin arrived in Canton, March 10th. The Emperor sent him to inquire and act so as thoroughly to remove the source of the evil, for, says he, 'if the source of the evil be not clearly ascertained, how can we hope that the stream of pernicious consequences shall be stayed? It is our full hope that the long indulged habit will be for ever laid aside, and every root and germ of it entirely eradicated; we would fain think that our ministers will be able to substantiate our wishes, and so remove from China the dire calamity.' It was reported in Canton that the monarch, when recounting the evils which had long afflicted his people by means of opium, paused and wept, and turning to Lin said, 'How, alas! can I die and go to the shades of my imperial fathers and ancestors until these direful evils are removed?' Such was the chief purpose of this movement on the part of the Chinese Government, and Lin was invested with the fullest powers ever conferred on a subject. Although long experience of the ineffectiveness of Chinese edicts generally lead those residing in the country to regard them as mere verbiage, still to say that they are all insincere and formal because they are ineffectual is to misjudge and pervert the emotions of common humanity." It is well known that the Chinese Government obtained possession of the opium by imprisoning the British merchants in their houses (you had before you in London Mr. Donald Mathieson, one of the merchants imprisoned), and the opium was all destroyed. Dr. Williams states that the market value of 20,283 chests of opium at the time was not far from 9 million dollars, and the cost price nearly 11 millions. War ensued; and here Dr. Williams quotes the language used by Lord John Russell, that the war "was set afoot to obtain reparation for insults and injuries offered Her Majesty's Superintendent and subjects; to obtain indemnification for the losses the merchants had sustained under threats of violence; and lastly, to get security that persons and property trading with China should in future be protected from insult and injury, and trade maintained upon a proper footing." Undoubtedly, there were other causes leading to the war in addition to the seizure of opium; and it seems to me that Mr. Lay and Sir Thomas Wade have simply set aside this one cause and have taken these other subsidiary and collateral causes and said that they were the only reasons of the war. It does not seem to me that you can logically adopt that course.

2403. I think Sir Thomas Wade urged that the exclusiveness of the Chinese, their unwillingness to enter into relations with other powers, treating us as barbarians only to be approached through the Hongkong merchants, were a natural and inevitable cause of misunderstanding. He urged that if the Chinese authorities had been willing to enter

into direct communication with us, explanations would have been exchanged which would probably have averted the ultimate warlike proceedings which we all regret?—No doubt that was the substance of his argument. Dr. Williams combats that by pointing out that on previous occasions concessions had been obtained from China without force; and if China had been treated in a proper way, these concessions might have been obtained. But at all events, the war did, as a matter of fact, grow out of the opium trade; and Sir Thomas Wade himself admits that it may properly be called the Opium War. Dr. Williams says: "The war was looked upon in this light by the Chinese, and it will also be so looked upon by the candid historian, and known as the Opium War." Dr. Williams also refers to the debate which took place in Parliament. Of course it was not admitted in that debate by Lord Macaulay, who was the Government spokesman, that opium was the object of the war; nor was it by Sir George Staunton, who took an independent position in the debate, and whose authority, from his great knowledge of China, was very great. He defended the war, but spoke in the strongest terms against the opium-smuggling trade.

But I venture to think that the speech made by Mr. Gladstone, already quoted by Mr. Arthur Pease, truly states the case, that while there had been no doubt many things on the part of the Chinese which were objectionable, yet in the main the Chinese were right and we were wrong. Lord Melbourne in the course of the debate said: "We possess immense territories peculiarly fitted for raising opium, and though I would wish that the Government were not so directly concerned in the traffic, I am not prepared to pledge myself to relinquish it." Dr. Williams remarks: "this debate was in fact a remarkable instance of the way in which a moral question is blinked even by conscientious persons whenever politics or interest come athwart its course." He also refers to two letters written by Commissioner Lin to Queen Victoria desiring her assistance in putting down the opium trade. One of those letters has been recently published. I should like to hand in to the Commission a publication of ours, "Chinese Statesmen on the Opium Traffic." It begins with one of these letters, and the other letter will be found in Mr. Storrs Turner's book which has been distributed. On two or three occasions Dr. Williams points out that negotiations which were begun with the object of stopping the war failed mainly because of the determination of the Chinese to resist rather than to grant full indemnity for the opium. Finally, Captain Elliott concluded a preliminary arrangement on four points, mainly the cession of the island and harbour of Hongkong to the British Crown, an indemnity of six million dollars in annual instalments, direct official intercourse upon an equal footing, and the immediate resumption of the English trade at Canton. As we all know, the Chinese were defeated and ultimately had to yield. One of the conditions of the treaty was that six million dollars was to be paid by China as compensation for the opium that was destroyed, that opium having been contraband. Then, after the treaty, at the final interview between Sir Henry Pottinger and the Chinese Commissioners, there was a remarkable conversation of which Dr. Williams gives an account taken from Captain Loch's "Events in China": "When matters connected with the treaty had been arranged, Sir Henry proposed to say a few words upon the great cause that produced the disturbances which led to the war, viz., the trade in opium. But upon hearing this (Captain Loch says) they unanimously declined entering upon the subject until they were assured that he had introduced it merely as a topic for private conversation. They then evinced much interest, and eagerly requested to know why we would not act fairly towards them by prohibiting the growth of the poppy in our dominions, and thus effectually stop a traffic so pernicious to the human race. This, he said, in consistency with our constitution and laws, could not be done; and he added that, even if England chose to exercise so arbitrary a power over her tillers of the soil, it would not check the evil, so far as the Chinese were concerned, while the cancer remained uneradicated among themselves, but that it would merely throw the market into other hands. It, in fact, he said, rests entirely with yourselves. If your people are virtuous they will desist from the evil practice; and if your officers are incorruptible and obey your orders, no opium can enter your country. The discouragement of the growth of the poppy in your territories rests principally with you, for nearly the entire produce cultivated in India travels east to China; if, however, the habit has become a confirmed vice, and you feel that your power is at present inadequate to stay its indulgence, you may rest assured your people will procure the drug in spite of every enactment. Would

"it not, therefore, be better at once to legalise its importation, and by thus securing the co-operation of the rich and of your authorities, from whom it would thus be no longer debarred, thereby greatly limit the facilities which now exist for smuggling? They owned the plausibility of the argument, but expressed themselves persuaded that their imperial master would never listen to a word upon the subject." Dr. Williams comments severely, as well he may, upon the tone adopted by Sir Henry Pottinger and his really untruthful statement that there was anything unconstitutional in prohibiting the growth of the poppy that had already been prohibited in a large area of British India, and upon the melancholy picture of a British statesman saying to Chinese statesmen, "Your people must become virtuous and your officers incorruptible, and then you can stop opium coming into your borders." England herself might so easily have stopped the trade. I think it must have been about that time, though I have never been able exactly to ascertain the date, that the Emperor of China used some very memorable words which are reported by Mr. Montgomery Martin. When approached with a view of legalising the trade, the Emperor replied. "It is true that I cannot prevent the introduction of the flowing poison; gain-seeking and corrupt men will, for profit and sensuality, defeat my wishes; but nothing will induce me to derive a revenue from the vice and misery of my people." Sir Edward Fry has pointed out that whilst nothing was said about this opium trade in the treaty, we almost immediately afterwards concluded a treaty with China in which we agreed to put down smuggling. That was really never carried out. A proclamation was issued by Sir Henry Pottinger, which was entirely futile, telling the traders in opium that they carried on the trade at their own cost. Dr. Williams says: "All this was done chiefly to throw dust in their eyes and put the onus of the contraband traffic on the Chinese Government, and the violation of law on those who came off to the smuggling vessels, and these proclamations and orders, like their edicts, were to be put 'in the cord.'" This was shown when Captain Hope of H.M.S. *Thalia*, for stopping two or three of the opium vessels proceeding above Shanghai, was recalled from his station and ordered to India, where he could not 'interfere in such a manner with the undertakings of British subjects'—to quote Lord Palmerston's Despatch to Captain Elliot: "This effectually deterred other British officers from meddling with it."

Once more Dr. Williams gives this final summary of the war "Public opinion will ever characterise the contest thus brought to an end as an *opium war*, entered into and carried on to obtain indemnity for opium seized, and setting aside the niceties of Western international law, which the Chinese Government knew nothing of, most justly seized. The British and American merchants, who voluntarily subscribed one thousand and thirty-seven chests to Commissioner Lin, acknowledged themselves to be transgressors by this very act." As Mr. Pease stated in London, neither Mr. Turner, my predecessor, nor I, have used the expression the Second "Opium War." It did not directly arise out of the opium traffic; although it was indirectly connected with it.

Here I turn to another authority, "The Letters and Journals of Lord Elgin," the Ambassador employed to negotiate peace and to settle the difficulties with China. His letters are full of allusions to the strong feeling he has that that war was an altogether unjustifiable and unjust war, and brought about by the misconduct of the English subjects in the East. Here is one of them: "I have hardly alluded in my ultimatum to that wretched question of the 'Arrow,' which is a scandal to us, and is so considered, I have reason to know, by all except the few who are personally compromised." In another place he says: "I thought bitterly of those who for the most selfish objects are trampling under foot this ancient civilisation." Again he says: "Two months I have been there engaged in this painful service, checking as I have been best able to do the disposition to maltreat this unfortunate people." Then Lord Elgin sums up: "No doubt, as you say, one cannot help sometimes regretting that one is mixed up with so bad a business as this in China, but then in some respects it is a great opportunity for doing good, or at least for mitigating evil." May I be permitted, though it is perhaps irrelevant, to say that those extracts and others which I could have read, show how great and noble was the character of Lord Elgin, how supremely he desired that justice should be done to races which had been proved to be weaker in war than the English race, and how one cannot help rejoicing in the hope that his son who is so shortly to arrive in India will be imbued with similar sentiments. Lord Elgin went from China to Japan. There he

signed the treaty which first opened Japan to our commerce, a treaty which had not been forced by war, a treaty which absolutely prohibited the opium trade, and which has been strictly enforced by the Japanese ever since. The Japanese are well aware of the vice which is bringing such terrible evils upon their neighbours in China; therefore they have always shown themselves on the alert to prevent its introduction into their own country. I once heard a missionary who had resided some years in Japan, tell how very severely some men were treated who were once caught attempting to smuggle opium into Japan.

Lord Elgin did not deem it consistent with his duty to make the legalisation of the opium traffic one of the terms of the treaty of peace with China. But I have dealt with that subject in a letter to the *Times* a few years ago.

I said in that letter which was a reply to Mr. Law:—"It may be well in the first place to observe that our present agitation is merely based, not on the assumption that China is being still forced to admit Indian opium, but on what appears to us to be the immorality of the Indian Government in producing, for the purpose of sale to China, a drug which causes such widespread demoralisation in the latter country. The question raised by Mr. Lay is, therefore, more a historical than a practical one. At the same time it undoubtedly adds immensely to the responsibility of Great Britain if, as we are convinced, the action of our Government in the past has been, such as to overbear the genuine objection formerly entertained by the Chinese Government to the admission of opium, and has brought about her present apparent acquiescence in its import. If Mr. Lay simply means that China has never been compelled, as the condition *sine qua non* of a cessation from armed force, to place opium in the category of imports permitted to be brought into the treaty ports, we must admit his correctness. But we maintain that the legalisation of the opium trade was really and truly the result of the cruel and unjust wars of 1840 and 1856, and of the powerful moral support continuously given to opium-smugglers by the British Government before the first war and in the interval between it and the second. As to the Opium War of 1840, it is needless to defend, even against Mr. Lay, the general verdict of history. *Securus judicat orbis terrarum*. It was unquestionably one of the conditions of the treaty of Nanking, which brought the war to a close, that compensation should be made by China for the value of the opium destroyed by Commissioner Lin; and this fact speaks for itself. As regards the tariff supplement to the treaty of Tientsin, with which Mr. Lay was personally connected, and by which opium was first recognised as a lawful article of commerce, it is to be remembered that the treaty itself was the result of violent coercion. Lord Elgin says of the negotiations ('Letters and Journals,' page 253): 'We went on fighting and bullying and getting the poor Commissioners to concede one point after another.' One of the 'chief articles' of the treaty thus concluded was, as stated by his biographer, 'the tariff fixed by the Treaty of Nanking to be revised.' If the treaty itself was obtained by force, how can it be said that the insertion of a fresh item in the revised tariff for which that treaty provided was purely voluntary? With regard to the circumstances under which opium was inserted in the tariff supplement, they are fully stated in the 'Report on the Revision of Tariff,' etc., furnished by Messrs. Oliphant and Wade, the deputies appointed by Lord Elgin to act on his behalf, which is annexed to Lord Elgin's despatch to the Earl of Malmesbury, dated Shanghai, October 22, 1858. They show that on October 12th the deputies (with whom Mr. Lay was associated by Lord Elgin's request) had a preliminary conference with the Chinese Commissioners, at which, by request of the latter, they furnished the Chinese with a list of subjects for discussion, No. 7 being 'legalisation of opium under duties.' It appears further that on this occasion it was urged by the British deputies that opium was an article which no laws were found to exclude, and the irregularity of the present trade in which was highly objectionable.' The following day another conference was held, when, for reasons not necessary to be here stated, the British deputies desired, and the Chinese Commissioners consented, to proceed with opium as the very first subject of discussion. One of the Chinese Commissioners, whose position as Superintendent of Customs at Shanghai, says the report, 'naturally gives him a chief voice in such matters, admitted the necessity of a change. China still retains her objection to the use of a drug on moral grounds; but the present generation of smokers, at all events, must and will have opium. China would propose a very high duty, but, as opposition was naturally to be expected from us in that case, it should be as moderate as possible.' He proceeded to urge that opium should be treated quite differently from other articles

"of import, and, 'after much disussion' as to the rate of duty, the British first naming 15 to 20 taels and the Chinese 60 taels per chest, it was finally fixed at 30 taels. Reviewing the whole transaction, it appears clear that Sir Rutherford Alcock was substantially justified in telling the East India Finance Committee of 1871, 'We have forced the Chinese Government to enter into a treaty to allow their subjects to take opium.'"

I should like also to refer to a letter by my friend Dr. Legge, who gave evidence before the Commission in London on this question, and who is one of the greatest authorities in England or Europe on Chinese questions. In a letter addressed to the *Times*, but which that journal did not publish, and which I quote from the *Friend of China*, he says: "The instructions issued to Lord Elgin from the Foreign Office (April 20th, 1857) directed him when discussing commercial arrangements with any Chinese plenipotentiaries to ascertain whether the Government of China would revoke its prohibition of the opium trade, for there would be obvious advantages in placing the trade on a legal footing by the imposition of a duty instead of its being carried on in the present irregular manner. Various expressions in Lord Elgin's diary show that, as a whole, his mission was not very agreeable to him; to procure the legalisation of the opium trade was especially disagreeable. How he got over the feeling, and yet we find no reference to opium in the articles of the Treaty, appears in a letter of the 19th October, written to Mr. Reed, the American plenipotentiary: 'When I resolved,' he says, 'not to press the matter on the Chinese Commissioners at Tientsin, I did so, not because I questioned the advantages that would arise from the legalisation of the traffic, but because I could not reconcile it to my sense of right to urge the Imperial Government to abandon its traditional policy in this respect under the kind of pressure which we were bringing to bear upon it at Tientsin.' He then speaks of the circumstances under which the question was to come up for discussion in the approaching Conference on the subject of the tariff being 'happily different.' So he was able to satisfy his 'sense of right' in fulfilling his mission by a delusion of the mind. The Conference on the tariff was a natural sequence to the discussions with the Commissioners at Tientsin. And the officers appointed by them to conclude the arrangements must have well known that they dared only to discuss and accede to the wishes of his officers, with any slight modification favourable to themselves which they might well be able to secure."

I do not think it material to refer to the subsequent war of 1860. Lord Elgin was sent to China a second time. It was after the burning of the Summer Palace that the Chinese finally gave way, and the treaty was ultimately ratified.

2404. Does that conclude what you have to say with reference to the war?—I will quote three opinions on the matter from very high authorities, and that will conclude what I have to say on that point. The first is the evidence of Sir Rutherford Alcock (Sir Thomas Wade's predecessor as British Ambassador in China) before the Indian Finance Committee in 1871.

"Now, is there anything in our treaties to force them to take our opium?—Yes, it is put in the tariff of articles of import.

"Then they are bound to allow the free import of opium?—That was the condition introduced into the treaty which Lord Elgin made.

"But we do not enforce the purchase?—Not the purchase; but they cannot prohibit the import of opium; it is amongst the admitted articles on the tariff.

"Then, notwithstanding the Chinese Government are so sensible of the demoralization of their people caused by the import of opium, they cannot prevent our sending it there; we force them by treaty to take it from us?—That is so in effect.

"We have forced the Government to enter into a treaty to allow their subjects to take it?—Yes, precisely.

"Is it any wonder that the Chinese Government complain of our conduct in that respect?—No, I do not think it is any wonder.

"What should we say if these Chinese imposed the like restrictions upon us?—I think that our answer to them for putting it into the treaty is: 'You cannot prevent it being smuggled, and the lesser evil is to admit it as a legitimate article of trade.'

"But is it not for them to judge of that, and not for us?—No doubt, if two nations are negotiating together on equal terms, each should have a voice.

"But suppose the Chinese Government were to say, 'We decline to admit opium; we will not renew the treaty except on the condition of excluding opium altogether?'—I think they could only do that on the same principle as that on which Prince Gortchakoff declared that Russia would not submit to the continued utilisation of the Black Sea,—they must be prepared to fight for it.

"As I understand you, you say that the Chinese have made a treaty from which it is not possible for them to escape?—It is not possible for them to escape from it, except by a declaration that they will not submit to what they conceive to be injurious terms.

"The only way that they can escape from it is by a war?—A war or a declaration that they are ready to go to war rather than submit any longer."

Then Sir Thomas Wade, said: "Nothing that has been gained, it must be remembered, was received from the free will of the Chinese; more, the concessions made to us have been, from first to last, extorted against the conscience of the nation—in defiance, that is to say, of the moral convictions of its educated men, not merely of the office-holders, whom we call mandarins, and who are numerically but a small proportion of the educated class, but of the millions who are saturated with a knowledge of the history and philosophy of their country." That was written by Sir Thomas Wade in a memorandum by him dated 1868 and contained in a Blue Book presented to Parliament in 1871. Once more, here are the words of Lord Elgin himself in a despatch.

2405. What is the date?—I have not the date, but it is in a Blue Book of 1871: "The concessions obtained in the treaty from the Chinese Government are not in themselves extravagant, but in the eyes of the Chinese Government they amount to a revolution. They have been extorted, therefore, from its fears."

2406. That concludes the statement you wish to make with reference to the wars in China?—Yes.

2407. Turning to the paragraph in your memorial in which you urge that the opium traffic brings misery to countless myriads in China. Have you anything to say in support of that view?—First we have the evidence of Protestant missionaries, of whom seventeen appeared before the Commission in London. I include Dr. Leckhart, who in that respect mainly concurred with our witnesses as to the evil effects on China. You had also the Secretaries of two important Missionary Societies, who personally had no experience in China, but who represented two large bodies of Missionaries, those of the Church Missionary Society and the China Inland Mission. To which I may add that all the English missionary societies labouring in China and one or two Scotch societies joined in our deputation to Lord Kimberley a year ago in support of our views. There was also a practically unanimous missionary petition presented to the House of Commons in 1883, and there have been on two or three occasions unanimous resolutions by Missionary Conferences in China representing the whole Protestant Missionary body. So that you have before the Commission the unanimous testimony of the whole Protestant Missionary body, including the medical missionaries labouring in China. Something was said about Roman Catholic missionaries. The Bishop and Vicars-Apostolic of Western China met in 1880, and there was some difference among them as to whether the use of opium in any form was to be absolutely prohibitory to reception into the Roman Catholic Church by baptism. The answer with which I have been favoured by Cardinal Vaughan of the Sacred Congregation for the Propagation of the Faith bears date last year. Referring to previous papal decrees on the subject it lays down the absolute rule that, with the exception of such indulgence as may be necessary for those who need medical treatment, the use of opium in any form is to be considered absolutely prohibited to Roman Catholics in China, its growth, and any share whatever in the traffic. So that the Roman Catholic Church, owing to the representations of its missionaries in China, is just as clear on the subject as the Protestant missionaries are. Then we have some British merchants in China, Mr. Donald Mathieson, who appeared before the Commission in London, and Mr. Hanbury, who was with us at the deputation to Lord Kimberley, and who has traded many years in China. He has always refused to have anything to do with the opium trade. In his business at Shanghai he has gone so far as to give strict orders that no portion of his large property is to be let to opium merchants. Then we have a considerable number of British officials connected with China. I have already referred to Sir George Staunton; I have also quotations from Mr. Montgomery Martin; Mr. Lay (who used a very strong expression, speaking of it as "ham-stringing the nation"), Mr. Majoribanks, Sir John Pope Hennessy, Governor of Hong-

kong (who spoke in the strongest words of the way in which the Chinese authorities had constantly remonstrated with him against the trade, not so much on physical grounds as on account of the moral effects of opium-taking), Sir Rutherford Alcock, and Sir Thomas Wade himself. As to the Chinese, Mr. Hanbury, at the deputation to Lord Kimberley, said: "Produce to me ten or even five Chinamen who will say that opium-smoking is innocuous." So far as I know, no Chinaman has ever come forward publicly to declare that he defends the trade. We have seen that some of them were in favour of legalisation as being a better thing than smuggling; but so far as I know, no Chinaman has ever said that the trade did not do a great evil in this country. There are a great many statements of Chinese statesmen and others to be referred to on that head. The counter-evidence is only that of some merchants, some travellers, and some officials. With regard to officials, I will ask the Commission to allow me to quote some important words pronounced by Mr. Gladstone in his speech in the recent debate: "I do not think that in this matter we ought to be guided exclusively, perhaps even principally, by those who may consider themselves experts. It is a very sad thing to say, but unquestionably it happens not infrequently in human affairs, that those who ought, from their situation, to know the most and best, yet from prejudice and prepossessions know the least and the worst. Eminently it was the case in the great question of the West Indian slavery, when this House and the country for a long time were discouraged and abashed by the assurance that those who were in favour of that great and radical change were in favour of it, only because they did not understand the Negro character. There may be something of that element in this case. I certainly, for my part, do not propose to abide finally and decisively by official opinion. Independent opinion—*independent*, but responsible, is what the House wants, in my opinion, in order to enable it to proceed safely in the career upon which I admit, that it has definitively entered." May I add that that seems to me to be a very strong case, and bearing a remarkable analogy to the present case. I believe that the West Indian officials were unanimous in the view that the institution of slavery was desirable. I, therefore, think that we ought not to be too much discouraged by finding that there is a general widespread view among Indian officials at the present time that the system of opium traffic

Adjourned till to-morrow, Tuesday, at 10-30.

to which they have been accustomed is not "morally indefensible."

2408. Referring to the evidence that you have with regard to public opinion at home, is there anything you wish to bring before us in support of your statement that the resolutions you propose are received with almost absolute unanimity at hundreds of meetings; and have you anything to say with reference to the number and influential position of those who sign the numerous petitions that are presented to Parliament?—I have taken a considerable share in the public meetings that have been held on this question since I became Secretary, rather more than four years ago,—latterly not so much as during the first year or two. One thing that has struck me very much is the way in which at these meetings different classes of opinion have been represented. One of the most important meetings that I attended after becoming Secretary was a breakfast meeting held at Leeds. The remark was made to me afterwards by a gentleman long acquainted with Leeds that he did not believe that on any other subject such a meeting could have been gathered. We had present representatives of all the different classes of thought into which English opinion is divided. Religiously, we had Church of England people and Nonconformists, High Church and Low Church; politically we had Tories and Radicals; and altogether it was a meeting that I was told was probably in Leeds unprecedented. What I have said of that meeting applies generally and to a very large degree to a great many other meetings that we have held throughout the country. With regard to the question of unanimity, where that unanimity has been broken, it has, I think, always been only by those directly connected with India and with the services in India. We have always been accustomed to give the fullest opportunity to gentlemen who wished to oppose the views we put forward. They have, no doubt, sometimes been listened to with impatience by the audience opposed to them. But at all events they have been fully and fairly heard on many occasions, and they never succeeded in turning any votes. The largest minority that I am aware of anywhere was a minority of 3, all directly connected with Indian official life. Petitions to Parliament have been very much to the same effect. According to the latest return I have, up to the 10th July last, 2,470 petitions were presented during the session, including 329 officially signed; the total signatures being 205,563.

At the Council Chamber, Writers' Buildings, Calcutta.

NINTH DAY.

Tuesday, 21st November 1893.

PRESENT :

THE RIGHT HONOURABLE LORD BRASSEY, K.C.B. (CHAIRMAN, PRESIDING).

SIR JAMES B. LYALL, G.C.I.E., K.C.S.I.
THE HON'BLE SIR LACHHMESWAR SINGH BAHADUR,
MAHAARAJA OF DARBHANGA, K.C.I.E.
SIR WILLIAM ROBERTS, M.D.
MR. R. G. C. MOWBRAY, M.P.

MR. A. U. FANSHAWE.
„ ARTHUR PEASE.
„ HARIDAS VEHARIDAS DESAI.
„ H. J. WILSON, M.P.

MR. J. PRESCOTT HEWETT, C.I.E., *Secretary*.

Mr. J. G.
Alexander,
LL.B.

21 Nov. 1893.

MR. JOSEPH G. ALEXANDER, LL.B., recalled and further examined.

2409. (*Chairman*.) We had arrived yesterday at the close of your examination-in-chief on the second paragraph of your last general memorial to Lord Kimberley. After your examination the subject was discussed by the members of the Commission, and it was decided that it was not necessary to take any detailed evidence with reference to matters so long since passed as those to which your statements chiefly referred. We therefore do not propose to cross-examine you upon the history of our wars and conflicts with China. In the third paragraph of your memorial presented to Lord Kimberley you express the desire that the area under poppy cultivation in the Behar and Benares Agency should

at once be restricted, and you urge in support of that prayer that declarations of that sense had been made in Parliament by Sir James Fergusson and the late Right Hon'ble W. H. Smith?—I think it is hardly correct to say that it is our prayer that they should be restricted. This paragraph refers to the measures that were actually taken or that we understood to have been taken by the late Government. The credit given in this paragraph to the late Government for what it had been done must be modified in view of Sir David Barbour's statement the other day that the Indian Government has not yet adopted any new policy in the sense we had understood. But with regard to

that I have further to call attention to an express statement by Mr. George Curzon which we thought justified us in making that statement. It was on the 25th February 1892, in reply to a question from Sir Joseph Pease which was founded upon those statements of Sir James Fergusson and Mr. Smith a year before, and which was, in fact, an enquiry as to how far the policy then stated had been carried out. Mr. Curzon made this reply:—"In reply to the Honourable Baronet I have to state that . . . the figures for 1891-92 have not yet been received, but "in order to restrict the area of cultivation the Government "of India reduced the number of chests for sale in the year from 57,000 to 54,000."

2410. When did Mr. Curzon make that statement?—On the 25th February 1892. We took that as an express declaration that the Government of India were acting upon the policy that had been announced in the House of Commons in 1891, as Mr. Curzon expressly said that it was in order to restrict the area of cultivation.

2411. Do you desire to express yourself as satisfied with the declarations that have been made by the representatives of the Government so far as they went?—We considered those declarations to mark a progress decidedly from our point of view.

2412. Do you now desire to say that the indications that have been given in Sir David Barbour's evidence have been received by you with a certain amount of regret?—Regret and surprise, because we had been given to understand that the Government of India was carrying out the views expressed by Sir James Fergusson and Mr. Smith.

2413. Have you anything further to say with reference to this question of acreage under poppy cultivation?—Perhaps this will be the best place for me to say that, from our point of view, a gradual diminution of this kind cannot really be satisfactory; it does not meet our main objection, which is that the trade is altogether an immoral one; and if it is an immoral trade obviously it ought to be stopped at once, and no question of gradual diminution can arise. But there is another point of view, apart from what I may call the moral point, from which we may look at the question—that is the point of view of practical philanthropy—the practical wish to put a stop to the consumption of opium in the East, and especially in China. I do not venture here to speak as representing all the members of our society; I do not know whether they would all follow me;—but for myself I should be willing somewhat to lay aside the urgency of the high moral point of view, namely, that the trade is immoral and should therefore at once and altogether be suppressed, if I could feel sure that by another course we should more speedily arrive at the real practical philanthropic object that we have in the stoppage of the consumption of opium in China. I think Sir George Staunton in the debate in 1840 made a declaration that this trade could never be stopped except by a consensus of the Chinese and British Governments; and, holding that he was right in that view, I should be satisfied to waive something of our claim that the trade must be immediately and absolutely suppressed, if it were necessary to do so, in order to obtain, from the Chinese Government, some concurrent action which would promise a more effectual ending of this great evil. My objection to gradual diminution on the lines laid down by the Government in 1891, and which we supposed the Indian Government had been adopting, is that practically it makes no difference to China. So long as there is no agreement with the Chinese Government that it will reciprocate those measures, the practical effect simply is that perhaps 3,000 chests extra are produced in China instead of in India. I believe that the Indian opium is more injurious and deleterious than native grown opium, being much stronger. From that point of view there perhaps may be some improvement; but otherwise, as long as the British Government has no agreement with the Chinese Government that it will carry out the same policy in China, a gradual diminution does nothing whatever to put an end to the great evil that we deplore and against which we are combating.

2414. Have you any reason to suppose that the Chinese Government is at the present time anxious to come to an agreement with the Government of India for the total prohibition of the use of opium? Has it not been represented to those who have recently been negotiating on the part of the British Government, that the Chinese Government are of opinion that if they attempted to prohibit importation, the demand could be met by a local supply, and that, having that in view, they thought it more politic to check the consumption of opium by taxation? It was impossible to entertain at present a policy of total prohibition. Was not that represented by Sir Thomas Wade in

his evidence in London, and is not that view confirmed by the course of negotiation in which the Marquess Tseng was engaged first with Lord Granville and afterwards with Lord Salisbury for modifications of the Chefoo Convention?—I think that in the letter which the Marquess Tseng addressed to our Secretary, Mr. Turner, after the conclusion of the last treaty, he says that China will certainly be prepared to enter upon the consideration of further measures for the suppression of the traffic.

2415. Can you cite a passage in support of that view?—I will do so. In 1869 the Chinese Government did make a proposal of that kind.

2416. Perhaps you will bring us down to a more recent date?—I will do so directly. The Tsung-Li-Yamen, or Foreign Board, of China addressed to the British Government, through Sir Rutherford Alcock, a memorial which is included in the papers which I presented yesterday under the title of "Chinese Statesmen on the Opium Traffic." "The writers hope that His Excellency will memorialize his Government to give orders in India and elsewhere to "substitute the cultivation of cereals or cotton. Were both "nations to rigorously prohibit the growth of the poppy "both the traffic in and the consumption of opium might "alike be put an end to." Shortly before the signing of the Additional Article of 1885, a special mission was again sent from China to Calcutta, to propose to the Indian Government a scheme for the gradual suppression of the poppy cultivation in both countries.

2417. Do you say that the commission was officially sent on the part of the Chinese Government?—On the part of the Chinese Government. Of that mission, so far as I am aware, no official account has ever been published. Information has reached me through private sources that there was such a mission. I believe that a gentleman employed in the Chinese Customs' service came to Calcutta in order to ascertain whether it would not be possible to come to some such arrangement with the Indian Government.

2418. For total prohibition?—For gradual suppression in both countries concurrently, over a term of five or ten years.

2419. What year was that?—I do not know the exact year. As far as I know it has never been published. Perhaps the Commission will be able to get information in regard to it which is not at present before the public. I presume the Calcutta Government will have some record of the proceedings.

2420. (Mr. Pease.) Is there any evidence that he was authorised by the Chinese Government?—I understood he came with the approval of the Chinese Government.

2421. (Chairman.) Was he a properly accredited representative of the Chinese Government?—I am not sure how far he was officially accredited. He must have received some introduction. I believe he was a gentleman in the service of the Imperial Maritime Customs of China.

2422. You have no direct knowledge?—No, it has simply reached me unofficially. Then I have here a quotation from a letter of Marquess Tseng written in 1886 to which I referred just now. In that letter addressed to our Secretary he said:—"This treaty I admit does not accomplish the desired "result, but it would prove nevertheless the first important "step towards checking the use and abuse of opium. The "British Government as well as my own will enjoy greater "facilities in future for re-opening negotiation on the "opium question with a view of agreeing to measures that "would reduce each year the quantity of importation and "consumption. The British Government may in the "meantime see its way clear to place restrictions upon the "present cultivation, in which case my Government would "surely lose no time in following the example and put an "effectual check upon the growth of opium in China." Since then the only evidence that I think I can bring before the Commission is derived from the interviews which His Excellency Li Hung Chang, the Great Chinese Viceroy, has accorded to some of our friends: to Mr. Dyer of Bombay in 1890, and more recently to the Revd. William Glover of Bristol, and Mr. Morris, a deputation from the Baptist Missionary Society, who were visiting China. In those interviews Li Hung Chang expressed the great desire of the Chinese Government to put down the trade. Li Hung Chang expressed himself in the strongest terms as to the impossibility of the Chinese Government taking any practical step, except by some agreement with the British Government, which would aim at the suppression of the import from India.

2423. Was Li Hung Chang on the occasions to which you are referring expressing his own individual views, or was he putting forward the opinion of his Government?—I think he was speaking his own individual views, but the

Alexander,
LL.B.

21 Nov. 1893.

Commission has already had some evidence on that question. I think the Revd. J. S. Adams put before the Commission his very strong view that the statesmen of China are almost universally anxious to put down the entire trade. I have had similarly very strong opinions from Dr. Dugdon, of Peking, who was Private Secretary to the Marquess Ieng, and who knows a great deal of many of the higher officials in Peking; and from other sources I have derived that impression. I may remind the Commission, too, that Sir Thomas Wade in his evidence said that many Chinese statesmen—he would not undertake to say whether or not the majority—are strongly opposed to the opium traffic. In particular Tso Tsung Tang, whose position and influence as I understand are only second to those of Li Hung Chang himself, is known as a strong and determined opponent of the opium traffic.

Sir Thomas Wade placed before us in London a report of certain conferences on the Opium Question, which had taken place between himself and the Ministers of the Tsung-Li-Yamen in 1881-82. He called our attention to a declaration made by the Yamen that, while desiring to see the abuse of opium repressed in China, the Yamen held the view that the habit was now so widely spread in China that any reform must be the result of a general moral improvement among the people; that they recognise that the growth of opium in China had become so extensive that it would be impossible by merely putting an end to the trade in India to put an end to the supply of opium; and that for the moment there were many questions of greater urgency than the decisive step of absolutely prohibiting the importation of opium. I believe that was the effect of the conversations to which Sir Thomas Wade called our attention in London. I should say with regard to that conversation referred to by Sir Thomas Wade that we only have his account of it, resting on his own private memoranda. We know how when a man has strong views he is apt to take others as agreeing with them perhaps more than they really do; and no official or public statement of that kind has ever been made by Chinese statesmen.

2424. That concludes what you have to say on that subject?—Yes.

2425. In the concluding part of the third paragraph of your memorial you refer to the abolition of what are described as licensed smoking dens throughout India. Have you anything more to say upon that subject?—On that point we rejoice in the action of the Government of India as a very decided step in the right direction. All that we have to say upon that is that it seems to us that the measure requires supplementing by further measures in the same direction. That has been suggested in a correspondence presented to Parliament this year at the instance of Mr. Caine—a correspondence arising out of a confidential circular issued by the Board of Revenue of the North-West Provinces and Oudh. In his despatch to the Government of India closing that correspondence Lord Kimberley says, under date the 16th of March 1893:—"The question arises whether the law ought not to be strengthened, so as to enable our officers to take legal steps for suppressing private opium saloons; otherwise, if unlicensed saloons for opium-smoking can be established without hindrance, the object which was thought to be attained by prohibiting opium-smoking on the premises of licensed opium vendors may be practically defeated. I shall be glad to learn the views of your Government on this point." I am not aware whether the Indian Government has replied to that enquiry of Lord Kimberley. We strongly hold the view expressed by Lord Kimberley that it is desirable to prevent private and unlicensed opium dens or opium clubs being established so as to provide facilities within the law for this practice of opium-smoking, which the Indian Government has by its action and its minute recognized as being undoubtedly a very great evil.

2426. You refer to the removal of the Minimum Guarantee Clause from the agreement made with those who hold opium licenses in Bombay. Have you anything to say on that?—I can only say that we also rejoice in that as a step in the right direction. I think I need not further comment upon it.

I may be allowed to add one point. In going through India with Mr. Wilson I have had my attention called to the fact that this measure of the suppression of opium dens has not been fully carried out. We visited three opium dens on the premises of licensed opium vendors, where we saw in three of them chandu-smoking and in one madak-smoking going on just as if no order had been issued by the Government of India. I think it desirable to call the attention of the Commission to the fact that, although

clauses have been put into the licenses in every province prohibiting the sale of opium for smoking on the premises, those clauses have not been fully carried out, as I have seen with my own eyes.

2427. (Mr. Fanshawe.) Were those public shops?—Yes.

2428. Licensed public shops?—We were told that they were licensed. Our gharry driver was a Mahomedan; and we were told that he would be able to take us to the places. He took us, and we found them open, with no concealment attempted at all.

2429. Where were they?—In the town of Gya, in Behar. We were told that there were some others also in the same town. We visited three.

2430. (Sir James Lyall.) In the third paragraph of your memorial you speak of "the extremely objectionable 'minimum guarantee' clause contained in the opium licenses used in the Presidency of Bombay." Do you not think that that is a very strong term to use?—It seems to me that it was extremely objectionable in its natural operation. I am aware of the object which was intended in the insertion of that clause, that is, to prevent smuggling; but it seems to me that the necessary operation of such a clause would be that there would be great pressure put upon the licensee to extend his sales so as not to incur the risk of a fine.

2431. I think you are aware that before that system was invented there was most extensive smuggling. The licensed vendors in Bombay, though they paid heavily for their licenses and sold a good deal of opium, yet took hardly any of the high-priced Government opium for their shop and relied entirely upon the smuggling trade?—I have been so informed.

2432. So that there were strong reasons for it?—I do not impute bad motives to the Government in adopting that clause, nevertheless I think that the clause as adopted was extremely objectionable, as the memorial says, and I am glad that it has been done away with.

2433. A man could only have one shop, he could not establish branch shops; the license only allowed him to establish a certain shop and sell to anybody who came?—Except with the permission of the Government official.

2434. But that permission was not given as a rule, he had only one shop?—Yes.

2435. Would it then make a great difference in the amount he sold whether he had to pay the guaranteed amount or not?—The ordinary motives of self-interest would make a man sell as much as he could. You may strengthen those motives by telling him that he is under a fine if he does not sell a certain quantity.

2436. Under that strong motive how would he increase the sale?—I have heard of such a practice since I have been in India as a man actually sending round to his customers, if they did not turn up at the accustomed period in the evening, to ask them why they did not come, in that way trying to induce a man who was probably only too ready to be induced and perhaps making some struggle to free himself. That is not my invention, it is what I have been told as having actually taken place. That is one way that I can suggest.

2437. (Mr. Fanshawe.) With regard to Gya, I understand that your statement depends on information given you by a gharry driver. Did you notice if there was a licensed board up at the shop?—The information was not given by the gharry driver, but it was given me by the Baptist Pastor of the place. He referred to our driver as being a man who would know where the shops were. It was he who made the statement to us that the shops were Government licensed shops.

2438. Was any licensed board up in front of the shops?—I did not observe any board.

2439. (Mr. Mowbray.) You are quite aware that similar difficulties have arisen in England with regard to clubs and public houses?—Yes.

2440. You are aware that there was a Committee of the House of Commons sitting on that subject last year?—I did not remember that; I take it from you, and I have no doubt it is so.

2441. And so far as I know Government have not taken any steps to put down these clubs in England?—I do not think they have, but I think the Temperance party, if I may speak as a humble member of that party, is very desirous indeed and is endeavouring to put pressure upon the Government to introduce a measure dealing with clubs.

2442. (*Mr. Wilson.*) Upon that point about the hogus clubs in England I suppose you are also aware that the members of the licensed trade are equally anxious to get them put down?—I believe it is so.

2443. With reference to Gya you use the expression "Tonga driver," perhaps you took that in a general sense for any carriage?—I was thinking it was a gharry. I have only been in India three and a half weeks, and I am not familiar with these technical terms.

2444. I think you did not say that the driver gave you the information, but that he knew where the shops were?—Yes.

2445. (*Chairman.*) Returning to your General Memorial, there appears to be nothing in paragraphs 4, 5 and 6 to which you desire particularly to call attention. In your 4th paragraph you say that you accept those measures of reform which have already been adopted as steps in the right direction, but in your view those measures fall short of carrying out the resolution which the House of Commons had approved. You then proceed to make a reference to the observations of Mr. Gladstone to the Electors of Midlothian, and you hold that those observations imply a sympathy with the cause which you have taken up. You then refer to the specific measures which you would recommend for adoption with a view to the repression of the opium trade. You also refer to the Bengal opium monopoly, to the Malwa transit duty system, and to the excise system. Then in your 7th paragraph you proceed to deal somewhat more in detail with the Bengal opium monopoly. You recommend that there should be an immediate reduction in the area of poppy cultivation with a view to limiting the production of opium to that which medical use requires; and you complain that opium is not prepared in India for medical use, but solely for sensual indulgence. Have you anything further to say upon that subject?—I should like to point out under this paragraph the great distinction between opium prepared for medical use and opium prepared for smoking or opium eating, which is what we mean by sensual indulgence—the habits of opium smoking and opium eating. I believe it to be a fact that the British Pharmacopœia does not admit of the use of Indian opium in the preparation of medicines in England. Its quality is not good enough for medical purposes. I am not an expert on those questions, but I may refer to Flückiger and Hanbury's Pharmacographia, in which the various ingredients are discussed, and it is shown that Indian opium, though very potent for intoxicating purposes, does not contain a sufficient proportion of those ingredients which are specially useful for medical purposes. In this paragraph we point out that a specially prepared article is issued from the Government Agencies to the Medical Department in India. I believe that is the Patna garden opium. I think that Dr. Watt's article on opium specifies that. No doubt a good deal of opium prepared for the Excise Department, and prepared, as I should say, for intoxicating use, is in fact used by doctors in India for medical purposes. And Dr. Maxwell, who gave evidence with regard to China, told me that, when practising in Formosa, having run out of medical opium, he had used the Indian smoking opium.

2446. (*Sir William Roberts.*) I think he said Indian crude opium?—That is what I mean, crude opium intended to be prepared for smoking purposes.

2447. He added that it answered just as well?—I did not remember that. I suppose he must have used it in some different proportions.

2448. The differences are really very slight?—Flückiger and Hanbury, I think, speak of the difference as being considerable.

2449. The analyses can be had; the differences are very slight?—I may point out that Dr. Flückiger has suggested that the Indian Government would do well to pay attention to the demand for good opium for medical use, that it might very well prepare opium with a view of competing with the Turkey drug which at present has a monopoly for medical use in Great Britain and Europe generally. I have various authorities that I can refer to on the question of its being prepared for what I call sensual indulgence. That largely rests upon a statement made by Julius Jeffreys, F.R.S., formerly Staff Surgeon of Cawnpore, and Staff Surgeon at Fatehgarh, published in 1858 in an appendix to a book on the British Army in India:—"My own acquaintance with the subject dates from the year 1831, when, in passing by water the chief opium magazine of the East India Company at Patna, I paid a visit to a friend who had charge of the scientific department of it. After he had led me through story after story and "gallery after gallery of the factory, with opium balls right

"and left tiered in shelves to the ceiling, upon my expressing amazement at an exhibition of opium enough to supply the medical wants of the world for years, he replied, "nearly in these words: 'I see you are very innocent; "these stores of opium have no such beneficent destination. "It is all going to debauch the Chinese, and my duty is to "maintain its smack as attractive to them as possible. Come "to my laboratory.' There I saw broken balls of opium "procured, I understood, from China, by the Bengal Government, as approved musters (samples) for imitation, by the "cultivators." Mr. Jeffreys adds: "Upon looking around "for information, I heard that the natives, where they "ventured an opinion, the Mahomedans especially, were "equally scandalized at the engagement of the Company in "such a traffic."

2450. What year was that?—The visit was in 1831.

2451. I presume you are aware that very little was then known about opium smoking?—Not very much in 1831. It was about 1840 that the first pamphlets came out attacking the opium trade, or shortly before 1841. In 1830 there was very little information on the subject, though Bishop Thoburn referred to the fact that it was condemned in very strong terms in the Impeachment of Warren Hastings more than 100 years ago. And the East India Company's despatch, I think of 1817, sanctioning the establishment of the excise system of selling opium in India, spoke in the strongest terms of condemnation of the habit. The Directors said that were it possible in compassion to mankind they would gladly stop the traffic altogether.

2452. (*Chairman.*) These remarks bear upon the subject generally, not upon the Bengal opium monopoly. Have you anything to say with regard to the special question of the Bengal opium monopoly?—I think I have nothing further to add.

2453. Do you draw any distinction in point of moral responsibility between the working of a system such as the Bengal opium monopoly and the position taken by the Government in other parts of India where it is not a manufacturer or producer, and interposes only to levy export duties and to enforce the payment of licenses. Do you draw any distinction between the two positions? I believe that has been done in some pamphlets issued by your Association?—I was intending to deal with that under paragraph 13, but I may as well take it here. I may say that the opinions expressed in that pamphlet dealing with Sir William Muir's minute are not the opinions held by our Society now; at least our conclusions are not the same.

2454. When was that pamphlet published?—Very early in the history of the Society.

2455. What year about?—1875.

2456. You were not connected with the society at that time?—I was not.

2457. Was Sir Joseph Pease connected with it?—Yes; but he was not President then. Lord Shaftesbury was President until his death. There was originally some difference of view, as I explained in London. In starting the Society it was committed to no very definite policy. That came out in a meeting at the Mansion House held in 1881, when three different speakers suggested three different lines. One was for total prohibition with the exception of medical use (of course whenever we use the term "suppression" or "prohibition" of the traffic we mean "except for medical use"). Another speaker advocated a policy of gradual suppression.

2458. Who was the second speaker?—I am not quite sure now; I almost think it was Lord Shaftesbury himself, but I am not sure. A third speaker, who I think was Sir Robert Fowler, our late Treasurer, advocated that the change of policy should be on the lines of Sir William Muir's minute. On that occasion Cardinal Manning was another of the speakers. He came after the speaker who advocated the Bombay system, and he quoted the old story about the king who wished that all his nobles had but one neck so that he might strike them all off at a blow, and he applied that to the opium traffic. He very strongly objected to the suggestion that the opium traffic should be handed over to private capitalists, because he pointed out that if that were the case, you would at once have a number of vested interests, like those that we have in England in connection with the liquor traffic. He would rather have the one neck of the Government of India to deal with. He thought that the question of compensation, if it came at all, might have to be a question of what England should pay the people of India in order to help them out of their difficulty. I do not know whether he put that into his speech,—perhaps that is rather my own suggestion. At all

events he would rather have the one neck of the Government of India to deal with than have the vested rights of a number of private capitalists. Since that time that view has been completely accepted by our Society, and in the Statement of Facts and Principles which I put in, and which was adopted by us at the beginning of 1886, the suppression of the Bengal monopoly was for the first time, I think, distinctly laid down as the programme of the Society, and it is embodied in paragraph 13 of the memorial to Lord Kimberley.

2459. (*Sir James Lyall.*) Suppression of the cultivation; not merely of the monopoly, but of the cultivation?—Not merely of the monopoly, but of the cultivation.

2460. (*Chairman.*) You put that forward now as the view held unanimously by the members of your Society?—Unanimously by the active members of our Society.

2461. What interpretation do you put upon the passage in Sir Joseph Pease's speech last session which I quoted in question to Sir David Barbour?—I think Sir Joseph Pease only meant to say what we have said in paragraph 13, that is, that the Calcutta sales are the most prominent and the most obviously indefensible part of the system from our point of view; that the Malwa system has more analogy to the drink traffic repressed by taxation with which we are familiar in our own country; and that the fact that the Government holds this position under the monopoly brings out in a more glaring light the evils of the system.

2462. You have nothing further to say on the Bengal monopoly? You have stated that you object to the system?—I had better mention here what I had intended to say under paragraph 13. It is sometimes said that there are no precedents for the prohibition of a trade in this way by a Government. I venture to put before the Commission two precedents, both relating to the liquor traffic. One is under the North Sea Convention for the protection of sailors in the North Sea against the liquor traffic that used to be carried on by what were called "copers."

2463. You would not draw any parallel between the North Sea liquor traffic and the opium traffic of India in point of magnitude?—No, not in point of magnitude certainly. I refer to it simply as answering the objection that has been raised against our proposal that it is altogether unprecedented. That is a precedent. I think, for the absolute prohibition of a traffic of similar character. The second, which was referred to by Mr. Pease in his examination in London of one of the witnesses, is that of the Brussels Anti-Slavery Convention, under which a large zone of Central Africa is absolutely protected from the liquor traffic. The provision is that where vested rights have not yet been acquired, that is to say, where the liquor traffic has not yet been carried on in Africa, it is to be totally prohibited. This Convention also provides by taxation for the limitation of the traffic, its restriction by taxation in those districts where it already existed before the Convention.

2464. In the case of Africa, I apprehend there is no difference of opinion among professional experts as to the effect of indulgence in liquor by the African tribes;—they are unanimous that it is a bad thing?—That is so; and I think there is practical unanimity in regard to the effects of opium in China.

2465. With regard to the Malwa system, you deal with that in the 8th paragraph, and you say that, with a view to preventing the cultivation of opium beyond what is required for medical use, it is desirable that there should be a mutual prohibition enforced alike in British India and in the Malwa States, and you say that if such an arrangement were made, the objection which has been urged on the part of the Government of India to the proposals on the ground of smuggling would be to a large extent removed. Have you anything to say in development of these views?—I would simply more clearly bring out our view that the Bengal trade ought first to be stopped. The Government of India ought first, according to our view, to cease itself from deriving a revenue from carrying on this trade. Having stopped the Bengal system, and having given up its own revenue, it would then be in a position to go to the Chiefs of the Native States and say: "We on moral grounds have abandoned this trade, feeling that it is an indefensible trade, and we ask you to follow our example."

2466. How long would you concede to the Government of India for the purpose of dealing with the case in Bengal?—I would say that it should be done as quickly as possible, and would say: Stop the trade immediately and convert the stocks you have in hand to medical use at once.

2467. You recognise the financial difficulty?—Yes, I do, but I am unable to put a financial difficulty on the same line with a moral objection. I think England should give help in regard to the financial difficulty certainly.

2468. You think that the Imperial Exchequer should come to the rescue?—Yes, that I propose to deal with later on. I should like to add another point on the 8th paragraph. I think that pressure upon the Native States would be justifiable, should it become necessary, on the ground that in the past we have forced the trade upon the Chinese; that if the Chinese Government had succeeded in its effort in 1840 to put down the trade, the Native States would have lost the whole of their trade. It was the force of the British arms that established the trade, and has kept the trade open ever since, and on that ground we should be entitled to exercise pressure upon the Native States if necessary, though I would only advocate that in the last resort, making use of our power as surrounding the Native territories. I have a note about the smuggling of opium. That difficulty would of course be met, as far as regards the States of Central India which produce opium, by an arrangement of the kind that I have suggested with the Native States. Some little difficulty might no doubt arise as regards smuggling over the North-West Frontier, and perhaps Bhopal, but I do not think that it is so formidable as is often stated. Sir Charles Aitchison in his memorandum in 1880, with regard to opium in Burma, says—"As regards smuggling, I do not believe that, even with our open seahoard of 1,000 miles and our long and unguarded frontier with Upper Burma, the Shan States, and Siam, there would be a very great increase in illicit traffic, either from Bengal or from China, if the importation of opium were altogether forbidden and the possession of opium were made illegal. Already the price of opium is artificially forced up to a maximum, presenting the very strongest temptation to the smuggler, while the fact that possession of the drug is not unlawful increases the difficulty of detection. The pecuniary temptation cannot become very much greater than it is if opium were altogether forbidden; the drug wherever found would be contraband without question, and we should have the sympathies of the people with us in the suppression of smuggling. One fact is worth a bushel of argument; we have succeeded in almost stamping out ganja, although the plant from which it is made grows wild in Burma. The difficulties we have in any case to contend with in preventing smuggling are so great that an addition to them would not be a very appreciable burden. Anyhow, smuggling, even on a considerable scale, would never lead to the universal consumption of the drug; and the evasion of the revenue is not to be compared to the gradual demoralization of the people."

2469. (*Sir James Lyall.*) With reference to the Bengal opium monopoly, I understand that your Society admits that the Bengal monopoly system is preferable to the Malwa or export duty system as the more powerful engine for restricting and regulating internal consumption; and the preference is not based simply upon the fact that it is easier to attack, but it is also admitted that, if the prohibition of cultivation is not to be enforced, the Bengal monopoly system is the most powerful engine possible for restricting and regulating the internal consumption?—I do not think we have ever admitted that. We recognise that there will be a risk in changing the system—that if we really changed the system, we might find ourselves worse off. My own private opinion is that we should not find ourselves worse off, in all probability.

2470. Not worse off in what way?—I mean there might be a greater consumption—it might possibly lead to a greater trade.

2471. If you free the trade?—And simply placed it under a system of excise, similar to that which we have at home in regard to the manufacture of beer.

2472. You do not think that your Society admitted that, but you yourself are inclined to think so?—I beg your pardon, I am inclined to think otherwise.

2473. What, that the free trade system is better for internal consumption than the Bengal system?—I do not suppose that anybody contemplated free trade.

2474. Free growth and excise and export duty?—Excise and export duty, a system such as that sketched out by Sir William Muir, which is one of licensing the growth.

2475. Do you think that would be better for regulating and restricting internal consumption than the Bengal monopoly system?—Yes. My personal opinion is that probably there would be less growth and less trade altogether under such a system than under the present system.

2476. I am speaking of internal consumption?—I have not formed an opinion about that. I recognise that there are risks, and that we might find ourselves worse off. The Society has recognized those risks, and does not wish to make the experiment.

2477. Are you aware that poppy cultivation once extended throughout India in all parts where the soil and the climate were suitable, though, except in certain favourable tracts, it was sown mainly or entirely for local consumption, not for the export trade; and are you aware that the operation of the Bengal opium monopoly and the policy of the Government of India in connection with it since its first establishment, more than a hundred years ago, have had the effect of putting an end to poppy cultivation in much the greater part of British India and in the greater part of the territory held by the Native States—are you aware of that?—I could not say that I was aware of it as regards the Native States. As regards British India I am aware that poppy cultivation existed here and there over a large part of it until the measures at the end of the last century were taken which we have referred to in paragraph 11.

2478. In Mysore and Hyderabad, by agreement with the Government, poppy cultivation was prohibited. There are two instances; and all the Native States under the control of Bombay are also other instances?—I cannot say I was aware of it. I have no doubt you are correct.

2479. Then but for the monopoly and the policy in connection with it, would not the cultivation of the poppy and the consumption and export of opium have been in all probability much greater than they are under the present system?—It is quite possible. I cannot form a definite opinion as to what would have been.

2480. I ask the question because in the anti-opium literature these facts are altogether ignored, and it might be thought that we had introduced the cultivation of the poppy and entirely created the export trade—I think we have frequently used the fact that the Government of India prohibit and put down the opium growth in many parts of India as an argument why it should and could do the same in the remainder of India. We have used that as an argument in paragraph 11, and we refer to it in our publications.

2481. In paragraph 7 you speak of limiting the production of opium to that which medical use requires. That means, does it not, that it must only be supplied on medical advice?—That is our view.

2482. But the mass of natives of India prefer their own system of medicine to ours; they may admit the superiority of our surgery, but they prefer their own system of medicine. Our doctors on the contrary say that their ideas of medicine are all wrong. Is not that a difficulty in laying down a rule that opium should only be supplied on medical advice of some kind?—I should not have thought so. I include in medical advice Native as well as European doctors, advice according to the native system as well as according to the European.

2483. You are aware that the medical system of the village doctors is of a most primitive kind possible?—I was aware of that.

2484. That people administer medicine for themselves, a man advising for his own family or for his neighbour?—We attempt to deal with that in England, where people also medicate themselves to a great extent, by directing that no medicine of a poisonous character shall be sold except by druggists.

2485. Do you think from what you know or what you have heard of India that the native practitioners, the Hakims and Vaidis, can be trusted with the power of prescribing opium and saying whether it shall be used for medical purposes or not, there being great inducements for them to misuse their power owing to the large demand for opium as a stimulant?—My answer is that you must work with such tools as you have. Although it may be true that the medical profession in India (using the word in the large sense of all who practise medicine) is not in a very satisfactory state, and that there would be some temptations of the kind you have suggested, yet it is far better that a general restriction should be applied than that the sale should be perfectly public and open, and every man allowed to get poisonous drugs exactly as he pleases.

2486. You know that opium is a stimulant, as alcohol is; would it not be very difficult to draw a line between the use of such a thing for medical requirements and its use for other purposes? I mean this. If you asked most people who took opium moderately why they took it at all, they would nearly all answer that they took it because they thought it did them good; how can you possibly draw a line and say that in this case it is for medical use and in that case it is not?—I cannot admit the suggestion that most people in India who use opium, even as you say moderately, would say that it was doing them good. It may be so, and my limited knowledge of India does not entitle

me to say that it is not, but I cannot be taken to admit that it is. I have heard a good deal in India to the contrary; that those who take opium admit that it does not do them good, even where they take it in comparatively small doses.

2487. (Sir William Roberts.) Do you not recognize the analogy between the use of brandy in our country, partly as an intoxicant and largely as a domestic remedy, and the use of opium? Is not the parallel pretty even?—No, I should have thought not.

2488. Why not?—There is this broad distinction at all events, that opium has been recognized by medical science as a poison, and that at home we do attempt to protect our people from its indiscriminate use in that way. We have not yet given that protection at home against alcohol, and if it were to be extended to India it would be something beyond what we have at home.

2489. Is not that begging the question that India and home are identical in regard to opium?—It is assuming that opium, being a poison in England, is also a poison in India. We certainly do assume that.

2490. (Sir James Lyall.) Are you aware that the English system which you recommend to be introduced is not sufficient for preventing any person who wants to get opium for excessive indulgence?—We have admitted in our 9th paragraph that the provisions of the present law as regards opium are too lax. I may explain briefly what the provisions are in the Pharmacy Act. The Act divides poisons into two categories—violent poisons, amongst which strychnine and arsenic are included, and milder poisons, amongst which opium and all the preparations of opium are included. With regard to the more violent poisons the provisions are exceedingly strict; they can only be sold by certified druggists, who must make entries and have a knowledge of the person to whom they are selling. With regard to opium, and other milder drugs, the provisions are only that it must be sold by a registered druggist, and that it must be labelled "poison." There is a considerable amount of medical opinion at home for taking opium out of the milder category and putting it in the stricter.

2491. You are aware that under the present system in the fens and other parts of England where opium is freely taken as it is in India the druggists have it prepared on market days on their counters?—Yes.

2492. People come in and take the opium without question?—I am aware that that is so, and that medical men and other observers in the districts speak of it as a very great evil and greatly deplore that such a state of things exists.

2493. Some do and some do not; some medical men justify the system?—I think I have seen one opinion of that kind, but I have heard a good many to the contrary.

2494. Has your Society ever thought out any system for India by which opium would be available for medical use and yet not available as a stimulant?—We have taken the view that that was a question upon which we at home could not work out the details, that we could only lay down principles and leave the Indian Government, which knows India and has its officials to consult, to ascertain the best way of applying those principles.

2495. In paragraph 8 you say:—"As regards Malwa "Opium we would point out that the present wide extension of "poppy cultivation in the Native States is due to the policy "of the British Government itself." Then you go on to quote as an authority the statement made by Mr. St. George Tucker. Has your society made any further enquiry to test the correctness of Mr. Tucker's statement? Does it still adhere to the statement as true in fact that the present wide extension of poppy cultivation is due to the policy of the British Government itself?—I do not think the society can be said to have made any further enquiry. I have received from yourself information with which you were good enough to furnish me with on the voyage out, which I admit tends to show that Mr. Tucker somewhat inaccurately represented the state of the case. We naturally took his statement as being that of a very great authority; and we were not aware of any facts which would displace the statement.

2496. You have not seen the memorandum as to the arrangement with the Native States which the Government of India has prepared?—No; I only received it yesterday, and I have not been able to look through it.

2497. Have you looked at the subject in Sir Charles Aitchison's work?—I looked up his book and I was unsuccessful in finding any trace of the opium question. Perhaps there was a foot-note somewhere.

Mr. J. G.
Alexander,
L.L.B.

21 Nov. 1893.

Mr. J. G. Alexander,
LL.B.
21 Nov. 1893.

2498. There is a copy of the Treaty made in 1820 with Holkar and a similar treaty was made with nine other States. In his philanthropic zeal Mr. Tucker mistook the facts and misrepresented them. You will find the treaty given there? —I did so, but I did not read it in such a way as to contradict Mr. Tucker's statement. I think Sir Charles Aitchison's object was to show that the new arrangement was better than the old; and that it seems to me, from every point of view, it undoubtedly is.

2499. You mean better than that made by treaty? —Yes.

2500. Better for the Native States. They objected strongly to the old arrangement; and so did the natives. The object of the treaties was to bring poppy cultivation into control and reduce it for the benefit of the Bengal opium?—It led to a system of espionage which was unendurable. We mention, in paragraph 8, that the old treaties were repealed.

2501. Mr. Tucker states that we contracted burdensome treaties with the Rajput States to introduce and to extend the cultivation of the poppy. There he was entirely wrong, as any reference to the authorities will show.—I am glad to know that it is so. I take it from you.

2502. When you say: "at the present time the Native States engage so to manage their opium cultivation and "production as to safeguard the British revenue; and in "exchange for this service they receive either money "compensation or other concessions." Did you imagine that the Native States there referred to were the same Native States—the Rajput Native States or Rajputana or Central India?—Yes.

2503. As a matter of fact they are not the same Native States?—We have given a reference to the passage. It is not our statement, but the statement of the Government of India in the Report on the Moral and Material Progress of India, 1887-88.

2504. Those States are Bombay Native States?—Yes.

2505. The Native States under the Bombay Government; it may be that other Native States are included like Hyderabad and Mysore; but in all cases when money compensation or other concessions are given they are given with a restrictive object?—All I can say is that that did not appear to us to be the meaning of the paragraph. If you tell me it is so, I will accept it on your statement. In my examination-in-chief, I have endeavoured to put the case as regards the Malwa opium on quite different and broader grounds.

2506. Would it not have been better to enquire of some person in authority before making a statement of that sort in a letter like this?—I think we were surely justified in taking these statements from two such high authorities and putting them down in their plain and obvious meaning. Of course we labour under great difficulties in England. Not nearly all the papers of the Government of India, its reports and despatches, are published in England.

2507. You piece the two things together—Mr. Tucker's statement of 1829, and something that is said in the Moral and Material Progress in 1887—sixty years after. Surely you might have enquired of some person in authority?—Those two statements seemed to justify the statement we made.

2508. (Mr. Fanshawe.) Your Society has recommended that opium should only be purchasable in chemists' shops?—It has never made that recommendation so far as I know.

2509. The recommendation is in a pamphlet addressed by the President of your Society to Lord Cross. A similar recommendation was made by some medical men at home, and is quoted with approval in that pamphlet. I was under the belief, therefore, that it had been distinctly stated by your Society.—It has not been made by the Society; it certainly has not come before me as an official publication.

2510. Does not this letter from the President, dated March 1892, which is now before me represent the Society?—The Society is not committed to every statement in that letter certainly.

2511. Does it not represent the views of the Society?—Will you read the words?

2512. At page 23 the President says: "With regard to "No. 2, dealing with old established habits, I would submit "for your Lordship's consideration that in substituting the "chemist's shop for the opium market, etc.,"—putting that forward as a recommendation of the Society. Then "he says at page 25:—"I believe your Lordship is already "aware that upwards of 5,000 medical men, some of them "knowing India thoroughly, have signed the following "declaration:" one of the paragraphs being "That the

"drug opium ought in India as in England to be classed "and sold as a poison and be purchasable from chemists "only." I should like to ask what your Society contemplates in speaking of the chemists' shops as applied to a large part of India?—Our Society has not made that proposal. Our proposals will be found in paragraph 9 carefully worded.

2513. What proposals?—"We would urge upon your Lordship to request the Indian Government without delay to "prepare and adopt such regulations under the Indian Opium "and Excise Acts as may be found best suited to adapt to the "requirements of British India the fundamental principles "that the sale of poisonous drugs is to be restricted to medicinal and scientific use, and that discretionary powers for "such sale should be entrusted only to responsible and carefully selected persons, who possess adequate knowledge of "the deleterious properties of these drugs, who can readily be "called to account for any improper use of the discretion "conferred upon them, and whose remuneration in no degree "depends on the amount of their sales."

2514. Then I may take it that your answer is that you have not thought out for yourselves the means by which the opium could be supplied, even for medical purposes, throughout the country?—I did not say we had not thought it out, but that we had left it to the Indian Government to apply the principles laid down in the way that the circumstances of India might require—the principles which underlie our home legislation.

2515. You do not see the difficulties?—I have no doubt there are difficulties, but I do not know what Governments and statesmen are for if it is not to deal with difficulties and overcome them.

2516. With regard to the limitation to medical use only, I will ask you to take the case of the Central Provinces, where Dr. Rice told us that many persons living in malarial conditions, the causes being constant and the effects constant, take opium in very moderate doses. Would you cut off that whole class of Indian society from the possibility of obtaining opium?—I spent some days in the Central Provinces, and I was informed that a measure of this kind would be generally welcomed.

2517. How would you arrange to provide those men with that kind of dose, so small that it was described as almost a medicinal use, or do you intend that they should be cut off from the possibility of obtaining it?—I think it is quite necessary as part of the policy of prohibition. I have been everywhere told in India that those moderate doses almost invariably lead to greater doses—that those who begin go on to more.

2518. Are you aware that in many parts of India very great changes in temperature take place, especially during the cold seasons, and that generally malarial conditions prevail?—Yes.

2519. If it were shown that the use of opium is a comfort in the way of enabling men to withstand cold, ill-clad men as most of them are—would you still propose that they should be entirely deprived?—I apprehend that if the Commission is satisfied on that point, it will not report in favour of prohibition.

2520. But your wish is to confine the use to medical purposes?—Of course, our Society has a conviction that it is not necessary. But even if it were established that there are some districts in India where there is a moderate use which is perhaps not injurious but even slightly beneficial, we might still think that the evils produced by opium are so great that any deprivation to small classes of that kind would be greatly overbalanced by the benefit to the people of India as a whole from the prohibitive policy.

2521. But if it could be shown that they are not small classes but to some extent large classes?—It must be simply a question of a balance of considerations.

2522. (Sir James Lyall.) You said you would be prepared to cut off those classes of moderate consumers from the use of opium, but in answer to my question you said you would entrust the discretion of prescribing opium for medical use to all the Vaidis and Hakims, native medical practitioners in India. Would not these medical practitioners prescribe opium in those cases?—That seems to me a very hypothetical question. Perhaps I made rather too large an admission when I assumed that medical advice would include all such practitioners. I am not sufficiently acquainted with the classes of which you speak. It may be that some of them are what we call quacks, whom the law would not recognize as entitled to give medical advice.

2523. (Mr. Mowbray.) Did I understand you to say that your Society contemplated in the last resort compulsion in the

case of these Native States, if the cultivation of the poppy in British India were abandoned?—Yes, I think so. These Native States are entirely dependent for their export trade upon the permission of the British Government that the drug should pass through its States, and if the Government had stopped its own trade purely on moral grounds, I think it would, in the last resort, be justified in refusing that permission to the Native States.

2524. I suppose your Society contemplated the alternative method of compensation?—I do not think I can say officially that the Society has done so. No doubt that might come into operation. I do not think the Society would have any objection of principle, if it can be shown that there is a real hardship in cutting off some of the revenue from the Native States, to their receiving compensation.

2525. I should have thought that before contemplating compulsion you would have contemplated the necessity of compensation?—We have been unable to ascertain exactly how far the Native States derive any substantial revenue from this system, and until one has the facts as to the profits derived, from the Native States, it seems premature to go into the question of compensation. I hope the Commission will obtain full evidence on that point.

2526. With regard to the financial statement put forward by your Society with regard to the Indian Government, and the readiness of the English people to provide money in substitution of the opium revenue, that item has not been taken into consideration?—It has not.

(*Mr. Wilson.*) You have referred to the Bombay system. I think it is unfortunate that the Commission has not had some official witnesses to describe to us exactly what the existing system is in different parts of India.

(*Chairman.*) You will have them.

2527. (*Mr. Wilson.*) It is like putting the cart before the horse. I am therefore obliged to ask you to tell the Commission what you understand to be the Bombay system.—I cannot do better than by reading paragraph 6, sub-section 2 of the memorial; “The Malwa transit duty system, under which, by arrangement of the Indian Government, opium grown and prepared in some of the Native States of Central India pays to the Government of India, on its passage to Bombay for export, a heavy transit duty, equal to nearly two-thirds of the present wholesale price at Bombay; the revenue obtained from it by the Native Princes being only a small percentage of that received by the Government of India.”

2528. With reference to the use of opium by certain persons or classes, have you ever contemplated the possibility of a system of registration such as already prevails in some parts of Burma?—It has recently been introduced in Lower Burma, and it is a suggestion that we have considered, but on which we have not finally pronounced an opinion that possibly some system of that kind might be devised, or become necessary, to meet the case of habitual consumers, so that you might allow them to continue to obtain the drug in doses to which they are accustomed, whilst stopping the spread of the habit by making it impossible for fresh individuals to obtain the drug in the same way.

2529. Has the possibility of any system of local option been at all considered?—I do not think I can say that our Society has considered that. The Anglo-Indian Temperance Society, of which Mr. Caine is Honorary Secretary, and which on this opium question in India works concurrently with our own, has considered it, and I believe it has pronounced in favour of local option as applied to opium as well as hemp drugs. But our Society has never officially pronounced an opinion on the question of local option.

2530. May we take it that the Society has never considered it a part of its duty to work out an elaborate system adapted to every part of India and to the varying circumstances, but that you would be quite prepared dispassionately to consider any proposals that might be made for meeting the various difficulties?—I am sure the Society would gladly consider any proposal of that kind which might be made by the Commission after obtaining fuller evidence than it has been possible for us to obtain in England.

2531. You consider that the elaborate details of any system ought to be worked out by the responsible Government and not by a voluntary Society?—That is my view.

2532. (*Mr. Pease.*) Is it not a fact that at one time the duty from Native States was Rs. 700 per chest?—Yes.

2533. And that duty was reduced to encourage the Native States to increase the quantity of opium produced?—I think that would be overstating the case. It was reduced because, as I understand, it was found that the duty of

Rs. 700 was likely to kill out the trade. It was only at Rs. 700 for a short time; it was then reduced to Rs. 650, because Government despatches said they found that Rs. 700 was more than the trade would bear. Two or three years ago there was a petition of the Bombay merchants, and the duty was reduced to Rs. 600, because the merchants stated that it was no longer a remunerative trade.

2534. (*Chairman.*) We will now proceed to put questions to you with reference to the ninth paragraph, in which you deal with the excise system. You there express a belief that “there is evidence that grave dissatisfaction is felt in India “at the facilities offered by the existing system for the sale “of these drugs.” You cite the practice at home under our latest legislation, and you propose that the fundamental and underlying principles which have been accepted in England should be extended to British India. I think in cross-examination you have already made a very full statement upon that subject, and perhaps you have little more to say with reference to the excise system in India.—There are just two points at the commencement that I have not yet dealt with. One is as regards other narcotic drugs. I should like to explain to you how we were led to take up this question in India. Our Society was formed for the purpose of putting a stop to the opium trade between India and China, and if you refer to Mr. Storrs Turner’s Prize Essay, which I handed to the members of the Commission, and put in evidence, you will see that he speaks with satisfaction with regard to the measures adopted by the Indian Government to protect its own subjects against the evils of opium. In a note subsequently written he refers to facts which had just come under his observation with regard to Burma, as showing that that satisfaction could not be extended to Burma, though he thought it applied to India generally. It is only within the last four or five years that our attention has been called to a number of statements which seemed to us to deserve consideration and enquiry,—that in several parts of India the use of opium was greatly extending, and that great evils were arising from it. It was on that ground that we for the first time took up the question as regards India in our memorial to Lord Cross, which is printed in the Blue Book “Consumption of Opium “in India.” In that memorial we included other narcotic drugs, owing to the evils arising from the sale of hemp drugs. That branch of the question has since been dealt with by the Society I just now referred to,—the Anglo-Indian Temperance Society, of which Mr. Caine is Honorary Secretary, so that it has passed out of our hands. With regard to India, I have stated that we have had various evidences from India that there is a desire on this part of at least a very considerable section of the Indian people that protection such as is given to our own people at home by our Pharmacy Act should be extended to India. We have had during the last two winters visits from India Miss Soonderbai Powar has addressed a large number of meetings, and has represented a very strong feeling amongst the zenanas on the part of the women in her part of India desiring suppression. You will, I hope, hear her evidence at Bombay or Poona. Then Mr. Raju Naidu came from Madras, representing a similar feeling there. I have a brief list of the public meetings before me. A great representative public meeting was held at Bombay in April 1891, on the eve of Sir Joseph Pease’s motion, presided over by the Bishop of Bombay. It was an enthusiastic gathering, and adopted a memorial in support of his motion, the result of which was telegraphed to him in time for him to read it to the House of Commons. A few days after, a great public meeting was held at Dacca, which I also heard was a most enthusiastic meeting, where all classes of native opinion and the opinions of influential native gentlemen were represented. Then there were several other meetings. At Madras, Bombay, and Poona great public meetings were held, which were attended by the leading Native gentlemen of the place. There was a remarkable petition from 227 opium drunkards at Bombay, begging that the dens might be closed, and that they might be protected from the habit.

2535. (*Sir William Roberts.*) Was the object of these meetings with reference to opium-smoking or with reference to opium-eating?—I do not know that the distinction was clearly made: it may have been in some cases, but I think not generally. I think one may say generally that at all these meetings, and in the petitions from India, that opium-smoking has been put to the front as being the most serious form of the vice, but that opium-eating has also been included in the condemnation and in the prayer for protection. Then there were two memorials—one signed by 20,000 persons in India, and another later on (this was in January 1892) with 22,000 signatures; and there was a great Tamil petition in March 1892 with 40,000 signatures. Some of these, I am afraid, do not appear in the Parliamentary

*Mr. J. G.
Alexander,
LL B.*

Mr. J. G. Alexander,
LL.B.
21 Nov. 1893.

Records, simply because the signatures have been in Tamil, or some other language, and I understand the practice in the Petitions Office in the House of Commons is that they simply pass over petitions which they are unable to read, because they are not written in English. There have also been public meetings at Jubbulpore, Agra, Sholapore, and at Igatpuri and Thana, both near Bombay. Then there was another meeting at Madras, and one or two other meetings in different parts of Bombay. Besides those there have been a considerable number of meetings connected with Missionary Conferences, meetings of the Missionaries and the Native Christians, which have unanimously adopted resolutions. Some were large meetings, and others were meetings of particular bodies.

2536. Were those resolutions which were passed resolutions directed against the use of opium or against the public houses, or divans or dens in which opium is used?—I think against the sale of opium: that was always the objective of the petitions.

2537. (*Chairman.*) Have you anything further to say upon paragraph 9?—I think there is one more point. I should like to refer to the closing words of the paragraph: "whose remuneration in no degree depends on the amount of their sales." In that item I admit that we go beyond the principles which are in force under the Pharmacy Act in England, but then the conditions of India and England are very different. No one would suppose that chemists in England would be likely to be tempted to betray their trust by reason of the profit they would make on the sale of the poisons. Public opinion is too strong, and that is, after all, the real guarantee of our laws in England. A chemist who carelessly sold a large dose of opium with the result that fatal consequences ensued, would be brought before a Coroner's inquest and would be gravely reprimanded.

2538. (*Sir James Lyall.*) Fatal consequences do not occur every day?—No, but a case of that kind would bring a druggist in England under the grave censure of public opinion. That, I think, is the real sanction of the law at home. But in India it seems to me to be a very important principle to lay down that those who sell should not be remunerated in proportion to the amount of their sales. I look upon it as the essential vice of the licensing system in force in India, with regard to opium, to hemp drugs, and to alcohol, that it so strongly gives to the licensee a direct interest in his increasing his sales. The Indian farming system is based upon the old system familiar to readers of the New Testament as that of the Publicans in the Roman Empire. The tax-gatherers gathered the taxes very much on their own account, and were responsible to the Government for paying in a certain quota. Something of that kind is still the principle of the farming out of licenses in India. It seems to me that that principle is radically objectionable, and that, whatever means are adopted for the better repression of the use of opium and the other dangerous articles, we should altogether steer clear of that wrong principle.

2539. What wrong principle?—The principle of farming out the licenses.

2540. (*Sir William Roberts.*) I should like to ask you whether that does not exclude the condemnation of the Gothenburg system which is in favour in some quarters in England?—On the contrary, I understand that the Gothenburg system is based upon that very principle; that under the Gothenburg system in Norway and Sweden the licensees have no interest in promoting the sale of spirituous liquors, and that is exactly what the supporters of that system urge as being the basis of its success.

2541. I suppose you are aware that the municipalities get the profits of the business?—Yes, but not the vendors. That is the point; that the vendor has no interest in extending the sales.

2542. (*Sir James Lyall.*) You object very strongly to the farming system, that is, the system of giving the shop in which to sell opium, or anything else, to the man who bids highest for it?—Yes.

2543. The other system is to make over the opium at a very high price to the man who pays a mere licensing fee for it. Say, you make over the crude opium to a licensed vendor, and you charge, perhaps, Rs. 20 a seer, a very high price: you make it over to the licensed vendor, who only pays, perhaps, a fixed fee for it, and he has to sell it. You are aware what the great objection to that system, as compared with the other system of giving him opium at a low price and making him pay a high fee for his license is?—That was not the alternative I had in my mind, or the alternative I should suggest.

2544. Are you aware of the reason why it is done in India?—I suppose it is the same reason which I think you have already stated for the minimum guarantee clause.

2545. That is, if you depend upon giving Government opium to a man at a high price, it becomes at once his interest not to take the Government opium, but, wherever possible, to take smuggled opium in preference. The evil of that is not only that the Government loses revenue, by selling less of its opium, but you must remember that we have to rely generally in India to a large extent for checking smuggling upon the self-interest of the contractors. The contractor being a monopolist for a certain town or a certain tract of country, it is to his interest to stop smuggling and inform against smuggling as much as possible, if he is dealing with Government opium; but if he himself is himself dealing with illicit opium, or smuggled opium, he cannot afford to inform against other people, for the people of the country would soon know that he is doing it; and if he informs against the smugglers, they will inform against him. That is the difficulty. It is easy, of course, for people in England to find fault with a system, but the officials out here know the natives and know the country and know the position of things. They have for generations and generations been working up these things, and they know the balance of good and evil of the different methods, and that has led them to decide upon what they think best. May I ask what is the system you propose?—I think you are putting to me, if I may say so, two vicious systems—two systems which I should characterise as both intrinsically bad—and asking me which of the two I prefer.

2546. Give me your reasons why you think one of those systems is better than the other.—Those reasons may be so far valid, but you spoke of the experience of Government officials. May I venture to say that I think one of the reasons why Government officials are apt to go wrong is that it is so difficult for them to go far enough back to root principles. You discuss two methods which have been applied, to both of which the same objection of principle applies: that you are giving an interest in some form or another to the vendor.

2547. How would you avoid giving an interest to the vendor?—I should say by selling entirely for Government profit.

2548. That is, you would give the man a salary and put him in a shop, and say, "you must sell this opium and account to Government for the whole profit." Is that it?—I think so.

2549. (*Chairman.*) You utterly dislike the sale of opium under any system?—Yes.

2550. But if any other system had been adopted you probably would have attacked it?—Probably; any system that does not aim at restricting opium to medical use.

2551. (*Sir James Lyall.*) At present you are putting forward an objection to an existing system and a preference for another system which you describe to be practically this, that you give a man opium, put him in a shop, or whatever you choose to call it, and tell him to sell on behalf of the Government, and account for the Government money.—

(*Chairman.*) I think the witness would not like to make himself responsible for recommending such a course. He wishes to recommend nothing but prohibition.

2552. (*Sir James Lyall.*) He was taking exception to the farming system. You would not recommend that system? Do you think it workable?—No, I was going to say that I have been told by the natives of India that there are already Government officials, Government dispensaries, and other places of that kind, established about India, amply sufficient to supply the demand for opium for medical purposes, and that nothing would be easier than to make use of those existing facilities for this purpose. That is what I have been informed, both before I came to India and since I have been in India.

2553. You mentioned in your evidence a Miss Soonderbai Powar. Can you tell me if she is a Christian or a Hindu?—A Christian.

2554. Educated by missionaries?—Yes, her parents were Christians; she was born in a Christian family.

2555. I do not know whether you would take her evidence seriously as a matter of importance; do you put any serious weight upon her evidence?—Before she took part in any meetings I had informed myself about her. The best qualified person I know, a missionary, who had resided for many years in Bombay, and whose judgment I could thoroughly rely upon, told me that I might certainly accept her evidence as genuine.

2556. Genuine no doubt, but is she not a young girl?—Certainly not. You will see her for yourself.

2557. (Chairman.) Is she coming before us as a witness?—Yes, at Bombay or at Poona.

2558. We now pass from India to Burma. In your tenth paragraph you urge that there should be no further delay in sanotining throughout Burma the measures which have been so carefully elaborated by the Chief Commissioner, Sir Alexander Mackenzie. Have you anything to say upon the case of Burma in addition to what is contained in your general memorial?—I think I may very briefly say that there are just two points which we have further to urge with regard to Burma. In Lower Burma there has been established a Register for opium consumers, and as regards the natives of Burmese race no additions are to be made in future to that Register. That provision does not apply to the Chinese and other non-Burmese inhabitants of Burma. We advocate the extension of that rule to the Chinese and non-Burmese. Then, secondly, that Register is not in force in Upper Burma, and the Excise Report for Upper Burma two or three years ago stated that the nominal prohibition that exists of sale to Burmans is absolutely inoperative, because the Burmans can always obtain as much of the drug as they require under cover of the sale to non-Burmese. We therefore urge that the Register already in force in Lower Burma should be extended to Upper Burma as well. Those are the two points we are now urging with regard to Burma.

2559. Is that all you wish to say as regards Burma?—Perhaps I ought to add a reference to our last memorial to Lord Kimberley. I do not know how the matter stands now. For all I know the subject may have been finally dealt with; but I should like to put in our memorial which was based on a telegram which appeared in the *Times* to the effect that the Chinese and non-Burmans were not to be registered at all. That was not part of the original rules as drafted by the Burma Government; and we very strongly objected to that. The *Times* telegram said: "This alteration will materially increase the difficulties of the policy of suppression, which are already almost insuperable." We memorialised Lord Kimberley in the hope that the modification which the *Times* telegrams stated to have been introduced by the Government of India, should not be insisted upon. I do not quite know what the present position of the matter is. No doubt the Commission will have before it distinct evidence as to the rules which have been finally approved and passed.

2560. Now we come to the Punjab. In paragraph 11 you urge that the Punjab system of licensing the cultivation of the poppy should be at once put an end to, and you further urge in support of that recommendation that "the prohibition of poppy culture has been already enforced by the Indian Government in 1799 as regards Lower Bengal and Orissa, as well as throughout Southern India, about 1860 in Assam, and at other dates elsewhere." You further say, "we are assured by competent witnesses that the Sikh people would generally welcome the adoption by Government of measures which would enable them to rid themselves of a habit which they recognize to be a debasing and injurious one." Have you anything to put before us in support of that prayer, and those references to the opinion and feeling of the Sikh people?—I have nothing special to say on that, in view of the fact that the Commission will no doubt visit the Punjab and enquire for itself the opinion of the Sikh people. The Commission will get very much better information there than we were able to obtain in London.

2561. That is no doubt the case. The Punjab question will be much better examined when on the spot than here. Now we turn to the 12th paragraph. In that paragraph you refer to the possible financial objections to the policy of prohibition which you recommend, and you state as a matter of opinion that the people of England would be ready to make up any deficiency which might arise from the prohibition of the export trade in opium. At the same time you urge that much can be done to meet the loss from the opium revenue by greater economy and by the development of Indian resources, and you are also of opinion that if there were loss from the abolition of the cultivation of the poppy, there would be a gain to the people of India from the cultivation of other productions and the general development of the soil. It is obvious what your views are; but have you anything to say upon that?—I do not think I need occupy the time of the Commission on this paragraph, because my views are so fully embodied in the little pamphlet I have already laid before the Commission entitled "Substitutes for the Opium Revenue."

(Chairman.) We have carefully read it, and we recognise the ability with which the pamphlet has been prepared.

2562. (Mr. Mowbray.) You state here that you believe the people of England will be ready to make up the deficiencies. Would you mind telling us exactly what Lord Kimberley said to the deputation in reply to that paragraph?—I was anxious to speak upon that point.

2563. I think it is important that there should be no doubt about it?—After quoting that passage of our memorial, Lord Kimberley says: "That you regard as a very important declaration; but I am bound to say that I have not the slightest reason to suppose that there will be any disposition on the part of the Treasury to place a heavy burden upon the tax-payers of this country for the purpose indicated. I do not think that there is any warrant for that. I am speaking as the Minister responsible for India now; and I do not think that such a proposition to the Treasury, no matter what the Government in power, would be likely to meet with a favourable response. The sum will be very large, not only to compensate the Indian Treasury, but also to compensate those who produce the opium, and also the native princes, who derive considerable sums from the growth of opium." I do not know whether I had better go on further.

2564. That is all I want. I also notice that the only one of your Vice-Presidents who is in the House of Commons, who signs this memorial to Lord Kimberley, distinctly declines to pledge himself to that particular paragraph of the memorial.—That is so. Sir Mark Stewart frankly said he could not agree with that statement. I should like to give my reasons in support of that statement.

2565. Can you tell us upon what that particular paragraph in the memorial was based?—First of all let me speak as regards our own Society. We have made this a part of our programme definitely ever since the year 1886. I put before the Commission the "Statement of Facts and Principles" adopted at the beginning of that year. I was at that time a member of the Executive Committee, and I took part in the Conference at which that Statement was drawn up. We had a debate upon this particular point. The late Mr. Chesson very strongly urged that it was right and reasonable towards India that we should express ourselves distinctly on the question. I remember that I supported him, and that the paragraph to that effect was carried. I have mentioned in the preface to "*Substitutes for the Opium Revenue*" that the same view was even more solemnly reaffirmed in 1891, shortly after the debate in Parliament, at our annual meeting. A Conference of members and friends of the Society was held, and in the evening a public meeting was held which confirmed the decisions of that Conference. I think I might read that resolution:—

"This Conference of members and supporters of the Society for the Suppression of the Opium Trade hereby declares that, in advocating the abolition of the Indian opium trade as a measure of national morality, it is strongly opposed to the imposition on the people of India of any oppressive taxation. Whilst urging upon the Government of India its obligation to effect such retrenchment of needless expenditure and to carry out such measures for the development of Indian resources as may enable it to govern India efficiently without imposing any permanent or long-continued burden on the tax-payers of the United Kingdom, this meeting is in favour of such temporary pecuniary assistance being given by this country to the Indian Government as may be found requisite to enable India to bear the loss of the opium revenue, without adding to the burdens at present resting upon the people of that country."

I may mention in passing that the phrase "temporary pecuniary assistance" was commented upon by Mr. Gladstone in the late debate as being somewhat ambiguous. Our meaning was very clear. Certainly we have always attached to it the meaning of a grant and not a loan. Mr. Gladstone seemed to think that it might be a temporary loan to be repaid.

2566. (Sir James Lyall.) You mean a temporary grant?—What I mean is developed later on in "*Substitutes for the Opium Revenue*": a grant spreading over a period of years; but a grant, not a loan. Mr. Gladstone threw out a suggestion that the words in Sir Joseph Pease's resolution might mean a loan to be repaid.

2567. (Chairman.) He contemplated the contingency that that loan might not be repaid. That supplied a leading argument for his speech?—Yes; I only wished to clear that up.

Mr. J. G. Alexander, LL.B.

21 Nov. 1898.

Mr. J. G.
Alexander,
LL.B.

21 Nov. 1893.

2568. (*Sir James Lyall.*) In any case a grant would be temporary. The loss would be permanent, and the grant would be temporary, would it not?—Yes. We take the view that India ought to be able to pay for its own government without reliance upon an immoral trade, and that therefore it is only a question of a few years to adjust the needs of the Government of India to the exigencies of morality.

2569. (*Mr. Mowbray.*) I am sure you will understand that I do not doubt for a moment that the Anti-Opium Society had expressed that wish. But I wish to illustrate that it had not been endorsed by the responsible Minister.—I quite understand your object. I should further like to say that that part of our programme has very frequently been put before the public in England. I have already spoken of enthusiastic public meetings which we have held, during the last three or four years especially. Almost always when I have taken part in those meetings I have made this one of the special points,—that India could not reasonably be expected to bear the loss of giving up the China trade. I may say that over and over again I have been pleased to find that that sentiment was most cordially taken up by the meeting: that England, which two generations ago paid twenty millions sterling for the emancipation of the slaves, should not hesitate to come to the help of India, and make some grant for the purpose of putting an end to this immoral trade without undue pressure on the tax-payers of India. I should like to narrate what occurred at one particular meeting, at which I was not present, but of which I read the reports and had them supplemented by those who were present. At that meeting this point was specially raised. It was a meeting held at Norwich. One of the members for Norwich, Mr. Colman, has for many years been a staunch supporter of our Society. The other member, Mr. Hoare (who had been asked to take part in the meeting), wrote a letter to the Chairman in which he drew attention to this phase of the question, expressing a doubt whether the British people would be willing to have an addition to the income-tax or in some other way to bear the additional taxation in order to get rid of the trade. The point was taken up in speeches by two of Mr. Hoare's strongest supporters, I believe, two clergymen of the Church of England, who expressed themselves in very strong terms upon it. It was put into the resolution of the meeting, and, I was told, was most enthusiastically adopted. In face of this letter from Mr. Hoare, the meeting expressed its conviction that the British people would not hesitate to incur such a sacrifice in order to put down the opium traffic with China. I give that as one particular instance of a great many meetings at which the same point has been raised.

2570. (*Mr. Wilson.*) You have given us cases of these meetings which, of course, would usually be attended by those who were more or less predisposed to favour anti-opium views. Have you any means whatever of suggesting anything to us, as to how it would be received by the general bulk of the voters and tax-payers, or of any tendency in English public opinion that would lead you to believe that it would be so accepted?—I do not know that I can say anything beyond this,—that these meetings are by no means exclusively composed of those who already have an interest in the opium question. During the last two years we have had the presence at our meetings of these deputations from India. The winter before last we had a Chinese gentleman from Australia. The presence of these people has attracted a very large number of persons who were not previously informed on the question, but who came to listen to what was said, and they have been very enthusiastic in supporting us. I do not think our meetings have been by any means confined to those who are interested in the anti-opium question.

2571. Would the general tendency of English people with reference to the moral and social questions lead you to take a hopeful view of what the average voters and tax-payers would say upon this question?—Certainly. Of course, very great power now rests with the working classes; and I think it has been especially amongst the working classes that we have received response to that sentiment. It is the richer people, who can afford it better, who have been more inclined to demur to the idea of increased taxation.

2572. (*Sir James Lyall.*) You say at the end of the paragraph that "the stoppage of the trade in opium with China would probably give a powerful stimulus to the export of other Indian produce to that country." I want to ask whether you do not think it is the case, that if China took other exports in the place of opium, it would, as Mr. David McLaren, ex-President of the Chamber of Commerce in Edinburgh, seems to hope, rather take them from England than from India?—I think it would benefit both countries

in that way. I think that probably the Indian trade with China would be increased, and the British trade with China would be still more increased.

2573. At the end of the paragraph you refer to the loss of India by exchange, and you say you think that the stoppage of the trade in opium with China would be likely to diminish that loss. Do you still adhere to that opinion?—Yes.

2574. Can you explain on what ground?—On the ground that the opium trade with China causes a very abnormal state of things, *viz.*, that the balance of trade between India and China is very largely adjusted by means of actual specie payments. At page 25 of "*Substitutes for the Opium Revenue*" will be seen the figures showing the net importation of silver,—putting aside gold. The net imports of silver from China (Hong-Kong and Treaty Ports) to India, after deducting exports to China from India, amount to an average of over one and-a-half millions a year. In 1890-91, the net imports amounted to Rs. 3,545,518, from China to India in silver in order to adjust the trade. With regard to that, Mr. Hanbury obtained specific information from a banker in London, engaged in the Eastern trade, that that heavy drain in that year very materially and manifestly affected the value of the rupee, sending it down considerably. In that year there had to be such a large import of silver from China and from the Straits in order to pay for Indian opium that the Indian Government, I think, lost by the depreciation of the rupee from that cause at least half its real net gain from opium.

2575. You know that India annually owes a balance to England?—Yes.

2576. And she meets that balance in a large part by transferring the debt which China owes to her for opium?—Yes.

2577. That being the case, how could the stoppage of that trade improve the difficulty of exchange between England and India, which is the difficulty we are talking about?—We minimize this drain of silver. The drain of silver would have to be very much greater than in fact it is on the average if it were not for that circumstance.

2578. We are talking of loss to India by exchange. How can the loss of a method by which India settles part of her debt to England get rid of the difficulty of the loss by exchange?—It may be that there would be some counteracting influence of the kind in connection with the balance of exchange, but I do not think that that sets aside or can counterbalance the natural depression of the exchange which must result from this great inflow of silver from China to India.

(*Sir James Lyall.*) I am not an expert like Sir David Barbour: but I agree with him in not being able to understand your argument.

2579. (*Chairman.*) In so far as the balance of trade between India and China fails to be adjusted by bills of exchange, and is adjusted by exportation of silver from China to India, to that extent you say there is an influence tending to depreciate the value of silver in India?—Yes; and I would point out further in reference to what Sir James Lyall put to me, that if the poppy were not grown, there would be a greater cultivation of cereals and other products. You must not assume that the whole value of the opium crop would disappear. There would be some considerable value to be put in its place by some substituted crop. That is a question I have not gone into; but I think I ought to say one word with regard to the estimate of the total value to India of the poppy crop which was put before the Commission by Sir John Strachey, and which is embodied in Mr. Batten's paper in the Society of Arts Journal. I think it was suggested to Sir John Strachey by Mr. Pease at the time that that is palpably and obviously a grossly exaggerated statement, because it proceeds on the assumption that if there were no poppy crop the land would be absolutely unproductive.

2580. (*Mr. Pease.*) And the labour?—And the labour.

2581. (*Chairman.*) We will not detain you upon this point. You would, of course, admit that if the export of opium to China from India ceased, and India failed to create another export trade with China of equal value, that India's position as regards the rate of exchange would be prejudicially affected?—I suppose it would to some extent.

2582. Now we turn to the last point with which I think you wish to deal, *viz.*, the monthly auction sales of opium in Calcutta. In your 13th paragraph you cite some eminent names of Indian Administrators, who have expressed their objection to the system of the monthly auction sales. You refer to Lord Lawrence, Sir Bartle Frere, Sir Herbert

Edwardes, Sir Donald Macleod, and Sir William Muir. At the same time, you fairly admit that these eminent men, while expressing their objection to the monthly auction sales at Calcutta, were favourable to the substitution of a system in Bengal, similar to that which exists in Bombay. Your Association, as you have repeatedly told us, condemns both systems alike; but you seem, in reviewing these opinions to which you refer, to recognise that there is some ground for saying that the system which obtains in Bengal, the actual auction sales in Calcutta, does more particularly and strikingly identify the Indian Government, with what you describe as an immoral traffic; and you urge that the total cessation of the sales, which are now taking place in Calcutta, could not fail to have the happiest results. Is there anything you would like to say in development of the views put forward in the paragraph to which I have referred?—I should like to read to the Commission the statement of Sir Herbert Edwardes on that point as putting very strongly and clearly our moral objections to the trade and summing up the whole case. I am now quoting from *The Friend of China*, June 1886:—

“In the ‘Memorials of Sir Herbert Edwardes,’ just published, there is given a paper, written by him after the great Mutiny of 1857, in which he points out what he believes to have been the national sins that drew down that national chastisement. After naming our withholding the Bible from the natives, and other failures in Christian principle, he writes:—‘Ninthly, I would name the connection of the Indian Government with the opium trade. This connection is fenced round with arguments nominally drawn from political economy, such as that the monopoly causes increase of price to the vicious consumer, and obtains the largest returns with the smallest outlay of capital. But no theories can get rid of the following serious facts: that India grows opium for China; that opium is ruining the Chinese people; that wherever grown in India, Government is an interested party in it; that in Bengal it is actually grown for Government and for no one else; that Government advances immense sums of money yearly to enable the cultivators to grow it, and maintains a large staff of officials to collect the produce; that Government sells it to those who import it into China; that the vice of opium-smoking is so fatal to the vital and moral powers of individuals, and therefore to the prosperity of a nation, and has spread such heart-rending misery in China, that the Chinese laws forbid its importation; that English merchants nevertheless force and smuggle it into China,’” (this “was written before the legalization”) “and are not prevented from so doing by the Government of England, which has formally engaged by treaty to prevent it;” (I think, perhaps, there he has somewhat overstated the case) “that all this was known to the Indian Government while growing opium or organizing its cultivation, and selling it to merchants who cannot legally get rid of it; that the very Chinese people, maddened with their own vice and misery, and inability to force us by arms to observe their laws and our own treaties, curse us openly for bringing this destroying poison to their shores; and lastly, that exactly in proportion as opium-ruin spreads in China, so the opium-revenue of the Indian Government is increased. An honest, manly conscience cannot get over these facts. It will not be misled by a phrase chipped off from the only sound political economy; the common benefit of the human race, no matter in what country scattered. It will fasten instinctively on the truth that with the Indian Government this is a question of revenue; and in presence of the calamities of 1857, it will conclude that revenue such as this does not come to much good in the end. It will remember all the plausible excuses that were made for Negro slavery, and it will urge the nation which abolished man-selling in the West Indies to abolish man-poisoning in the East, let the cost be what it will.” Taking that as a true description of the trade, and of our objections to it, I think it will be clearly seen that a proposal merely to put that trade into private hands, and to derive a revenue from it, whilst still continuing it by means of an excise or license duty instead of by means of monopoly, is a wholly inadequate remedy, and does not meet the true moral objections to the trade.

2583. (*Mr. Wilson.*) Can you tell me who Sir Herbert Edwardes is, and what he knows about it?—He was a distinguished Indian soldier and administrator, I believe. I am afraid my knowledge of his career is not very great.

2584. (*Chairman.*) What is the date of this?—At the time of the Mutiny. He died some years afterwards. What I have read was written shortly after the Mutiny.

2585. (*Sir James Lyall.*) With reference to your quotation from Sir Herbert Edwardes’ writing about national sins, are you aware that at that time Sir Herbert Edwardes was

inclined to be, what most people would think, a bit of a fanatic: that he included in national sins our toleration of the old endowments of Hindu temples and Mahomedan mosques: he wanted to sweep them all away?—I am aware that moral reformers, who are in advance of their age, are generally considered fanatics.

2586. (*Chairman.*) The concluding paragraph of your memorial deals with China. You have had the opportunity of giving us your views with regard to China, and I take it that you have not much to say upon this paragraph. I understand, however, that you wish to call particular attention to the observations which you quote of Dr. Griffith John of the London Missionary Society?—Perhaps I had better read those observations. I will read the latter part of our quotation from Dr. John, who is very well known in the missionary world, as one of the most experienced and able of all the missionaries labouring in China. He says:—“But have the Chinese the ability to put down vice? As long as the Indian trade in opium exists, the hands of the Chinese Government are tied and paralyzed. They can simply do nothing, but allow things to go on from bad to worse. Their best efforts, however sincere and energetic, would prove abortive. If the Indian trade in the drug were abandoned, the Chinese would, I firmly believe, make an honest effort to stop the native growth, and the attempt would eventuate at once in a diminution of the evil. It might eventuate ultimately in its complete suppression.” I think in expressing those views in a careful, guarded form, Dr. John agrees with some of the most weighty evidence given before the Commission in London by other experienced Chinese missionaries. Mr. Hudson Taylor, I remember, especially, spoke to the same effect—that he did not feel able absolutely to prophesy what the Chinese Government would do, but that he was clear that as long as the import from India goes on under sanction of the Treaty of 1858, so long the Chinese Government is helpless to deal with what it certainly recognizes as being a great national evil. Dr. Griffith John concludes with these words—“But whether the Chinese Government can put down the native growth or not, our path as a Christian nation is plain enough. It is for us to wash our hands clean of the iniquity. The trade is immoral, and a foul blot on England’s escutcheon. It is a disgrace to ourselves as a people, and unworthy of the place which we hold among the nations of the earth.” I do not wish myself to speak too confidently of what will happen in China and of how soon, or how quickly, or how effectually the Chinese Government may be able to put down this vice, which has obtained so great a hold of its people. The position of our Society is this, that however that may be, it is not for us to wait for the Chinese Government, hampered and fettered as it is, to take action, but that we ourselves should recognise that the trade is an immoral one, and that we should begin by wiping our hands of it. Then we should be free to exercise all the right diplomatic pressure that we could, to help China to free herself from that evil. In connection with that, I may say that I have been longer a member of the Committee of the Anti-Slavery Society than of the Anti-Opium Society; and it seems to me that there is a very clear precedent for British action, of that kind in the part we took with regard to the slave trade. When we had abolished the slave trade ourselves, we proceeded to use all our influence diplomatically with the other nations of Europe, in order to get the trade put down in other nations as well. I hope we shall do the same with regard to the opium trade. Having washed our own hands of it, we can then rightly and properly help China to deal with this great evil, which has grown up in her midst, and for the growth of which we nationally have so grave and serious a responsibility.

2586. (*Sir James Lyall.*) Have you considered the fact that the monopoly and the trade and revenue derived from it, is all Indian, and that the Indian people are primarily interested in it, and that the sentiments to which you appeal are English; I mean that the object of putting the English name right in the eyes of the Chinese, and facilitating the conversion of the Chinese to Christianity is an English object—have you considered that?—Yes, I have. I think I cannot answer that better than in the words of Sir Edward Fry. Sir Edward Fry wrote three Essays on the opium question which appeared originally in the *Contemporary Review*, 1876-7-8. The first and, perhaps, the second were written when he was Mr. Fry, Q.C., and the last one or two after he had been made a Judge. He deals with that argument thus:—“An argument against interfering with the opium revenue, somewhat to the following effect, is often urged or suggested: ‘It is very well,’ it is said, ‘for you to assume this high moral tone about the opium revenue; the revenue is not yours, but belongs to India, and with it England has nothing to do. To abolish the traffic is to throw some nine millions, (the

“ amount was then much greater than it is now) more of annual taxation on the already over-taxed population of India, and that for a scruple of some weak-minded philanthropists in England. Pray, pay for your own philanthropy, and do not make another country pay for it.”

“ Let us consider this objection a little; and let us note, in the first place, that it may be taken to concede the justness of the objection to the revenue; it only objects to the person of the objector.” Here is the answer—“ India is, as it were, a minor, under the guardianship of England, and England is a trustee for India in the administration of Indian affairs. But, in taking upon ourselves that burden and that duty, we have incurred no obligation to do for India what we might not lawfully do for ourselves. If, in the course of our trusteeship we have sold a poison wickedly for the gain of a minor, are we bound to continue so to do? Have we lost the right of repentance because our sin enures to some one else's benefit? India cannot change the policy, for she is in tutelage; England cannot change the policy, for she is a trustee; therefore the sin must go on for ever. Is that sound reasoning?”

2588. (Sir William Roberts.) May I ask if your Society takes the same attitude with regard to alcohol as it does with regard to opium?—A good many members of our Society are active prohibitionists, but the Society as a whole consists of men who unite on this opium question, although they differ upon all sorts of other questions in politics, in

religion, and in regard to the temperance question. But I think all would be in favour in some degree of prohibition, though I doubt whether all the members of our Society would support the policy of the United Kingdom Alliance. I really do not know about that.

(Chairman.) That I believe concludes your evidence. We have to thank you for the clear manner in which you have put us in possession of the views of the Association which you represent, and we recognise the efforts that you have personally made in the cause which has commended itself to you. Naturally, it has been your duty, entertaining the views that you hold, to say many things which are not accepted, at any rate by some members of this Commission, but I am sure that we shall all feel that what you have put before us has been put before us with the utmost sincerity of purpose, and we all appreciate that in the encounter in which you are engaged with the Government of India upon its own ground, you are placed in circumstances of no ordinary difficulty.

(Witness.) There is one point that we did not deal with in our memorial and which has really come under my notice since I came to India. I do not know whether it would be desirable that I should make it in any way part of my evidence. It is with regard to the system under which the poppy is grown in the Behar district.

(Chairman.) I think it would be appropriate to deal with that when we get to that district.

Adjourned till to-morrow at 10-30.

At the Council Chamber, Writers' Buildings, Calcutta.

TENTH DAY.

Wednesday, 22nd November 1893.

PRESENT :

THE RIGHT HONOURABLE LORD BRASSEY, K.C.B. (CHAIRMAN, PRESIDING).

SIR JAMES B. LYALL, G.C.I.E., K.C.S.I.
*THE HON'BLE SIR LACHHMESWAR SINGH BAHADUR,
MAHARAJA OF DARBHANGA, K.C.I.E.
SIR WILLIAM ROBERTS, M.D.
MR. R. G. C. MOWBRAY, M.P.

MR. A. U. FANSHAWE.
„ A. ARTHUR PEASE.
„ HARIDAS VEHARIDAS DESAI.
„ H. J. WILSON, M.P.

MR. J. PRESCOTT HEWETT, C.I.E., *Secretary.*

The Reverend W. B. PHILLIPS called in and examined.

Rev. W. B. Phillips.
22 Nov. 1893.

2589. (Chairman.) Will you explain to us the position which you fill and state the length of time you have passed in India, and generally explain to us what have been your experiences bearing on the question which is before this Commission?—I am a Missionary of the London Missionary Society. I have had experiences among Hindus and Mahomedans of all grades and castes. I have been in Bengal for eighteen years. Of these fifteen years were spent in the District of Murshidabad, which was formerly the head-quarters of the Mahomedan Government of Bengal, and three years I have spent in Calcutta. For fifteen years I was continually mixing with all classes of Hindus and Mahomedans, and for about twelve of those years I was itinerating during ten months of each year among their towns and villages. At these times I was conversing freely with them in their own language, in their shops and houses, and gathering them in crowds for preaching and discussion. During the same fifteen years I was President of a Society worked by a Committee composed of Hindus, Mahomedans, and Christians, and whose sole object was to promote abstinence from intoxicating drugs and drinks. If I may be allowed I should like to hand in at this stage a certain memorial and an account of the Society of which I was President for fifteen years.

2590. In order that it may be placed upon the notes, it would be well if you would read what you consider the more important passages in the memorial, and make any observations upon those passages which you think are necessary for the elucidation of the subject.—The Society to

which I refer still continues its work. Its head-quarters are at Berhampore, the civil station of Murshidabad. I have visited opium dens where both chandu and gooli (madak) were smoked. I was associated for fifteen years with the Rev. S. J. Hill, who was for thirty-seven years a Missionary in Murshidabad, and who knew the habits and history of the people most intimately. We often conversed about the opium habits of the people.

2591. Would you tell us what you observed among the classes of the population of India among whom you laboured with reference to the habit of opium-eating and smoking, with reference to the degree in which that habit is prevalent among the various classes of the population, men, women, and children, and the age at which the habit is acquired—if you know anything about that; and tell us generally what are your experiences with reference to the opium habit and its results?—Opium-eating is very prevalent among large numbers of the Mahomedans. In the city of Murshidabad it is almost universal among them; probably as many as 90 per cent. take it. Many Hindus and others also eat opium. The Rev. S. J. Hill told me of one Hindu who used to boast to him of being the first of his class in Berhampore to begin eating opium. He also boasted of having persuaded three hundred to follow his example. I have not heard of the drinking of opium in the Murshidabad District. With regard to your question as to the different ages, I do not think I have anything to say about that.

2592. Can you tell us something as to the motives which you think induced people to form the habit of smoking opium. Also, can you tell us anything as to the power people have of relinquishing the habit when once they have contracted it? Can you tell us anything with regard to what has been described to us by some witnesses as being a general tendency to increase the dose, and what you consider to be the usual results of the habit, whether viewed physically, mentally, or morally?—Before doing that I should like to say another word about a further use of opium,—opium-smoking.

2593. We shall be glad to hear anything you have to say about the opium habit.—Opium-smoking is carried on to a considerable extent. It is carried on in both its forms. The one is called chandu-smoking, and the other gooli-smoking. Chandu is not so largely smoked as gooli. Chandu is pure liquefied opium. It is smoked through a brass tube, about 15 inches long. At three inches from one end is a door-handle-like knob, with a wee hole in the centre. Over this hole, by means of a skewer, a pilule of chandu is worked up. This is then applied to a jet of light, and the smoker draws hard till it is consumed. Gooli is, I believe, in some parts called "madat;" but in Murshidabad I never heard that term. Gooli means pill or ball, and arises from the form in which the preparation is used. I have watched both the process of preparation and the smoking. Guava leaves are fried black, and liquid opium is heated. The two are then mixed, forming a mass, light in weight and almost black in colour. Bits are broken off and rolled into pilules for smoking. From this comes the term "gooli." Usually along with the smoking a kind of pasty sweetmeat is used, and is said to aid intoxication. Chandu is probably smoked mostly in the opium dens, but gooli is largely smoked at home as well as in the dens. When I stood watching the sale of this preparation, many came to buy for carrying away home. There it is smoked either singly or in groups. As to what are the motives which induce people to form the habit, I may say that probably the majority begin the habit from association with opium-eaters and smokers, and without any deliberate intention. Some are led to it from using it medicinally for rheumatism, lumbago, dysentery or choleraic pains. One very prevalent, and, I fear, the most common reason for using opium is as an aphrodisiac. In the present morally low condition of this country the use of aphrodisiacs is very extensive. Both men and women among the Mahomedans use opium for this purpose. It is quite common for people to recommend opium for this purpose. It is especially recommended for those who have reached the age of forty, or who have married wives much younger than themselves. And as no Hindu widower can get a new wife above ten or twelve years old, the proportion of elderly men with young wives is very considerable. Prostitutes and the frequenters of their houses almost invariably use opium as an aphrodisiac. Then, as to whether the habit is easily relinquished at once or gradually. To relinquish the opium habit seems extremely difficult. In my intercourse with the people this point has impressed me very deeply. I have not yet found any exception among them in the firm and openly expressed conviction that "no opium consumer can ever give up the habit." The way the people spoke on this subject led me to make much use of the illustration in preaching amongst them. I was always sure that my audience would admit it as an axiomatic truth. I tried the same illustration again only a few days ago upon a Calcutta audience with the same invariable, most marked, and emphatic assent. As a further proof of it the following incident came before my notice in a striking way just the day after the event. A man had brought himself and family to become a prey upon his relatives through this opium habit. Being refused money to buy the drug and preferring death to the misery of the craving, he hanged himself. In another case a man who had owned property adjoining our mission house, after bringing his family to degradation and death, spent the last months of his miserable life haunting opium dens and scraping the leavings from opium pipes. From what I have heard on this head it seems indisputable that opium gains a terribly powerful hold of its victims. As to the general tendency to increase the dose, I think there is a general tendency to increase the dose. It needs a larger quantity to give equal effect. One result of this is that not infrequently opium-eaters take just a little too much and lose their lives. This danger was first brought to my notice forcibly some years ago. A member of the Nawab of Murshidabad's band, a Eurasian, had a wife and two children attending our Hindustani service in Berhampore. He was an opium-eater. He took an overdose and died, and his wife and family became a burden for years upon the European community. Since then I have often heard of such cases. One or two such cases are reported almost

monthly in our Calcutta papers. There was at least one case reported in September and two in October. And for one case thus reported we may be sure that there are many unreported throughout Bengal, Behar, and Orissa. Then as to the results of the habit physically, mentally and morally. Scientific evidence on the physical and moral results of opium-eating and smoking will be given by medical men. I shall speak only as an unscientific observer, for years in close contact with the people, deeply interested in their welfare. Physical effects: (1) one of the most noticeable is the extreme emaciation that results from opium consumption. It renders many of them peculiarly miserable objects to look upon.

2594. In the case of those who smoke opium, you are referring to those who smoke it in excess?—Certainly to those who smoke it in excess. Also another exception should be made which is very clearly and forcibly illustrated in the district in which I have worked. There is the Jain community, a wealthy community in the cities of Azimgung and Jeagung. They are a wealthy community. They are a vegetarian community. They partake generally of milk and ghee and sweetmeats. That seems to counteract the emaciating effect generally. In the city of Murshidabad the emaciating effect is very marked because such a large percentage of the people are opium victims. Emaciation can, however, be warded off for a long time by the wealthy through the large use of milk, ghee, and a liberal diet generally. (2) A second physical effect is indolence. Without knowing it I once employed an opium-smoking Hindu carpenter on the Mission boat. He was a young man and understood his work very well, but somehow the work made scarcely any progress, and at last I dismissed him in disgust. Afterwards I saw him in a gooli den, and the whole thing was explained. Another man of a respectable class and good education I watched and conversed with for years. Year by year he grew thinner and more indolent. I often urged him to leave off opium but to no purpose. He would agree with all diatribes against it, but smiled incredulously at the idea of giving it up. He used to ask me why our Government did not give up tempting the people to become opium consumers. In a city like Murshidabad, where the population is largely Mahomedan and where such a proportion as nearly 90 per cent. use opium, the emaciation and indolence produced by the habit are very marked. Hundreds of times as I have preached among the crowds of that city, I have felt most painfully what miserable specimens of humanity they were. In no other city or village has the superficial aspect of society struck me so painfully. And it is in such a city that the genuine effects of using opium can be best discovered. Some years ago I found that as a consequence of the indolence and expense attending the habit, nearly all the property of the city was drifting from Mahomedan into Hindu hands. There are other physical effects of a serious nature arising from the extensive use of opium as an aphrodisiac. But upon these I need not enlarge. It is only too well known how grave are the physical consequences of giving unnatural stimulus to sexual appetites. Mental effects: lethargy of intellect as an ultimate consequence seems to be the principal mental evil arising from the use of opium. In time it dulls the natural activity of the brain and produces a drowsy and listless state of mind. Only once have I heard it spoken of in connection with a case of hopeless insanity in a young man; but then it was associated with ganja smoking and other vices, so that it would be hard to say what share opium had in the result. Moral effects: (1) these probably arise as indirect results from certain direct effects upon physique, mind and pure. Indolence, strong craving and heavy expense are well established facts connected with the use of opium. These necessarily tempt all but the wealthy to get money by any and every means. Non-payment of debts, lying, cheating and stealing are merely the natural outcome of the immense strength of these temptations. Nearly three years ago I sold a cow to an opium-eater, and up to the present it does not seem to have occurred to him that there is any need to pay. The same individual undertook to collect rents. I believe he did so, but the landlord has not seen any of them. It is also very commonly understood by the people, particularly in times of Pooja, that they must be always on the watch against those who take opium, because they are peculiarly liable to take brass lotas and clothes, and anything else they can pick up. (2) But the most serious moral as well as physical aspect of this question is the one directly connected with the use of opium as an aphrodisiac. Anything which stimulates the lustful passions of men and women must have a most disastrous moral effect both upon themselves and society. The natural strength of these passions lies at the root of some of the greatest moral evils of the world. The large use of anything therefore that increases

Rev. W. B. Phillips. that natural strength must always be regarded as one of the gravest dangers and curses of society.

2595. Have you anything to tell us with regard to the medical use of opium as a protection against fever or as a protection against the debilitating influences of malaria?—On this point, of course, my evidence is of a popular, and necessarily not very important kind. I may say that I have never heard opium spoken of in our district as being used as a protective against fever. I do not believe that it is any protective against fever. That is my personal belief. Murshidabad is supposed to be a malarious district, but I never heard the people speak of opium as a protection against malarious fever. They speak of quinine: that is the great thing that is used, but not opium.

2596. Do you think that opium enables the working people to get through a greater amount of bodily toil?—The opium-user will say that he cannot do without it: but there is no general belief in its necessity or value to enable people to do their work. It is a capital thing to make them go to sleep.

2597. Have you anything to say to us as to your impression with regard to the view which is generally taken by the native community with reference to the opium habit as being immoral, or in any sense disgraceful?—Opium-smoking is almost universally regarded as a disgraceful habit, but opium-eating does not seem to arouse such general censure. The opium-eater does not make himself such an object of public knowledge, nor indulge his habit in such filthy dens. The whole surroundings of smokers in *gooli* and *chandu* are extremely disgusting; and the appearance of many of them is wretched in the last degree.

2598. Turning to the action of the Government in relation to opium, have you any observations to offer, with reference to the licensing system? Do you consider that the existing system tends to the spread of the habit, and do you wish to offer any criticisms upon the attitude of the Government in relation to the licensing system?—I believe that the existing system of licensing is inherently and hopelessly vicious, and tends decidedly to spread the habit of opium consumption. The sale of licenses by auction puts the highest possible pressure upon purchasers to push the sale. In some cases such pushing is their only chance for making a profit, seeing that competition at auction has driven them to the very verge of gain and close to the abyss of loss. It is a self-acting system for giving Government the biggest returns with the least trouble. It is the very system adopted by the Romans with their taxes when they cared not a jot what happened to the people in the provinces, so long as their own coffers were filled easily. It exercises a steady pressure, acting all along the line, to promote increased consumption. No temporary check, through some sudden new move, stops that steady onward progress towards larger consumption. This system and its effects greatly weaken the force of all Government assurances as to benevolent intentions. High officials sometimes feel hurt because the public do not accent their statements as to the Government intention to restrict the sale of opium and other things. Without in any way reflecting upon the honesty of Government officers, I would yet wish to put in a word for the public. Take my own case. I have lived for 18 years in this country, and watched the steady increase of excise revenue; and have all along taken an active interest in trying to check the growing influence of drugs and drinks among the people. I have watched the higher price given at auction sales for licenses, and reflected much upon the inevitable tendency of the system to let loose upon society a growing number of growingly greedy shopkeepers. As a result of these 18 years' reflection and experience, I have reached the conclusion that under all the circumstances Government cannot reasonably expect the public to accept such assurances of benevolent intention.

2599. Do you see any analogy between the granting of licenses for the sale of opium by the Government of India and the granting of licenses for the sale of liquor by the Government at home?—The Government at home is distinguished greatly from the Government of India by its relation to the traffic in opium. The Government at home is not responsible for the production of alcohol in the way that the Government of India is responsible for the production of opium: I hold that the Government of England, in dealing with the licensing of alcohol, is also at present in a very guilty position with regard to the welfare of its subjects: but I do not care to distinguish very seriously between the positions of the two Governments.

2600. You think both, from the point of view that you take, deserve condemnation?—Yes, I do.

2601. Do you think it desirable to prohibit the sale of opium in this country, except for medical purposes, and do you think that the public opinion of the people of India would favour the adoption of a measure which would restrain or prohibit the sale of opium, excepting for medical purposes?—I do think it is most desirable that the sale of opium should be prohibited in India, except for medical purposes. As to whether public opinion would favour the adoption of this measure, I may say that a certain class of superficial patriots, whose loud claim to represent public sentiment I strongly challenge, is just now echoing the alarmist cry about revenue and losing sight almost entirely of the moral aspects of this question. Another faction is composed of opium victims. But leaving out these two classes, I believe that the sound good sense of the people at large would heartily support Government in limiting the sale of opium to medical uses; and the best elements of Indian society would gratefully welcome such action on the part of Government.

2602. Can you offer any suggestion as to the mode in which the loss of revenue to the Indian Government resulting from such a course of policy as you recommend could by any possibility be met?—I would join in supporting Dr. Thoburn's suggestion of a small tax upon tobacco. It is so extensively used, and is so comparatively harmless, that increase of consumption is not a thing to be seriously dreaded. Moreover, increase in that direction is almost impossible, the people already take about as much as they can. I have long thought of this as a source of revenue, but never till lately felt prepared to advocate the measure. The *Daily News* of this morning, in an article upon Dr. Thoburn's evidence, has this sentence:—"Of course, if the Indian revenue continues to be inadequate, there is no other resource; it may be necessary to put a tax on tobacco; but to gratuitously fling away the opium revenue, for no reason whatever that any sane man could accept, in order to put a tax on so innocent a luxury, we had almost written necessary, as tobacco, would be too monstrous." Now, the very argument which this writer puts forth as to the reason why a tax should not be put upon tobacco is one of the strongest reasons in my own mind for recommending the tax. After a great deal of reflection on this subject, I am coming more and more to this conviction, that Governments must tax innocent commodities, and that in time they will be forced to it even in England. The next move in public opinion is likely to be towards local option; and even the working classes are coming to see that local option will mean to them shutting up a large number of public houses; and shutting up these public houses will lessen the revenue from alcohol, until I believe the time is coming, when England will have in alcohol a less gigantic evil to deal with than it has at present, and when it will get the courage and nobility of character to put its foot down on that evil, and say: "We will not carry on our Government as we have done, so much on the fruits of this most dangerous thing." It is, therefore, my strong conviction that Governments should look for their revenue to innocent and necessary substances. As it is, the virtuous part of the public is compelled to live, as it were, upon the vice of the vicious. For my own part I am not willing to eat my bread and butter at the expense of families that are going down to misery and degradation through the use of alcohol or opium. I protest against it.

2603. You have expressed yourself with great strength of feeling with reference to the abuse of alcohol at home. It is the case, is it not, that at home the most earnest men in the movement for the suppression of the opium traffic in India are connected with the temperance movement at home?—I believe so.

2604. The two movements are in a sense inter-dependent?—I believe so.

2605. Is there anything further that you would like to state?—I should like to say a word upon the present sale of opium as encouraging suicide. In 1876, whilst teaching in our English school at Berhampore, a student of the Entrance Class rushed in greatly excited, asking for leave to go home as his mother had taken opium. With great difficulty that life was saved. Naturally this case shocked me very much, but I have never till recently turned attention to the great frequency of such suicides. At the early part of this year, especially, I began to remark how often suicides by opium appeared in our daily papers. I would respectfully recommend that the Commission should have returns of opium suicides for one year prepared. I believe that just one year's extracts from newspapers would show a startling result. On the 6th of September last I commenced noting them, and continued this until September 23rd. During

those seventeen days there were five clear cases of suicide and three cases of death from overdoses, in which the suicidal attempt was not so clear. Of these, two were women, and three were young men under 22. Of these latter, two were students at college. It is my conviction that if any poison should be guarded strictly by Government, because of the dangers of its use for suicide, opium is pre-eminently such a poison. It is of all poisons the one which must be naturally the most attractive to a suicide. It presents death in its easiest and most delightful form to one who has reached that state of mind. I believe that its free sale does greatly encourage suicide.

"How oft the sight of means to do ill deeds
Makes ill deeds done."

2606. (*Sir William Roberts.*) You spoke about opium being used as an aphrodisiac; of course you know that there are other aphrodisiacs used than this?—Yes, I do know that.

2607. A great number, are there not?—I believe so.

2608. Do you think that a pious Hindu or a pious Mahomedan would consider himself as acting immorally in taking an aphrodisiac?—I doubt it.

2609. What is your impression in regard to the use of opium with reference to longevity?—I have made no remarks upon that question, and I scarcely feel in a position rightly to speak on that matter.

2610. You said that opium-smoking was regarded as degrading amongst the people that you laboured with, but not opium-eating or drinking?—Yes.

2611. Have you resided in China?—I have not.

2612. I understand that the position you take up is to bar all alcoholic liquor and opium but not tobacco?—Not tobacco.

2613. You are in favour of tobacco?—I cannot say that I am in favour of it, but it seems about as innocent a thing as there can be of that kind.

2614. Have you ever tried to explain why nations like those of Western Europe—Christian nations generally—notwithstanding their use of alcohol, are so prosperous as compared with other nations that do not use alcohol, or only a little?—I believe the great secret of the prosperity of the Western nations is the higher standard of morality generally that has resulted from the religion of Christ.

2615. Then you admit that the use of alcohol in Europe has not prevented that influence from operating in a favourable sense?—Just so.

2616. But does not that appear to you an odd paradox?—No. I think there may be so much good in a nation as to enable it to throw off even a great deal of evil without its interfering with general progress, particularly in comparison with other nations that have perhaps all the evils with very little of the correctives.

2617. It has never struck you that as a possible view that, although alcohol does an enormous amount of harm to individuals, it may nevertheless do a great deal of good to those who consume it moderately, and that the good done in that way may balance the evil that it does?—I am not able to take that view, although, if alcohol were universally moderately used, I should never be a total abstainer, but I feel that the evils are so many and so serious that it cannot be thus treated.

2618. (*Mr. Pease.*) You stated that the result of the opium habit was to transfer the property in Murshidabad from the Mahomedans to the Hindus. Will you explain that?—It happens in this way: the Hindus are less under the power of the opium habit, they have therefore more money. These Murshidabad people spend so much in opium and suffer so much from its degrading influences generally that they give a chance to men of wealth to buy their property, so the Hindus have practically been stepping into their shoes all round in that city.

2619. You say it is a more prevalent vice with the Mahomedans than with the Hindus?—Yes.

2620. You said you had observed for some time past an increase in the price given for licenses to sell opium. Have you any figures that you can put before us on that subject?—I have not.

(*Chairman.*) The Secretary says that the Commissioner of Excise can furnish official figures on the subject.

2621. (*Mr. Wilson.*) You told us that you had a great deal of experience in the Murshidabad district until recently?—Yes.

2622. May we take it generally that your evidence relates especially to the Murshidabad district?—Yes.

2623. And if there was other evidence from other parts of India, it might not necessarily conflict with yours?—Decidedly.

2624. I have some vague idea of what the word "Poojah" means; I should like to hear your definition?—It is the religious worship of the Hindus.

2625. At any time?—Yes.

2626. I thought you spoke of it as relating to some particular season?—The term is applied to regular worship and also to special occasions. The special occasions are those to which I alluded in my evidence, when large crowds of people gather together and the opportunities for selling are very numerous. All the pilgrims are warned, in fact they know themselves, that they must watch against opium-eaters or smokers.

2627. You spoke of two kinds of smoking—chandu and gooli?—There is chandu and madat. Madat, I believe, is synonymous with gooli-smoking.

2628. When you spoke as to how far opium is used medicinally, was that from the general impression that you gathered from the people themselves, or have you had a conversation with the native doctors?—I have not had much conversation with the native doctors on that point.

2629. The impression you have given us is chiefly derived from the people themselves?—From what I have seen of their habits.

2630. Lord Brassey asked you a question about the temperance movement and the anti-opium movement in England as being inter-dependant, and I understood you to say you thought that they were?—If I put it in that form it would scarcely represent my views. What I mean is that as a rule the enemies of alcohol are the enemies of opium, that probably most anti-opiumists are anti-alcoholists.

2631. But if you can imagine that the anti-opium agitation completely collapsed in England, do you think it would have any impression on the temperance movement in the sense of inter-dependance?—Not the slightest.

2632. Perhaps you are aware that some prominent members of the Anti-Opium Society are not temperance men at all?—I was not fully aware of that fact.

2633. Perhaps you are not aware that Mr. Donald Mathieson and Dr. Legge are neither of them connected with the temperance movement in any way whatever?—I was not aware of that.

2634. (*Mr. Mowbray.*) Can you tell me the proportion of the Mahomedan population of Murshidabad and the Hindu population?—I believe in Murshidabad they are nearly half-and-half.

2635. What is the total population?—1,250,000 I believe by the last Census; it used to be 1,353,000.

2636. I may take it then that there are about half a million Mahomedans?—About that.

2637. And you said that 90 per cent. were consumers of opium; I suppose you mean of the adult males among the Mahomedan population?—I have not made that statement; I have confined my statement to the city of Murshidabad, not to the district.

2638. Do I understand that the population of Murshidabad is upwards of a million?—Yes.

2639. And that practically half of that population is Mahomedan, and 90 per cent. of the Mahomedan population are consumers of opium?—No; Murshidabad District is distinct from Murshidabad City. Murshidabad City is the former Capital of Bengal.

2640. Then you do not mean that the population of the city is a million?—Oh dear, no.

2641. Would you tell me what it is?—What I have said as to the population applies to the district.

2642. What were you referring to when you said that 90 per cent. of the Mahomedan population were consumers of opium?—I was then referring to the city of Murshidabad.

2643. What is the population of the city?—I am not perfectly certain, but I believe it is 56,000.*

* Note.—Mr. Phillips desires to put in the following figures showing the population of the Murshidabad city in 1881:—

Hindus	22,719
Mahomedans	15,818
Others	694
TOTAL	39,231

Rev. W. B. Phillips. 2644. Is half of that Mahomedan?—I could not answer exactly—more than half I should say—much more than half.

22 Nov. 1893. 2645. Then is your experience limited to the city or to the district of Murshidabad?—No, it spreads over the district also.

2646. And is what you have told us about the city of Murshidabad good as to the district of Murshidabad?—No; it is not.

2647. Will you tell me what are the proportions of the population in the district of Murshidabad?—That I am unable to say.

2648. Your remarks as to the 90 per cent. referred to the population of the city only?—Yes.

2649. Then, taking 90 per cent., or more than half of the population, do you think it would be possible with due regard to the public opinion of that city, entirely to prohibit a practice indulged in by so large a proportion of people?—Certainly; with a proviso similar to that which the Government is carrying into effect in Burma, allowance being made for present consumers.

2650. You would have a registry made of present consumers; how will you propose to carry that out?—I suppose that would be the method.

2651. Do you think it would be a practical method?—I feel that is a question for Government officials more than for myself. If it were not practical, they would find another mode.

2652. You have expressed your belief that public opinion would support a prohibition of this kind. I wish to know what grounds you have for saying that public opinion would enforce such a prohibition in the case of so large a proportion?—My dependence is of course not upon the public opinion of Murshidabad City, but upon the public opinion of India, that is, the public opinion of 280 million people, contrasted with the public opinion of 56,000. I believe if Government had at its back the public opinion of, say, 200 million, it could afford to deal strongly with the public opinion of some 56,000.

2653. Are you able to speak with as much confidence as to the public opinion of 280 million of people that you have not been brought into direct contact with, as you can with reference to the opinion of the smaller number with which you have been brought into direct contact?—I feel confident that the public opinion of these opium-smokers would not agree with it, so that in that case the analogy breaks down; but with regard to the whole population of India, I express my belief generalizing from particulars, but of course I can scarcely be reasonably expected to offer anything like a guarantee that this opinion is absolutely correct; it is my opinion.

2654. I think you also told us that opium-smokers say that they could not work without it, but in your opinion that is not so?—I did say that opium-smokers would say that they could not work without it, and there is another class would say that they could work without it. I do not think I went further than that.

2655. Your opinion was that it was not a correct idea on their part?—As far as they are concerned, I think they do believe that they could not work without it, and it may be that it is true, although I have had conflicting evidence from one who called anti-opiumists mad fanatics. He said they could work without it, because they were obliged to do without it in jail.

2656. I do not want to go into any one else's evidence. I want to ask whether in your opinion there is a general idea among these men that they cannot work without it?—I think that certainly.

2657. Therefore I presume they would object to be interfered with?—Doubtless.

2658. I suppose you would admit the truth of the proverb "that the man who wears the shoe knows where it pinches"?—Yes, I think that is correct.

2659. (*Mr. Fanshawe.*) I understand you to describe the effects of opium-smoking on an urban Mahomedan population in Murshidabad?—It would be more correct, as far as the city of Murshidabad is concerned, to say that I have described more largely the effect of opium-eating.

2660. May I take it that you describe the effects of opium-eating on an urban population such as you find in Murshidabad?—I do not wish to confine my remarks as applying only to these cases; my own dwelling, for example, was 7 miles away from the city, in Berhaupore, where also the evil effects of opium are known.

2661. But taking it broadly, that is the class you are referring to generally as using opium to excess?—Yes; I think so certainly.

2662. Outside the city of Murshidabad, can you tell us what the proportion of opium-eating would be to opium-smoking?—No.

2663. Is smoking much more common than opium-eating, or much less common?—I cannot say accurately.

2664. You have been in the habit of visiting a great number of villages for a series of years in this district?—Yes.

2665. Has it come within your experience that opium-eating is resorted to at all as a stimulant in the malarious parts of Murshidabad?—No, it has not.

2666. Among the Jain community to which you referred, is the opium habit one of eating or smoking?—Mostly eating.

2667. The members of that community are good business men, I presume?—They are.

2668. And would the remarks that you have made with regard to opium leading to lying and cheating and not paying debts apply to that community?—No, they have not the temptation: I exempt all wealthy men.

2669. You exempt the wealthy community?—Yes, they are not under temptation.

2670. You said it was quite common in the city of Murshidabad to recommend the use of opium as an aphrodisiac: would you kindly tell us by whom you mean?—I wish to consider that remark as enlarged far beyond Murshidabad and as applying not only to Mahomedans, but to Hindus and very largely through society.

2671. By whom is it recommended: by their native doctors?—By one another, by friends.

2672. Recommended amongst themselves?—Amongst themselves.

2673. You recommend that the use of opium should be prohibited except for medical purposes; speaking generally, what do you include under medical purposes; do you mean that opium should only be sold on medical prescription?—Yes, I should think so.

2674. Like other medical prescriptions?—By qualified medical men.

2675. Throughout the districts?—I think there is a system now in India of both English practitioners and Kabirajis.

2676. Then you would mean that opium should only be supplied on the certificate of a qualified practitioner according to the European system, or a qualified practitioner according to the Native system, including both?—Yes.

2677. With your knowledge of the country, would you say that opium generally is used as what I might call a domestic remedy in cases of dysentery, rheumatism, pains, and so on, in many villages throughout the districts, apart from what the doctors would recommend?—I believe it is, particularly for lumbago, rheumatism, or pains of the body.

2678. If it is used generally as a domestic remedy, how would you provide for cases of this kind in future should it be necessary to have a medical certificate, European or Native?—I should like to say that I have never attempted carefully to work out this, nor do I pretend to have any scheme in my mind, but I believe that a scheme may easily be devised. Of course medical practitioners could give a certificate or some prescription by which I suppose medicine of that kind could be got regularly in certain quantities.

2679. With your knowledge of the country you must be well aware that there are many vegetable poisons to be found in almost every village?—That is so.

2680. Do you wish us to understand that your experience has been that poisoning by opium is a much more common form of suicide than by any other poison?—I believe it is much more largely used, and that a comparison with any other poison would reduce the comparison almost to an absurdity.

2681. But if you had not opium, do you think that anybody wishing to commit suicide would be debarred by any difficulty in finding poison according to the present conditions of life?—My impression is that in the case of most suicides a little difficulty goes a long way, and that they should be protected to the utmost extent to which Government can protect them. I believe a man gets so under the influence of depression that if the way of getting free, as it were, of the burden, were not easy, it would probably be a sufficient deterrent, and then common sense would return and he would not wish to commit suicide.

2682. But is the way not easy in the presence of the large number of poisons growing almost in every village?—I do not think it is so easy.

2683. Would it not be easy to substitute any one kind of poison for another?—I do not think it would; if I did, I would not recommend it. I think that all poisons should be, as far as possible, suppressed.

2684. With your knowledge of Indian life you must know that a great number of suicides are committed every year by native women throwing themselves down wells?—Yes.

2685. Does not that come within your knowledge?—It does not come within my personal knowledge.

2686. But you think that is generally correct?—I should say so.

2687. The well in India being used as a means of committing suicide?—I cannot say that it has come prominently before me. I dare say that any one in the North-West Provinces would be more likely to hear of it. I believe it is a common way of committing suicide among native women.

2688. (*Sir James Lyall*.) You attribute the wretched appearance of the Mahomedans to the prevalence of the opium habit. Is it not common in India in the old Mahomedan cities, particularly decayed ones, which were formerly capitals, that the population has a weak and degraded appearance?—My experience of old Mahomedan cities is limited to Murshidabad, and therefore I am not in a position to answer that question.

2689. You refer to the use of opium as an aphrodisiac; is it not usually understood to be the case that from very early sexual intercourse and other habits impotence is unusually common among men in India and often comes early, and that for this reason opium and many other drugs are in unusually large demand as aphrodisiacs?—Well, that may be a fact, but I do not believe that the opium taken as an aphrodisiac is taken with the intention of procuring offspring. It is taken more for increasing sexual enjoyment. I believe that answer will apply almost universally in reference to the use of opium.

2690. You think it is taken not by men who are disposed to be impotent, but by men ordinarily capable of sexual intercourse who take it to get an excessive enjoyment?—I think it is taken by both classes, the object being the pleasure that it may produce.

2691. You say that the existing system of licensing is vicious, putting the highest pressure on the vendor to spread consumption. Is that a theory, or have you any personal knowledge or experience of the special methods by which such vendors spread the sale?—I know such vendors; I know one particularly who used to be a student in our own school, and I know that their object is to try and establish as many shops as they can.

2692. They are not allowed to do that, are they?—That is their object; they try.

2693. Before the thing is put up for auction the number of shops is fixed and no vendor can after that establish

more shops; he knows when the auction takes place, how many shops are going to be allowed?—I had especially in mind the fact that in the time of Sir Rivers Thompson, I made a strong effort to get one of his shops closed and succeeded in that effort. Our Temperance Society took the matter up, and I know how very strong was the opposition we had to meet with on his part. This also I know from conversation with the people that they try to tempt as many as they can into this habit, particularly in the different outstill districts.

2694. The vendor I suppose sits in his shop; he does not advertise in the paper or go round about hawking the thing. I should like to know if you have any knowledge of any special way of increasing the sale which he has beyond that of any other shopkeeper who sits in his shop?—The shopkeeper is not usually the man who buys the license. In the Murshidabad District there were only five principal licensees, and all the shops throughout the district came under them; they put in their shopkeepers.

2695. Have you any knowledge or is it theory, of any special way by which they spread the sale?—I am not prepared to call it theory, if you watch the way in which they gather the people.

2696. That would be one way; have they any system of gathering the people? That is what I wanted to ask you, whether you have any knowledge or experience of that?—I have not any knowledge of any special way. I depend more upon what I hear of the pressure that they put upon people in trying to increase their sale.

2697. You say that the Government of India is specially responsible for the production of opium; is it not also to be credited with the restriction of opium in India as a whole, and high taxation of what is consumed or exported?—I think Government is to be credited with that intention in late years.

2698. I mean with a restriction of production in India as a whole?—I heard on this Commission from Sir David Barbour that the Government production has remained the same for a number of years.

2699. In the greater part or nearly the whole of British India and a very large part of the Native States do you know that through the instrumentality of the Government opium has been extinguished?—That I understand.

2700. And what opium is consumed or produced is very heavily taxed?—That I know.

2701. (*Mr. Wilson*.) With reference to the question about licenses, I understand that it is the case that a certain number of shops is mentioned in the licenses?—I am not sure of that.

2702. Is it not the fact that that number can be increased by the consent of certain officials?—I am not clear on that point.

2703. If I say it is, you are not prepared to say that I am wrong?—I am not prepared to say that you are wrong.

The witness withdrew.

Mr. SITA NATH ROY called in and examined.

2704. (*Chairman*.) What is your occupation?—Banker and Zemindar, and Secretary to the Bengal National Chamber of Commerce.

2705. I understand that you wish to speak to us with reference to the consumption of opium on the moral and physical condition of the people of Bengal?—Yes.

2706. It is a well-known fact that the consumption of opium in this Presidency is not restricted to particular classes or districts, nor does caste impose any restriction on the consumption of opium?—It is more or less taken by all classes from the highest Brahmanical caste downwards, but it is more generally consumed in the Central and Western than in the Eastern parts of Bengal. It would not be going too far to affirm that a considerable portion of the population of Central and Western Bengal take opium while its consumption in Eastern Bengal is much more restricted. The disparity in the use of opium by people of different parts of the Presidency is mostly due to the great prevalence of malarial fevers in Central and Western Bengal; Eastern Bengal being less subject to these afflictions. There is a deep-rooted belief that opium is a prophylactic in malarious diseases. The consumption of opium is largely confined to adults above 40 years of age, for it is in advanced life when the meridian of life has passed, that opium is deemed a necessity as a means to

ward off the many ills which flesh is heir to. People living in low and marshy lands, and those who have to undergo severe physical labour and fatigue and to submit to night exposure, deem it a necessity to take opium in moderate doses, as it is supposed to prevent chill and cold and to give sustained energy and vigor. Young men seldom, or only under medical advice, indulge in the use of opium. With reference to the effect of the consumption of opium on the moral and physical condition of the people, my views are that those who use opium moderately do not suffer any ill effect; on the contrary, the general impression, bordering on conviction, is that the moderate use of opium is beneficial; that it is a panacea for many diseases, and that its tendency is to prolong life. Native physicians concur in holding that opium is a reliable prophylactic against malaria and chill. It brings certain relief to those who are suffering from wasting diseases, diabetes, consumption, rheumatism, gout, and bowel complaints; when other treatment fails, patients are invariably recommended the use of opium. The consumption of narcotics in some form has been in use in this country from time immemorial. The Rajputs and Sikhs, the two most martial races of India, are said to be the largest consumers of opium, and yet they are not only the most prolific and vigorous, but the sturdiest of the people of this country. As regards the evils attending the use or rather abuse of opium, they

Rev. W. B. Phillips.
22 Nov. 1893.

Mr. Sita Nath Roy.

Mr. Sita Nath Roy.
22 Nov. 1893.

are as nothing in comparison with those caused by alcohol. Not a single crime can be ascribed to the use of opium. Who ever met with an opium-eater beating his wife and children, quarrelling with his neighbours and creating public disturbance? We daily meet with the sad spectacle of people dead drunk from the use of alcohol, reeling in the streets of our large cities in a disorderly and unconscious state and incapable of taking care of themselves. But who ever met with an opium-eater behaving in this fashion? At least the uproariousness and wildness caused by the use of alcohol are not visible in the case of opium. A man under the influence of opium is less harmful and less dangerous than one excited by the use of alcohol or of other native drugs.

2707. What do you say as to the disposition of the people of Bengal as to the use of opium for non-medical purposes?—As a rule there is no disposition among the people, especially the higher classes of this Presidency, to use opium for any but medical purposes. The rich and the poor alike do not hesitate to take opium when occasion arises, but they do so under medical advice. I should be wanting in candour if I were not to state here that some (though the number is very small) among the lower classes in our larger cities do take opium as a means of pleasurable excitement. There are opium dens visible here and there in our large cities where *chandu* and *madak*, different preparations of opium, are smoked by a few who may be designated the scum of society, but this is a vice which cannot be charged against the higher classes.

2708. Will you tell us anything you wish to say with reference to the disposition of the people of the Province of Bengal to bear in whole or in part the cost of measures for the prohibition of opium?—It is superfluous to ask the people of this country whether they are disposed to bear in whole or in part the cost of prohibitive measures. Can it be supposed that while the masses of the people of this country are proverbially poor, mostly living on one meal a day, and that while they are literally groaning under numerous direct and indirect taxes, they should be disposed to pay additional taxation to recoup the heavy loss that must inevitably follow the prohibition of the manufacture and sale of opium in British India? As to the financial aspect of the question, is it reasonable to throw to the winds a magnificent revenue of about six millions in tens of rupees at present derived from an unobjectionable trade in deference to the well meaning but mistaken views of moralists and irresponsible persons, and then to ask the people of the country to recoup the deficiency by the payment of additional taxation? No one knows better than the gentleman in charge of the financial portfolio of the Government of India how difficult it is to raise money in this country from taxation, and due weight should be given to his representations. Lands in this country, besides bearing the weight of a heavy revenue payable to Government, have, in infringement of the permanent settlement, in violation of the solemn compact entered into with the landholders, of late been saddled with the payment of two different cesses, namely, road and public works cesses, while trade, commerce and the different professions have been taxed to the uttermost by the imposition of an obnoxious income-tax. Better sources of revenue are hardly available, and any attempt at fresh taxation would arouse the greatest indignation and discontent everywhere throughout the length and breadth of India. Indeed, the imposition of further burdens would be a cruel injustice. Hence, on financial grounds, it would be highly impolitic to abandon the revenue derived from opium, for which there seems no practicable substitute.

2709. Now let me ask whether in your view the growth of the poppy and the manufacture and sale of opium in British India should be prohibited, and whether you think it would be practicable to enforce a prohibition of that kind?—There does not seem to be the slightest justification for prohibiting the growth of the poppy and the manufacture and sale of opium in British India while other stimulants of a far more objectionable character are available, while drunkenness reigns rampant here, especially in Europe, and while the country is being deluged with the spirits manufactured here and the imported brandy, gin and rum, or noxious liquors under those names, it is absurd to talk of abolishing the manufacture and sale of such an innocuous article of commerce as opium, which certainly is not so harmful to society as alcohol. Should opium be abolished, people will have recourse to narcotic drugs and alcohol, and an unlooked for market of large dimensions for European liquors would be opened here. So long as philanthropists and moralists in England cannot persuade the British Parliament to surrender the large revenue amounting to about 28 millions of pounds

realised from the liquor traffic at home, and adopt strong legislative measures for repressing the use of intoxicating liquor, it is a mere mockery to ask the Government of this country to prohibit the manufacture and sale of opium. But what would be gained by such prohibition? China has long cultivated the poppy, and the amount of opium manufactured there is much larger than that imported from this country, and in the absence of that pure product, the Chinese would themselves supply an article far more obnoxious. While the Indian opium being very superior and considered a great luxury is confined to the well-to-do people, the home-grown opium, which is not so refined and is much cheaper, is consumed by millions of people. The only consequence of abolishing Government trade in opium would be either to throw the drug open to free trade, or to hold out an incentive to Chinese for the much larger manufacture of less pure opium in their own country. While the Chinese would go on smoking their pipes with home-grown opium, the Government of India, which can hardly make two ends meet, would for nothing be sacrificing a revenue of six millions tens of rupees at the bidding of a number of well meaning but mistaken philanthropists, who perceive not the beam in the eyes of their own people. It does not seem possible to effectually prohibit the manufacture and especially the sale of opium in this country. Government may prohibit the growth of the poppy in British India, but it cannot and should not, consistently with justice and without giving rise to serious unpleasantness, prohibit the growth of the poppy in the States of the Independent Chiefs of Central India. With the abolition of the opium trade in British India, a greater stimulus would be given to the growth of the poppy and the manufacture and sale of opium in the Native States, and opium would continue to be imported and smuggled into British territory, China and elsewhere, and it would be costly and extremely difficult, if not unpleasant and unsafe, to prevent it by a system of excise which would be intolerable. The revenue derived from opium is one of the principal sources of income in the Native States of Central India, and to ask them, without any reason, to forego it, would be asking too much of them. Nor can the payment of adequate compensation induce the Central Indian Chiefs to prohibit the manufacture of opium in their territories, for their subjects have been accustomed to the use of opium from time immemorial, and a habit so deep-rooted cannot be easily abandoned. The fact is, the prohibition of the growth of the poppy and the manufacture and sale of opium in this country would not only throw the Government into extreme difficulty, but bring serious loss to ryots and landlords alike and to many thousands of people engaged in opium factories.

2710. Do you think that any change short of prohibition should be made in the existing arrangements for regulating and restricting the opium traffic in Bengal and raising a revenue from that source?—The present system of Government monopoly seems to work admirably, and I cannot suggest any change in it. It imposes a great restriction on the consumption of opium. With the abandonment and withdrawal of the Government monopoly, several powerful joint-stock companies would be floated for the manufacture and sale of opium, and some of the very gentlemen who are now loudest in their declamations against opium might be shareholders in such a thriving and lucrative business.

2711. Does that conclude what you wish to say in your examination-in-chief?—There is one thing more I should like to say in reference to what has fallen from Mr. Phillips as to the wretched condition of the Mahomedan population of Murshidabad. My belief with reference to the wretched condition of the population of Murshidabad is that it is more on account of the prevalence of malaria that they present such a wretched appearance. The fact that a large number of the population of Murshidabad do take opium is on account of the prevalence of malaria. I know it from my personal contact with the people living in and around Calcutta where there is a great prevalence of malaria. The people in and about Calcutta do take opium, and those who are stricken by malarial fever necessarily present a wretched spectacle. It is my belief that it is not on account of the use of opium that such a sad appearance is presented, but on account of their being stricken by malarial fevers.

2712. (Mr. Pease.) With reference to your previous answer as to joint-stock companies, I should like to ask what ground you have for such a statement?—That is my belief.

2713. That gentlemen who are at present denouncing the opium trade are so insincere that they would take part in that business?—I do not mean to say that.

2714. Then what do you mean?—I mean that although I might not take alcohol, still I might take shares in a wine business.

2715. (*Chairman.*) A pure hypothesis?—A pure hypothesis.

2716. (*Mr. Pease.*) What special grounds have you had for forming an opinion upon the physical effects of opium?—As a merchant and zemindar I have had experience among several classes of people. Living in the mofussil and in Calcutta, daily coming into contact with a large number of people, I know a large number who consume opium without any ill effects from the use; indeed, they tell me it is very beneficial for their health.

2717. Are you personally interested in the opium business or in the employ of those who are?—I am not in any way interested directly or indirectly.

2718. Is opium largely used in the district from which you come in cases of fever instead of quinine?—In one part of the country, I mean at Dacca, there is no such thing as malarial fever, consequently the consumption of opium, as I have said, is very limited. It is in Western and Central Bengal that the consumption of opium is larger.

2719. (*Mr. Wilson.*) Will you tell me whether the general remarks you have made in reference to its use for medicinal purposes are based on personal knowledge or on what your friends have communicated?—Not on personal knowledge, but on what I hear from my friends as to the effect of it. I myself do not take opium.

2720. Do I understand that you are here as representing the Chamber of Commerce?—Yes.

(*Chairman.*) I believe it is the Native Chamber of Commerce.

2721. (*Mr. Wilson.*) You have not said much as to its effect on commerce, on which I expected to hear a good deal; have you anything to add on that subject?—I never dealt in opium. I have but little knowledge on that subject.

2722. Supposing the sale and cultivation to be largely restricted or abolished, in what way would it affect the Chamber of Commerce as a commercial body?—In this way: if the consumption and export of opium to China were less, in consequence of the restriction, the Government revenue from opium would be less, and in order to recoup the deficiency the Government might impose fresh burdens on the people including zemindars and merchants who would not relish it.

2723. In any other way?—The people also would not like it because in many instances they are obliged to take opium, and if it could not be had easily they would be dissatisfied.

2724. That is a matter in regard to the social life of the people; I am speaking particularly from a commercial point of view; have you anything to say except that there is a fear of additional taxation?—There are persons, especially some big Jew gentlemen, who deal in opium, and some Marwari gentlemen who deal in opium, and perhaps they would be inconvenienced if the consumption and production of opium were restricted.

2725. Are they members of your Association?—Some Marwaris are members of the Association.

2726. I think you said you regarded opium as a panacea for many diseases?—Yes.

2727. You mentioned particularly malaria?—Malaria, rheumatism, gout, bowel-complaints, and diabetes: in all these cases opium is very largely taken, and the Kabirajis prescribe it.

2728. I asked about young children?—Not necessarily children; it may be that children as well as adults are all liable to attacks of malaria.

2729. My question is, are not children especially liable to be affected by malaria?—I am not aware of it.

2730. Can you tell me whether, as a matter of fact, opium is given to children or not. You say it is useful in later life?—I do not know whether it is given to children. I come mostly in contact with grown-up people, and they tell me that they use opium as a prophylactic against malaria, that they derive great benefits from its use.

2731. I think you said that many of these people you are speaking of are extremely poor and only get one meal a day?—Large masses of the people.

2732. But although they have only that one meal a day they find money for the opium?—Not necessarily. Opium is taken by all classes of people, rich and poor alike, but perhaps those who live on one meal a day can hardly spare money for opium.

2733. In reference to the taxation, you are aware that the proposal of the Anti-Opium Association in England is that any additional cost in loss of revenue should not fall upon India?—I was not aware of it until I read it in yesterday's papers.

Mr. Sita Nath Roy.

22 No. 1893.

2734. Now that you are aware of it, does it not somewhat modify the opinions you have expressed?—I do not know whether they will indemnify the ryots, the landholders, and the people of Central India. It might be that they will be disposed to give the millions of money which the Government of India would lose, but I do not know whether they would indemnify everybody that would lose from the suppression of the opium trade.

2735. Do you consider that the ryots would suffer much?—I believe so.

2736. You think it is a very profitable crop?—It is one of the most valuable crops.

2737. Are you aware that in several recent opium official reports reference has been made to the difficulties in getting it cultivated?—I am not aware of it.

2738. If you were to see such statements in official reports, would it modify your opinion that the ryots are very fond of the crop?—I believe the advances of money made by the Government of India are an inducement to the ryots to cultivate land for the poppy.

2739. Very likely, but do you think it is the most profitable crop they have?—One of the most profitable.

2740. You have referred to the Native States. Is it not the fact that the growth of opium is now prohibited in some of the Native States?—I am not aware of it.

2741. Are you not aware of any Native States in which it is prohibited?—I am not aware of it.

2742. Do you know anything about Mysore?—No.

2743. Are you aware that the revenue from opium has been diminishing a good deal of late years?—Yes.

2744. And that with the constant increasing growth of the poppy in China there are considerable fears that opium will further diminish?—It is diminishing, but that is no reason why it should be forcibly suppressed.

2745. If it is steadily diminishing, some means will have to be found to meet it?—It will be many years before it is completely diminished.

2746. Suppose England to be willing to make a very substantial contribution now in order to get rid of what many persons object to in this traffic, do you not think it might, if it were possible, be a good bargain for India to get English money, and not to see this revenue gradually dwindle away until it comes to nothing?—If the Government gave a guarantee that they would remit every year 6 millions of rupees, and at the same time indemnify all the ryots, landholders, and subjects of the Native States of Central India, and also allow the use of opium for medicinal purposes, I think we should not have the least objection.

2747. You have referred to the drink traffic in England and the revenue derived from it. If there were to be some material alteration made within a few years in our liquor laws in England and if we showed some anxiety to get rid of that curse that would destroy the force of your argument about the opium traffic in that respect?—Still we would not like to abandon the opium traffic, because to us it seems that opium is not so harmful and dangerous as alcohol. Opium, it appears to us, is an innocuous article of commerce.

2748. That was not my question. I thought you introduced the question of the liquor trade in England and pointed out the inconsistency in that respect?—Yes.

2749. Then, if England were to make some distinct advance in reference to its own liquor laws, that would destroy that part of your argument?—What I meant was that in that case they could consistently ask the Government of India to put restrictions on the export of opium to China.

2750. (*Mr. Mowbray.*) You said that on certain conditions with regard to the payment by England you thought it might be possible to restrict the use of opium in India to medicinal purposes?—Yes.

2751. Have you formed any plan in your own mind as to the way in which that could be carried out?—Not at all.

2752. (*Mr. Haridas Voharidas.*) Did I understand you to say that you think opium does good and not harm to the people who use it in moderation?—Yes.

2753. Not for medical use only?—As far as I know, it is used mostly for medical purposes, and if it were not, still it would do no harm.

Mr. Sita Nath Roy, 22 Nov. 1893. 2754. You do not think it is a vice?—The immoderate use of it as a means of pleasurable excitement, as a means of debauchery, is condemnable, but the moderate use of it, especially as our countrymen use it for medicinal purposes, is not condemnable.

2755. (*Sir James Lyall.*) Two missionary gentlemen who have given evidence before the Commission, have suggested that a tobacco tax might be imposed to make good the reve-

nue lost by the prohibition of the cultivation of opium; what do you think would be the general idea in India of such a proposal?—There can be only one answer to it. The whole of India as a man would protest, because the lower classes and the higher classes also, especially the lower classes, cannot do without tobacco. A tax on tobacco would be highly resented by the people and produce the greatest amount of discontent and indignation; it is the last thing that Government should do.

The witness withdrew.

(*Rev. W. B. Phillips.*) As one of my statements has been traversed, I should like to say that my remarks, with

reference to the appearance of the people in Murshidabad, apply to the city only, and not to the district.

Adjourned until to-morrow at 10-30.

At the Council Chamber, Writers' Buildings, Calcutta.

ELEVENTH DAY.

Thursday, 23rd November 1893.

PRESENT :

THE RIGHT HONOURABLE LORD BRASSEY, K.C.B. (CHAIRMAN, PRESIDING).

SIR JAMES B. LYALL, G.C.I.E., K.C.S.I.
" WILLIAM ROBERTS, M.D.
MR. R. G. C. MOWBRAY, M.P.
" A. U. FANSHAWE.

MR. ARTHUR PEASE.
" HARIDAS VEHARIDAS DESAI.
" H. J. WILSON, M.P.

MR. J. PRESCOTT HEWETT, C.I.E., *Secretary.*

The Reverend THOMAS EVANS called in and examined.

Revd.
T. Evans.
23 Nov. 1893.

2756. (*Chairman.*) Will you state shortly the length of time you have been in this country and the nature of the work upon which you have been engaged, and generally describe the nature of your position and occupation?—I have been in India for 38 years, and I have been engaged in mission work until lately, when I retired. For the last few years I have been more specially engaged in the promotion of temperance work among the natives of India.

2757. What means have you had especially of ascertaining the social habits of the people of India regarding the use of opium?—I would say at the outset that my chief attention with regard to the Indian "Abkari" Department has been devoted not so much to the opium question as to that of strong drinks.

At the same time I have not mixed up, as a missionary, with the people of India for the last 38 years without having had numerous opportunities of discovering that the use of opium, more or less, is a prevalent vice among them, if not more so than their indulgence in alcohol. Indeed, in many cases opium finds free admission into many wealthy families where strong drink would not be tolerated.

The *Shastras* of the Hindus, as well as the Koran of the Mahomedans, strongly prohibit the use of alcohol, while, as far as I am aware, opium is not thus forbidden. I heard yesterday from a native gentleman of high caste that this drug is more or less in use among all classes of the people of India. The simple fact that opium produces such a large amount of revenue to the Government is at once a proof of its popularity. In the North-West Provinces alone no less than Rs. 8,41,270 was realised by way of opium revenue in the year 1892, while in Oudh there was the sum of Rs. 1,08,753; and in both cases there was an increase over the previous year. The revenue from opium and hemp drugs in the Punjab for 1891-92 was Rs. 6,19,595 and for 1892-93 Rs. 6,49,330. This same sort of increase is seen in nearly all other parts of India, and specially so in the Central Provinces. As to the use for which the people of India generally consume opium, while no doubt many use it medicinally, yet I am of opinion that this is not the general use for which it is taken. It is common to hear of poor mothers giving it to their children in order to put them to sleep while they are away at work, and of late years this practice has greatly

increased in the case of women who are employed at the various factories. Only the other day I was told by a reliable authority that great havoc is made among little children in such cases by overdoses of opium which at times is given them. Then if a wife is jealous of her husband it is a common practice to resort to opium to put an end to life. But from all I have been able to gather in my intercourse with the people, I find that the drug is chiefly used on account of its aphrodisiacal properties in order to force into activity the exhausted powers of nature and to stimulate and excite lust. Before I had been six months in India I was told by a brother missionary who used to distribute grain to the poor on Sundays, that it was a common thing for the beggars to ask for a bit of opium to promote sexual intercourse, and often since that time the same request has been made to myself. I have been told more than once by native doctors that the use of opium for this purpose is as common as it is sad and degrading.

2758. Can you give any special cases of opium victims that have come under your observation; and at what age do you find that the opium habit is generally formed?—As to any special cases that have come under my immediate notice and with which I have had to do, I can just now call to mind the following instances. One case is that of the "*pundit*" who taught me the Hindi language and whose name was *Paramanund*. He was a Christian convert at Agra, and during the Mutiny was killed at Muttra. This man had been for years, while yet a Hindu devotee, in the habit of eating opium. Every possible effort was made to cure him of the habit, but all was in vain. I have often seen him walking along by my side with his eyes closed, and it was with the greatest difficulty I could keep him awake while teaching me the language. He himself often said that he deeply felt the disgrace of his position, but that he could not possibly live without his daily dose of opium. Another case was that of a young Brahmin, who was a fine Sanskrit scholar. He became, I believe, a true convert to Christianity at Allahabad in the year 1870, and he often preached with me in the bazaar. I was not at first aware of his opium propensities, although I could see a strange restlessness in his eyes and some eccentric conduct. At last it all came out and his sad story was, that some years before some old woman had persuaded him to take opium as a preventive from cold.

The dose went on increasing by degrees until at last he had become a slave to the habit. I did all in my power to get him to give up the vice, but I utterly failed and was compelled at last to give him up as a hopeless case and turn him out of the mission. Another case was that of a tinsman in Allahabad. This poor victim looked so emaciated and wretched that I one day asked him if he was ill. He said, "Yes, Sir, and I cannot be cured." I answered, "Why?" His pitiable reply was "I am a *kaidi* (prisoner), shut up in 'the prison of *'afeem'* (opium) and cannot possibly find a way "out." I pitied the poor fellow, and in order to induce him to make a strong effort to conquer the vice I offered him 5 rupees if he kept from the opium for five days, and I asked his master to watch over him. He held out for three days and then broke out saying that no amount of money could compensate for the horrible craving for the drug which made his life a burden. A common expression with opium-eaters when they cannot get the drug is to say "*sub budden futt 'jota hai*;" that is, "the whole body is going to pieces." Such is the agony of the fearful opium crave that the poor victim who suffers from it will beg, borrow, or steal in order to secure a fresh supply of the drug. Such, in brief, has been my observation of opium victims, though of course the instances above given were extreme cases. At the same time it should not be forgotten that opium, like alcohol, is a crave which grows on one insidiously and like a deadly hydra folding its slimy coils round its victims by slow degrees until at last the fearful craving crushes its votaries to death. I have found that, as a rule, opium habits are formed in early life by mothers administering it to their children. Then there are other cases in which men take to the indulgence of opium and *bhang* and *ganja* and *charus*, when they resolve to lead the life of religious ascetics, as nearly all devotees in India indulge largely in stimulants, which among them is not considered a disgrace, for they are freed from the trammels of social life, as they suppose.

2759. Does that represent all you wish to say as to the difficulty which it is alleged is experienced in relinquishing the use of the drug when once the habit has been contracted?—As to the question whether opium victims ever give up the habit, while I would not say that there are no exceptions, yet I do say that as a rule they do not give it up. In proof of this I may state that during my travels through India, from the extreme north to the south, for the last four years, to promote temperance work among the natives, while I have been able in connection with the Anglo-Indian Temperance Association to organise about 130 anti-alcohol societies which include about 100,000 members, I have not been able to find a single person willing to give up the use of opium, and I have often been asked to say that members need only sign against liquor. As far as my experience goes, I do not think that five per cent. of confirmed opium-eaters, and not one in 1,000 of *chandu*-smokers, ever relinquish the evil habit till death sets them free from the terrible bondage.

2760. Are you of opinion from your experience that the opium habit tends materially to the shortening of life?—I am not prepared to make any statement on that point.

2761. What do you consider the most injurious method of taking opium; and do you think that the opium drug is a preventative against malaria or fever?—It would appear to me that opium-smoking is much more deleterious in its effects than that of eating or drinking it. The fumes of the poison seem to affect the lungs and through them the blood with greater virulence than is the case when otherwise taken. We full well know that the smoking of *chandu* (which is clarified opium) is much more injurious than that of eating or drinking the drug. This may account for the fact that the Sikhs in the Punjab and others as well, who use opium as a drink with their food, do not suffer nearly as much from its evil effects as others do who smoke it.

2762. (*Sir William Roberts.*) Does that apply to opium-eating and smoking in India?—In India.

2763. Not in China?—I know nothing about China.

2764. (*Chairman.*) What have you to say about opium being a preventative against malaria?—As to the question whether opium is a preventative from the effects of malaria or not, I am not competent to give a reliable opinion, but if it be so, it seems strange that our benevolent Government, which supplies cholera pills free of charge to people living in places where that sickness prevails, should not be equally liberal in supplying opium pills to its poor subjects residing in malarious districts. And further, if opium is such a powerful prophylactic, how is it that, while the Chinese in Burma may enjoy the boon, it is strictly forbidden by law to allow the native Burmans either to sell or to purchase it? Another strange mystery about this question is this, that, while it is supposed that opium is good to those who

live in British territory, strange to say, the subjects of Native States are forbidden to enjoy this boon by the cultivation of it in their own native country. The Government of India has made a treaty with the State of Mysore in Southern India by which the cultivation of opium in that country is strictly prohibited, and, if I am not misinformed, the same restriction is enforced upon other Native Princes in India.

2765. Have you any remarks to make as to the result of closing the licensed opium-smoking shops in India?—With regard to the closing of *chandu*-smoking dens by the order of Government, I am sorry to have to say that that order has been so far sadly neglected, and it may be that the chief reason for that is found in the issue of a confidential circular, circulated at the order of the Commissioner of Excise in the North-West Provinces in July 1892. That confidential circular I will now read:—

"Confidential. No. 1 of 1892, dated 26th July 1892.

"From T. Stoker, Esq., C.S., Commissioner of Excise, North-West Provinces and Oudh, to all Commissioners and Collectors, North-West Provinces and Oudh.

"Sir,—You are already aware that henceforth the *chandu* and *madak*-smoking is absolutely prohibited on the premises licensed for the sale of the drug. It is impossible to doubt that this prohibition will be followed by the opening in many places of unlicensed places of resort where smokers can obtain the facilities which they require, and that such places will have to be kept under observation, both for general reasons and also with a view to prevent the use of illicit opium. As the law now stands, the authorities have no power to suppress consumption on premises where opium or its preparations are not sold. There is nothing in the law to prevent any one opening a saloon for the accommodation of opium-smokers who bring their own *chandu*. He can supply pipes and lamps and service, and charge a fee for their use, and the law cannot touch him unless he is detected selling opium or its preparations, or found in possession of more than the legal quantity. On this point the opinion of the Board of Revenue is that it is not altogether advisable that such places should be suppressed. Collectors should watch such establishments carefully so as to prevent the sale thereof of illicit opium. The known conditions of *chandu* smoking render the maintenance of some common place for the consumption of the drug an almost absolute necessity. No effort should be made to suppress such places, as it is better that they should be known, and thus be liable to supervision."

I presume that any further remarks from me on this circular are unnecessary.

2766. What in your opinion, so far as your experience goes, are the results of indulgence in opium?—As to the results of indulgence in opium, little need be said, as it is a fact as well known, as it is sadly deplored, that the results are, and must be, degrading and disastrous. Physically, the body, with all its complicated functions, becomes in a large measure paralysed. Languor, listlessness, and laxity of nerve and limb set in as a natural consequence of opium poisoning. The brain is clouded over by the fumes of the deadly drug, and no doubt the moral nature is lowered in tone and character, and becomes so defiled and corrupted that the keen sense of right and wrong is in a large measure annihilated.

2767. Turning to the cultivators, are you of opinion that they are glad to have the opportunity of using their fields for sowing poppy?—As to the question whether or not cultivators object to use their fields for sowing poppy, I have reason to know that they would rather not do it. During a residence of ten years in Monghyr, a place surrounded by opium cultivation, I have often asked the people if it was their own wish to plant the poppy. The answer, as a rule, was to this effect:—"No, sahib; it is a great trouble, and expensive too, but what are we to do?" "It is the order of the Sircar (Government), and we are bound to obey." Besides this, it is not a fact that the Opium Department have a staff of highly-paid officials whose duty it is to visit the villages and to offer large advances of money to those who will consent to cultivate opium? It may not be too much to say that this is the bait which hooks on the cultivators to this work, and that without it the probability is, that few, if any, of them would of their own accord give up their fields for poppy cultivation. I have also been told, but I have had no proof of it (it is very difficult to find evidence), that the Putwa, the man whose duty it is to look after the land and see what it produces, often gets presents, backsheesh, from the Sircar to induce the people to cultivate opium. Of that I have no positive evidence; but it is said so. I have every desire, as a loyal subject (which all Welshmen are) to give the

Revd.
T. Evans.
23 Nov. 1893

Indian Government all possible credit for its good intentions, and I deeply sympathize with its financial pressure. At the same time one cannot forbear asking why not be consistent and say: "We need the revenue and therefore we cannot give up the opium trade, or the liquor, or the hemp drug traffic." This would be straightforward. But, further, if the Government could see its way wisely to renounce all revenue derived from the vices of its subjects, knowing that that which is morally wrong cannot be politically right, then it would act a noble part that would command the approval of the Most High. Great Britain lost nothing, but gained, by the payment of 20 millions sterling for the emancipation of its slaves in the West Indies, and if our Government in the East Indies would but follow that noble example, the Great God, who commands the wealth of the Universe, could and would more than repay the loss, and cause the financial as well as the political basis of our British rule in India to be established in righteousness and to be fixed upon a rock as firm as His own eternal promises to reward all those who put their trust in Him, who is the King of Kings and Lord of all.

2768. You have stated in strong terms the objections which you entertain towards any sanction being given by the Government of India to the traffic in opium. Do you entertain similar objections to sanction being given by a Government, whether the Government of India, or the Government at home, to a traffic in strong drinks?—The English Government in England does not traffic directly in strong drinks: it is not the proprietor of the concern. In India, the Government is the proprietor and the promoter of the whole concern. I think that that makes a great difference.

2769. You are aware that witnesses who have appeared before us on behalf of the Anti-Opium Association do not concur in that view: they hold an equal objection to what is known here as the Bengal monopoly system, and to the Bombay system, under which licenses and export duties are levied; but the Government is not directly concerned in the matter?—I do not think myself if the Government simply levied a prohibitive tax upon the opium, cultivated and exported, the Government would be as responsible for it as it is at present.

2770. (*Sir James Lyall.*) By prohibitive, do you mean a tax which would amount to prohibition?—Yes, in a large measure so.

2771. (*Chairman.*) If the tax were not sufficiently onerous to practically prohibit, you would regard it with the same moral objection as you entertain to the Bengal monopoly system?—If Government confines itself to taxing the article and not producing it, I think it would rid itself of its moral responsibility.

(*Chairman.*) That view which you are now expressing has been put forward very strongly by some, but there are witnesses who have appeared on behalf of the Anti-Opium Association who do not concur with your view.

2772. (*Sir James Lyall.*) You say that the order to close chandu shops has been sadly neglected?—Yes.

2773. You apprehend that this is due to the confidential circular?—Partly.

2774. What meaning do you attach to the circular? What results do you attribute to it?—The meaning I attach to it is that the chandu-smokers took encouragement when they heard of this to carry on the trade.

2775. But how do you think they heard of it, because it was an expressly confidential circular?—These confidential things very often leak out, and people who are financially concerned, very often find them out very quickly.

2776. Is not what is stated in the circular correct, that such shops cannot be suppressed by law, as the law stands at present?—They may not be able to suppress them, but I think that where it is known by Government that they are carried on, efforts should be made to suppress them.

2777. How can it be done, if there is no law?—The law was that chandu dens should be closed.

2778. The law was that none should be licensed; that no dens should be licensed in which opium could be sold.—Would you kindly allow me to read an extract from my own diary bearing on this subject.

2779. Will you answer that question first? You said that the order was that chandu shops should be closed?—Chandu-smoking shops, not chandu-selling shops: the order never included that. The people are still allowed to sell chandu, but not to meet in a special place to smoke it.

2780. But if the law does not prevent a man opening a saloon in which people can smoke chandu, as long as chandu is not sold in that shop, if that is the law, how can the Magistrate prevent the saloon being opened? The

circular states the law.—I am not at all sure in my own mind that that was the spirit of the law. If it was, it was a very imperfect law. Here is an extract bearing on this subject. I quote from *Abkari*, April 1893, page 67:—
"Chandu shop.—We now went down a most filthy, narrow lane, and there saw a shop for selling chandu. The owners are Jhanguo Khabeab and Syed Abdul Janur. There is a second chandu shop in Begum Bazar belonging to the same people. Close by the first shop is the "smoking den"; they rent these places, pay Rs. 3 for the chandu shop, and Rs. 4 for the big den, about 40 feet long and 20 broad. We went there about 9 A.M., and the place had then thirty smokers inside, most of them lying down, some asleep. In the evening they told us that some fifty or sixty come, and among them one woman of a bad character. The chandu is prepared in the shop, the other side of the road, and is sold at about Rs 50 per seer to the smokers, most of whom can only afford to get one or two annas worth per day. Some smoke as much as 4 annas worth daily. Mr. Evans:—Has not the Government issued an order to close all opium-smoking dens? How then do you keep this? Shopman:—That I don't know, and don't care. I was told when I took my license to sell chandu that I could have a smoking den if I only put it 22 feet apart from the chandu shop. I have done that, and now I can have as many smokers as I like in my den. Mr. Evans:—Who told you you could do this? Shopman:—The Excise Officer, Babu Hari Mohun. So I am quite safe, as the den is 22 feet away from the selling shop; you may measure it if you like." That is all the difference that it made,—that the smoking shop was removed 22 feet away from the selling shop.

2781. When the order was passed it was well known that it would be avoided?—I am happy to be able to state that this confidential circular was condemned and cancelled and recalled by the order of the Secretary of State.

2782. I wish to know what you mean when you recommend that the Government should give up a revenue derived from the vices of its subjects: do you mean by this that poppy cultivation, liquor distilling, and hemp cultivation should be prohibited, or that they should be left alone?—It would never do to leave them alone.

2783. What do you mean, that they should be prohibited?—Yes, prohibited.

2784. Liquor-distilling, poppy cultivation, and hemp cultivation?—Yes; but I would say by all means that a sufficient quantity of opium should be grown for medicinal purposes.

2785. How could you do that?—By restricting certain portions of land for the cultivation of a certain amount of poppy. That would be a very easy thing to do.

2786. How would you distribute the small amount of opium you would allow to be produced? Would you allow it to be distributed among the people?—I would supply all the hospitals and medical stores with opium, and give it on the certificate of a medical man.

2787. You mean medical men trained according to European methods?—Native or European. They would give a certificate that so much opium was wanted for medicinal purposes.

2788. Do you think these certificates could be relied upon?—I am afraid they could not always be relied on in the case of natives.

2789. Do you not think that a great many people would set up immediately as *Vaidis* and *Hakims* in order to get the power to give such certificates?—It is possible that they would: but there are difficulties in every reform.

2790. I think you would create a most valuable new profession?—It would not be as bad as the present system in use.

2791. (*Mr. Fanshawe.*) I am not quite sure where your experience has been. Has it been in the North-Western Provinces?—I have lived in Agra and in Delhi, one year in Calcutta, ten years in Monghyr, and seven years in Allahabad, chiefly in the North-West Provinces.

2792. Have you had any direct experience of the Rajputs and the Sikhs, who are stated at times to eat opium as a matter of race? Have you had any experience of the opium habit among them?—I have had no personal experience. My information is from what I have heard with regard to them.

2793. You know the country very well, and you know the practical conditions of native life: has it been your experience that there is no habit of eating opium among people living in malarious districts? I was not quite sure what your views were upon that point?—I have not

observed such a practice myself, as far as my experience goes.

2794. Do you know the Central Provinces at all?—Very little.

2795. Dr. Rice, Surgeon-General, speaking from thirty years' experience in the Central Provinces, told us that there was a habit of eating opium in moderate doses among the people living in malarious surroundings; in fact that the habit grew out of the surroundings in which they lived. Have you had no such experience as that?—No.

2796. You stated that the habit is taken to in early life. Is that correct?—Yes.

2797. Did you mean it to be understood that the habit grows up from boyhood amongst the people who are addicted to the use of opium?—What I meant is that, as a rule, opium is administered by poor women who are mothers to their children, to quiet them, and put them asleep while they go to work. The children grow up inoculated with this opium curse.

2798. You do not mean that they begin eating or drinking opium as boys? You say that they are accustomed to opium as young children: do they give it up altogether, and take to it again, as men?—Some of them may do so.

2799. Do you think they go on with it through boyhood?—Yes.

2800. I was not quite sure what you said about native opinion on the subject. Do you say that native opinion was opposed to the use of opium generally?—I did not make use of that statement.

2801. Did you make any statement about native opinion generally on the subject?—I do not think I did.

2802. What do you think about native opinion generally; you have had good opportunities for observation?—What I think about it is this: that natives who are given to opium habits, would be against giving it up, but that those who are not given to opium habits, would be very glad to have the thing abolished.

2803. Let us come to particulars. Would you say that there is any such general feeling amongst the Mahomedans as you know them in the North-West?—The Mahomedans I found are more given to opium habits than the Hindus.

2804. Would you say that there is a general feeling on their part in favour of giving opium up?—I think not.

2805. What would you say is the general feeling amongst the village and agricultural people, the cultivators, on the subject?—I think they would be in favour of abolishing it.

2806. You spoke of the use of opium as an aphrodisiac: would you say that it is used as such among the villagers and cultivators?—Not as a rule.

2807. Would you distinguish from your experience between opium consumption in towns and in the country outside the towns?—I would.

2808. Would you say that the evil effect of opium is larger in cities than it is in towns?—Much larger.

2809. What do you think native opinion to be with reference to the difference between smoking opium and eating or drinking it?—I cannot tell.

2810. You do not know whether they regard opium-smoking, as practised in India, as different from opium-eating?—I know that there is much more opium-eating and drinking in India than opium-smoking.

2811. But you do not yourself know what native opinion on the two points is?—I do not.

2812. (*Mr. Mowbray.*) With regard to that confidential circular to which you have referred, are you aware that it was moved for, and presented to the House of Commons?—I am not aware of it. Is it a fact, may I ask?

2813. You may take it from me that it is so. Then you are not aware either I suppose, that the subsequent correspondence with regard to that circular was laid before Parliament?—No, I am not.

2814. You have referred to some despatch from the Government of India, in rather strong language. Have you that despatch before you?—No, I have not.

(*Mr. Mowbray.*) I think it would be advisable that the despatch should be presented.

(*Chairman.*) The Secretary will obtain a copy of that despatch. Perhaps you may wish to see it inserted in the appendix?

2815. (*Mr. Mowbray.*) I think it would be better that we should have it, and that the story of this confidential circular should be completed. (*To the witness.*) With regard to your own personal experience, do I understand you to say that you have found it easier to induce people in India to

join anti-alcoholic societies than anti-opium societies?—It is very much easier.

2816. Would you draw from that the inference that there is a stronger feeling in favour of opium?—The conclusion I draw is, that it is harder to give up opium habits than drinking habits.

2817. I suppose you would be prepared to admit that that would increase any difficulty in a general prohibition of the use of opium?—Yes.

2818. Have you ever tried to form an idea of how you could prohibit the use of opium, allowing it to be used by those who have used it before?—I have no doubt it would be a very difficult work, and that it would take years to accomplish it.

2819. You referred to the case of Burma: have you any personal knowledge of Burma?—I was in Burma for three months, three years ago. That is all.

2820. I think the law in Burma has been altered since that?—That may be: but that was the law.

2821. With regard to your statement that opium-smoking is more common among the Mahomedans than among the Hindus, do you attribute that at all to the fact that alcohol drinks are forbidden to the Mahomedans by their religion?—I am sorry to say that though it is forbidden, Mahomedans in these days go in for alcohol, drinking almost as freely as the Babus of Calcutta.

2822. Do you think that if they were prohibited from taking opium, they would fall back upon alcohol?—I do not, as a rule: some might do it.

2823. I do not know whether you quite understand my question. My question was, whether, if you prevented Mahomedans getting opium, would they not take to alcohol?—It is possible that some of them might.

2824. (*Sir James Lyall.*) You have spoken of associations for the prevention of indulgence in alcohol; were they composed of people addicted to the use of alcohol?—In a very great measure they were addicted, but some were not. The principal members of that association are high-caste Brahmins and educated native gentlemen.

2825. Most of them addicted to alcohol?—Not most of them: we will say about one-half.

2826. (*Mr. Wilson.*) Who constitute the greater part of those who have joined these associations that you have been forming?—Educated Hindus, chiefly high-caste people.

2827. Some of whom have been addicted to drink?—A great number of them.

2828. Do you mean addicted in the sense of taking drink and becoming intoxicated?—Yes.

2829. And some are not addicted to drink?—Some are not.

2830. You say about half have been addicted to drink?—That is only an impression.

2831. You spoke about opium being prohibited in Native States? You referred to cultivation?—Yes.

2832. Consumption of opium is not prohibited?—Oh fear not. But it is British opium.

2833. It was only cultivation that you referred to?—Cultivation is prohibited, but consumption is not. It is a monopoly.

2834. You told us that in some place you were at, I think Monghyr, you thought that the cultivation of the poppy was not popular with the natives?—I did not find it popular.

2835. Have you had that kind of testimony on several different occasions from different persons?—While I was in Monghyr, not in any other place. I have no personal evidence. At Gya I have heard the same thing from very reliable authority.

2836. You have said that they could use their land for better crops?—Yes.

2837. Has it ever been suggested to you what crops they could cultivate in preference?—The natives have found out recently that the cultivation of sugarcane pays far better than opium. Opium cultivation, to begin with, is very uncertain. If a shower of hail should fall at a certain time of the season it is all destroyed, and the natives lose in consequence. Then it requires the best of their land. It requires manure and a great deal of labour in collecting it from day to day.

2838. The sugarcane is the chief thing that you imagine might be established?—I should think that wheat would also be more valuable to the people as a rule than

*Revd.
T. Evans.*

23 Nov. 1893.

- Revd. T. Evans.* opium. I may add that it is not the ryots, the cultivators, who get the profit.
2839. Who gets it?—Chiefly the Government and those who are between the Government and the ryots: I mean the under native officials.
2840. Of course the Government gets this large revenue from it. You do not mean that the Government gets any other profit?—No. It purchases opium at from 4 to 5 rupees a seer, and sells it in India for from 16 to 20 rupees.
2841. You spoke of some of the minor officials getting backsheesh?—I mean the native underlings.
2842. Are you sufficiently acquainted with the matter to know who those persons are and in what way backsheesh was given, and for what purpose?—I could not say who they are personally. I only give my impression from what I hear, *viz.*, that they do get presents from the Opium Department to induce the cultivators to lay out their fields in poppy cultivation; but I have no direct proof of it.
2843. I have understood that it is a fact that these persons or some of them are paid partly by salary and partly by commission: in that case the commission would be what you call backsheesh?—It may be so.
2844. You spoke of the advances that are made to them being a bait?—Yes.
2845. And I think you had previously said that it was the order of the Sircar?—That is their impression.
2846. That the order implies compulsion?—Yes.
2847. The bait implies inducement?—Yes.
2848. Do you think it is both, or which do you think is most potent?—Both. I think money is the most important part of it—the advance.
2849. As far as its being a question of the order of the Sircar, do you imagine any ill-consequences would befall these cultivators if they declined the order?—Many.
2850. Of what nature?—The tehsildar, the native revenue collector, and the putwa who are over them, the men who are paid by the zemindars, and partly, I think, by Government, to look after the produce of the fields and see what yield they give,—these people would so annoy them that they could not exist in that place. That is to say, they could not afford to live there; they would be so annoyed.
2851. If these minor officials are paid partly by commission, you mean they have a direct pecuniary interest in inducing people to cultivate?—I mean that.
2852. And you think they have some powers of annoyance which amount to compulsion?—Of that I am sure.
2853. (*Sir James Lyall.*) You said the tehsildar?—Yes.
2854. The tehsildar has nothing to do with the Opium Department?—No, he has to do with the revenue of land.
2855. Is it probable that the tehsildar would take the trouble to annoy these people?—I cannot say.
2856. But you have said so?—I do not remember that I said that the tehsildar interferes directly with opium affairs. I say that he would have power if he wishes to annoy them.
2857. But he has nothing to do with the Department?—That I cannot tell.
2858. (*Mr. Wilson.*) Upon that point do I understand distinctly that you have yourself conversed with the cultivators in the district of Monghyr?—Yes.
2859. And that from one and another you have had this impression?—Yes.
2860. Whether you could produce individuals or not, you have in your mind a very strong belief?—The men to whom I spoke may now be dead and gone; I could not produce them as evidence.
2861. With regard to the question put to you by *Sir James Lyall*, whatever this tehsildar is, he would have no direct connection with the matter; but it is in the minds of the people that in some way or another they would suffer: is that it?—I wish to make this statement, that any request made by a Government official, whether it be a European or Native, comes to the ryots of India as an order. They look upon it as a "hukum" (order). It means command of the Sircar, and they are afraid to disobey it.
2862. What I want to know is, if the tehsildar has not direct connection with the opium, is it your impression that the people believe in some way or another that he can exercise some annoyance also?—He would no doubt if he wished to do so; but whether he would do so or not I cannot tell.

2863. Do you think the people think so?—Oh yes, no doubt of it.
2864. Now about the dens. You read us part of a diary. Can you give us the date of that?—Dacca, Bengal, January 13th, 1893.
2865. Do you happen to know whether that was before or after the cancellation of the circular?—I think it was before the cancellation.
2866. You are not quite certain about that?—I am not quite decided.
2867. Do you know whether the cancellation of the circular was publicly notified in that part of the country?—I cannot tell.
2868. (*Sir James Lyall.*) The circular did not apply to that part of the country?—It did not apply to Bengal: it was a North-West Provinces circular.
2869. (*Mr. Wilson.*) Do you understand why the 22 feet was specially mentioned?—I cannot tell.
2870. Is that an Indian measure or anything of that kind?—I do not know that it is; but that is the measure which the man gave me. He said, "When I got a license, I was told that the smoking den must be removed 22 feet from the selling shop."
2871. But you do not know whether the 22 feet is or is not a measure, or a multiple of any Indian measure?—I do not know; I do not think it is, as far as I know.
2872. Did I understand you to say that this place, where they were smoking, was on the other side of the street?—On the other side of the road. There was a lane and the shop was on one side of the road, and the smoking den was on the other side of the road, 22 feet off.
2873. Did you ascertain the rent in each instance?—I did, and the name of the people.
2874. Did you find that these places were let to the same man?—Yes, let to the same man.
2875. Do you know whether this den had been used for the same purpose previously?—I do not know.
2876. (*Mr. Pease.*) Were there any women or youths in this opium den, as well as adults?—There were no women in the den when I saw it: there were some young people. I asked them if women came there, and they said, "One bad woman comes here in the evening."
2877. You alluded to the pressure which you represented as being put upon the ryots by the Government; do the zemindars in any way interfere with the ryots as to the crop they cultivate, or put any pressure upon them as to what the crops should be?—I have no doubt they do. The land belongs to the zemindars. It is only sub-let to the ryots. The zemindar is all powerful over the ryots.
2878. What would the zemindar's object be?—Perhaps he would have more profit by the cultivation of opium than he would make by other cultivations.
2879. Would you be able to make it a condition of letting the land that the poppy should be grown?—I cannot tell: I doubt that.
2880. (*Sir William Roberts.*) I think you said that you had been for over thirty years in India?—Yes.
2881. Mixing very freely with the population?—Yes.
2882. With which classes of society would you mostly mix?—I have mixed much more among Hindus than among Mahomedans.
2883. You have mixed equally among the better classes, the commercial classes as well as the poor and distressed?—Yes.
2884. What is your impression as to what we may call the distribution of the opium-eating habit; it is very common among Mussulmans and Hindus?—It is more common among Mussulmans than Hindus.
2885. What proportion of the adult Mussulman population do you think would eat opium?—That is a question to which I cannot give a precise answer, but I think I shall be safe in saying 25 or 30 per cent.
2886. Would it be more among the upper or the lower classes that opium-eating would be found?—I think it is more among the upper classes, because they can afford it better.
2887. It did not injure them very much so far as you saw, I suppose?—I did not see the evil effects of it upon them.
2888. You have been in the country a very long time. With regard to the prevalence of opium-smoking as

distinguished from opium-eating, what is your impression? Is opium-smoking more prevalent now than when you came into the country?—Recently opium-smoking has been put down by order of the Government, and that has diminished it somewhat: but before that, however, it was increasing.

2889. When you first came to India and mixed with the people you did not find opium-smoking so common?—No.

2890. You are clear upon that point?—Yes.

2891. You have no facts to give us?—I have not; but opium-eating and drinking is much more prevalent in India than opium-smoking.

2892. Your impression is clear with regard to the smoking habit—that is, smoking chandu. Do they make chandu in India?—Yes, it is simply boiled opium, with a little of the ash of the opium that has been consumed in the pipe, which is called insi. They boil it for hours. I have seen the whole process.

2893. They use it fresh from the caldron in which it is boiled?—Yes.

2894. They do not keep it?—No, they use it there in the den.

2895. Right off?—Yes.

The witness withdrew.

Mr. J. H. RIVETT-CARNAC, C.I.E., F.S.A., COLONEL OF VOLUNTEERS, and A.-D.-C. to HER MAJESTY, called in and examined.

2896. (*Chairman.*) I believe you have some documents you wish to put in?—Yes, I have some papers I wish to put in under orders of the Government. They are notes on the supply of opium prepared under the orders of the Government of Bengal, and two maps—one showing the cultivation and the outturn in the Behar Agency, and the other in the Benares Agency. They have been coloured in such a way as to give the Commission an idea of the extent of the cultivation and of the outturn. Green represents the cultivation drawn to scale; red shows the outturn drawn to scale.

2897. You are a member of the Indian Civil Service, as I understand, and you have held the position of Opium Agent at Benares?—Yes, I have been for thirty-five years in the Indian Civil Service.

2898. You have held a variety of official appointments in India?—Yes.

2899. For the last eighteen years I believe you have been in charge of the Benares Opium Agency?—I have.

2900. You have had very long service and have held high positions in this country? You have had the opportunity of forming your own judgment upon the question which has been referred to the consideration of this Commission, and perhaps the most important part of our inquiry is as to the alleged demoralising effects of the opium habit: have you any observations to give us from your long experience as to the effects of the opium habits upon those who resort to its practice?—I would say that no cases of the demoralizing effects of the opium habit have come under my personal notice.

2901. Dealing with different classes, what do you say as to the cultivation of opium and the members of your factory establishment?—Opium cultivators, so far as my observation goes, do not indulge as a class; but I would say, in explanation of that, that one has not very much opportunity of ascertaining when one sees people during one's tours or at the weighments or at the opium settlements. Unless one is a medical man and can examine them no conclusion can be arrived at. One cannot tell from the look of a man whether he is an opium-consumer.

2902. (*Mr. Pease.*) When you use the word indulge, do you mean a person who consumes opium at all or a person who consumes it to excess?—I should say a large number do not use it at all. That is, as far as my knowledge and observations go. I cannot pretend to speak with any authority as to the proportion of men who do or do not use it, or to the extent of the use.

2903. (*Chairman.*) The factory establishment, I understand, numbers about 4,000 workmen and women: what do you say about that?—The factory establishment is generally presided over by a medical man. I have constantly made inquiries from him as to whether the men in the establishment use opium or not, and I have been invariably told that they do not as a class. Undoubtedly there are some cases, but the number of cases, as a rule, is few. No cases have been brought to my notice of men who use it to excess, or, in fact, who use it at all.

2904. Turning to large cities, what is the result of your observations?—I have reason to believe, in fact to know, that the opium habit does exist in large cities; but my information has always been that it is an accompaniment, and generally a consequence, of many varieties of vice.

2905. (*Sir James Lyall.*) Do you mean excessive use?—Yes, excessive use.

2892. Your impression is clear with regard to the smoking habit—that is, smoking chandu. Do they make chandu in India?—Yes, it is simply boiled opium, with a little of the ash of the opium that has been consumed in the pipe, which is called insi. They boil it for hours. I have seen the whole process.

Revd.
T. Evans.

23 Nov. 1893.

2893. They use it fresh from the caldron in which it is boiled?—Yes.

2894. They do not keep it?—No, they use it there in the den.

2895. Right off?—Yes.

2906. (*Chairman.*) With regard to the people with whom you have been in close personal contact—your own servants—what have you to say about them? I understand you have had experience in the management of a transport train when you were serving as Special Commissioner on the Bengal Famine Relief in 1875: what do you say is the result of your experience?—In the case of my own servants, I had, and have at the present moment, a servant who is an opium-eater: my other servants tell me so. On one occasion we happened to be in camp in the Punjab, when the Viceroy received the present Amir of Afghanistan. I was taken up there on staff of the Commander-in-Chief. We had extraordinary and exceptional weather: it poured with rain much of the time. We were very far north in a very cold climate. Both Europeans and natives, especially the latter, felt the effects of the change of weather very severely. My servant who smoked opium was with me, and he was the only man who really stood the great inconvenience and distress of the weather. That is the only case that has come under my personal observation.

2907. You were speaking of a transport train.—With regard to the transport train, I had the honour to be Special Commissioner on the Bengal Famine Relief in 1875. There were a large number of carts and mules and ponies used to carry the grain down from the North-Western Provinces to Behar. I had to see to the transport and distribution of the grain. The Commander-in-Chief gave a large number of troops—several hundred—to man the trains. There were about fifty European military officers employed in the work. During that time I constantly saw men, troops and sepoy, who, I was informed, took opium. We had occasionally very bad weather, and these men often had very trying times of it: they had to work very hard. I have no personal experience of opium and no medical knowledge; but I was informed by the officers under whom these men worked that several took opium, and that the opium helped them through their troubles.

2908. Were you making a long march?—Yes; they had often not only to make long marches, but they had to get carts that had broken down out of the mire, and re-load mules that had thrown off their packs, and so on. The weather sometimes was very bad, and it was most difficult and tiring work,—very trying work. Indeed, it was acknowledged by Government afterwards to be very trying work.

2909. During the labours of the expedition, do you consider that the men who took opium seemed to be fortified for the work they had to do?—Yes; so far as my information went, it certainly helped some of them through their troubles.

2910. We have heard a good deal from other witnesses with reference to the administration of opium to young people; have you anything to say upon that point?—My evidence upon that point, I am afraid, cannot be of any value: I do not wish to take up the time of the Commission with reference to it, but I may mention I understand that there are many affectionate and devoted Indian mothers who administer opium to their young children in small quantities, which would seem to indicate that the use of the drug is not believed to be injurious. I only mention that as being the popular view of the subject; whether it is correct or not I do not pretend to say.

2911. Do you desire to offer any observations with reference to the appointment of a Royal Commission to make inquiries into the opium question at this particular

Mr.
J. H. Rivett-
Carnac,
C. I. E.;
F. S. A.;
A.-D.-C.

23 Nov. 1893.

Mr. J. H. Rivett-Carnac, C. I. E.; F. S. A.; A.-D.-C.

23 Nov. 1893.

junction?—Yes; I should like to be allowed to say that I leave the service almost immediately, and in a very short time now I shall be no longer an official: I thereforeshould like to speak rather as an outsider than as an official.

2912. I am aware that your service in India was specially extended for a short time in order that you might have the opportunity of putting us in possession of the views of one in your exceptional position and long experience in the matters with which we have to deal. I believe I am correct in saying that I owe it to your Lordship that I am here to-day. I may explain that it is quite evident that I could have left the country and the service before the Commission arrived, and I could then have escaped perhaps a not very easy duty, but I preferred to remain here and give such information as the Commission may require.

2913. Have you anything to say with reference to the appointment of this Commission? I am quite prepared to take what you say as coming practically from a person no longer holding an official position.—Perhaps I may be allowed to state that my position has been rather exceptional for a great number of years. I have not been in the line of the regular administrative service. During the last eighteen and a half years my appointment has rather been that of a merchant managing a large firm paid by Government. I do not think anyone would accuse me of being what is called over-official in my views. I desire to say that what I put forward now I do not put forward as an official, but as one who is just about to leave India, and has absolutely no personal or official interest in the matter at all. Under these circumstances I desire to be allowed to say that as a tax-payer, and as one having a stake in the solvency and tranquillity of this country, I regret the inquiry by a Commission in India at this stage, holding that no case has as yet been made out, by indispensable and exhaustive inquiry and convincing evidence in China, that the results of the trade are as injurious and demoralising as represented by the anti-opium party. The feeling of many here is that, to risk unsettling India now, and to incur expense by the presence of an influential Commission, which is popularly believed to threaten interference with the use of the drug in India, and to menace a valuable source of revenue, to which the people have been for ages accustomed, and which they regard with satisfaction, is unnecessary, unfair, and impolitic, if not, indeed, possibly dangerous. It is not unlike placing a man on his defence for murder, and involving him in all the expense and anxiety of a criminal prosecution, even before the death of the supposed victim has been substantiated by necessary evidence. I desire to say that this is the opinion which has been put before me by a large number of persons with whom I have been in communication. To a large extent I concur in those views. What has been put to me by a great many who are interested is, that it would have been right that the investigation of the Commission should first have been made in China and that a really good case ought to have been proved, before any risk was undergone of possibly disturbing the finances and the feeling of the people in India.

2914. You have explained your position to be that of a civil servant of long experience, and who is on the eve of retirement. I take it, we may infer from that that you have no personal interests in the maintenance of the present system?—Absolutely none except my pension.

2915. Supposing the present system of the Bengal monopoly were abolished, do you think it might possibly insure to your advantage?—I believe that if the anti-opium party carry the attack on the monopoly, I should, for the very first time in my life, be within measurable distance of making a fortune. If they do not, retiring as I do as an Opium Agent after nearly 19 years' service, my experience is worth absolutely nothing. If, on the other hand, the anti opium party could have persuaded, or even now can persuade, the Government to do away with the monopoly, and to put on a pass duty as in Malwa, I believe there would be many opium companies formed at once, and I have no doubt that I should be able to realize a very large sum of money as a promoter and possibly as Managing Director; and that the commercial value of my experience would be considerable, in being able to select officers from the European and Native staff to work for those companies.

2916. In a certain degree, all those employed by Government for working the monopoly would be in the same advantageous position?—That is my belief.

2917. As to the monopoly system, have you any remarks to offer which you consider a vindication of the system

which is now adopted by the Government in Bengal?—I understand that the system and the working of the monopoly are not so much assailed as its principle. Evidence as to the satisfactory working of the Department should perhaps come not from the Department itself but from the outside, and I believe that the whole body of officials and non-officials residing in the tracts to which the monopoly extends, the Government of the North-Western Provinces, the planters, merchants, and the cultivators themselves, would all bear witness to the careful, considerate and successful working of the Department. Complaints have indeed been made by the cultivators to the highest authority against the Agent personally. Several petitions were submitted to Her Majesty the Queen-Empress against me.

2918. What was the charge brought against you?—It was the only occasion on which a serious complaint was brought against me. It was not for attempting to force cultivation, but because I had, under the orders of Government, restricted the cultivation in certain districts. These petitions were addressed to Her Majesty, and were sent out here for disposal.

2919. (Mr. Pease.) Would you kindly say whose petitions they were?—They were the petitions of certain cultivators who were desirous of continuing to sow poppy, and were indignant at not being permitted to do so.

2920. (Chairman.) It is stated in some of the Parliamentary Papers, which have been placed before us, that in the view of some there is a certain compulsion exercised upon the cultivators to induce them to extend the area under the poppy. Have you anything to say upon that? I think, perhaps, what you were going to tell us as to the circumstances which led to those petitions would have a bearing upon that?—I am prepared to say unhesitatingly that official compulsion to cultivate the poppy is unheard of. I am talking of my own part of the world, the agency to which I belong; but I have no doubt that it applies equally elsewhere. The district administrative staff, by which I mean the Collectors and his subordinates, take no part in the operations of the Opium Department. I quite understand that any evidence of mine on this point may be looked upon with some suspicion after what has been said with regard to official evidence; but I have no doubt that there will be absolutely no difficulty in the Commission obtaining full independent evidence upon this head; but still I affirm that compulsion in the North-West Provinces is unheard of.

2921. When we visit the districts we shall hear more of it, no doubt. Have you any remarks to offer about the system of advances?—The cultivator is undoubtedly encouraged to sow with the assistance of advances; but this system, save that the advance bears no interest, is identical with that which has been found necessary from time immemorial in indigo and in almost every similar transaction with the Indian cultivator, or manufacturer, who has little or no capital at command. With reference to the point about there being no interest charged, I think it may be a question whether interest is charged or not. No interest appears in the books, but the Government pay a certain price, that is to say, a price they consider sufficient for the purpose, and it may be a question whether that price is not calculated so as to cover the interest. I may put it in this way. A tradesman sells you an article. He possibly does not tell you he is charging interest, but if he knows you are not likely to pay at once he will possibly put something on the price. In the same way it seems to me very possible that Government may say "We would give Rs 5-8 if it was not for the interest; but we will give the cultivator Rs 5 a seer only and that will cover the interest."

2922. Now I turn to the objections which have been advanced to the monopoly system. It has been objected to on economical grounds and on moral grounds. First, we will take the economical objection. Will you tell us the economical arguments which are urged against the monopoly system, and give us what you think are answers to those arguments?—I realize fully that the position is open to attack on economic grounds, that the monopoly is declared to be un-English and opposed to all the principles of free trade, and that the tax is crushing in its incidence. There are also certain other economic objections to a revenue from opium, which do not directly affect the question of the monopoly, and which do not call for detailed notice here. I may mention that I am now attempting to defend the monopoly or rather the Departmental system, with which I am concerned, and which is but an outwork of the main position, and so it is unnecessary to bring in all the other economical objections which in no way affect the Departmental system. One well-known

objection, for instance, is that it is not a wise thing for Government to depend upon opium revenue at all, a tax which is levied upon people outside its boundaries. Taking briefly the economic objections to the position with which I am immediately concerned, the speculator has undoubtedly the serious grievance that what he considers a mine of wealth is closed to him; whilst the merchant complains that the severest possible export duty is imposed, thus checking the development of the trade. Many tax-payers hold that the Government does not make the most of the splendid capabilities of a prolific source of revenue, which could be largely increased without touching those resident here, and that thus the tax-payer is not so much relieved as he might be, whilst the Government foregoes a revenue which might be utilised in much-needed development, advancing the material progress of the country. The cultivator, too, supposes that if the trade were thrown open, he might obtain a much higher price for his produce than he now receives.

2923. Turning to the objection on the moral ground, do you consider that the monopoly system tends more to restriction of the trade than would a system of free trade?—In my opinion it does, and, so far as I can ascertain, that view is now generally accepted by the anti-opium party. For a long time, so far as one can judge from its publications, the Society seems to have considered the monopoly the key of the position, and the attacks seemed to be directed against the outwork I have the honour to command. But so far as I can learn from what has passed lately before the Royal Commission, that attack is perhaps likely to be diverted: but still I think it would be right for me to shew what is the defence of that position.

2924. I believe it has been publicly stated by those who represent the movement which led to the appointment of the Commission, that they do not themselves distinguish from a moral point of view seriously between the Bengal monopoly and the system which prevails in Malwa. The Bengal monopoly has however been singled out for criticism in England, and if the Government of India, speaking through you, desire to make an explanation of the working of that system, and to offer any remarks in vindication, perhaps it is fair that they should be put upon record?—I should like to do so. I understood from Mr. Alexander's evidence that those who attack the monopoly had to a certain extent changed front.

2925. It is directed against the whole traffic.—I understand that some of those who oppose the monopoly on moral grounds hold the strongest objection to the direct connection of the Government with the trade, and, bad as they consider the trade under any conditions, would much prefer what is known as the Malwa system to that now obtaining in these provinces. I believe that the Society has since changed that opinion. Some, I think, still hold it. An examination of existing conditions will, it is hoped, establish the fact that the monopoly affords the most effective means of keeping the consumption in India and the foreign trade in check, and that the economic objections raised to the system are the strongest proof of the existence of well-considered restrictive measures. Sir E. Baring (Lord Cromer) pointed out that, in direct proportion as the economic objections to the monopoly might be removed, the moral objections would be intensified in degree. The Government has, during a long series of years, failed to remove these economic objections, and serious though they may be in the eyes of those interested, their maintenance protects the interests on the opposite side. The monopoly system is, in fact, a compromise between throwing open the trade to the public and prohibiting the trade altogether. If, then, the cultivation and trade in opium be not altogether prohibited, the monopoly should receive the strongest support of the anti-opium party.

(Chairman.) I understand that the monopoly system is not a system of recent introduction, that it is an inheritance from the distant past. Perhaps with the same object with which you have already given explanations as to the monopoly system, it may be desirable to place upon the notes a concise statement of the history of the question.

2926. (Sir James Lyall.) You are merely giving your own evidence; you have no commission to speak for the Government of India?—Not in the least. I was ordered to come as a witness. I am giving my own opinion only.

(Chairman.) He is ordered here by the Government of India.

(Witness.) These are only my own views: they are not the views put forward by the Government.

In the note presented, under the orders of the Government of Bengal, to the Commission, it is indicated that full information regarding the history of the opium trade and of the monopoly will be found in the Dictionary of Economic

Products of India, by Dr. Watt, and in the 1st Volume of the Report by the Bengal Opium Commission. Although it is undesirable to burden this abstract with any detailed account of this history, it appears necessary, before explaining what are considered the merits of the monopoly now existing, to invite attention to the circumstances under which the present system in this country grew up under native rule and was later admitted in a modified form into our revenue system, and thus to attempt to dispel the prejudice against the system founded on certain incorrect notions of the supposed original invention by the Government of the monopoly. It is popularly supposed that the cultivation of, and trade in, opium was introduced into India by the East India Company; that these British traders first imposed the use of the drug on the many nations of this country, then upon the Chinese, and that the opium monopoly is one of the many sins debitable to the commercial greed of the defunct East India Company. No views could be much wider from the truth than these. The cultivation of the poppy and the trade in the drug are traceable to times far anterior to our connection with this country. The Portuguese found the Arabs and Hindus trading in opium with the Chinese and Malays. The earliest British merchants, who were a hundred years after the Portuguese, found these, together with the Dutch and others, engaged in a remunerative commerce in opium with the Straits and further Asia. Under the Moguls, our predecessors in the Government, opium, like salt, was an imperial monopoly. Although, as in the case of other valuable crops such as sugar and tobacco, a special rate was generally levied on the fields, the poppy was cultivated everywhere in Bengal without restriction, as we found it later in Assam, and as, until recently, was the case in the Punjab. Bengal opium, from the tracts to which the monopoly now extends, had a high repute, and was a valuable article of commerce. The right to manufacture and sell the drug was farmed out to the highest bidder. When the East India Company took over the administration of Bengal they took over with it the existing revenue systems of which the monopoly was one. As Dr. Watt notices, in his valuable work above alluded to, the monopoly is "a hereditary gift" to the British successors of the Great Mogul Emperors. The Mogul system continued in force until 1797, when, in consequence of the flagrant irregularities of the contractors, and the serious grievances of the cultivators, the deterioration of the drug and the danger to the trade by adulteration and other causes, it was determined to abandon the contract system, and to bring the cultivation and manufacture under the direct management of a Government department on the system which has obtained ever since. The system as it at present exists is, then, no grasping invention of the greed of the East India Company, but one of those judicious adaptations of existing methods to the circumstances and interests of the country and the people, which have ever been the secret of our administrative success in India.

2927. I think that seems to complete the historical review which from one witness or another I thought it was desirable we should obtain. Turning to the practical result of the monopoly system as it affects the various interests more directly concerned, as regards the cultivator, what do you say?—As regards the cultivator the advantages claimed for the system are that he is now safeguarded from the many troubles to which experience has shewn he was subjected in the past. To him is ensured fair dealing; an advance when he most requires cash, a fixed and remunerative price, and a solvent and certain purchaser for his entire crop, besides many minor advantages, all of which combine to make the cultivation undoubtedly popular. His interests are guarded by an experienced and considerate department, the members of which have no selfish interest in results, and whose sympathy can be relied on in a season of failure and distress.

I may mention I find that in the Behar Agency some few of the officials receive a commission, and are thus remunerated by results. But this is not the case in the Benares Agency.

The system is a security to the landlord for his rents to the Government for its land revenue, in the districts where the poppy is cultivated. The Government system detects and checks the adulteration of the produce, and ensures a high quality of drug and standard of manufacture, and a high price which the rich alone can afford to pay. It provides for the Government a considerable, and, on the whole, steady revenue, the pressure of which, save so far as local excise is concerned, in no way touches its Indian subjects. Taxation is relieved thereby, and the material progress of the country rendered less difficult.

2928. Sir William Muir and others have urged that in Bengal the Malwa system might, with much advantage, be

substituted for the monopoly system; what in your view would be the probable operation of the Malwa system if it were applied to Bengal?—The probable results would be the increase of cultivation, production, and opium consumption in India and elsewhere. The area available for food-grains would be reduced. Powerful and influential vested interests would grow up. The cultivation and trade might thus get entirely out of hand, and could only be checked by a crushing export duty, which the powerful trading interests that would be created might successfully oppose.

The cultivator would suffer by the change. The trade would be highly speculative; the trader might not be able to afford to give a steady price, and might fail altogether in a year of difficulty. The cultivator would, in all probability, be again exposed to many of the dangers the removal of which was one of the objects of the introduction of the present system. The Government revenue would undergo certain risk and disorder, possibly great loss, whilst, at least, uncertainty would be introduced into the finances, which in the present state of the country would be most undesirable and unwise.

2929. How would you compare the system of deriving revenue from export duty with the profits obtainable by the sales which periodically take place at Calcutta where opium is sold by auction to the merchants?—In my opinion an export duty cannot be compared in efficiency with the auction sales, which automatically adjust monthly the highest possible rate of duty, and against which, as the price rises and falls, there can be no cause for uncertainty or complaint, as is now always the case when the pass duty is altered.

2930. What would be the results as to revenue?—It would be impossible to levy a duty on Bengal opium equal to that now raised by the monopoly. The present Malwa duty falls much below that which Bengal opium virtually pays. That this is the case is proved by the success of the "Malwa Excise Scheme" introduced by myself. I may mention in explanation that a table was drawn up many years ago shewing the incidence of the duty. A chest of Benares opium sold a few days ago at the Board of Revenue for Rs. 1,086. By this calculation made in the Financial Department under Sir John Strachey some years ago, it appears that when a Bengal chest realizes Rs. 1,073 (that is, Rs. 15 less than our chest sold for the other day), the equivalent pass duty in Malwa is Rs. 900. At present Malwa is paying Rs. 600 a chest, so that practically the Government gets Rs. 300 less for the Malwa than for the Bengal chest.

2931. Do you see any special difficulty arising from the circumstances of Bengal in preventing smuggling?—Extensive and expensive preventive establishments would be necessary; a portion of the existing establishment would have to be pensioned; both involving expense. The standard of manufacture would probably fall; the mark and credit of the produce would be affected. China would be inundated with inferior opium, and the trade would eventually suffer. There would be a boon in speculation and great inducements to smuggling accompanied by all its well-known certain demoralising results. The change could do absolutely no good to the cause of morality. It would do certain harm to India by unsettling and reducing the revenue, and by necessitating increased taxation, which, under any circumstances, is undesirable, but especially in the furtherance of views the correctness of which is not acknowledged by the Indian tax-payers, and with which they have but little sympathy.

2932. Do you see any analogy between the system which you have been defending and what is called the Gothenburg system for the supply of liquors?—Supposing that system to exist in England, it would be out of the question to believe that the advocates of temperance would, with a view to the ultimate prohibition of the trade, desire to see the system give way to one which would throw the trade into the hands of the brewers and the publicans and other influential opponents, with whom the battle would have to be fought out at a later stage, when immense vested interests had been established. It is the argument quoted by Mr. Alexander as having been brought forward by the late Cardinal Manning, that it was much better to have one neck to strike at instead of a hundred. When I prepared the notes on which my answers are based, I did not know that the Anti-Opium Society had changed front to a certain extent in respect to the monopoly.

2933. You have presented your mature views on the question, and I do not see that they are less important because there has been some difference of view on the part of the representatives of the Anti-Opium Association. We have to consider and compare the views of experienced men on the one side with the views and facts put forward by men who have strong convictions on the other side?—I only

wish to mention that my notes were prepared some time before that point came up.

2934. Have you any general remarks to make on the moral aspect of the question?—As regards the moral stigma that is supposed by some to attach to the Government and to its servants from their direct connection with the monopoly, it is to be remembered that neither the Government nor its officers, nor indeed the mass of thinking people in Europe, to say nothing of the population of India, have as yet been convinced of the correctness of the views put forward by the anti-opium party. As I have said before, we are open to conviction. If a Commission were to sit in China, and produce the most convincing evidence, possibly the views of many Government officers would be changed. But at present we have no such convincing evidence. We have a certain number of statements, some of which are believed to be not perfectly accurate, and some of which are said to be exaggerated, in regard to China; and we have evidence before our eyes of what is going on in India. It can hardly be expected until we have convincing evidence of the ill-effects in China that we should be inclined to give up a system which has long prevailed here, and which undoubtedly has done a certain amount of good to the country.

2935. But you would be prepared to modify your opinion in deference to any well-ascertained facts?—I do not pretend to speak for the Government; I speak for myself; but supposing the most convincing evidence were produced, I have no doubt that a great many persons here would modify their views. What I hold is that up to the present time no such convincing evidence has been produced.

2936. You opened with some remarks on what may be called the political considerations connected with the appointment of this Commission. I do not know whether, in closing your evidence-in-chief, you would like to say anything further on that point.—I shall be glad to add some remarks on that subject, because I have been for some time past in the districts in which, as the Commission may be aware, there has been distinct trouble recently. I have lived for 35 years in India. I came out after the Mutiny, which had been suppressed in the part of India to which I was posted. This year, for the first time since the Mutiny, there have been European troops marching about in all the districts in which I now serve. The present is an exceptional time; and commanding, as I have the honour to do, the volunteers in those districts, and being in communication with a large body of Europeans in the districts, and going about a great deal, I have had many opportunities of knowing and seeing that the state of the country is not as satisfactory as it has been for some years past. For that reason I cannot help regretting that anything should now be done which may possibly further unsettle the people. I desire to invite the attention of all who are interested in India to the political danger which may attend the anti-opium agitation. The present season is specially inopportune for any action which may cause misapprehension and anxiety throughout the country. Indian finance is just now at ebb-tide. The political barometer is not steady. Although the views and motives and the unselfish aims of those earnest and devoted men who lead the Association are understood and honoured, even by those of their countrymen who do not agree with them, still it is not to be expected that these aims will be equally apprehended and appreciated by the masses in India whose interests will be affected by any change in existing systems. The reform demanded comes before the Indian public with the strong support of various Missionary and Religious Societies, whose action is often regarded by the natives of this country with suspicion and distrust. One of the reasons advanced for the prohibition of the Indian opium trade is the obstacle offered thereby to Missionary success in China, and it is sometimes urged that, in the interests of Christian progress, the Government here is bound to take action even at a great sacrifice of revenue. Admitting, for the sake of argument, that the case against opium has been conclusively made out, which few in India will accept, and supposing the above contention to be entirely correct from a Christian standpoint, it is to be remembered that the people who would suffer by the change have not as yet accepted the tenets on which this argument is founded, and are not interested in the progress of Christianity in China or elsewhere. What may possibly be regarded by the masses as a taxation in the interests of Christianity in China, may also be viewed with suspicion as only the first step towards similar efforts in India, and the entire reversal of those promises and that judicious policy which have long helped to keep India quiet and contented. By the Anti-Opium party it will doubtless be held that even the suggestion of the above views is exaggerated and far-fetched, and that the position in India is clear and

well defined, and distinctly affirmed by Her Majesty's Proclamation. Of the latter point there cannot be any sort of possibility of doubt in the minds of all reasoning persons. But, for all this, the danger of misconception is not materially reduced. It is not only with the educated and the sensible that the Government here has to deal, and there remains the danger of misapprehension in the minds of the suspicious and ill-educated masses from an agitation which is admittedly based on what are declared to be the claims of Christianity. No sensible person ever supposed that the rumour that agitated India in 1857 regarding the greased cartridges had any real foundation. Still its effects are written in history. And it is hardly too much to say that the incautious action of well-intentioned enthusiasts in this delicate question, to which a distinct religious colouring has been given, and which is liable to arouse no small interest throughout the country, may, besides embarrassing the finances, have possibly the much more dangerous effect of disturbing the political balance of Her Majesty's Empire in India.

It is quite true that those who now support the Anti-Opium party might perhaps fairly say that, so to speak, the bottom has been knocked out of that part of the argument, based on the view that the people have to pay something for the change, and that there is a danger of additional taxation. So far as I understand the Anti-Opium party now, they say "Oh no, that is a mistake, England is going to pay the whole bill." If that is the case, that entirely disposes of any argument based on the possible discontent of the people from enhanced taxation. But, if I may be allowed to say so with very great respect, after all when the Anti-Opium party ask us to relinquish this argument, we may fairly say we cannot do so without a valuable consideration. And the only valuable consideration offered is apparently a sort of promissory note offered by the Secretary of the Society. Now, first of all, that promissory note does not seem to have the stamp of soundness upon it that is necessary; and farther, we only have on the bill the name of the Secretary. I do not know if he has any power to represent and sign for the whole Society. As far as I can understand, the Secretary of State for India has altogether declined to put his name to the back of the bill. I read the speech of the Prime Minister, and he certainly did not seem inclined to put the name of the people of England on the back of it.

We hear of a meeting held at Norwich at which several gentlemen passed resolutions, and apparently they were inclined to put their names to the bill, but I do not think that any one in his senses would consider that the bill, as it now comes before us, is a negotiable security. I think before we give up our arguments we should like to see the money down. Before India is to be disturbed or her people alarmed with the idea of increased taxation, as undoubtedly they will be, it will be satisfactory if the Anti-Opium Association will get the Government or the people of England to put the money down. Then, if they will come before us with proof of the real horrors in China, I do not think there would be so great a difficulty in the change. It may be said that it is necessary to find out how rough the sum would be. You cannot go to the people of England without some sort of idea of how much will be wanted; but, as I have said before, there would be no case to go to the people of England unless the position in China were proved, and we certainly want more conclusive evidence on that subject than we have at present before us. If the case in China is thoroughly well proved, perhaps the people of England will put down that sum of money, but after all, even if that were done, there would still remain a very great difficulty in India with those among whom the prohibition of opium, except for medical purposes, would lead to a great deal of discontent. An enormous sum, I believe, will be required to be capitalised before the Indian people will believe that they will not have to pay the bill or any part of it, and that there will be no taxation. First of all, you have to capitalise a sufficient sum to make up for the present revenue, that is, Rs. 5,000,000 or Rs. 6,000,000; then there would be the Native States. The sum would be enormous in the way of compensation. If I understand Mr. Alexander rightly, he said, as the mouthpiece of the Association, that if the Native States were not inclined to give way gracefully, compulsion should be used. Now we, who have been in India a long time, know what compulsion would mean. The sum spent in compulsion would probably very much exceed the sum that would have to be capitalised to pay for the losses of revenue in India proper. That compulsion, as a distinguished officer in Central India wrote years ago, would mean fire and sword, and it would not only mean fire and sword in that particular part of the country to which the compulsion desired by the Anti-Opiumists would be applied. If you once begin

with fire and sword in one part of India, the materials are so inflammable that you may have fire and sword extending a great deal further. That would mean an enormous increased cost in the Army. I do not think any one can form an estimate of what that cost would be.

2937. You can only give your view generally?—If persuasion does not succeed, I understand that there is to be 23 Nov. 1893. compulsion, and compulsion to my mind means making people do something, whether they like it or not, by forcible measures, and that would mean a large increase in the European Army of occupation.

2938. So far as the Commission is concerned we are expressly charged with the duty of consulting the people of India with reference to any alterations that may be proposed in the existing system.—I want to put forward the enormous expense that would be incurred. I say that this sort of promissory note will be for an enormous sum of money, and I do not believe that England would ever put down a sufficient sum of money for the purpose. I hold that it is perfectly fair to assume that the sum required will not be paid by England, and that taxation, therefore, will be necessary in this country, and if you put taxation on the grounds recommended, you may have very considerable trouble throughout the country.

2939. You are merely discussing a pure hypothesis—given a certain policy, certain results will possibly follow?—I say distinctly that if you have heavy taxes such as were proposed the other day, a tobacco tax, an increase in the salt tax, and so on, for the reasons which have been advocated, you will have considerable trouble in the country. I believe that will be found to be the opinion of nearly every European and native who knows anything about the country.

2940. (*Mr. Wilson.*) Will you be good enough to begin at the beginning and tell us the exact process by which land is put in cultivation and the various steps by which opium gets into your stores?—First, the Government must permit, through an order of the Board of Revenue, cultivation in a district. It is intimated to me that I may give licenses in a certain district—that is the first process. Then intimation is given to the cultivators through the native staff that the officers who serve with me are prepared to give licenses in that tract.

2941. Is that intimation verbal or is it published?—The notice is generally sent verbally through the native staff. I may as well explain the sort of staff through which the whole arrangement is managed. There is the native subordinate zilladar who is the unit of the opium system. He is a native of those parts and having knowledge and experience of the people, and has charge of a certain number of villages which are marked out in a map, and to which he is appointed by the opium officers of the district under whom he serves. Intimation comes from me that a certain amount of opium is to be grown in the district. That decision is made by me on the orders that I receive from the Government as to the amount of opium that will be required for the next season from the Agency.

2942. That intimation is an order?—No, they take it if they like it. It is a question whether I can get the amount required.

2943. You said you gave an intimation that a certain quantity was to be cultivated?—The Government say they require a certain amount of cultivation, and they ask me to get a certain amount if I can. I then make up my mind as to the distribution. I take the different districts and I make an estimate or forecast of what can be got. I tell the officers of the districts to send up what we call a forecast of how much they will be able to get. My orders are given as to whether they are to cultivate 20,000 bighas or 10,000 bighas. Notice is given to the native staff, and at a certain time, which is notified, the officer goes into the interior of the district. The zilladars bring the cultivators in, and they make a petition to be allowed to cultivate, each man so many bighas. The officer has to decide how much he will take and what lands he will take, and when, say, 40 or 50 men come and present a petition and ask to be allowed to cultivate so much, he selects the men whom he considers good men and strikes out those whom he considers to be indifferent; that is, in cases where he gets a great deal more offered than he wants. If as many men do not come as he wants he does not strike out anybody. In every case the man has to make a petition to be allowed to cultivate opium, and then the Departmental officers grant the license, and without that license the men cannot cultivate.

2944. What is the petition?—That he wishes to cultivate so many bighas.

2945. Is it in a printed form?—No; the zilladar writes it down.

Mr.
J. H. Rivett-
Carnac.

Mr.
J. H. Rivett-
Carnac,
C. I. E.;
F. S. A.;
A.-D.-C.

2946. Some petitions I have heard of in India have to be on stamped paper?—These are not. The officer decides whether he will accept their offers or not. He has the papers before him, and he decides whether he will take the man as a cultivator or not.

2947. Are these applications or petitions for a definite quantity of land or a general request to grow?—For a definite quantity of land.

2948. Is it a uniform definite quantity?—No. One man gives a bigha and another half a bigha and another a quarter of a bigha, and so on. In our part, we have a system which has greatly added to the popularity of the Opium Department—a system of dealing direct with the cultivators. In old days the lumbardar, who is the headman, used to come and say that he had so many men who wanted to cultivate, and he used to be told that they might have so many bighas. Now we try to get the cultivators to come in themselves to what is called the settlement.

2949. Is that better?—Yes. We deal direct with the cultivators. I consider the system is immensely preferable; people like it very much now that they understand it. In old days the payment and all arrangements used to be through the middleman; now in the agency to which I belong we try to do everything direct with the cultivator himself.

2950. (Mr. Pease.) In the paper called "Notes on the supply of opium," it is said that under the system of licenses advances are made through the headman?—We do not always deal direct with the cultivators, but we do so as much as possible and not through a middleman.

2951. (Mr. Wilson.) Will you now go on with your description of the process?—The opium officer gives a man a license to cultivate a certain quantity of land. The man asks, perhaps, to be allowed to cultivate half a bigha, but if he is not a very satisfactory cultivator, the officer only gives him permission to cultivate a quarter—when he gets his license, he gets at the same time an advance varying in amount according to his merits as a cultivator. He takes the money, goes home, and sets to work, and gets the field ready; about this time of the year they have just sown.

2952. (Mr. Pease.) Is any security given as to advance?—Yes, the lumbardar gives security.

2953. But you have done away with the lumbardars?—He gives security. We do not take security from individual cultivators, but from the lumbardar who gets certain advantages; he gets a certain commission and becomes surety for his cultivators.

2954. Do you know what the commission is?—It varies; it is about Re. 1 per maund. The man gets his field ready and in due time the opium officer comes and measures it. He sees that the man has sown as much as he has permission to sow. The measurement process takes place about the month of January or February. The poppy is ripe at the beginning of the hot weather. When the opium is collected, the cultivators bring the opium into a central place where there is a weighment shed; there the opium is weighed and the man is paid at the rate of Rs. 5 a seer. The account is worked out, and the advance he has received is deducted from the sum due to him. The opium officer at the weighment shed has not all the appliances and cannot tell exactly what is the consistence of the opium.

2955. (Mr. Wilson.) What distance of land would a central place of weighment cover? How many miles would a cultivator bring his opium?—We have during the last few years so arranged the weighment that the men do not come more than perhaps 15 or 20 miles; in old days they would come 100 miles and think nothing of it, but during the 18 years that I have been in charge, we have made many new places for weighment and settlement, and the consequence is that our settlements and weighments are more central than ever they were before. On an average men do not come more than 20 miles. When the account is made up the man is paid after the advance is deducted. The opium is then sealed up in a jar and sent down to the central factory at Ghazipur.

2956. Is it marked with his name?—Yes, when you go to Patna the whole process will be seen on the spot.

(Chairman.) Perhaps that will be the best way. We should be sorry not to go into any matters as fully as may be desired. The presence of a witness who has been so closely and personally connected with the business naturally suggests such questions, but on the other hand, if we are going to the district to make an examination *in situ* for ourselves, perhaps the detailed investigation should take place on the spot.

(Mr. Wilson.) I was speaking to a gentleman who I thought had some knowledge of this subject, and when I

asked him this question he told me that Mr. Rivett-Carnac could answer them all.

(Chairman.) Then perhaps you had better finish it.

(Witness.) The final payment is not exactly on the weight of the opium. The question of consistence comes in. Of course you are aware that in opium as in all other vegetable products there is a certain amount of moisture. The Government pay a man Rs. 5 a seer on a consistency of what we call the standard of 70. That means that if opium has the 70 per cent. of solid matter in it and 30 per cent. of moisture Rs. 5 is paid. If the opium only has 50 per cent. of solid matter and 50 of moisture only 50-70ths of Rs. 5 is paid. The opium officer, when thousands of cultivators are assembled at the weighments, has not all the appliances, and cannot tell exactly the consistency, and whether the percentage of solid matter is 60 or 65; but he makes a rough shot at it; he pays the man at a rough estimate, and sends the opium down to the Factory at Ghazipur or Patna. At these factories there are what are called steam tables on which the opium is exposed so as to ascertain the consistence. First in most delicate scales a certain amount of opium in its crude state with the moisture in it is weighed off. This is placed on the steam table, where by means of great heat all the moisture is evaporated. Having done that, the residue, a perfectly dry powder, is taken into the laboratory and re-weighed, and the residue shews what the consistency is. If there is 80 per cent. remaining it shews that there is 80 per cent. of solid matter and the opium is of 80 consistence. When the accounts are made up the man who sends in his opium with a consistency of 80 gets paid 80-70ths of Rs. 5. These accounts are made up by an elaborate staff at head-quarters, and the figures are sent back to the district officer. The cultivator returns a few months afterwards for the settlements, and then he gets what they call a chukt or the balance.

2957. In fact that is the final settlement?—Yes.

2958. Does he get his account?—Yes, the whole account is written out on his license.

2959. (Mr. Wilson.) Then he is paid his balance?—That closes the transaction, and then he begins again or not as he likes.

2960. Is there always a balance?—Generally, unless there is a bad year.

2961. If there has been a mistake, or if there is a bad year, what happens?—Then he does not get anything paid as "chukti," and the balance remains over till the next year. He need not remain a cultivator; he can give up his license if he likes. As regards the recovery of balances, this is left a good deal to the Opium Agent. If there has been a very bad year, the chances are that the balance is spread over five or six years and collected by degrees. Sometimes it is remitted altogether if there has been a very bad year, under special circumstances.

2962. Are these small balances collected from the man himself or from the lumbardar?—They are paid by the man when he comes in the next year and deducted from his amount.

2963. I believe, according to the condition of the stores in Calcutta and according to the condition of the trade and the amount that the Government desires to sell, the area is from time to time increased or decreased?—Of course I do not know that. All I know is that they tell me to obtain so much. You should ask the Government; it is a secret locked up in their hearts. They tell me so much opium is required, and I believe it practically depends very much upon the state of the stocks in Calcutta. I have, however, no official authority for saying that; it is their secret.

2964. The Government intimates to you what it would like and you have to get it increased or decreased according to such instructions?—The Government says "we should like your agency to provide if possible so many thousand chests of opium next year." I make a rough calculation. I know how much opium there is in a chest, and I know what is the average production per bigha. I know, for instance, that if the production has been on an average $4\frac{1}{2}$ seers to the bigha, it would require 15 bighas to provide one chest. I make a rough calculation, and make up my mind how to get the required number of chests. I tell each district officer to try and get so much cultivation, apportioning my total between the different districts according to circumstances.

2965. Suppose that a year has been a good one and there is less need for a large supply the following year, would that reduction be effected usually by reducing the number of cultivators or by reducing the number of bighas or the area that each man has to grow?—That would depend very much upon the district opium officer. There are a large number

of officers working in the department in the districts. General directions are issued, and each officer sends a forecast. I have to leave the details largely to them. Possibly they send reports and recommendations. They may say that the cultivation in such a part has been very unsatisfactory, and they may recommend that the cultivation be given up there altogether. Or they may say that it has been very satisfactory, and that they will cut down certain villages or certain licences or certain persons. The details are left very much to them.

2966. Is the quality grown in different districts by different cultivators so nearly alike that the price depends solely upon the moisture in it? Is there no difference in the quality apart from that?—There is none recognised in the department. We pay the men from all the different districts the same price. Payment is entirely upon the consistency and the weightment. Quality is not taken into account.

2967. One district or one cultivator is not better than another?—A man may be better in this way, that he brings in a larger outturn. Of course, if he is caught adulterating, that is a different thing.

2968. There are no differences in Calcutta?—They are not recognised.

2969. I have no doubt you are aware that reference has been made in some official documents from time to time to the difficulty of getting the requisite quantity of land. What does that arise from?—The cultivators do not care to sow.

2970. Why?—I suppose at times the cultivators find that they can get some crop that pays them better, and possibly they often get disheartened. It is the bad class of cultivators that get disheartened after a bad season, the good class do not. The indifferent cultivator, if the season is bad, tries something else. The good cultivator does not get disheartened, but sticks to the crop.

2971. In your opinion is there anything in the nature of pressure—perhaps you will not call it compulsion—to induce men to grow the quantity required?—In my belief there is absolutely none. I should punish it severely if I found it, but I do not believe there is in the least. The position of the department in the North-West Provinces particularly is a peculiar one. It is what you may call an *imperium in imperio*. It is a department that is not subordinate to the Government of the North-West Provinces, and has nothing to do with the district officers. Having been a district officer, and having served in the administrative branch myself, I know, and I daresay every Indian officer will tell you, that a department which is independent of the Government and independent of the district staff would always be an unpopular department. And I believe that if any of the departments to which I belong were to attempt to bring pressure on the people, they would immediately go and tell the district staff, and I do not think the district staff would be very much inclined to hold us excused.

2972. Take the case of the lumbaradar who is paid by commission; is it not in human nature that he should try to get as much commission as he can?—I should think so; human nature enters a great deal into everything—as a general principle, I admit that.

2973. I suppose even among lumbaradars there may be some black sheep?—Yes, numbers.

2974. Then taking the case of a black-sheep lumbaradar, has he no means by which he can exercise persuasion amounting to compulsion?—I think it is possible, but it is very improbable. The district officers go round, and I think that probably the man would get into trouble later on; he would be complained against, and he would probably get caught and severely punished. I daresay they may do as suggested sometimes.

2975. Have you had to deal with such cases?—Never I never heard of a case of compulsion. I have had complaints made against me even to Her Majesty the Queen-Empress after the petition had gone through the different stages. People came in hundreds complaining of the stoppage of cultivation. The petitioners went before the Board of Revenue, then to the Lieutenant-Governor of Bengal, and then to the Viceroy, and then to Her Majesty. Many petitions, some of which went to Sir Henry Ponsonby, were sent back here. It was not the case of a wicked opium official making the people grow opium, but it was the wicked Agent who would not let them grow it. That actually took place, and it can be proved up to the hilt. I can shew that every year hundreds of men relinquish the cultivation. There may be some lumbaradars who may force men to remain on, but I can give conclusive evidence that year by year hundreds of men give up. There is absolutely no compulsion whatever by the Department.

2976. (*Sir James Lyall*.) You say that the lumbaradar may in some cases force them?—For aught I know. It is quite a hypothetical case; there is a possibility of it.

2977. (*Mr. Wilson*.) In the fourth paragraph of your printed statement you express regret with regard to this inquiry being held, and you state that there had been no convincing evidence from China on the subject?—Yes.

2978. I suppose you know that question was settled by the House of Commons in 1891 when a Conservative Government was in power?—I think I read in the speech of the Right Honourable the Prime Minister, who stated distinctly that it had never been settled.

2979. May I give you the words of the Resolution that was carried by 160 votes to 130.—“That this House is of opinion that the system by which the opium revenue is raised is morally indefensible”?—I have not brought with me the papers, but I think I could quote from the speech of the Prime Minister the statement that the matter had never been distinctly settled by the House of Commons. If I mistake not, one speaker also laid it down distinctly that it had never been distinctly settled.

2980. I ask if you know that the amendment was carried; I did not ask about the Prime Minister, but I ask whether you know that the amendment was carried by 160 votes to 130?—I did not know the number. I had read what the Right Honourable the Prime Minister said, and I distinctly understood that it was to the effect that the matter had not been settled by the House of Commons, and I think Mr. Speaker said the same. I can put in the extract if necessary.

(*The Chairman*.) So far as it is in the records of Parliament we have it before us irrespective of any information which the witness may have.

2981. (*Mr. Wilson*.) I ask whether in giving this evidence you were aware that the House of Commons had expressed an opinion that it was morally indefensible?—I was not aware of it.

2982. Your answer is in the negative?—Yes. I understand that no motion of that sort has been carried. I say distinctly that the people of India, of whose opinion I hear a good deal sometimes, do not consider that there has been convincing evidence of the fearful effects of opium in China, that they have not heard sufficient to make them consider the desirability of giving up this source of revenue and bringing trouble on the country.

2983. When you say the people of India, whom do you mean?—I understand it to be a very strong feeling in India. I cannot speak for the people of India, but I say that amongst the large number of people whom I have met the general feeling is that they are not convinced that the state of affairs in China is so terrible, that there is sufficient reason why Government should give up the large revenue that is now raised from opium.

2984. When you speak of these people in India, you mean the Anglo-Indians?—And natives, particularly educated natives. They have constantly said to me “has it been satisfactorily proved?”

2985. You want us to understand that the persons whom you have met in India do not agree with the Resolution of the House of Commons that the thing is morally indefensible?—I was not thinking of the House of Commons then.

2986. I understand your point is that when the House of Commons states that it is morally indefensible, there are some persons in India who do not agree with them?—I thought the Commission might wish to hear the opinions of a large number of persons in India, both European and Native, to the effect that they do not consider that the case has been thoroughly proved in regard to China, and that before giving up a large revenue and possibly embroiling the country in great trouble, they would like the case to be thoroughly proved by an exhaustive inquiry in China. It was not in reference to anything connected with the House of Commons that I was speaking.

2987. (*Mr. Pease*.) You make some allusion to a change of front on the part of the Anti-Opium Society. It is only fair to say that in 1886 they put out a document in which they took exception to the Bengal system, and at the same time they say that they will strongly oppose the transference of the trade into private hands.—I am under some disadvantage. Until, through the courtesy of Mr. Alexander, I recently received some papers, I had hardly seen any of these publications, I was always under the impression that the Anti-Opium Society treated the monopoly as the key of the position attacked; and I was rather glad to defend it.

2988. You say that there are Deputy Sub-Agents; by whom are they selected or appointed?—They come in

Mr.
J. H. Rivett-
Carnac,
C.I.E.,
F.S.A.,
A.D.C.

23 Nov. 1893.

Mr. originally as Assistant Deputy Opium Agents, and are promoted by degrees to be Deputy Opium Agents. They are appointed by selection and competition. The nominations for the vacancies are in the hands of the two Opium Agents and the Governments of Bengal and the North-West.

23 Nov. 1893.

2989. Do the Governments and the Opium Agents nominate?—The actual process is, that each nominates one man. The four nominees compete for one appointment, the best of the four getting the appointment.

2990. (*Sir James Lyall.*) You and Mr. Hopkins are the officers of the head opium agency in Benares and Behar. Your duties are confined to superintending and managing, granting licenses to cultivate the poppy, giving advances to the cultivators, the collection of opium from the cultivators, and its manufacture and transport to Calcutta; these are your duties, I believe?—They are.

2991. I understand that you and Mr. Hopkins were named by the Government as witnesses to give evidence as to the duties of your work and how it is managed?—That is correct.

2992. You had no instructions to defend the monopoly system or to express the views of Government on the question referred to the Parliamentary Commission?—Absolutely none. I believe we were practically told to come here and give any information that our experience may enable us to give.

2993. You pointed out the additional duty or profit that Government gets on Bengal opium as compared with Malwa opium?—I did.

2994. Is it not the case that that additional profit or duty on Bengal opium is got by appropriating to Government through the monopoly a small part of the profit which the Malwa cultivator gets, that is, the Malwa cultivator gets a little more for the opium being free trade than the Bengal cultivator does?—I should say that is correct.

2995. The rest of the profit is got by appropriating to the Government the whole of the profit which the Malwa manufacturer gets?—That is my view.

2996. (*Mr. Fanshawe.*) Mr. Evans, who gave evidence this morning, spoke of the fear of the tehsildar as being a reason why cultivators could not give up poppy cultivation. In the North-West has the tehsildar any power to deal with poppy cultivators?—Absolutely none. I do not mean to say that if he had a personal friend, the tehsildar might not get him to do something. One cannot say that he might not have some influence. The tehsildar as a native official has nothing to do with us. A complaint amongst Opium officers often has been that although the tehsildar goes out and provides every sort of arrangement for other officers going through his district, he does not regard Opium officers as anybody at all, and will not put himself out of the way for them because they are not officers who are connected with him. I was at first inclined to think that it was a great mistake that we did not work through the District officers. After I joined the Agency, having served in the Central Provinces where all the administrative strings were in the hands of the District officer, it seemed to me that it would be an excellent plan to have all the opium staff put under the collector so as to bring the collector and the tehsildar to help the Opium Department. I was unmercifully snubbed for the recommendation, and afterwards I saw the foolishness of my proposal and the wisdom of the rebuke that was administered to me, inasmuch as it was pointed out that the Government could not recognise the district staff as being connected with opium cultivation.

2997. If any native subordinate of your Department could put pressure on the cultivators, who would it be?—Would it be the zilladar?—I really do not know how they could put pressure.

2998. If anybody might put pressure on the villagers to cultivate poppy it would be the inspector or the man who goes round the villages?—Yes.

2999. He is the zilladar?—Yes.

3000. Has he a circle?—Yes, he has five or six villages. He is the administrative unit.

3001. Then the man who goes first through villages in that way would be the man who might put pressure to bring them in?—Yes.

3002. (*Mr. Haridas Veharidas.*) You were in the Bombay Presidency as Cotton Commissioner and you had occasion to see and know the cultivators?—Yes; I served a long time in the Central Provinces and Berar. As a Cotton Commissioner I was brought into contact with the people.

3003. Can you give an idea of the condition of the cotton cultivators as compared with that of the poppy cultivators?—I knew the cotton cultivator in his halcyon days when he used to make much money and was extremely well off. I think the opium cultivator is as well off, because the opium cultivators are the cream of the cultivators in our part of India. Nobody excepting the best class of cultivators will take up the poppy cultivation or keep it for long. I should say that the average opium cultivator was better off than the cotton cultivator. I saw the cotton cultivators in the days of the cotton famine.

3004. Cotton cultivators get no advances?—No.

3005. Does the poppy cultivator go to the officer to get a license or does the officer go to the cultivator?—We now send the Opium officers to certain central points. In old days the officer used to remain at head-quarters. For some years past now we have had bungalows scattered about the districts and the Opium officer goes to these points on fixed dates, and the cultivator comes to him. I do not mean to say that the zilladars do not encourage men to come in and perhaps very often bring them with them. They come to the bungalow where the officer is. The opium subordinate goes originally to the opium cultivator.

3006. (*Mr. Moubray.*) So far as I gather, you do not deal in any way with the landowners, but directly with the cultivators or with the cultivators through their headman?—Yes.

3007. The only advantage therefore that the landowner derives from the cultivation of opium is the better security for his rent, because his tenants are more likely to be solvent?—Possibly the landowner sometimes gets a little opium for himself.

3008. From his tenants?—Yes, if he is an opium-eater. Sometimes he may tell the cultivators to bring him a little, and this is very difficult to find out.

3009. That raises the question that I was about to ask, whether you believe that there is much of that kind of what I may call smuggling?—It is difficult to say whether there is much, but it would be wrong to say that there is not some. I could give several reasons which seem to indicate that the amount cannot be very large. Undoubtedly there must be some smuggling; I should think that women keep back small quantities for their children and for medicine and a little for the cattle, but my reasons for supposing that the amount is not very large are these. Several times men have been caught buying what is called excise opium in the North-West Provinces and carrying it to Calcutta. The reason for their doing this is that the excise price of opium at Benares is much lower than at Calcutta. It suggests itself that if these smugglers have to go to the excise to buy opium, they must have considerable difficulty in getting it from the cultivators. They pay Rs. 17 a seer for excise opium, and the price we pay to the cultivators is only Rs. 5—a difference of Rs. 12. You cannot believe that they would buy excise opium at Rs. 17 if they could get opium easily in the districts at any price between Rs. 17 and Rs. 5. Then another reason for believing that the amount kept back is not very large is that opium is constantly smuggled from Nepal on our North East border. The Punjab traders have been caught over and over again carrying pony-loads of opium wrapped up in onions, tobacco, etc., which they have had to go to Nepal for. If they go to all the risk and expense and trouble of going through our districts, buying opium in Nepal and coming through our districts again, there must be some considerable trouble in buying from the cultivators. I do not say that it is not done to some extent. Another reason which makes me suppose that there is a difficulty in smuggling is that we have constantly caught men carrying pony-loads of opium pottery for long distances, 50 or 100 miles. During the opium collection season hundreds and thousands of women and children collect the opium. They scrape off the opium from each capsule and put it into a little earthenware dish. When they get home they scrape the opium out of these little dishes and place it in a larger jar. All these little earthenware dishes, even when scraped, retain a certain amount of opium. These are sometimes smashed in order to extract the opium from them. If the people go to all the trouble and expense and risk of carrying this pottery, it cannot be very easy to get much from the cultivators. Of course it would be absurd to pretend, with the millions of cultivators engaged in the trade, that they do not keep back some of the opium in small quantities—that is an admitted fact.

3010. What proportion of the staff generally are English?—When I first joined the Department nearly all the Sub-Deputies and Assistants were Europeans. Some years later the Government determined to throw the Department open to boys born and educated in this country. I

generally give the nomination to a European; but a young Englishman who comes out from England has very little chance against a boy educated in this country. During the last few years we have appointed a certain number of natives, a small percentage; one in three.

3011. The subordinates who deal more directly with the cultivators are all natives?—All natives.

3012. Do you consider the commission system a good system for paying these people?—In the Agency in which I am, none of the officials are paid by commission; we have always been against it, rightly or wrongly.

3013. The prices, we understand, paid to cultivators is the same every year?—No, since I have been in the Agency it has been changed two or three times. In 1871-7 it was raised from Rs. 4-8 to Rs. 5 a seer; in 1878 it was reduced to Rs. 4-8 per seer; and in 1882 it was again raised to Rs. 5, and that is the rate at which it stands at present.

3014. Was that done at your recommendation or by the orders of the Board of Revenue?—Under the orders of the Board of Revenue and the Government of India. In a matter of that sort involving an enormous sum of money the orders that came to me through the Board of Revenue were from the Government of India.

3015. Does it depend on the price which the Government are getting at the auction sales in Calcutta, or on the difficulties which you find in getting people to cultivate the poppy?—This reason for lowering the price is a mystery. The Government say they want a certain amount sown, and if I said I could not get it at Rs. 5 they would probably

raise the rate. I think they would prefer to lower the rate rather than to raise it. There is always great trouble about raising it.

3016. (*Mr. Pease.*) Is it not a fact that when the opium rate was low there was a high price of cereals so that there was a difficulty in getting people to cultivate opium, and it was necessary to raise the rate so as to induce them to cultivate it?—My impression is that they raise the rate because they want more opium.

3017. I think I have read that it was on account of the high price of other produce at that time that the rate for opium was raised?—I cannot say.

(*Chairman.*) It depends upon two things—upon the price obtainable at the time for other descriptions of produce, and also upon the requirements of the Government with reference to their stock of opium.

3018. (*Mr. Mowbray.*) Do the cultivators who grow opium put all their land into the opium crop, or do they cultivate cereals on part of the land?—The cultivator only puts a small patch under opium, say a quarter or sometimes one-sixth, with which he intends to pay his rent; the rest he cultivates as a rule in grain crops to supply his family and his cattle.

3019. (*Mr. Wilson.*) You have explained to us that when the Government does not desire to have so much land under cultivation a certain number of persons are struck off the list, or other persons may have a portion of land reduced?—Yes.

3020. When that takes place, do they get any kind of compensation?—No.

The witness withdrew.

Adjourned until to-morrow at 11 o'clock.

At the Council Chamber, Writers' Buildings, Calcutta.

TWELFTH DAY.

Friday, 24th November 1893.

PRESENT:

THE RIGHT HONOURABLE LORD BRASSEY, K.C.B. (CHAIRMAN, PRESIDING).

SIR JAMES B. LYALL, G.C.I.E., K.C.S.I.
THE HON'BLE SIR LACHHMESWAR SINGH, BAHADUR, MAHARAJA OF DARBHANGA, K.C.I.E.
SIR WILLIAM ROBERTS, M.D.
MR. R. G. C. MOWBRAY, M.P.

MR. A. U. FANSHAWE.
„ A. ARTHUR PEASE.
„ HARIDAS VEHARIDAS DESAI.
„ H. J. WILSON, M.P.

MR. J. PRESCOTT HEWETT, C.I.E., *Secretary.*

MR. JAMES FAIRBAIRN FINLAY called in and examined.

3021. (*Chairman.*) Kindly state what your position is.—I am Secretary to the Government of India in the Finance Department.

3022. You attend this morning for the purpose of producing on behalf of the Government of India five papers, of which copies have already been given to the Secretary?—Yes.

3023. Will you tell us the different heads with which those papers deal?—The first is a "Statement shewing Opium Revenue and Expenditure of British India under all Heads of Accounts;" the second is a note regarding "Opium produced or consumed in India;" the third is a note regarding "Arrangements with Native States regarding Opium;" the fourth is an "Account of previous proposals for abolishing the Government monopoly, cultivation, manufacture and sale of Opium in Bengal," and the fifth is a Reprint of a Report on Opium in Western China by Mr. W. D. Spence, Her Britannic Majesty's Acting Consul, Ichang, dated 11th April 1892.

3024. The papers that you have enumerated have, as I understand, been in the hands of the Secretary for a day or two, but we cannot assume that every one of these papers has been attentively read by each member of the Commission. I understand your desire is that those papers shall be accepted by the Commission as being the evidence tendered in chief on the part of the Government of India with reference to the various matters which are there dealt with; you desire that your personal part in giving information should rather take the form of explanations which may be required of you by any member of the Commission regarding any points which are dealt with in those papers?—That is so.

I believe it will tend rather to the despatch of business if we did not detain Mr. Finlay further this morning, but that it should be understood on the part of the Commission that we should read these papers with attention, and that Mr. Finlay should attend on Tuesday

Mr.
J. H. Rivett-
Carnac,
C.I.E., F.S.A.,
A.D.C.

Mr. J. F. Finlay.
24 Nov. 1893.

Mr. J. F. Finlay. morning, when the Commissioners will be prepared to cross-examine him upon them.
 24 Nov. 1893. (Witness.) I have been asked to produce the papers relating to the Confidential Circular issued by the

Excise Commissioner of the North-Western Provinces to which publicity was given by the "Abkari." I now hand them in.

RAM DHULABH MAZUMDAR called in and examined.

R. D. Mazumdar. 3025. (Mr. Pease.) Will you kindly state to the Commission your position and where you reside?—I am a pleader at Nowgong, Central Assam.

3026. With what classes or races have you had experience, with regard to this opium question?—With the Assamese people generally

3027. Over what period?—For over 18 years.

3028. What special opportunities have you had?—As a pleader, I have had opportunities to meet and talk with every person of every nationality and of every creed and colour. We get domestic servants and labourers from those classes. I come in contact every day with these people.

3029. Have you had any opportunity of seeing them in their home life?—Yes.

3030. What is your experience with regard to the consumption of opium in the district about which you are able to give evidence?—A large number of people consume opium in that district.

3031. Is it more so in one class of society than in another?—Yes, among the Mekirs and Hozais smoking is prevalent.

3032. Kindly tell us what position in life these Mekirs and Hozais occupy?—They are barbarous people that live mostly on the hills.

3033. The practice is not so extensive, is it, among those of higher position?—Opium-smoking is not, but opium eating and drinking are.

3034. Can you give us any idea of the proportion of the population that indulge in the habit?—It may be 25 per cent. of the whole population.—I mean by the whole population, including foreigners.

3035. At what age do they begin to use opium usually?—From 16 to 18 years of age, when they grow up and are in a position to earn money. Some are taught in early childhood.

3036. Do they take it for the cure of disease or as an indulgence?—Some take it as a cure for disease. They are advised to take it for rheumatism, and sometimes in cases of dysentery.

3037. Can you give us any idea what is the proportion of those who take it as a cure for disease?—I cannot.

3038. Have you any information as to its being given by mothers to their children?—Yes, it is given by mothers to their children. Women form the greatest portion of the working community: they do 75 per cent. of the domestic and field work. When they leave home, they give small doses of opium to the little children in order to keep them quiet at home.

3039. Do you know anything with regard to those who have acquired the habit of taking opium, giving it up?—Yes, I have information with regard to some cases.

3040. Kindly give it to us?—I know the case of a pleader who lives next door to me. He was in the habit of smoking opium, and he gave it up all of a sudden. He says now that he is much better than he was when he was in the habit of smoking it.

3041. Are there many who give up the habit, or do they find a difficulty in giving it up?—They certainly find a difficulty in giving it up, unless they are compelled to do so: somehow they do not give it up for good.

3042. Do you find many who take it to excess?—Yes.

3043. What proportion of their income do the people who have been speaking of spend over opium?—I should say from ten to twenty per cent.

3044. Do you find there is a tendency to increase the dose?—Yes, those who are in the habit of taking opium, increase the dose.

3045. What do you think is the effect upon the people from the consumption of opium?—The people are growing weak and indolent and unfit for physical labour.

3046. Do you apply that to those who do not take it to excess?—I apply it generally to those who take opium. There is a vast difference between those who take opium and those who do not take it, even in their physical appearance.

3047. In your district is opium supposed to be a protection against fever?—I have never heard of it.

3048. Will you tell us the complaints for which it is taken?—Rheumatic pains, and sometimes in cases of dysentery.

3049. What is the medicine that is taken in the case of malarious fever?—Cinchona and quinine.

3050. So far as you know, opium is never prescribed?—Never.

3051. Do you think it is necessary for the working classes to take opium to enable them to do their work?—I do not think so.

3052. What is the public feeling with regard to the taking of opium, does it bring any discredit upon those who take it?—Yes, amongst the rising generation.

3053. Do you mean that it is a disgrace for young people to take it, or that the young people look upon it as a disgrace?—Young people who are educated look upon it as a disgrace.

3054. What do you think is the effect of the licensing system of opium in Assam? I should think it is rather an inducement to take opium—licenses are so freely given. It is placed at every man's door. In the district of which I am speaking, there are about 200 licenses, if not more.

3055. Have you any suggestion to make as to the course the Government ought to take with regard to the licensing?—I should say that the licenses should be reduced to a smaller number—to a very small number,—so that people cannot get opium very easily.

3056. Do you think the law, as it at present stands, has been fully carried out in your locality?—I think it is carried out properly. I mean the opium law.

3057. Have you any suggestion to make with regard to the prohibition of opium smoking?—I think opium-smoking should not be allowed on the premises. If smoking were stopped altogether, it would be a very good thing.

3058. Is it your opinion that the sale of opium ought to be prohibited, except for medicinal purposes?—I think it should be, but I do not think it is practicable to stop it altogether in the present state of the country.

3059. Have you any suggestion to make with regard to a substitute for the loss of revenue which would be created by a reduction in the opium revenue?—Tobacco might be taxed; it is extensively used, and it is a luxury.

3060. Have you any suggestion to make as to how opium should be sold for medicinal purposes?—There should be certain licensees under the supervision of the police. A register ought to be kept of the people to whom they sell, as in the case of ammunition. If practicable, also, I think certificates ought to be got from the medical advisers.

3061. Have you any suggestion to make as to the persons who should be authorised to sell it?—Persons should be licensed. I do not refer to any particular class of people.

3062. Do you think there should be any supervision over those who have thus been licensed?—There should be full supervision.

3063. Are you aware whether there is any smuggling in your district?—There is no smuggling of opium in the district. I have heard of cases in other districts.

3064. Have you any other information with regard to those districts?—No, I have not much.

3065. (Mr. Wilson.) I notice you refer to something which you call "black fever"?—Yes.

3066. Is that a kind of malaria?—It is called malarial fever by medical men. It is extensively prevalent in the district, and causes deaths in every village.

3067. You also refer to muhunts; who are they?—Muhunts are persons who are priests or religious teachers.

3068. Among the Hindus?—Yes, among the Hindus.

3069. They avoid it?—They avoid it themselves; and they compel their disciples to avoid it.

3070. You refer to the town of Nowgong; is that a large town?—It is a small town; but it is the head-quarters of the district.

3071. You say the people smoke opium and eat it in the shops: is there more than one shop?—There is only one shop for smoking purposes, that is called the chandu shop.

3072. Is there an arrangement somewhere in that shop by which they can go and lie down and smoke chandu?—Within the same house: the vendor sells it, and they smoke it in the house. There is no separate house; it is only one hut.

3073. Is it on the same premises?—Yes, it is one hut. The same as this room is.

3074. In one building?—Yes, one building, a thatched hut.

3075. If I went there to buy some chandu, should I see some people smoking at the same time?—If you buy from the outside you would not see them; but if you go inside you will see them smoking.

3076. Many?—Yes.

3077. How many?—I cannot say; it may be twenty or twenty-five at a time. If you buy from outside the vendor will hand it to you outside, and you will go away without seeing them smoke it.

3078. You have said that smoking on the premises should be stopped. By whom should it be stopped?—By authority: I should say the Magistrate.

3079. Does not the law prohibit smoking on the premises now?—No; it is understood that they should smoke on the premises.

3080. But there may be a difference between the law and the practice. You have told us that people do smoke there. I want to know whether that is legal. Are you aware of any law prohibiting smoking on the premises?—No, I am not as far as the Opium Act of 1878 and the Chief Commissioner's Rules under the Act are concerned. As a pleader I get cases under the opium law—breach of the opium law; but I never heard of a case of breach of the opium law by smoking on the premises.

3081. You never heard of a prosecution?—No.

3082. What I want to know is, could a prosecution be instituted?—I do not think so. If it could, the police would take it in hand. They are under the very nose of the police.

3083. Are you at all acquainted with the Blue-book entitled "Opium Consumption in India"?—I have read parts of it.

3084. Have you seen a statement made and dated December 2nd, 1890?—I do not remember the date.

3085. In reference to a statement made by Mr. Caine, the Commissioner uses these words:—"In paragraph 18 of the memorial a suggestion is made that all opium dens or shops for the retail sale of opium to be consumed on the premises should be closed. Now I can positively state that there are no 'opium dens' in this province, such as have been described by Mr. Caine and other gentlemen; none of our opium-eaters in the province sit in the opium shops and consume the opium." And further on he says, "there is no room into which he is invited to enter or into which he can go and rest, if so inclined. We have not a single 'opium den,' and it is not necessary to make any change in the mode of sale." Were you aware of that?—I have read that.

3086. Do you think that is correct?—I think that it is qualified. He has admitted somewhere that there are chandu shops where people are allowed to smoke.

3087. Is that admitted in this paper?—Yes.

3088. Could you find it?—It is on page 30. "In the case of chandu shops (I have three shops for the sale of chandu and seven for the sale of madak and chandu) the drug is always consumed on the premises."

3089. I will read the whole passage.—It is on page 28, paragraph 5 of Mr. Driberg's note:—"In paragraph 18 of the memorial a suggestion is made that all opium dens or shops for the retail sale of opium to be consumed on the premises should be closed. Now I can positively state that there are no 'opium dens' in this province, such as have been described by Mr. Caine and other gentlemen; none of our opium-eaters in the province sit in the opium shops and consume the opium. All our opium-sellers carry on other business besides the sale of opium; nearly every opium-vendor in the province sells also rice, dal, cloths, and other articles. A purchaser of opium may or may not consume the opium on the premises; the generality of them carry it home. Opium is not smoked in Assam as a rule, it is swallowed in its crude state in the form of a pill, or it is diluted with water and drunk; now a man when he wants opium buys $\frac{1}{2}$ of a tola, or $\frac{1}{4}$ of a tola, or $\frac{1}{8}$ a tola, and consumes part of it at once, and puts the remainder in a pot (debia) which he

carries with him. If you hinder him from swallowing a pill in the shop he will do so outside of it. In fact, there is no such thing as going into a shop. The place of vend is open on the outside, the vendor sits on the chang or platform, the purchaser standing in a narrow verandah outside makes his purchase and leaves. There is no room into which he is invited to enter or into which he can go and rest, if so inclined. After making his purchase he must go on or sit below the nearest tree. The conditions of Upper India do not apply to this province. We have not a single 'opium den,' and it is not necessary to make any change in the mode of sale. We wish to restrict people to making small purchases of the drug. This will not result from debaring them from consuming the opium in the shop verandah, or outside it. If you compel a man not to take opium near a shop he will be careful to have a larger supply always at home, and this will always be worse for him and worse for all the inmates of the house." That is the whole paragraph. Now we understand that. The passage, however, to which the witness refers me is on page 30; from Mr. H. Luttman-Johnson, Commissioner of the Assam Valley Districts, to the Secretary to the Chief Commissioner of Assam. There he says at paragraph 2.—"With regard to the specific proposal made by the Society that our licenses for the retail sale of opium should not include consumption on the premises, I have the honour to say that consumption on the premises is not common in my division. In the case of opium shops proper, of which I have 880, I may say that the drug is never consumed on the premises. In the case of chandu shops (I have three shops for sale of chandu and seven for sale of madak and chandu) the drug is always consumed on the premises. In the case of madak shops, of which I have ten, besides these seven licensed to sell both madak and chandu, it is often consumed on the premises. My annual Excise Reports give full particulars of the number of the shops and the opium taken on their account from the treasury each year. In 1889-90, 13 maunds 16 seers were sold from the treasury for madak and chandu shops, out of a total of 1,398 maunds. I would not mind closing these shops; such a measure would make no difference to the habits of the people. The few people who use them, chiefly foreigners, would make some other arrangements." That is what Mr. H. Luttman-Johnson, the Commissioner of the Assam Valley Districts, said on the 30th December 1890. What I quoted was from Mr. J. J. S. Driberg, Commissioner of Excise, Assam, on 2nd December 1890. It appears from that that the Commissioner of Excise, writing to the Chief Commissioner of Assam in December 1890, stated that there were no opium dens in the province.

(Witness.) That is not quite correct.

(Mr. Wilson.) A few days later, on the 30th of the same month, Mr. Luttman-Johnson, Commissioner of the Assam Valley Districts, wrote to the Secretary to the Chief Commissioner of Assam, that there were a number of opium dens. That is really what appears from these extracts.

3090. (Mr. Pease.) You are aware that there was a Resolution of the Government of India, in the Finance and Commerce Department, dated 25th September 1891, commencing—"The evils connected with the smoking of opium and its preparations on the premises of licensed shops have for many years attracted the attention of the Government of India and the Local Governments; and endeavours have been made to prevent or minimise the evils," in which it is stated that "the Government of India now directs that, when the term for which any existing licenses are in force expires, in any licenses which may be renewed a clause should be inserted prohibiting the consumption of opium on the premises in any form?—I am not aware of any Circular being issued in Assam.

3091. That is a Resolution. Therefore if licenses have been issued in accordance with that Resolution, the owner of the license to which you are referring is breaking the law by allowing smoking to take place on his premises?—At the time of the sale he is never told that he is not allowed to let people smoke on his premises. The notice is issued as before.

3092. Is it not stated in his license?—I have not seen a license particularly: but the conditions of license are published: they are the same old conditions.

3093. Do you say that this condition is not inserted in the license?—I have not seen it.

(Mr. Pease.) Could we have a copy of the license?

(Secretary.) The Licenses for Assam have not yet been presented.

- R. D. Mazumdar. 3094. (Mr. Wilson.) I want to be clear about this matter. These passages I have read show, do they not, that the Excise Commissioner speaking of the whole province said that there were none, that he knew of none, and Mr. Luttmann-Johnson speaking of one portion of the province said that there were a great many? Is that right?—Mr. Luttmann-Johnson is right.
3095. I am referring to that time?—They were as they are at present.
3096. That is another question. You yourself say now that they continue at the present time—at least one that you know of?—Yes.
3097. In the town of Nowgong?—Yes.
3098. Do you know of any others?—I am not aware of any other shops.
3099. With reference to the advisability of prohibiting the sale of opium except for medical purposes, you have said that it was desirable, but that in the present state of affairs it was impracticable. Was that your answer?—Yes.
3100. What do you mean by the present state of affairs?—People who have already taken to the use of opium would suffer very much if they were not allowed any.
3101. With regard to the question as to whether public opinion would prefer the adoption of this measure I understood you to say that public opinion would be indifferent. I do not quite understand you. You say that it is not practicable, and yet that public opinion would be indifferent?—The whole population would not think of it at all. Only those who consume opium would raise a cry.
3102. Then with reference to smuggling, if there is any smuggling in Assam, where do you think the smuggled opium comes from?—I have said there is no smuggling; at least I am not aware of any smuggling in the district.
3103. What do you refer to—to Calcutta or the North-West Provinces?—I have heard opium is sold very cheap in Calcutta by public auction; but in Assam it is sold at Rs. 37 per seer. A man who gets a chest for Rs. 1,000 or Rs. 1,200 would be a gainer by taking it into Assam and selling it retail.
3104. Do you consider that the district of which you are speaking—the district which you know best—is a very malarious district?—Yes, it is malarious at present.
3105. (Mr. Mowbray.) When was it exactly that you saw these shops and the people smoking on the premises?—Some time in August last.
3106. This year?—Yes.
3107. What did you say with regard to the price of opium in Assam, in answer to Mr. Wilson, I did not quite catch it?—In Assam opium is sold by the Government Treasury for Rs. 37 per seer.
3108. That is not the price at which it would be bought by the people of Assam?—That is for Assam licensed vendors.
3109. That is the price at which the licensed vendors buy it from Government?—Yes.
3110. I want to know what is the price at which they sell it?—Rs. 45 to Rs. 50.
3111. Has the price increased lately?—Yes.
3112. Could you tell me how much?—Rs. 5 per seer, it has increased this year.
3113. Are you speaking of the price to the consumer?—The price to the consumer, by retail vendors.
3114. You have told us that the licenses are given too freely. I suppose you are aware that the number of licenses in Assam has been very much reduced during the last ten years?—I should think it would be not very much; from 208 to 197 or 198 in the district in which I am.
3115. Are you aware that according to the figures furnished to us by the Government of India, the number of shops for the retail sale of opium has been reduced between 1883 and 1892, from 1,318 to 866?—I cannot give the exact number for the whole province.
3116. Are you aware that the number of shops for the retail of madak and chandu in the same time has been reduced from 37 to 16?—I cannot say. There is only one shop in the town in which I live.
3117. Assuming these papers which have been put in by the Government of India to be correct, does that not show a considerable reduction in the number of licenses during the last ten years?—That shews a reduction, but there is still room for further reduction.
3118. I think you have told us that there would be no general feeling against prohibition: do I understand your remarks to apply to opium-smoking only, or to opium-

eating?—Opium-smoking and opium-eating. The majority of the population would not think about it: they would not mind being deprived of it.

3119. They would not mind being deprived of opium-smoking or opium-eating, that is your opinion?—Yes.

3120. (Mr. Fanshawe.) May I ask you if you have had an experience of the district life, or is your experience mainly limited to Nowgong? Have you been in the habit of moving about among the people in the villages?—Not much.

3121. What is your length of standing as a pleader?—Thirteen years in that district.

3122. Your experience is mainly limited to Nowgong itself, and not to the district?—Nowgong itself.

3123. The people to whom you were referring were Assamese people: have you had any opportunity of knowing what their views would be on this subject of opium-eating?—Yes; I have talked to several Assamese people.

3124. Speaking generally of the district, the Assamese people, I understand, would be the cultivators of that district?—There is very little difference between the town and the suburbs, and the interior. People residing in the towns are as much cultivators as the others.

3125. In Nowgong is that so?—Yes; it is something like a village.

3126. Have you had any special means of ascertaining the views of those people who consume opium?—They would be against it.

3127. I think you said that quinine was ordinarily used as a preventive against fever. Do you mean to say that these Assamese people to whom you refer would get quinine?—Yes. If they went to the dispensary they would get it free of cost.

3128. Perhaps you are not aware that the Post Office has lent its agency to the Local Government for the sale of Government quinine in all post offices. Are you aware of that?—I am not aware of the post offices selling quinine in Assam.

3129. Even with the agency of the Post Office being available for the sale of Government quinine, do you think that the quinine can generally be brought to the doors of the people so that they can easily obtain it?—Yes; even vaccinators take quinine to their doors.

3130. Do you think there is any tendency or likelihood of the people largely taking to quinine? Have you any experience to justify you saying that?—I cannot speak positively on that point.

3131. You said that there was no law against opium-smoking on the premises: is that so?—I think so.

3132. Do you mean that there has been no executive order of the Government against it?—I have not seen any.

3133. You said there was no law; do you mean that there was no executive order of the Government?—I mean that in the Opium Act there is no provision for it.

3134. Has there been any executive order from the Government on the subject as far as you know?—I am not aware of any orders.

3135. What is ordinarily smoked in Assam? Is it madak and chandu?—Yes.

3136. And nothing else?—They smoke tobacco.

3137. Of course I mean with regard to opium. Madak and chandu is what is smoked?—Yes.

3138. Are you aware of what the number of shops in Assam is for the purpose of selling madak and chandu?—I do not know. There is only one shop in Nowgong.

3139. The figures of the Government show that there are sixteen in the whole Province?—That may be so.

3140. This particular shop in Nowgong where you saw consumption on the premises, was it a madak shop?—A madak and chandu shop.

3141. As distinguished from an opium shop?—Opium is also sold on the same premises.

3142. (Sir James Lyall.) Do you know the name of the master of the chandu vendor's shop?—His name is Kolai. He is a Mahomedan.

3143. Are you sure that the smoking was going on in that shop, or was it in a detached place?—There is no detached place. There is only one hut, and that is a chandu shop. I have seen people inside there, and some people told me they were smoking, and I knew them to be smokers of chandu.

3144. You saw them smoking?—I did not actually see them smoking: I knew they were smokers.

3145. (*Chairman.*) You were told that they were smoking?—Yes, I know people who smoke. They go to that place at a stated hour. Some people go at 2 o'clock: that is their time, and then you cannot keep them on duty.

3146. (*Sir James Lyall.*) If they were smokers they would go to that shop, whether they smoked or not, to get chandu?—They might go to the shop for chandu; but some people spend their time there, though there is no necessity for their spending their time there. There is an arrangement for them there. They have got chutni and other eatables there. Lately there was a case (No. A 207 dated on the 23rd August 1893 by Major P. E. Henderson) in which all these things were stolen from that shop. I was pleader for one of the defendants. There were two persons in the dock. One was convicted: he confessed he had stolen all these things. On inquiry I found all these things; there was some madak and chandu, and there was some chutni. People immediately after smoking must have something sweet or something sour in order to take the taste away.

3147. You mentioned that the mohunts and their devout disciples do not smoke opium?—No; they do not.

3148. Are they also prohibited from drinking alcohol?—Drinking alcohol is generally prohibited among the Hindu people of Assam.

3149. What class of people drink arack in Assam?—Hillmen; the whole people drink, they make their own drinks.

3150. Do you think that if opium-eating were stopped, there would be a danger of these people drinking arack?—It is religiously prohibited among the Assamese; they would not take alcohol.

3151. You say that religious teachers prohibit opium too; still people take opium?—Yes, that is so.

3152. Perhaps you are aware, that, before the British Government annexed Assam, opium cultivation was free in that country?—Yes, it was.

3153. I suppose opium then must have been extraordinarily cheap, as compared with the present time?—Every man cultivated his own opium. There was very little necessity for buying it.

3154. Have you also heard that when the British Government prohibited the cultivation of opium, there were riots?—There was a row at one place, but it was not on account of opium alone. The income-tax was introduced at that time, and both these things combined, irritated the ryots. A certain officer, a Lieutenant and Assistant Commissioner in the district, went among the ryots. He did not use proper discretion, and he was killed on the spot. There was no attempt to loot the treasury, and no attempt was made upon the life of the Deputy Commissioner who was chief officer in the district. That was some time in 1861.

3155. What district was that?—The Nowgong district, about 9 miles from the place where I live.

3156. (*Mr. Pease.*) How long was the prohibition before the riots?—About a year a little more than a year.

3157. (*Mr. Wilson.*) What did you say about the tax?—It was income-tax.

3158. Was that a new tax?—It was a new tax.

3159. Had it never been in force there before?—I do not think so.

3160. (*Sir James Lyall.*) An income-tax would not affect the cultivators, would it?—Everybody was taxed. The present income-tax does not affect those who derive their income from the land, but the former Act provided that every sort of income must be taxed.

3161. (*Mr. Mowbray.*) I suppose if the opium revenue were abolished, it might be necessary to put on another tax in Assam; is that so?—Somehow or other, it must be made up.

3162. (*The Maharaja of Darbhanga.*) You have said that the people in Assam generally spend from 10 to 20 per cent. of their income on opium; what class do you refer to?—The lower classes.

3163. You did not refer to the higher classes?—The Assamese are mostly cultivators. There are no zemindars in Assam, except in the district of Goalpara.

3164. How about the tradespeople?—The tradespeople are foreigners; they are Marwaris in general, most of them do not take opium.

3165. (*Sir William Roberts.*) What race are the people of Nowgong, are they Hindustani, or alike to the Chinese in blood?—Some of them are like to the Chinese. They are called Ahoms. Most of them are small aboriginal tribes living on the sides of the hills.

3166. You have said that opium-smoking prevails more among certain classes than in others, and that among the Hindus it may be between 30 and 40 per cent. Does that mean adult males?—Yes.

3167. That is to say that nearly half the adult males use opium?—They use opium in some shape or other.

3168. Do they use it mostly in the way of eating, or drinking, or of smoking?—Among the Hindu population, mostly in the way of eating or drinking.

3169. And among the Mekirs more than 75 per cent. of the adult males?—Both males and females.

3170. This applies, I presume, to the population of Nowgong and not the country parts about the town?—This is all the population of the hills.

3171. The town population?—A little distance away from the town.

3172. In the Suburbs?—Yes.

3173. I think you said in answer to Mr. Fanshawe, that your experience was confined to the Towns and Suburbs mostly?—I mean those people who come from the hills.

3174. Are these people healthy?—They are healthy.

3175. People who eat or drink opium, you think, are not affected in their health?—They do not get any particular disease, but they grow weak.

3176. Would you consider that the population of Nowgong, the adult males, are a weakly and unhealthy set of people?—I should consider them weakly.

3177. Do you know whether opium is used as a popular domestic remedy in Assam?—It is used in cases of rheumatism and dysentery, as I have already stated.

3178. You have not heard of opium being used for the purpose of relieving people affected with malarial complaints of any sort?—No, I am not aware of any cases in which opium was prescribed for malarial fever.

The witness withdrew.

HON'BLE D. R. LYALL, C.S.I., called in and examined.

3179. (*Chairman.*) Will you state what is your position in the service of the Government of India?—I am now Member of the Board of Revenue, Lower Provinces.

3180. How long have you served in India?—I have served in this country for over thirty-two years.

3181. In what districts have you been employed and in what capacities?—The most of my service as a young man was in East Bengal, in the districts of Backergunge, Tipperah, Faridpur, and Dacca. In this last district I served nearly sixteen years as Assistant Magistrate, Sub-Divisional Officer, Joint Magistrate, Collector, and Officiating Commissioner.

3182. In these capacities what opportunities had you of forming a judgment as to the facts of the use of opium: did you see anything of the Chinese population?—When Sub-Divisional Officer of the Munshiganj Sub-division, Narainganj, which was then largely frequented by Chinese junks, was under me. I also as Collector kept

excise administration in my own hands. Subsequently, after my return from furlough, I was Inspector-General of Police for about three years, and Collector of the 24-Parganas and Officiating Commissioner of the Presidency Division for about two years. I was then for nearly seven years Commissioner of the Chittagong Division, and after my return from second furlough, I was appointed Commissioner of the Patna Division, whence I was transferred to the Board of Revenue, where I have been in charge of, among others, the Excise and Opium Departments. I have thus knowledge, more or less, of the whole province, but chiefly of East Bengal.

3183. Will you tell us what is the opinion that you have formed from this extensive experience of the effect of opium upon those who consume it?—My experience is that opium is far the least hurtful of the three principal sources of excise revenue in Bengal, *viz.*, opium, ganja, and alcohol. As regards its effects on the natives of the country, I hold the moderate use of opium to be beneficial in a malarious country like Bengal, and cases of immoderate

Hon. D. R.
Lyall,

use are very few and far between. Nor does even immoderate use of opium cause such bad effects as the immoderate use of alcohol. I can assert that I know no case in all my long residence in India, in which I can say that I believe the death of any native has been due to immoderate habitual use of opium, while I know very many cases in which death has been due to the excessive use of alcohol. A native who takes to alcohol, more particularly in its European forms, almost invariably takes to it in excess. This is not the case with opium, among Bengalis at least. It is said to be different with Burmese; but from what I saw of them in Chittagong, especially in the Cox's Bazar sub-division, I was not able to come to the conclusion that in this respect Burmese differed from Bengalis. When I was Sub-divisional Officer of Munshiganj, and later on Collector of Dacca, many Chinese junks used to come to Narainganj, and I studied the effect of opium on the Chinese sailors. Some of these took opium in very large quantities and used to lie in a state of stupefaction, but next day these men were fit for their work, and did just as much as the abstainers and moderate smokers. This greatly impressed me, as I had come out with the usual ideas one gains in England that opium ruins a man body and soul, and I was so fully convinced that opium did these men no harm, that, when I was Collector of Dacca, I proposed that they should be allowed to buy a seer each man to take with them for the homeward voyage, and this was sanctioned. I think DeQuincey is largely responsible for the general acceptance of the view that opium is so very harmful, and possibly when it is taken in the form of laudanum, it is more deleterious, and creates a greater craving than when taken, as it usually is here, in pills.

3184. What do you say to the effect of opium with regard to its leading to crime?—Opium never leads to crime of any kind, so far as my experience goes. It does not make a man quarrelsome or violent, but calms and soothes him, and in this respect its effects differ entirely from those of alcohol and ganja.

3185. What do you say about the effect of opium from a medical point of view?—I consider the use of opium in Bengal to be a very large extent medical. It is used to keep off fever, and is the only excise article which a good Mahomedan can use for this purpose. It is therefore largely used in the malarious districts of the Burdwan Division, in Orissa, in Chittagong, Murshidabad, Rangpur, and Malda, and also in Calcutta and the districts round it. The consumption in Calcutta is very large, partly owing to the number of Chiuamen here, partly owing to there being a larger number of immoderate consumers here among the Mahomedans than elsewhere, but also because it is more largely used by the respectable classes of natives, chiefly by men over 40, than it is in the mofussil. This is generally done under medical advice, and no stigma attaches itself to the consumer's character. I may mention, as shewing that connexion with the Opium Department is not held as involving any moral stain on those serving in it, that the son of Babu Keshab Chundra Sen, the great Brahmo Reformer, and brother of the Maharani of Kuch Bihar, and the son of Mahamahopadhyaya Mohesh Chundra Nyaratna, C.I.E., Principal of the Sanskrit College, and an orthodox Hindu, are both in the Opium Department. There are also two Mahomedan gentlemen of good family in the Department.

3186. Would you express a belief from your experience which has been so great in Eastern Bengal, that the consumption of opium as a means of sensual enjoyment is comparatively limited?—I think it is very limited. I consider that the number of cases in which it is used for sensual enjoyment compared with the total consumption is very limited indeed. Ordinarily I should say that the consumption in Bengal is in no way immoral.

3187. Do you believe it is possible that opium may be taken in limited quantities as an indulgence in the sense in which a glass of wine may be taken as an indulgence without moral harm?—Such are my views.

3188. What have you to say with regard to the proposals which have been urged for our consideration to the effect that the growth of the poppy and the manufacture and sale of opium in British India should be absolutely prohibited except for medical purposes? Take the argument that rests upon the objections to the trade with China?—It used to be urged that we forced opium on the Chinese. I think that argument is pretty well exploded. I noticed when Mr. Alexander gave his evidence on the point, he chiefly referred to the ancient history of the matter. Now, Indian opium is simply used in China as the higher class Havana cheroots are used in England, or as Indian tea is used along with China tea. In the first case the Mandarins of North China and Peking use the more expensive Indian

opium, just as a rich man at home smokes an expensive cigar, and in the latter it is used to bring up the quality of the indigenous opium, but its use in this respect is steadily declining, owing to the improvement in the home-grown drug; and I am informed by men who know China that whereas formerly 75 per cent. of Indian opium was ordinarily required to mellow the indigenous drug, 25 per cent. now suffices to produce an equal article.

3189. Have you anything further you would like to say with reference to your view of the moral aspect of the question?—The medical evidence will deal with the matter much better than I can. It will put before the Commission that the Indian drug is a milder and less harmful drug than the Persian, containing as it does less morphia and more narcotine. I confess I fail to see any immorality in such a trade, and the opponents of the present system seem to be on the horns of a dilemma. If opium is bad, then surely it is better to have it under Government control and to restrict the production, as is now done; while if it is good, then why this outcry against it? Even if, for the sake of argument, it be allowed to be possible to forbid the growth of opium together, such prohibition would be a gross political error, or even danger; I wish to emphasize the word "danger." I consider it to be an absolute danger, but it is impossible to allow it to be grown for medical purposes and for no other.

3190. Do you think that absolute prohibition of the growth and use of opium in India would lead to smuggling and to evasion of the law?—I believe that both total prohibition and prohibition for anything but medical purposes would lead to smuggling, and it would also be impossible to draw the line between its use for medical purposes and for pleasure only. In place of opium shops we should have the retail of opium by hakims and kabirajis and *pansaris*, and supervision would be more difficult than at present. Total restriction would mean smuggling from Native States and increased use of alcohol and ganja, both, as I have already stated, more hurtful than opium. I refer the Commission to the opinion of Sir Ashley Eden who said that the cost of the preventive service would be absolutely prohibitive.

3191. What have you to say to us as to the political effect of the policy of prohibition?—I hold that in a political point of view total prohibition would be so dangerous, and would alienate so large a body of Her Majesty's subjects in India, as to be impossible. No good Mahomedan can take spirituous or fermented liquors, while he may take opium. If opium is prohibited, the opium-consuming Mahomedan will be driven either to spirits, to take which is contrary to their religion, or to ganja, which is physically more injurious. The dissatisfaction would be enormous, and I am not prepared to say that, fanned as it would be by professional agitators, it would not amount to disaffection and require the presence of more British troops in India. It would, in fact, arouse much the same feelings as any real attempt to "rob a poor man of his beer" would do in England. There is also another danger not confined to any class, and that is, the total inability of the native mind to grasp the fact of the possibility of the present agitation being without some motive. They cannot conceive that any body of intelligent human beings can go in for a crusade against what they have always held to be a harmless article out of which a large revenue is realized without their being called on to pay it, and not have some motive in the background; and in this case the motive is supposed to be the spread and increase of the sale of imported European liquors. The same idea was started when the discussion took place in Lord Mayo's time, and is referred to in Sir E. Baring (Lord Cromer's) note, and it was mentioned to me the other day by an intelligent native gentleman.

3192. What do you think would be the disposition of the people of India with reference to the restriction as regards the use of opium for non-medical purposes?—I think the people of India would object to restriction. My experience, as I have stated, is chiefly in East Bengal; but I have seen a good deal of Sikhs, Gurkhas, and other opium-consumers, particularly Gurkhas. In the Lushai Hills Expedition opium was regularly served out to the opium-consumers, and the men who consumed it did the same work as their comrades, and bore the hardships as well, if not better. One great advantage of opium as compared with alcohol in campaigns is its small bulk and consequent easy carriage. Thinking natives of India say with truth, what right has England, which raises so large a revenue from spirits, wine, and beer, to come and try and stop our comparatively innocent equivalent? and any legislation in this direction would be viewed with great disfavour.

3193. In considering this question it is evident that should a preventive policy be adopted, there must be a serious loss of revenue. The Government of India has to be carried on, and if it should be found impracticable to meet the loss from the cessation of the opium traffic by economies, then there must be increased taxation; what have you to say with reference to the disposition of the people of India?—I believe that among the people of India there is absolute unanimity. Even the few organs of public opinion that favour prohibitive measures, say that the loss to the revenue should be made good by economy here and by reducing home charges; but the utmost economy could not produce five to seven millions, and that sum would be required, or in fact more in case the dissatisfaction amounted to disaffection. The bulk of the people of India are poor; not poor in the sense of poor in England, but living from hand to mouth, though in a state of fair comfort and with very few hopeless paupers; and being thus poor they cannot stand direct taxation, which is also specially bad in India, because so much of direct taxation fails to reach the State coffers. The only alternative would be to double the salt tax, and I fancy the strongest anti-opiumist would hesitate to propose this. In his evidence Bishop Thoburn has suggested a tobacco tax. This would be a most expensive tax to realise, and it would fall on exactly the same class as the salt tax. Almost every man, woman, and child in India consumes tobacco, and if taxation of this kind is to be imposed, it would be infinitely better to double the salt tax, which is easily collected at a minimum of cost. I fail entirely, however, to see the equity of prohibiting men from using opium which they are willing to pay for, and to tax non-opium consumers to make up the deficit.

3194. I believe that you came prepared to make a statement to us with reference to the Bengal monopoly. It is not necessary that I should trouble you on that point. The Commission have conferred and we understand it to be the view of those members whose opinion in this respect we are specially bound to consider, that the mere cessation of the Bengal monopoly would not remove the objections which are entertained to the opium traffic. They hold that if such a traffic is permitted at all, the conduct of that traffic under the system of monopoly as it exists in Bengal is no particular aggravation of what might be considered to be the evils inseparable from that traffic. I therefore do not propose to re-examine you on the Bengal monopoly. Before concluding your evidence-in-chief, I think I am right in assuming that you were present on the occasion when Mr. Alexander gave his evidence?—Yes, I was present.

3195. If you desire to do so, I think it is my duty to afford you the opportunity of making any observations you wish in regard to that evidence?—I desire to add a few words regarding Mr. Alexander's evidence. In the first place, I would desire to put on record the fact that has no doubt attracted the attention of the members of the Commission that his evidence deals very largely—in fact almost exclusively—with ancient history, more especially as regards the attitude of China. Next, I would note that paragraph 13 of the memorial identifies the Society's objects with the spread of Christianity. The Government of India is a government by Christians strictly pledged to religious neutrality, and it would be most dangerous and opposed to the most solemn pledges if Government in any way moved from this attitude. Mr. Alexander also stated that excise opium was more intoxicating than medical opium. The opium is the same, the only difference being that the medical opium is selected (that is to say, it is the best opium that is sent in), and that it is dried in the laboratory, and not in the sun. The reason of Indian opium not competing with Turkey opium in England is that the price paid even for Turkey opium in England is less than the price realized in India for opium. If we competed, the price of Indian opium would be lower than that of the Turkey drug (that is, in the English market it would be lower), as the Indian opium contains less morphia. With regard to farming licenses, I would only remark that in practice we find it impossible to put on a sufficiently high selling price in some districts. The range is from Rs. 16 per seer in the Patna Division to Rs. 32 in Orissa. Communications have so improved that smuggling is easy, and the profit on a seer bought at Patna and smuggled to Calcutta is Rs. 12. In Chittagong, with the help of the farming system, the price in the south of the district has been raised as high as Rs. 50 to 70. That I may say was done in order to prevent smuggling into Burma. I may also note that only this morning I had a case before me in which 2 maunds of opium were seized at Mokameh while being sent down to Calcutta by a Patna vendor in order to get these Rs. 12 which I am speaking of. That is by no means a single case. I had it before me only this morning. Another point that requires notice is

that, so far as I could understand, the Anti-Opium Society has not distinguished between the smoking and the eating of opium, as I think it should have done. All the arguments regarding China refer to smoking, and not to eating. In India opium is entirely eaten, and all that has been said in the evidence of different witnesses, except as regards chandu and madak shops, relates to the eating of opium, and not to smoking. The licenses are perfectly separate for madak and chandu. The opium which is consumed under these licenses is smoked, the rest is eaten.

3196. Have you anything else you would like to put in as part of your evidence-in-chief?—I desire to draw attention to the memorial which has been put before the Commission by Mr. Phillips. That memorial was sent to me by the Bengal Government to whom it had been referred by the Government of India, and I desire to make a few remarks upon it.

(*Mr. Wilson.*) We have been told that that was withdrawn.

(*Witness.*) The note as originally drawn up contained by oversight an extract from a private letter, and it was that that I desired to withdraw. In the note which is now before you it has been excluded. A private letter was alluded to, which I had no right to quote.

(*Chairman.*) I suppose if Mr. Lyall desires to make the statement in regard to the memorial, we may receive it.

(*Mr. Wilson.*) The note was withdrawn, and I have neither read it, nor the remarks.

(*Chairman.*) The document has been in our possession for perusal, and Mr. Lyall can be examined upon it, another day, unless he particularly wishes to say anything on behalf of the Government of India.

(*Witness.*) I have been directed by the Secretary to the Government of India to present the note before you.

(*Mr. Wilson.*) Of course it calls for a rejoinder.

(*Witness.*) I should like to add one or two words more with reference to the evidence that has been given since. Reference was made in Mr. Phillips' evidence to the decayed appearance of Mahomedan families. Now I desire to say that the decay in Mahomedan families is not peculiar to Murshidabad; it extends all over Bengal to my certain knowledge, and it is due to their lagging behind the Bengali in education and in general ability to conduct their own business. Most of the old Mahomedan families have allowed their estates to fall into the management of the more clever Hindus, who have gradually ousted them. It is to that I attribute the decay of Mahomedan families. I do not say that some are not opium-eaters, but the general decay is due, not to the opium, but to the Mahomedans falling behind the Hindus in the race for life. Another point is this. It has been said that dispensaries could supply opium for Bengal. I have brought a list of Charitable Dispensaries which shews that in all Bengal in 1892 there were 282 Charitable Dispensaries only, of which 77 were private, Government having no connection with them; leaving only 205 dispensaries for all Bengal. Another point raised in Mr. Evans' evidence is the objection of the ryots to cultivate. I can only say that knowingly no pressure is put upon any ryot by the Government of India to cultivate, and that yearly, I might almost say daily, I receive petitions from ryots against the Opium Agents and Sub-Agents for refusing to give them licenses. This very morning I sent some such petitions to Sub-Opium Agents for report. Instead of getting petitions objecting to being made to cultivate opium, the petitions that we receive at the Board of Revenue are almost entirely from ryots who complain that they have not been allowed to cultivate opium.

3197. (*Mr. Pease.*) You remarked that opium was used to keep off fever and was the only "excise article" which a good Mahomedan could use for the purpose; I suppose they have no difficulty in using articles that are not excise?—No; that is why I put in the word "excise."

3198. I believe there are many other remedies?—Yes, there is quinine, but I may say that there is a strong prejudice amongst the natives, which we are unable to get over, against quinine; they say it gives them headaches.

3199. Are you aware that when the son of Babu Keshab Chundra Sen was appointed to the office, the *Indian Messenger*, the *Sanjivani* and several other papers and the missionaries of Keshab Chundra Sen condemned the appointment of his son as a slur upon his father's name?—I did not see those papers.

3200. (*Mr. Wilson.*) You say that opium is largely used in the malarious districts of the Burdwan division,

Hon. D. R. Lyall, C.S.I. in Orissa, and in other places. Is Orissa very malarious?
Lyall, C.S.I.—Very much so, perhaps one of the most malarious parts of Bengal.

21 Nov. 1893.

3201. You say that the price of opium in Orissa is Rs. 32 per seer?—I can easily explain that. The price of opium is fixed with reference to the facility with which smuggling can be carried on. The Orissa districts are the most remote from the opium-producing districts, and it is difficult to convey it there: therefore, the price is higher than in any other part of Bengal.

3202. (*Sir James Lyall.*) The price to the vendor?—Yes, of course. I may add that we have had strong representations made by the Assam Government to raise the price of opium in Rungpore and the neighbouring districts, but the Government of Bengal have been so far unable to accede to the wishes of the Assam Government, simply on the grounds that the facilities of smuggling in these districts are so great that raising the price would inevitably lead to more smuggling.

3203. Raising the price to the vendor might cheapen the price for the consumer?—Probably it might have that effect.

3204. (*Mr. Wilson.*) I understand that the tendency of your evidence as of other evidence we have had, is that opium is a great advantage to the people both as a prophylactic and as a remedy in case of fever?—I hold it to be so: it is largely used as a sort of domestic medicine.

3205. Is it not an apparent anomaly that in Orissa, which you say is one of the most malarious districts, the price is exceedingly high?—Exceedingly high in one sense, but for the small amount sufficient for a dose the price is really exceedingly low. I mean that a man can get enough for a dose for a very small amount. The doses taken here are perfectly infinitesimal. The ordinary native takes an amount of opium that should be almost laughed at in England as a dose of opium. It is a very small amount indeed, and these small doses a man can get for a very small amount. If you look at the statistics before you shewing the consumption in the whole of Bengal, you will see that the incidence of revenue per head is only Rs. 038, which is an exceedingly small amount.

3206. Still the fact remains that the price is twice as high in Orissa as it is in Patna?—Yes. It is grown in Patna, and if we were to put a high price there, there would be smuggling. We are obliged to keep it down. It is next to the North-West Provinces, where the price is Re. 1 lower.

3207. You submit to us that doubling the price makes a great deal of difference for the Government, but no difference to the people?—Not very great. The people can still get enough for the purpose they require it for.

3208. (*Chairman.*) The Government could make the price higher, but they could not put a check upon smuggling?—Sir Charles Elliott was much in favour of raising the price, but he gave it up.

3209. From an apprehension of smuggling?—Entirely.

3210. You say that you put the opponents of the present system on the horns of a dilemma: if the opium is bad, it is better to have it under Government control. I suppose you know that they would say that if it was bad it was better to do away with it?—I do not think you can do away with it; the dangers would be too serious. I do not think that any Government in India would think of doing away with the production of opium.

3211. You have said that any legislation of a prohibitive character would be viewed with great disfavour, but you have a great deal of legislation already of a highly restrictive character?—Restrictive, but not prohibitive; you surely admit the difference.

3212. There is undoubtedly a difference, but do you think that people view the restrictive legislation with disfavour?—Distinctly. I believe if the people of India were polled, they would be in favour of the universal production of opium all over the country without restriction. It is the Government that has imposed restrictions, not the will of the people.

3213. You have said that the bulk of the people of India are poor, but not poor in the sense of poor in England?—We have no such thing in India as the poor that the Salvation Army tries to deal with. The residuum that there is in England scarcely exists in India. It may exist to a small extent. The ordinary cultivator is in many districts a poor man, but not poor in the English sense of the word. He has not much, but the country is one in which he can live much cheaper than it is possible in England with comparative comfort. The state of the poor in India, even of the very poor, is different from that at home. We have not the sunken mass of poor that you have to deal with at home.

3214. Is there not a considerable portion of the population that only has one meal a day?—I do not believe it. The last time I was in Patna I made full inquiries. I do not mean to say that there are not some, but the bulk of the people certainly get a fair amount of food, even in famine time.

3215. Is there such a thing as the "Behar Opium Manual"?—Yes, it is in three bulky volumes which, if desired, can be produced before the Commission.

3216. I think when fever is exceedingly prevalent in certain localities, Government is in the habit of sending apothecaries with considerable supplies of quinine?—Yes, I think so. I have never been in one of those localities, but I have understood so.

3217. In such cases does the Government also send free supplies of opium?—I really am not aware. That is a medical question which I am unable to answer.

3218. Government does send out medicines, but what medicines you are not in a position to say?—That is so.

3219. (*Mr. Mowbray.*) I believe in Bengal you have a system of druggists' permits?—We have.

3220. Does that come under your Department?—Yes.

3221. Will you explain what the system is?—They are allowed to take small quantities of opium, as much as they are expected to use in their legitimate business, but not such quantities as would allow them to sell to the people for anything but medical purposes.

3222. Do they get those licenses cheaper than the others?—It is a different form of license. They have no right to sell opium alone.

3223. Therefore they pay less for the privilege?—Yes. The whole statistics will be put before you by the Excise Commissioner.

3224. Have you any reason to suppose that the system is abused?—Not at present. We restrict the amount given to these druggists to such an extent that I do not think they do abuse it at present. If they were allowed to take what they wanted, of course it would be abused.

3225. I suppose those druggists' permits do not profess to supply all the opium required for medical purposes?—Nothing like it; not a hundredth part I should say.

3226. If you extended the system there would be more risk of its being abused?—If you extended the system, from the evidence I have heard, I take it that every Kabiraj, Hakim and Vaid in every village would require a license.

3227. Could you give us any idea of the difference in the retail price in Patna and Orissa?—No. The retail price is generally a few rupees more than the price at which they buy. It depends very much on the license fees.

3228. The result of the difference between the Government price in Patna and in Orissa is to increase the profit of the vendor in Patna?—No; it is sold very cheap in Patna. Practically the license fees almost come to nothing, so that opium is sold almost at the same rate as Government retails it. If you look at the statement before you, you will see that the license fees in the Patna division only amount to Rs. 5,398.

3229. Practically you find yourselves compelled to sell it very cheaply in the districts where it is grown?—Yes, we are compelled to do it.

3230. (*Mr. Haridas Voharidas.*) You state that the crop is a paying one apart from the advances made upon it?—In a favourable year the crop is a very paying one; during the last three years we have had bad crops and they have not been so paying; there has been a smaller result. But even in bad years it pays better than ordinary crops, and nearly as well as other garden crops. Opium is essentially a garden crop. It is grown on a small piece of land close to the man's house, not in his field.

3231. Is not injustice done to others who grow other crops by these advances to the cultivators who grow opium?—Any man can get advances who chooses to cultivate.

3232. To cultivate the poppy?—We give advances for no other crop.

3233. Then so far do you not do an injustice to those who cultivate other crops?—If you choose to call it so. Any man can grow it who chooses to apply for it.

3234. (*Mr. Fanshawe.*) We may take it that the poppy crop does not occupy the whole of a man's ground?—No, I know no case in which the poppy crop occupies the whole ground: it is an infinitesimal part of the man's land—a very small part close to his house.

3235. (*Sir James Lyall.*) I understand that in the South, Chittagong, the price had been raised to Rs. 50 or Rs. 70 per seer—that is, to the consumer?—Yes.

3236. What is the Government selling price to the vendor in Chittagong?—I think Rs. 28.

3237. Will you explain how the price has been raised to the consumer from Rs. 28 to Rs. 70?—I happened to be Commissioner of Chittagong when the arrangement was made, and I can therefore explain it. We had had strong representations from the Burma Government as to the amount of opium smuggled from Chittagong into Burma. A hundred and fifteen maunds were consumed in one year in Cox's Bazar sub-division; the real consumption could not be more than twelve or fourteen maunds, all the rest was smuggled into Burma. The Burmese Government made direct representations to the Bengal Government, and they referred it to me as Commissioner of the Division to see how it could be stopped. The only way we could think of was by putting an artificially high license on these shops. We restricted the sale of these southern shops to so many seers per month, and we made them pay a license fee in proportion to the number of seers they were allowed to take, which, of course, raised the price enormously to the people who bought it for consumption in Burma. That was the only way we saw of doing it.

3238. A fixed fee, not a farming license?—Yes, it was altogether an exceptional arrangement.

3239. In other districts in Bengal when the price to the vendor is low, that is, where the producing districts are not near, is the farming system used?—Yes, entirely.

3240. And the result is to raise the price to the consumer?—Yes.

3241. The object of raising the price to the consumer in two ways—that is, partly by keeping up the price of the opium sold to the vendor, and partly by farming licenses, is, I understand, to prevent opium vendors from dealing in smuggled opium?—Such is the intention.

3242. Do you in your official experience know of any instances of Government officials being discharged or degraded through the alcohol habit?—More than once—a good many. When I was Inspector General of Police, I am sorry to say that I had to deal with more than one case; and I have also had to deal with such cases in the Opium Department.

3243. Have you known of any instances in which Government officials have been discharged or degraded through the opium habit?—Never; not even a native officer.

3244. (*Mr. Pease.*) Do you see any disadvantage in doing away altogether with the system of licensing chandu shops?—No further than it is an interference with the liberty of the subject. I do not say that there is any very great objection to it. In Calcutta I do not think it could be done, because we have so many Chinamen here. In the mofussil I do not think it will be any very great hardship. It is an interference with the man's liberty if he buys a certain amount of opium, just as if I bought a bottle of whisky I should think it an interference with my liberty if I were not allowed to make whisky toddy. If a man buys 5 tolas of opium, I do not see why he should not make it into chandu and smoke it if he chooses.

The witness withdrew.

MR. J. L. HOPKINS called in and examined.

3256. (*Sir James Lyall.*) I believe you are a civilian of 30 years' standing?—Yes.

3257. You are now Opium Agent for Benares and Patna?—Yes.

3258. You have only recently joined the Department as Opium Agent?—Only six months.

3259. I do not propose to ask you questions as to the details of the agency system, as we shall have other witnesses with greater experience?—I should like to explain that there is only one difference in the Opium Agency at Patna and Benares. I pay commission to the Gomasthas. The Asamiwar system is not so much in force in Patna as in Benares.

3260. What is that?—It is the system by which the advances are paid direct to the cultivators without the intervention of the lumbaradar.

3245. You are aware that Government has largely reduced the number of licenses for the public shops in the North-West, the madak and chandu shops, from 324 to 14?—They are being reduced largely. It is the most harmful means of taking opium as far as my knowledge goes.

3246. What do you say with regard to madak?—It is more harmful than eating.

3247. But there would be no particular difficulty in reducing the license shops for madak or chandu?—I do not anticipate the same danger that I should anticipate if opium were prohibited altogether.

3248. (*Mr. Wilson.*) I understand you to say in reply to Mr. Velaridas that anybody can get an advance and grow opium who chooses to apply for it?—Provided the land at the disposal of the Sub-Deputy Opium Agent has not been already given away.

3249. We heard from Mr. Rivett-Carnac yesterday that a number of persons are from time to time refused on various grounds?—Yes, the Opium Department refuses any one who is, in the language of the Department, a bad cultivator, that is a bad gardener; because the opium garden produce requires more care than most crops.

3250. Also if Government does not require so much somebody must be cut down?—Yes.

3251. Therefore it is not quite correct to say that anybody can get an advance?—Provided there is land still available; that is what my meaning was.

3252. (*The Maharaja of Darbhanga.*) I should like to ask a few questions with regard to suggestions for the total abolition of the poppy cultivation. First, is the poppy plant cultivated simply for the sake of opium manufacture, or is any other use made of it?—The ryot in addition to what he receives from Government, first for the opium itself, next for the leaf, and again for the trash, is also allowed to sell in the open market the poppy seed, which sells at a high rate.

3253. How much per acre do you think he makes from the poppy seed?—The product I think is under a maund per acre if I remember rightly. I should not like to give the amount of poppy seed. I think it is about 36 or 39 seers per acre, but I am not quite sure.

3254. What is the price at which the seeds sell?—I am not prepared to say.

3255. Besides the poppy-seed is there any stalk of the poppy?—Yes, it is used as manure. I should like to add one word more. In a publication of the Anti-Opium Society that I have seen this morning, and had not seen till then, it is put forward as a strong indictment against the use of the poppy, that no less than 77,378 seers are used in Bengal every year. I must say that looks a pretty big sum, but if you reduce it, and deal with it with reference to the population, and again deal with the population according to what one anti-opium witness said was the probable consumption,—25 per cent. for the adult males,—I find that the yearly consumption of the adult male in the population of Bengal amounts to $\frac{7}{10}$ ths of a rupee in weight in a year, which I think is not very much.

Hon. D. E. Lyall, C.S.I.
24 Nov. 1893.

Mr. J. L. Hopkins.

Mr. J. L.
Hopkins.

24 Nov. 1893.

3266. Do you think that medical use can be distinguished from non-medical use?—No. As a rule opium is used in the first instance, properly speaking, for medical use. It is used in cases of insomnia, irritability of the nerves caused by excessive heat, overwork and malaria.

3267. Do you think that a system of providing opium for medical use only could be invented and worked properly?—I do not see how it could. It is an administrative act and for my part I do not see how any distinction could be made, because the consumption of opium amongst people over 50 is so very considerable. I do not mean that they take excessive quantities, but so many people take opium.

3268. What do the natives think of the proposal to prohibit the use of opium except for medical use?—I do not think they have thought much about it, if at all.

3269. Have they heard of it lately?—Yes. But they give no opinion on the subject; they have no thought about it. They cannot understand it. They say that opium is of such general use and consumption that it would be impossible to prohibit it. It would be a great hardship too. In the first place the medical use of opium is dependant on a medical certificate—the certificate of the medical officer in the district. Practically speaking there are no competent medical officers in the District. There is the Civil Surgeon and his assistant at head-quarters and at sub-divisions, but elsewhere they are only stationed at dispensaries, which are comparatively few in number.

3270. Would the people, or any large part of them, be willing to bear the whole or part of the cost and the losses involved?—Certainly not.

3271. Is there any part of the opium excise system which you think ought to be altered on moral grounds?—I do not myself consider that the opium shops themselves are capable of being altered. The opium license is very generally given to a moodi and sold as a drug by the moodi. There used to be a moodi pretty well in every village where opium used to be sold. As a rule the opium vendor is a moodi in the agricultural districts; in towns it is different.

3272. What would you say is the size of the circle in which there is one opium shop?—I should think it is about 50 square miles—quite.

3273. Do the same classes of people generally use both opium and alcohol?—Certainly not.

3274. If they use one they generally do not use the other?—Not generally. Alcohol is used by the lowest classes; opium by the better classes. Alcohol is used considerably by khayasths, members of the writer class.

3275. If the use of opium were checked, do you think that other stimulants would take its place?—Certainly they would.

3276. Have you any information as to the magnitude of the interest bound up with opium in the districts of your Agency in which the poppy is cultivated and the loss to the cultivator involved in such prohibition?—For this I refer you to the statement appended to my notes. The number of licensed cultivators in 1892-93 was 637,157, and the sum disbursed amongst them over 80 lakhs of rupees. It is impossible to say how the withdrawal of this sum would affect the landlords; it would mean a considerable reduction in their rent receipts, for so-called poppy lands are the highest rented lands in the neighbourhood to which they belong. The withdrawal of such a large sum from agricultural industry and general circulation is bound to produce distress. Landholders as a rule support poppy cultivation and encourage it; cultivators rank it with tobacco, potatoes and sugarcane as a profitable crop. Poppy employs the females and young people of a family and produces a handsome return. The items of profit are as follows:—Opium, poppy-seed, poppy-leaf, trash, manure. It would pay to cultivate poppy for its seed and the valuable manure it produces. Poppy seed oil is used in India for cooking purposes, and the seed is exported to France, Italy, etc., wherever olive oil is produced. I think it right to note that to the ordinary cultivator and labourer, having reference to their diet, clothing, and general simplicity, one rupee represents the same value that ten shillings does to an English labourer: there is no class in this country which represents the English farmer. Therefore 80 lakhs of rupees represents to them what £4,000,000 would represent to the British labourer and small cultivator; and we must consider the withdrawal of the monopoly with reference to the withdrawal of the 80 lakhs of rupees which the cultivators receive for opium; a very large portion of the sum would have to be met by relief proceedings on an extensive scale.

3277. I understand that the proposal to abolish the monopoly is now being withdrawn?—Yes.

3278. Have you any further remarks to make?—No.

3279. (Mr. Wilson.) You have stated that no case has come under your notice of the habitual use of opium for non-medical purposes?—None.

3280. Habitual use of opium for non-medical purposes is unusual?—I say it is generally used in cases of illness.

3281. That is the commencement of the use?—Yes.

3282. Not the continuance?—No.

3283. Would you wish to modify or explain that?—I think I said that the non-medical use of opium is unusual. It commences with the medical use, and it is continued.

3284. You say that it would pay to cultivate the poppy for its seed and the valuable manure it produces?—Yes.

3285. You do not mean apart from the opium altogether?—Yes.

3286. Do you mean that the cultivator having grown the poppy has got all his value in the seed and the manure left behind, and what he gets for the opium is clear gain?—I have said that the poppy seed is used for the manufacture of oil which is largely used for cooking purposes in India, and besides that it is largely bought for the continent for the adulteration of olive oil.

3287. I want to know whether I am to understand that, in your opinion, poppy cultivation would pay though there were no opium produce at all?—Yes, I will explain. Every seer of opium will give a return of poppy-heads, which would give two maunds of poppy-seed; therefore if you have six maunds you get twelve maunds of seed, and twelve maunds of seed would sell for Rs. 37-8-0.

3288. Then you say that the money that the cultivator gets for the opium is clear gain into his pocket?—Certainly, of course if he gets a fair return for the poppy seed. Sometimes there are only two seers of poppy per bigha, and in that case it would not pay.

3289. You have told us that the poppy land is more highly rented than the other?—It is.

3290. If a cultivator is refused an advance and refused a license to grow opium, does he pay less rent upon that land?—Yes.

3291. It is not inherent in the particular patch of land, but the question is whether he gets the poppy crop or not?—It would depend on the crop.

3292. The zemindar would reduce the rent?—Most probably; I cannot say for certain. Whenever the ryot cultivates the poppy the rent is raised to the rate of the poppy land usual in the neighbourhood.

3293. We understood from Mr. Rivett-Carnac yesterday that the zemindars had no occasion and no interest whatever to put any pressure on the ryot under any circumstances to grow the poppy?—That may be in the North-Western Provinces; the zemindar there is largely the Government. Zemindars in the Patua Agency are zemindars under the Permanent settlement.

3294. I should like to get it as clearly as possible whether the zemindar can and does raise or lower his rent according to whether a particular cultivator *A B* gets permission to grow opium or not?—If *A B* for the first time sowed the poppy in certain land, that land would be raised to the poppy rate usual in the village to which he belongs.

3295. And if he was refused a license in the following year the zemindar would reduce him to the original rent?—No case of that sort has come to my notice, but I imagine it would be reduced again. You must know that poppy land requires four or five years cultivation to come into thorough bearing. The first year gives a small return, the second a larger return, the third a still better, and the fourth and fifth years will give a full return.

3296. Do you receive every year an official intimation as to the amount of land that should be devoted or the amount of opium that should be produced?—The quantity of opium that should be produced. We are forbidden under the orders of Government to exceed the average area of the previous five years.

3297. Sometimes you have to reduce that?—I think that three or four years ago in my Agency ten per cent. of the cultivation was reduced all round.

3298. My question was this—was the enhanced rent of the district reduced by ten per cent. or not on the poppy cultivation?—I cannot say.

3299. You do not know?—No, it was before my time.

3300. (*The Maharaja of Darbhanga.*) You have said that there is a special rate for poppy lands?—Yes.

3301. According to the Tenancy Act, is it not the custom that the rent at which the land is assessed is not according to the crop grown on it, but according to the quality of the land?—It is so.

3302. Therefore if a tenant chooses to cultivate the poppy on land upon which he has hitherto grown other crops, can the landlord easily, according to the law, ask for an increase in the rent?—That is a point of law that I have not studied. The poppy rate of the mauza (village) in which the poppy is raised is always charged to the poppy cultivator.

3303. Do you know that the rates applying to poppy land and tobacco land are the same?—Poppy and tobacco lands are about the same.

3304. If the poppy is abolished, the ryot cannot ask for a deduction on that ground?—I suppose it depends upon the crops sown.

3305. (*Mr. Fanshawe*) Is there another point in regard to the opium monopoly which you wish to bring out?—

The witness withdrew.

Dr. FREDERIC PINSENT MAYNARD called in and examined.

3311. (*Sir William Roberts.*) I understand that you are a medical officer in charge of the workmen at the Patna opium factory?—Yes.

3312. Before you had that duty, what experience had you in India?—I had served in the Punjab, in the North-Western Provinces, and Behar, with Native troops of all ranks over 5,000 in number and of all classes and all castes. They were Sikhs, Rajputs, Dogras, Hindustanis and various Punjabis.

3313. I presume that those who work at the factory invariably consult you in case of illness?—Yes, I am in medical charge.

3314. How many workmen are there there?—The maximum number employed this year was 2,758, and the minimum number 606.

3315. Altogether your experience has been in two rather different states?—But in between those two services I was in civil employ. I was Civil Surgeon at Burdwan and Nuddea, both in Lower Bengal, and highly malarious districts: so much so that in Nuddea the population between the two last censuses is said to have decreased over 30 per cent. from malarial diseases.

3316. Have you opportunities of judging how far the opium habit prevailed in those places?—It is always difficult to form an opinion as to how many men eat opium unless some effects are apparent.

3317. So that you can only give an impression?—The troops I serve with, have the reputation of being opium-eaters, but they do not exhibit any ill effects from the opium.

3318. Was opium served to them?—On field service yes.

3319. They did not buy it themselves?—In cantonments it was not served. It is never supplied to the troops by Government.

3320. They have to buy what they use?—I suppose so.

3321. Referring to your experience with these regiments, did you observe any ill effects from opium in any case?—I can only remember one man, a Sikh, who was an opium-eater to a rather larger extent than usual; he took about 30 grains daily and occasionally he would be stupid, so much so that it was decided to pension him; but he was of a considerable age.

3322. With that exception could you tell by the look of the men who used to take opium and who did not?—No, I was surprised to find the men opium-eaters on that account—that I could not see that they were so.

3323. Did you see anything in the shape of disease or illness that you could attribute to opium in these regiments?—Certainly not.

3324. Turning to your other experience in the Patna Opium Factory, may we assume that there was a considerable consumption of opium amongst the people you had to do with?—I am not aware of it.

3325. You mean you could not see the effect?—As far as the factory hands are concerned I do not believe that they consume opium.

There is one point in favour of the opium monopoly which has probably escaped notice; it is that it enables cultivators to improve their holdings in spite of the zemindars, who, as a rule, oppose all improvements for fear they should be registered and reduction of rent or compensation claimed, and they thus nullify one of the beneficent purposes of the Tenancy Act.

3306. Kindly explain what you mean by that?—Improvements are registered under the Bengal Tenancy Act. When a ryot is ejected, he is entitled to compensation. Perhaps I am wrong in talking about a reduction of rent. I am not quite sure.

3307. Why does this system allow him to make improvements?—We make well advances.

3308. The Government advances money to make wells?—Yes, the money is advanced to the ryot without interest; the ryot makes the well, and he repays the money in instalments. The well then constitutes an improvement.

3309. That enables him to ask for a reduction?—No, it entitles him to compensation if he is ejected.

* 3310. That is what you were referring to?—Yes.

Mr. J. L. Hopkins.
24 Nov. 1893.

Dr. F. P. Maynard.

3326. Not any of them?—I have never seen any effects, and I think, considering that one sees them all day long, and that their duties are severe, necessitating great sharpness of mind, and so on, that one would catch them tripping if they were in the habit of consuming opium; but it is unknown in the factory.

3327. You say it was an unknown practice among the factory hands?—Yes, unknown.

3328. Do I understand you to say, not merely that it was not known to you, but that it was not talked of or that it was not understood to be the case that the factory hands did use opium?—I made very searching inquiries from all the officers of the factory who spent their lives there, and their different subordinates, and I could not hear of any case of opium-eaters among the factory hands.

3329. It is a malarious district about Burdwan and even about Patna I suppose?—There is a certain amount of malaria about Patna, but not so much as in Lower Bengal.

3330. Has it come to your notice that children are subject to malaria?—I think they are very subject to malaria and the effects in their case are more disastrous than in the case of adults.

3331. How do you recognise that fact?—By an enlarged spleen and by malarial cachexia.

3332. You speak of an enlarged spleen as a well-known sign of malarial disease?—Yes, I have seen babies in arms with enlarged spleens in Burdwan brought to the dispensary.

3333. Does it appear to you possible that they might have been born of malarial mothers and have been malarial themselves?—I should say it is very possible, but I have not seen any instances.

3334. Do you think quinine could altogether replace opium in these malarial districts?—I should say not.

3335. Why not?—Even if the present system of using pice packets were so extended that every individual could obtain them, I do not think it could replace opium, because in these districts other diseases prevail,—bowel complaints and diabetes, which are more common in Lower Bengal, and in these diseases opium is very valuable.

3336. Is it used as a popular domestic remedy or under medical prescription?—It is not possible to get a medical prescription in the case of a great proportion of the population. They have to use it as a domestic remedy.

3337. Are they within reach of medical advice?—No, very few.

3338. I thought there was a dispensary system in India?—So there is, but it cannot reach the great masses of the population. For instance, the district of Nuddea, where I was Civil Surgeon, is 3,404 square miles with a population, according to the 1881 census, of over 2 millions. I was the only European medical officer in that district. I had an Assistant Surgeon and a number of native hospital assistants and five dispensaries scattered over the district; but in spite of it all there are a large number of people who cannot avail themselves of these dispensaries, who cannot travel the necessary distance.

Dr. F. P. Maynard. 3339. They have native doctors I presume?—I think that in many of the villages there are *hakims*, but their knowledge is small.

24 Nov. 1893.

3340. Is it the opium that is made at the factory that is used in that district as a domestic or popular remedy?—It is the opium obtained from the licensed vendors I presume, and that must have been manufactured at the factory, or it would be contraband and would be seized.

3341. I think you have paid some attention to the analysis of various classes of opium?—Yes, I have given in some tables, to be handed in to the Commission, compiled from the laboratory records of the Patna Opium Factory.

3342. Will you tell us broadly what are the differences between the opium you make at Patna and the Smyrna or the Turkey opium?—The deductions I have made from these tables are that the opium grown in Behar contains more morphia than either Persian, 1.27 to 1; or Chinese, 1.59 to 1 (though this analysis is open to doubt on account of the adulteration of the Chinese specimens that we receive for analysis), but less than Smyrna, 1 to 1.868, or Malwa, 1 to 1.02. The Behar opium contains more narcotine than the Persian, 1.26 to 1; the Chinese, 1.39 to 1; Smyrna 3.65 to 1; Malwa 1.39 to 1. The contrast with Smyrna is very marked. Behar contains 3.65 times as much narcotine as the Smyrna opium does. The proportion of morphia to narcotine in the Behar opium is 1 to 1.59; Smyrna 4.26 to 1 (4 times as much).

3343. The Patna opium is very like the Persian opium?—It is very similar.

3344. But richer in narcotine?—Yes, it contains more narcotine than any other variety, and it also contains more extractive matter.

3345. The samples of opium contain the same ingredients, but vary in their proportion?—Yes, it is the proportion.

3346. Of course you are aware that opium is an extremely complex substance, with a great number of active principles?—Yes.

3347. And I presume you will tell us that the main effect of Patna opium is the same as our medicinal opium in England?—No, I do not think it is.

3348. You draw a distinction?—There is a marked distinction.

3349. Will you tell us the distinction?—Smyrna opium, which is the officinal drug in use in Europe, contains a much larger proportion of morphia and a much smaller proportion of narcotine.

3350. By doubling the dose it would be about the same?—The people who consume Indian opium regularly are consuming narcotine, and narcotine is a tonic and antiperiodic similar in its effects to quinine.

3351. It has anti-malarial properties?—Yes.

3352. But not equal to quinine?—No.

3353. I understand that Patna opium is used medicinally?—Yes, in India, and we supply from the Patna Factory all the medical stores and depôts in India. There are two kinds of medical opium, one in cake and one in powder.

3354. We were told by Dr. Rice that he used opium much more freely than some of his medical brethren at home; perhaps that was the reason; because he used opium poorer in morphia?—Possibly.

3355. Do you think it was likely?—I think it was quite possible.

3356. I presume that all the analyses you have given are taken from authorities?—They are all from recognized authorities.

3357. The variety of opium you send out as medicinal is called Garden Patna Opium, is it not?—Yes.

3358. And what do you call that which is sent out for general use?—It is all garden opium; it is the same kind of opium. We pick out the medical opium on account of its fine grain, and being of high consistency, and therefore not requiring so much labor in the manufacture. It is all perfectly pure opium. We have no distinction in the districts from which medical opium comes. We have perhaps one

jar from one district and one from another. There is no special place for growing medical opium.

3359. Practically there is no distinction?—No.

3360. I understand so far as your experience goes that you have not witnessed, except in the case you mention, any ill effects on the health of the population from the use of opium?—No.

3361. Have you noticed any difference in their character and their moral faculties?—I have not seen the ill effects of opium.

3362. Among the soldiers?—No, I have not.

3363. (*Mr. Pease.*) What is the distinction between the medical and the other opium?—Medical opium is opium of 90 degrees consistence, with 10 per cent. of moisture. The difference consists in the way in which this degree of consistence is arrived at. The opium is dried in shallow trays in the shade, and it is worked by hand every few days until it dries up to 90 degree consistence; then it is pressed into cakes and issued in that way. The opium for excise differs in being dried in the sun.

3364. What is the object of making a difference in the process?—I cannot say how the difference originated, but the result is different. To the touch and to sight the opium is not the same as the Abkari opium.

3365. The analysis is the same?—Yes.

3366. And the effects upon the consumer are the same?—I believe so—precisely the same.

3367. Therefore if doctors prescribed the ordinary opium it would have the same effect as medical opium?—The ordinary Indian Abkari opium—I believe it would; not the Smyrna.

3368. (*Mr. Wilson.*) Is what you call medical opium in cakes exactly the same as medical opium in powder?—No.

The other variety of medical opium in powder is the same opium dried on a steam table until all the moisture is evaporated and the powder results; it is pure opium at 100 degrees.

3369. Then, as far as you know, the difference is purely one of moisture? the quantity of water in it?—Yes; the chemical composition I believe is the same.

3370. If I were to purchase a quantity of ordinary opium dried on the steam table until it is 90 degrees consistence?—That is not dried in trays in the shade.

3371. It is drier than ordinary opium?—Yes, it is drier than ordinary opium.

3372. What is the consistence of the ordinary opium which you send out from the factory?—We send to China opium of 75 degrees consistency; the Abkari is 90, and the medical 90 and 100.

3373. The medical powder is 100?—Yes.

3374. (*Mr. Mowbray.*) Do I understand you to say that opium is actually served out to Sikh troops on service?—I believe it is.

3375. Is that within your own personal knowledge?—I was on service in the Black Mountain Expedition, and then opium could be had as a ration in place of tea by the men who were in the habit of taking it.

3376. (*Mr. Fanshawe.*) What regiments were you serving in?—I was with a section of a field hospital and with a Wing of the 4th Sikhs and a Wing of the 2nd-5th Gurkhas.

3377. Then were you referring to these troops when you said that an opium ration was served out—Sikhs and Gurkhas?—Sikhs.

3378. Only Sikhs?—As far as I know.

3379. You only know that opium was served out as a ration in the field and to the Sikhs?—They could obtain it. It was not served out unless it was asked for.

3380. (*Mr. Pease.*) In place of tea?—The idea was that the man could take tea or opium as he pleased.

3381. (*Mr. Wilson.*) Do I understand that these Sikhs could apply for a ration of opium?—I was not connected with the issue of rations in any way. I simply knew as a matter of common knowledge that it was obtainable. I cannot say what the system was.

3382. Was it a limited quantity?—Distinctly.

3383. What was the quantity?—I do not remember, but it was limited. It is three years ago.

The witness withdrew.

Adjourned till to-morrow at 10.30.

At the Council Chamber, Writers' Buildings, Calcutta.

THIRTEENTH DAY.

Saturday, 25th November 1893.

PRESENT :

SIR WILLIAM ROBERTS, M.D. (IN THE CHAIR).

THE RIGHT HONOURABLE LORD BRASSEY, K.C.B.
 THE HON'BLE SIE LACHHMESWAR SINGH BAHADUR,
 MAHARAJA OF DARBHANGA, K.C.I.E.
 MR. R. G. C. MOWBRAY, M. P.
 „ A. U. FANSHAWE.

MR. ARTHUR PEASE.
 „ HARIDAS VE HARIDAS DESAI.
 „ H. J. WILSON, M.P.

MR. J. PRESCOTT HEWETT, C.I.E., *Secretary*.

SURGEON-COLONEL ROBERT HARVEY, M.D., M.R.C.P., D.S.O., called in and examined.

*Surg.-Col. R.
 Harvey,
 M. D.,
 M. R. C. P.,
 D. S. O.*

3384. (*Chairman*.) I believe that you are at present Inspector-General of Civil Hospitals in Bengal?—I am.

3385. And you have been in the service for nearly twenty-nine years?—Yes.

3386. Kindly tell us what service you saw?—I was for more than five years in Rajputana, where opium is very largely used; four years in Malwa, where it is extensively grown; five years in the Punjab, where it is also largely taken by the Sikhs; and twelve years in a large practice in Calcutta. I have been six times on Frontier expeditions, some of them involving great hardships, have had considerable experience of jail management, and during all my service have had large experience of opium-eaters. I have also visited China and Turkey when on furlough.

3387. Will you tell us when your attention was first called to the use of opium?—My attention was first drawn to the opium question in Lancashire during the cotton famine of the American war, when I was assistant to the House Surgeon of the Stockport Infirmary. Many applications were made at the Infirmary for supplies of opium, the applicants being then too poor to buy it. These were invariably refused and the patients warned against the danger of the practice. I was much struck by the fact that the use of the drug was much more common than I had any idea of, and that habitual consumers of ten or fifteen grains a day seemed none the worse for it, and would never have been suspected of using it. I remember only two cases—both opium-drunkards, one of whom took four ounces of laudanum daily—where the refusal caused any appreciable suffering; and several patients thanked us afterwards for enabling them to break with their habit.

3388. Did you connect that unusual tolerance in England with the effect of the famine or partial famine, that then prevailed in Lancashire?—No; according to their own account, these were people who were in the habit of taking opium, and only came to us because they could not afford to buy it themselves. Apparently they were ordinary opium-eaters before the famine. I do not think, as far as I remember, that it had anything to do with the famine: I think it was simply because they could not afford to buy it.

3389. (*Mr. Pease*.) In what form do they take the opium?—In pills apparently, and sometimes in the shape of laudanum.

3390. (*Chairman*.) Tell us your experience in Rajputana, Malwa, and the Punjab?—In Rajputana, Malwa, and the Punjab my experience has been similar. During the great famine of 1868-69, crowds of half-starved paupers, most of them refugees from other States, were treated in the Bharatpur hospital and dispensaries. Bharatpur is the most Eastern State in Rajputana, and the people suffered comparatively little from the famine. Most of the people were refugees from other States. Large numbers were accustomed to opium; and small supplies, never, I think, exceeding two or three grains, were given to these without any bad effect, but to their great comfort and contentment. In all ordinary cases we had no idea the patient was an opium-eater till he asked for the drug. I know of no criterion by which the moderate opium-eater can be recognized, and while very many of them at once admit the

habit, many others—and this is, I think, especially true of soldiers and others who know what is said against opium—will strenuously deny that they use it, or will admit it reluctantly to a medical man.

3391. Have you known many instances?—I have known repeated instances of this.

3392. You are now speaking of persons who take opium in moderation?—Yes, in moderation.

3393. Were they inclined to increase the dose?—Many people, of course, do increase the dose, but in the average man, there is no necessity for him to increase it at all, and I do not think he does as a rule increase it.

3394. Have you any experience of opium being taken in excess?—I have seen opium taken in excess, by what I call an opium drunkard. It is perhaps a misnomer, because in this country they eat more than drink. I use the term as a convenient one and as analogous to the alcoholic drunkard.

3395. What did you observe in the case of opium-drunkards that you have seen: what was it you saw amiss with them?—The regular opium drunkard is a most pitiable object,—lean, emaciated, dried-up and altogether a broken-down wretch, that is good for nothing. But I have seen, comparatively speaking, very few of these.

3396. In those that you have seen was any organic disease at length produced?—I do not think disease was produced. I think in a very large number of cases the persons organically suffered from disease, and that was why they took to the opium.

3397. Do you mean to suggest that some of those whom you call opium-drunkards began to take it for disease and were diseased?—Yes, I should say that the great majority of them were.

3398. Have you seen any opium-drunkards pure and simple?—Yes, I think I have. I am perfectly certain that I must have: but I think in the great majority of them the cause of the excess is the fact that they are suffering from some painful or some wasting disease which calls for the relief which opium gives. No doubt there are cases where men do it for the sensual enjoyment of the opium, but I think they are quite the minority.

3399. Do you mean by that more than the enjoyment which many people have with a cigar?—Something similar. I think the feeling of *bien être* which opium gives is more marked than you ever get from a cigar. Morphia is not much used by the natives, but the feeling which morphia gives is much more marked than that given by opium.

3400. May I take it from you, that even an opium-drunkard, pure and simple, does not, as far as you know, develop organic disease?—I have never seen any case that I could distinctly put down to the use of opium.

3401. In your experience, the vast majority of Indian opium-eaters take it moderately?—I should say so, certainly.

3402. What would you call the average dose of a moderate opium-eater?—I never like to give numerical expression to anything. I have not investigated statistical

25 Nov. 1893.

Surg.-Col. R. Harvey, M. D., M. R. C. P., D.S.O.
25 Nov. 1893.

When you ask a man about his opium the general way in which he puts it, is, that a pice worth lasts him two or three days, or that he uses two pice worth a day. It is generally expressed in terms of pice: he says that a pice worth lasts him for so and so. In my experience while many men take a pice worth a day and a good many take two pice worth a day, a very much larger number make a pice worth last them two, three or even four days. I myself got a pice worth from the bazar yesterday and it weighs 4 grains.

3403. We may take that as the usual thing?—I should say about 2 grains is a very common allowance. A good many men take four and some take eight grains. When you get beyond eight grains I should think you are going to excess.

3404. What effect has it upon them in the case of moderate opium-eaters?—It supports and comforts them, especially under exertion or exposure—many of them take it only or take a little more than their ordinary dose when called upon for extra work,—enables them to do a great deal on what seems to European ideas a very scanty and insufficient diet, and I believe by its sustaining power acts as a prophylactic to a considerable extent against chills, rheumatism, and malarial fevers, dysentery, and, I think I might add, diabetes.

3405. Coming more particularly to the Sikhs and Rajputs with whom you have had some experience, what did you learn with regard to the effect of opium on these people?—I should say that, as races, they are the two finest races in India generally. Anybody knowing India on being asked which were the two finest races, would probably reply Sikhs and Rajputs, or Rajputs and Sikhs. They are very martial people and altogether a very fine race. A very considerable proportion of them take opium habitually. As I say again, I cannot give you any numerical expression of opium because I have never investigated the subject statistically.

3406. I understand that opium is served out to certain regiments on the march?—I hardly think that is so. I think the Commissariat takes a supply in order that the men may be able to buy it. But I have never heard of its actually being served out. It may be so, if that is in evidence: but I have never heard of it. I believe the Commissariat on frontier expeditions takes a supply of opium to give it to habitual opium-eaters on payment.

3407. If it is served out, one would like to know how much is served?—That I cannot answer. My idea is that none is served out, but that the opium-eaters are allowed to buy it. I do not think they get it for nothing. They are allowed to buy it from the Commissariat. The Commissariat takes out a supply in order that there may be no difficulty about giving it to the men.

3408. Have you had any experience in China?—I visited China on furlough in 1874, and I was there for about three weeks. I was struck with the physique of the common people, which was very good. I was very much struck by two chairmen who carried me about in Hong-Kong. Through an interpreter I asked what they did, and they both said that they smoked opium. I had never seen two finer men, and they carried me up and down the streets of Hong-Kong with most perfect ease.

3409. What is your impression about the men of business in Calcutta?—Many of the great business men of Calcutta, merchant princes, who for skill in business and boldness in speculation can hold their own with any, are Marwaris (from Marwar in Rajputana), and I know from having had a large practice among them that many of them, I believe I should not be wrong in saying the majority of them, are habitual opium-eaters. Many others take it occasionally; and while I think that few men who have once made a habit of it give up the habit, as few men who smoke and drink moderately in other countries give up their drink or tobacco, I believe they could do so if they wished without any great difficulty and without any danger whatever. I have never known a native of India come to hospital to be cured of the habit, but I have known many give it up under advice, and others voluntarily.

3410. Are you speaking now of cases of excess?—I am speaking now mainly of cases of excess. The cases where I have advised people to give it up have been cases of excess; but I may add that for many years I do not remember having interfered with a patient's opium habit. If I found that he took opium, I treated the case absolutely without reference to that fact. I did not interfere with it in any way. I treated him merely, as if he were an ordinary person. The case is different with the opium-drunkard.

He finds it very difficult to stop; but the difficulty lies more, I think, in the initial weakness of will which led to the excess, than to the effects of the opium itself. The man has very little power of self-control; and he cannot nerve himself to the amount of discomfort he has to undergo in order to get rid of the habit.

3411. What is your experience with regard to prisoners in Indian Jails?—The rule, I believe, in Indian Jails varies in different provinces. A certain latitude is allowed to the medical men. The rule in this province, for instance, as laid down in the Jail Code, is that all opium found upon a prisoner on admission is confiscated, and he is not supposed to get any. The smuggling of opium is a jail offence. I believe, as a rule, the supply of opium is entirely cut off at once. People say that the prisoners obtain opium by bribery. But I do not think this can be largely true, though I would not say it never happens; it is probably quite exceptional. I think that our jail discipline is sufficiently good to make it very doubtful whether every opium-eater who comes into jail can easily supply himself with smuggled opium. I do not think it is likely; no doubt it can be done occasionally. I have known a few instances of considerable temporary suffering accompanied by diarrhoea; the stoppage has never led to dangerous results, and the suffering has passed off in a few days, except in the case of those accustomed to take the drug in excess. They suffer considerably longer, but they get over it in time. I have cured a considerable number of very bad cases of Europeans and Eurasians. I recollect one case, and one only, where the suffering terminated in death, but it would be hard to say that the deprivation of the accustomed opium had any share in the fatal result, for the man—a cooly on field service—had been under-clothed, over-worked, and exposed, without proper or sufficient food, to extreme cold and was drenched to the skin every night by heavy dews. The deprivation of the opium may have been a factor in the case, but I doubt it very much; at all events it was not the only one.

3412. The evidence given before us almost with one accord testifies to the fact that opium does not produce any known organic change, but it has been stated by several witnesses that the habitual use of opium makes those persons more liable to intercurrent disease. What is your view with regard to that?—I can understand that being the case with an opium-drunkard, although I have had no actual experience of it; but with the moderate opium-eater I believe the exact contrary to be the truth. In the first Miranzai Expedition of 1891, where only native troops—many of them opium-eaters—were employed, we encountered the most terrible weather, constant rain and snow, and sometimes 20° of frost. The men were very hardworked, had to wade repeatedly through ice-cold mountain streams, and were frequently wet to the skin all day. One regiment alone had forty men frost-bitten on 2nd February—none of them were opium-eaters. Had the theory been correct, the conditions were such as to prove it. Yet the net results of the campaign gave a death-rate of only 7.83 per 1,000 of strength per annum, about half the average death-rate of troops doing duty in cantonments; the admission-rate, 573.9, being also about half the average.

3413. What has been the effect upon the moral character?—So far as I know, the moderate use of opium has no effect upon the moral character, while excess does not lead to violent crime. The opium-drunkard, when under the influence of the drug, only asks to be let alone. If poor, he may be driven to petty thefts to get the means of supplying himself with the drug. In my experience, even patients who come with the sincerest desire to be cured of the habit invariably bring opium with them and they lie in the most unblushing way about it, declaring that they have not got it. The same thing applies to alcohol. Every medical man has known of and seen cases of drunkards who are prepared to swear that they have not tasted a drop for weeks although they are saturated and reeking with alcohol.

3414. You probably agree that the excessive opium-eater, like the alcohol-drunkard, is more likely to be carried off by intercurrent disease?—I think so certainly. I think in both these cases the cause is want of control. It is neither the alcohol nor the opium that leads to excess: it is the want of will and self-control of the patient. The worst result I ever knew from opium was the case of a fine young woman who deliberately prostituted herself during the Lancashire Cotton Famine in order to obtain means to buy opium.

3415. What do you think generally of the place of opium amongst what we may call dietic restoratives or stimulants?—I think it is one of the most harmless and most

useful. I think it is one of the greatest blessings that men can have. I think it was Dr. Gregory who called it *Optime Dei donum*—God's best gift.

3416. Have you any further information to give to the Commission?—I believe, although I have no evidence to offer upon the point, that if men accustomed to opium were to be effectively denied it, the possibility of which I doubt, since small quantities can be so easily smuggled, they would take to other stimulants; and if these happened to be ganja or alcohol, "the last state of those men would be [very much] worse than the first." As to the ease with which opium can be smuggled, I may say that taking 2 grains to be the amount a man eats in the day, a year's supply will go into a packet $2 \times \frac{1}{2} \times \frac{1}{4}$ inches. I hold in my hand a packet containing a year's supply of what I call the average opium-eater. It contains two years' supply for many; it contains half a year's supply for the man who takes a pice worth a day. Any native in this country could so conceal this packet in his loin-cloth or in his pugree that you would have to strip him naked in order to find it. It seems to me as a matter of practical administration absolutely impossible to subject people to this sort of espionage, and I do not believe that people would stand it.

3417. I presume that in your responsible position and throughout your career you have mixed very largely with medical men in the Indian Service?—I have. I have mixed largely with medical men not only in the Indian Service, but in the Medical Staff, and with large numbers of native medical practitioners, university graduates of all sorts, and vernacular school graduates.

3418. Do you think that the views you have expressed are held by those men generally?—I should say that they were held by all with the exception of an infinitesimal minority.

3419. That is to say by medical men who had practical experience in India?—Yes, practical experience in India. I should say we are practically at one. I know one or two who will not endorse these views, but I think the profession as a whole certainly would.

3420. I suppose you have no explanation of the fact of why the natives of India should take to the use of opium and tolerate it in a different way from our own countrymen at home?—I think it is a race question. Looking all round the world we find that each nation has its own habits; at the same time we find that all mankind seems to want a stimulant of some sort. The Northern nations of Europe resort largely to spirituous stimulants. Going down to the south of Europe you come to wine-spirits being much less used. Northern nations seem to be able to do with a quantity of spirits which if administered to people in the tropics, as experience has proved over and over again, kills them off at once. Spirits are absolutely unsuited to a hot climate. My idea is that opium is the stimulant which the inhabitants of this country have found by experience to be the best suited to them. Although like everything else it is liable to abuse, the moderate way in which the great majority take it not only does them no harm but does them a great deal of good. It adds to their comfort and satisfies for them the desire which is satisfied by wine in France and by spirits in Scandinavia and in Scotland.

3421. Have you any further statement you would like to make?—There is one practical point which I should like to bring before your notice. It has been brought up in the evidence of several preceding witnesses. Everybody seems to admit that opium must be allowed for medicinal purposes; with that reservation it seems to me that it is absolutely impossible to prohibit the use of opium in Bengal. The last Report of the Medical Institutions of Bengal, which I only got two days ago, shows that as a matter of fact, in a population of over 70 millions, only $2\frac{1}{2}$ per cent. of the population get any benefit from the Government Medical Institutions. There are no doubt a certain number of private medical practitioners spread about the country, but the great bulk of the people practically have no medical advice to go to, unless they go to those baidas and hakims who have no real qualifications, who are not registered, but who, as I understand, must be allowed to give certificates that such and such people are to be allowed opium. As far as I see, there is nothing to prevent any man being his own hakim and prescribing opium for himself; at any rate a number of baidas and hakims scattered about the place will have the power of ordering opium, and from what I know of native character, I think that anybody who wishes to get opium would only go and give four annas to get a certificate. You transfer the opium revenue into the hands of the baidas and hakims: you would not decrease the consumption of opium in the least, as far as I can see; but

you would seriously embarrass the Government. There is a statement in this Report, from which it appears that allowing each dispensary to deal with a radius of 5 miles, the 310 dispensaries of Bengal cover less than one-fifteenth the total area of the province; so that less than one-fifteenth can come under proper medical arrangements, which could be safeguarded; and you must throw it open practically to any man who calls himself a baid or hakim.

3422. (Lord Brassey.) Have you any personal experience of the use of opium?—Yes, I have. I have myself been an opium-eater in a very small way. I trust that I shall not be considered to be one now; not that I have reformed. I am perfectly prepared to begin again if circumstances required it. My first experience of its use was during a professional examination when suffering from a severe influenza cold. Thirty drops of laudanum taken to procure sleep had the exact contrary effect, but removed the stupidity due to the cold and enabled me to go lucidly over the subject of next day's examination. I seemed to have the books all before me; everything came clear before me. In 1871-72, when in charge of the advanced base hospital in the Lushai Expedition, I had nearly two thousand sick and wounded through my hands in less than three months, and there were sometimes four hundred in hospital at once. During most of the time I had only one hospital assistant to help me, and neither nurses, orderlies, nor clerks. I had begun the campaign with a severe attack of fever which kept recurring every few days, and I never was so nearly overdone in my life. I believe I must have broken down but for opium, of which I used to take a grain about 6 A.M. when beginning work for the day, whenever I knew the work was unusually heavy. I may have taken it thirty or forty times. I never exceeded the grain, never hankered for more, and had no difficulty in stopping it. It sustained and comforted me and kept my head clear. I have taken it perhaps ten times since, always under circumstances of great fatigue or exposure, and always with the same result.

3423. (Mr. Pease.) You mention the great exertions which men were able to put forth under the influence of opium. You would consider I suppose that that was the result of its being a stimulant and not on account of its nourishing qualities?—On account of its stimulating properties. It also diminishes waste of tissue. That is the physiological explanation of it. By diminishing tissue-waste it enables a man to do more.

3424. Is there not a corresponding depression after the effects of the opium has passed off?—I do not think there is, unless you take large quantities of it.

3425. Did you find that in your experience at all?—No, I found no reaction or depression whatever.

3426. Do you find that persons who are in the habit of taking opium are equally susceptible to other drugs?—I think so. I do not think I have noticed any difference.

3427. You spoke of persons who had become opium sots as persons of weak will: do you not think that the taking of opium considerably affected or weakened the powers of the will?—That is a question I could not give a definite answer to. It seems to be more, both in the case of alcohol and opium, a weakness of the will. I know it is generally said to be the effect of alcohol or opium, but I do not see that there is any evidence of that.

3428. You have made a well-known quotation from Dr. Gregory: was he not at that time alluding to opium as a medicine and not as an indulgence?—No doubt. But in many of these cases it is used medicinally. I think in a very large number of cases it is begun for the relief of pain and for medical reasons, and then people have felt such a comfort from it, that they go on with it.

3429. Are you in favour of any reduction in the present facilities in obtaining opium?—I do not think that it is at all necessary.

3430. (Mr. Wilson.) You have referred to a person in Lancashire who was in the habit of taking 4 ounces of laudanum daily?—Yes; a young woman. It was the same young woman who afterwards prostituted herself because she could not get it.

3431. Did this person taking 4 ounces of laudanum daily come to your infirmary to ask for charitable relief?—She came to ask for opium because she had no means of paying for it.

3432. Four ounces of laudanum would cost a good deal of money?—Yes, as far as I remember, her husband was a well-to-do operative, probably an overseer, or something like that; at all events she had been able to get opium up to the time of the cotton famine. They were then all turned out of work, supplies of money dried up, and eventually she came to us, but we refused to give the opium to her.

Sur.-Col. R. Harvey, M.D., M.R.C.P., D.S.O.
 3433. You refer to the Miranzai Expedition, where there were only Native troops : you say that many of them were opium-eaters ?—Yes.

3434. I suppose you are not able to give us any kind of proportion ?—No, I cannot, I have never made a numerical enquiry. It is well known, however, that Sikh sepoys do take opium very considerably, although a great many will deny it ; more of them take it than admit that they take it. But a considerable number will admit that they take it. I ascertained afterwards that none of those particular 40 men who were frost bitten were opium-eaters. They may have been, but they said they were not.

3435. Opium-eaters and non-opium-eaters alike stood this severe weather so well that your death-rate was only about half the average death-rates of troops doing duty in cantonments ?—Yes, opium-eaters and non-opium-eaters equally stood it.

3436. You do not suggest that the non-opium-eaters died faster ?—No, this is with reference to a statement that under certain bad conditions the opium-eater is liable to intercurrent disease. It is only to meet that. The real causes of the diminished death-rate were to be found in the admirable arrangements made by Government for the comfort and feeding of the troops, and for their shelter.

3437. You say that opium sharpens the mental faculties, brightens the wits, and improves the logical powers ?—I think so.

3438. May I ask you why you do not take it regularly ; do not you want to have sharp faculties and bright wits ?—I hope they are sharp enough. Seriously speaking, I think it does sharpen the mental faculties under circumstances of exertion. It was under those circumstances that I have taken it in the past, and I would always take it again in the future if it were necessary.

3439. That is the point I was going to ask you about,—whether you regard its value mainly as a special agent under peculiar circumstances of stress, or whether you mean that it has that habitual tendency throughout life ?—I do not think I am in a position to answer that question. I said that when I was taking it it kept my head clear. It has done that for me several times. It made me as I said, when I had the desperate cold and was stupid and thought that I must fail in my examination, go right over the whole subject. It cleared my brain in the most wonderful way. You cannot speak of the intellectual faculties of other people, because you would not know what the ordinary effects of it upon them are, or what their original condition was.

3440. As a matter of fact you do not recommend it as a practice to persons who wish to have sharp faculties and bright wits ?—I would not go as far as that.

3441. Have you ever recommended anybody to take it regularly ?—I have.

3442. To take it regularly ?—Yes.

3443. Have you recommended it to many persons ?—Not to very many, but I have recommended it to many diabetic patients.

3444. I am not talking about disease at all, I mean for these valuable results ?—No, I have certainly not for that purpose.

3445. With reference to your own experience which you gave us, I take it that when you were suffering from this severe influenza cold, your taking it was purely medicinal ?—It was on that occasion. That was the first thing which showed me the value of it,—as a supporting thing, and as clearing the intellect. That was before I had any experience of it in other people. That was when I was a student.

3446. That was for a special purpose ?—Yes.

3447. For a temporary purpose ?—For a temporary medicinal purpose. Afterwards I took it as a stimulant.

3448. Speaking generally, will you tell us whether the evidence that you have given relates specially to eating or drinking or smoking ?—I have practically no experience of smoking with the exception of my reference to the two Chinamen who carried me about in Hong-Kong. They were smokers. The majority of the people, however, in this country, eat the opium. They take a little pill,—a little goli. They carry it in their pugree or loin-cloth and pinch off a little bit. In Rajputana, especially on official occasions, it is generally made into a solution and drunk, but the bulk of the people in this country eat it. I have no experience of what they do on the Bombay side. In the large cities of India, especially where there are Chinamen, they have learned the habit of smoking it ; but I practically have no experience of opium-smoking.

3449. We may take it broadly that the evidence you have given relates to eating ?—Eating or drinking, which I think is practically the same.

3450. You tell us that you were five years in Rajputana ?—We had some little difficulty the other day in ascertaining exactly what Rajputa are. Do you know what proportion of the population of Rajputana are called Rajputs ?—I think you may practically say the whole population. They all take opium. I do not think there is much difference. They are not all pure Rajputs : there are various mixed races in the country. As far as my knowledge goes, they all take opium,—much in the same proportion ; but I have never made any statistical enquiries, and I could not reduce the question to a numerical statement.

3451. In consequence of some degree of doubt about it here the other day, I referred to Hunter's "Gazetteer." There I found that the population of Rajputana was given at 10 millions odd, and the number of the Rajput class or caste, half a million. That is five per cent. It is important to know whether the reference to Rajputs refers to that five per cent. of the population, or whether you speak of the population of the country ?—I am speaking of the whole population of the country : my remark refers to them.

3452. I do not know whether you know anything of the views of a medical missionary, Dr. Huntly, who has lived a good many years in Rajputana ?—I do not recall the name.

3453. In a letter addressed by him to the *Lancet*, he says among other things : "The natives of Rajputana are well aware that drinking milk with opium helps to ward off some of the ill-effects of the drug. On the other hand, the majority of opium-eaters very soon show the harmful effects on the system, and they are able to be recognised at a glance by the doctor who gives time and attention to this." Do you agree with that ?—I agree with it in the case of people taking it to excess, but not in the case of a moderate opium-smoker. People do take milk in order to obviate a tendency to constipation which is sometimes caused ; but I think the average moderate opium-eater is absolutely unrecognisable.

3454. Further on he says : "In seven years of constant intercourse with the natives I have never met a native who considered the drug harmless." That is not your experience ?—No, certainly not.

3455. "In a careful enquiry into 100 cases of opium-eaters I found from their own lips that nearly forty per cent. had begun the habit to stimulate the sexual appetite, and the end of many of these was impotence. This fact can be learned from the native songs."—I believe that a certain number of people do take it under the deluded idea that it is an aphrodisiac. I do not think that it is a real aphrodisiac. The natives are extremely fond of resorting to aphrodisiacs ; and whenever a new one is started there is a tremendous run upon it. If you ask any chemist in Calcutta, he will tell you that. Whether they begin it for that purpose or not I do not know ; probably they do. I do not think I have ever made any enquiries as to that particular point.

3456. I was shewn a book the other day—Russell on *Malaria and Injuries of the Spleen*. Is that book any authority ?—I glanced through the book when it was published. That was a good many years ago. I do not think it had any very large circulation. I have no doubt from what I know of Dr. Russell that it ought to be a book of authority. I do not know what his statements are, so I cannot say whether I agree with them or not. Dr. Russell's opinion, however, ought to be valued.

3457. You made use of an expression that you thought this was very much a race question. Can you apply such a term to India ?—Perhaps I ought to have said a climatic question, rather than a race question. Climatic question would be a better term. The races vary enormously. There is a very large number of entirely different races. I ought to have said a climatic question rather than a race question. It was clear from the illustration I gave that I meant a climatic question.

3458. (*Mr. Haridas Veharidas.*) Do you use alcohol ?—Yes, I use alcohol, but in strict moderation.

3459. You took opium you say 30 or 40 times ?—Yes, 30 or 40 times. Since that expedition I have taken it perhaps 10 or 12 times.

3460. Were you also in the habit of taking alcohol on all occasions ?—No, I was not. I could not get any. That was the reason. I should have taken it if I could have got it.

3461. Then you gave up the opium ?—Yes, I gave it up afterwards.

3462. Were you obliged to take something after you gave up the dose of opium?—I took wine as soon as I could get it. There was no wine there.

3463. Had you to take more alcohol afterwards?—No.

3464. (*Mr. Fanshawe.*) Did I understand you to say that it had come within your experience that opium was largely used as an aphrodisiac by the natives?—No, I did not say largely. It is used no doubt. I have no personal experience, but I have no doubt they use it. They use anything that they hear is an aphrodisiac.

3465. I suppose you would not be able to tell us the sort of doses they take?—No, I cannot give you any information upon that point.

3466. Can you give us any information as to the age, speaking generally, at which the classes who have the opium-eating habit, the Rajputs and Sikhs and others, would begin the habit?—I have often been in Rajputana and I think the habit is begun when they are children and carried on sometimes throughout boyhood. Sometimes it is given up. It is frequently given by mothers when they go into the fields in order to quiet their children. Then I think there is a period when it is not taken. I have seen children of five or six years of age who took opium regularly.

The witness withdrew.

SURGEON-LIEUTENANT-COLONEL A. CROMBIE, M.D., called in and EXAMINED.

3473. (*Chairman.*) I think you are Superintendent of the Presidency General Hospital?—Yes.

3474. And you have been a long time in the Indian Medical Service?—Yes.

3475. And you have also had a large private practice for many years?—Yes.

3476. Tell us what means you have had of becoming acquainted with the effects of the opium habit in India?—I have been a Hospital Physician and Surgeon during the whole of my service in India. I have served in the Medical College Hospital in Calcutta, in Rangoon, in Dacca, and again in Calcutta. These are the places where I have served. I was for the longest period Civil Surgeon in Dacca, namely, 11 years; but for only 7 years of that period did I actually reside in Dacca. Besides hospital experience, I have also been medical officer of two very large jails. I have repeatedly had executive charge of one of these jails, and I have also been in charge of a lunatic asylum at Dacca for 7 years, which held 220 lunatics. I have also had considerable experience of lunacy throughout the whole province of Bengal, in consequence of being consulted by the Government of Bengal in all matters relating to lunatics.

3477. I understand you have paid rather special attention to this question?—Yes, and especially of late years.

3478. Kindly give us your impression as to the consumption of opium in the Lower Provinces.—I have made a number of calculations with regard to the consumption of alcohol and opium in India, especially in Bengal; and I should like to give the data for those calculations. I wish to call the attention of the Commission to a collection of papers relating to the consumption of opium in India published in the *Gazette of India* on the 9th January 1892. There is a great deal of information in this book; but the particular page to which I wish to refer is page 99, in which the total consumption of opium in British India is stated to be sufficient to furnish a moderate daily dole of $\frac{1}{4}$ tola (that is to say, $\frac{1}{16}$ th part of an ounce, or 45 grains), to about 400,000 people (that is to say, 2 persons in every thousand of the total population); that comes to $22\frac{1}{2}$ grains per thousand of population, or $8\frac{1}{2}$ grains per head of the population for the whole of India, men, women, and children, per annum. The cost of this would be 4 pies per annum: that is, a little more than a farthing. In contrast with this I would mention that the cost of drink in England is £3-15-0 per head of the population per annum. With regard to the proportion of opium to each opium-eater in that amount, that would depend upon the estimate formed; by taking it very low, at 5 per cent., it would give about 400 grains per annum to each opium-eater, or rather more than 1 grain a day.

3479. Five per cent. of the total population?—Yes.

3480. That would make about 20 per cent. of the adult population?—Yes, about 20 per cent. of the adult male population. In Bengal, that is to say, in the Lower Provinces under the Lieutenant-Governor of Bengal, 1,942 maunds of opium are supplied for consumption. That amounts to $15\frac{1}{2}$ grains per head of the population, or, according to the same calculation, 300 grains per annum for each consumer, which is rather below 1 grain a day for each opium-eater. I believe the amount varies in different parts

3467. That would be in Rajputana and in the Punjab?—*Surg.-Col. R. Harvey, M.D., M.B.C.P., D.S.O.*

3468. Then would they recur to it when they were grown up men?—They generally do.

3469. And give it up in the interval?—Apparently.

3470. I want to make that point about the Rajputs quite clear. You say in speaking of the Rajputs that they are one of the finest and most martial races in India?—Yes.

3471. In using that expression, you are referring to the Rajputs proper?—I am referring practically to the whole population of Rajputana—whether they are pure Rajputs or not—as being one of the finest races in India. There are a number of offshoots,—the Jats and Dogras, and people who are related to the Rajputs although not pure Rajputs. They are splendid men, physically, and make very good soldiers. The same may be said of the common people, who are of very mixed blood. They are as fine and plucky men as you could wish to see.

3472. The opium habit is equally common among classes other than Rajputs?—Yes, I think so.

of Lower Bengal. A gentleman supplied me with some information the other day,—Bijoy Matab Mukerji, one of our Sub-divisional Officers who has served in the Sub-division of Supur in Bhagulpore. There the amount obtained from the Treasury was 3 maunds for a population of 600,000, which amounts to $2\frac{1}{2}$ grains per annum per head of the population or 50 grains to each consumer per annum. He mentioned, in explanation of the small quantity of opium used in that sub-division, that a large quantity of alcohol was consumed by that population, and he considered that the two intoxicants are used in inverse proportion. In the Sub-division of Ranaghat (not very far from Calcutta), which is a non-alcohol district, alcohol being used in very small quantities, the consumption was from 12 to 15 maunds in different years, giving from 25 to 31 grains per head of the population, or about 600 grains per annum to each consumer. That amounts to nearly 2 grains a day to each consumer. With regard to that, there are two or three explanations. The amount is, I believe, very much smaller than is actually taken by the average consumer; and it may be that only a portion of those consumers use it daily, leaving a larger quantity for the others; or the estimated percentage of opium-eaters is too high; it may be that there is a considerable quantity of illicit opium in constant use. My evidence with regard to the effect of opium on the people of India, as seen by a man practising with every opportunity of observing the evil effects, is almost absolutely negative.

3481. But you have recognised that cases of excess do occur?—I have of course frequently met with individuals who take opium in excess. I have not always noticed that the excessive quantity produced any deleterious effects. In one or two, perhaps three, instances, I have seen these deleterious effects in the course of my 20 years' experience.

3482. Deleterious effects which you traced directly to opium?—Yes, which I traced directly to opium.

3483. Opium uncomplicated with any disease or poverty?—With any existing disease.

3484. Does your memory carry you sufficiently back to remember what were the conditions of a man who took opium to excess, without any disease and without any poverty?—It is rather difficult to find a case exactly fulfilling these conditions. The first case which was brought prominently to my notice was that of a Chinaman, a prisoner in the Rangoon Jail, who died in the hospital from chronic diarrhoea. He was a very large consumer of opium, and the conclusion I came to at the time, either rightly or wrongly, was that both the diarrhoea and death were due to opium. Chronic diarrhoea and dysentery are of course very common to India, and it may have been that this was a case of chronic diarrhoea due to other causes. But the impression made upon my mind at the time was that death was due to opium, and I have always considered it so.

3485. In your experience, that is the only fatal case that occurred?—That is the only fatal case that I know.

3486. You have had a good deal of experience from the fact that you have been in charge of hospitals and asylums, can you tell us if the opium habit has been a cause of lunacy or a cause of crime?—In that Supplement to the *Indian Medical Gazette*, which I believe has been sent to each member of the Commission (I now formally

Surg.-Lt.-Col. A. Crombie, M.D.

25 Nov. 1893.

present it to each member of the Commission) I have given my experience with regard to lunacy. The figures on which my opinion is partly based, will be found at page 27 of that Supplement. There the statistics of the Bengal asylums are given for ten years. The number of admissions to these asylums during those ten years was 2,202. Of that number, 641 were ganja-smokers, or consumers of ganja in some form; 117 were drinkers of alcohol, and only 8 were opium-eaters.

3487. Would you put it quite in that way. The column I see is headed "Alleged cause"?—Yes.

3488. So that a good many more than these 8 might have been opium-smokers or eaters?—No, I think not. In each of these cases in which the history of ganja or spirits or opium is given, that is put down as the cause. There may be other causes; but in the asylum records I think it is invariably put down as the cause. These may be regarded as statistics of ganja, spirits, and opium-eaters in asylums. With regard to ganja, there is no question in my own mind that in a very large proportion of the cases in which it is put down as "alleged cause," it is the cause. With regard to spirits, I believe it is also the same in the asylums in England, where from 20 to 25 per cent. of the lunatics have become insane in consequence of drink. But with regard to the opium-eaters I am of opinion that the opium is never the cause of insanity. As regards the number of opium-eaters shown here, it merely means that these were lunatics who had been accustomed to take opium. I have also collected statistics from Bombay and Rangoon, as well as Madras, but they are incomplete, as I was unable to obtain the figures. I can only give the figures for Bombay for 3 years, and for the Rangoon asylum for 6 years. In Burmah there are also very few opium-eaters, indeed, admitted as lunatics; whereas the number of spirit-drinkers is very considerably increased in the town of Bombay, that is to say, in the Colaba asylum. There is a considerably larger proportion of spirit-drinkers admitted there than in the other asylums. In 1888 there were 25, in 1889 and 1890, 13; against 1 opium-eater in two of those years, and 3 in another year.

3489. You have given an account of your opinion and the impressions produced upon your mind by the study of this question?—Yes.

3490. Will you state the reasons why you think the evils of opium-eating in India are almost of a microscopic character?—In the first place because it is specially a habit of advanced life. Alcohol and ganja are the intoxicants chiefly used below the age of 30 or 35.

3491. What would you consider the beginning of advanced life?—Speaking of the natives of India, 40 may be considered as advanced life.

3492. Do you think that the people of India have a constitutional tolerance for the drug?—I have some reason for believing that there is such a tolerance, and I believe that a great deal of the agitation on opium is due to that difference,—that the effect of opium, specially of morphia, is very much greater in European countries, and especially among people who use alcohol, than it is in India. It is also perfectly certain that all animals are not equally affected by opium. I have during the past week made some experiments upon ducks and fowls, and I have given them enormous quantities. To a duck weighing 2½ lbs, I have given at one time 30 grains of opium and into another duck of about the same weight, I have injected 3 grains of morphia. That would mean to a man of 10 stone, 15 times 140 grains, at one dose or 1½ grains of morphia to every pound of his body weight. That would mean 1½ times 140, or 210 grains for one injection. Beyond giving rise to a certain amount of nausea in all the animals, to some slight drowsiness lasting about an hour in the case of the ducks and to a little unsteadiness of gait, little or no effect was produced upon these animals. During the first few days in which the experiment was continued, they were quite happy, inquisitive as ducks always are, and ate their food as usual. The fowls after two or three days of the treatment ate very little and were evidently affected in some way by these enormous doses of morphia and opium. I made these experiments in order to satisfy myself that the statements made in books with regard to that, were true. I am able to confirm those statements. There are evidences of various kinds that the natives of India have certain peculiarities in their constitution, and the first one of these, I would like to mention, is with regard to the body temperature. In 1872-73-74 I made some 1,500 observations of the normal temperature of the human body of the natives as well as of Europeans in India, and they have been printed in this book which I shall be glad to present for the inspection of the Commissioners. I have here drawn the differences diagrammatically.

The three lower figures are the average temperatures of Europeans in England as observed by Ogle, Casey, Allbutt and Rattray.

3493. You say there is a difference in the bodily temperature; your argument would be, I suppose, that there may be a difference of tolerance?—That is my idea.

3494. (Mr. Pease.) Can you give the average temperature?—It depends very much upon the time of day. The mean daily temperature according to Ogle was 97.9 of Europeans living in England; 98.2 according to Allbutt and 98.07 according to Casey; giving an average of 98.08 from the three observers. From the observations which I made here in India of Europeans, I found the average daily temperature to be 98.5.

3495. What is the average temperature of the native population in India?—Nearly half a degree higher. That makes the temperature nearly a degree higher than that of Europeans living in England.

3496. Have you any special information, direct evidence, of the difference of tolerance for opium between a European and a native of India?—It has to be taken into account that we are using weaker opium, but there is no doubt that it is the experience of us all, that we can give larger doses of opium here than in England. For instance, in cases of acute diarrhæa, I never give less than one drachm of laudanum, which is probably three times as much as would be given by an English practitioner in England in an ordinary case of that kind.

3497. Would your preparation be made from Smyrna opium or native opium?—The laudanum I prescribe is mostly obtained from England—Turkey opium.

3498. That would contain a full amount of morphia?—Yes.

3499. You give a drachm dose?—Yes, a drachm dose freely without hesitation.

3500. To adults?—Yes, to adults; but I think the difference in constitution is to be chiefly noticed with regard to children. Our authorities, especially Lauder Brunton, say that opium should not be given at all to English children, under 5 years of age, only with great precautions. But here, in India, we do it hardly with any precaution. We give opium to children even of a year old in fair doses.

3501. (Mr. Mowbray.) English children?—We give it also to English children; but I am now referring chiefly to native children. We also give it here to English children in larger doses than they do in England.

3502. (Chairman.) Do you observe the distinction of doses in the two cases?—Yes. I give it more freely to native than to European children. I know that native mothers constantly give opium to their babies when they are a day or two old; and I believe the habit is continued to the age of four, when it is most frequently given up. Most of our ayahs, who are entrusted with the care of European children, are up-country women, who are accustomed to deal with their own children in this way, and when they find a peevish, fretful English child they give it the same dose of opium they would give to their own child, and the English child dies. I think Bishop Thoburn mentioned a case in his own experience the other day. We have all had experience of that kind.

3503. Have such examples fallen under your own notice?—Yes, where a child has died from opium given to it by an ayah. I have never treated a native child for opium poisoning in the course of my 20 years' service. No case has ever been brought to any hospital with which I have been connected.

3504. Do you consider tolerance with regard to opium in India is altogether a matter of race or a mixed product of several causes?—I think it is the product of all the influences which are brought to bear upon the natives in the course of ages, they are constantly living in a hot climate, have a constant vegetable diet and abstinence from alcohol. I think these are the chief conditions which have brought about this result.

3505. Do you include the malarial constitution?—I cannot go into that point as giving tolerance. I am not aware of that.

3506. Of course you are aware that certain diseases like diabetes do give a tolerance?—Yes.

3507. I thought perhaps you might have observed whether malaria did?—I have not observed it, except that most of the people I have treated have had more or less malaria taint in their systems.

3508. I believe you distinguish between the effects of the habit and those of the ailments for which it is taken,

that is a matter of course?—That goes without saying I think. Another point, though there are differences of opinion with regard to this, is, that evidence of differences of constitution is to be found in the immunity of the natives of India from typhoid fever. Dr. Harvey tells me, for instance, that he has seen typhoid fever in natives, the diagnosis being confirmed by *post-mortem* examinations. But if I am not wrong Dr. Harvey refers to a long time ago. I think it must be admitted by all that typhoid fever in natives is extremely rare. I ascertained the other day that a native student may go through the whole of his curriculum of 5 years without ever seeing a case of typhoid fever. Dr. Gibbons, who was pathologist in the Medical College Hospital for seven or eight years, has never seen evidences of typhoid fever in a native on the *post-mortem* table. It is common enough in the General Hospital, which is a European Hospital. I think there they are from ten to twenty cases every year. I have never myself treated a native of India for typhoid fever.

3509. (Lord Brassey.) Have you had the same experience with regard to scarlet fever?—Yes, but I do not bring that forward so much, because Europeans in India are practically exempt from scarlet fever. I have seen an unquestionable case of scarlet fever in one European in India.

3510. (Chairman.) Have you anything to tell us about the comparative effects of eating and smoking opium?—I have made a special study of this particular point. I believe that the evils of smoking opium are very considerably greater than anything that can be attributed to eating opium. But I think that is due chiefly to the conditions under which the opium is smoked. Opium is eaten at home; a man swallows his pills, and at once proceeds to his usual avocations: it is smoked in clubs and, until recently, in opium dens—smoking in company. It is a social vice like alcohol. People go to these places for the sake of company to enjoy each other's society, and they smoke opium together. The consequence is, that opium-smoking is a vice of the younger people and of the low characters and those of vicious habits generally. I believe that madak-smoking is more deleterious to the constitution than chandu-smoking. I have repeatedly visited several of the madak shops as well as chandu shops. Three or four years ago I came to the conclusion, and I still believe, that madak-smoking does lead to greater ill-health than chandu-smoking. Chandu is the Chinese way of smoking, madak is the Bengali mode of smoking.

3511. You have visited these opium dens more than once I think?—I should think I have paid six or eight visits to them at different times.

3512. What has been your impression of their effect upon the public morals?—On the public morals absolutely none, but I believe there is no doubt that it does deteriorate the morals of those who indulge in the habit, as indicated above. It has no particular effect on the public morals. It gives rise to no violent crime, no infringements of public decency. You might live within a short distance of an opium den and not know that it is there. I confess that I lived in Dacca for seven years, where there was an opium-smoking den and I did not know of its existence.

3513. Opium-smoking in India—madak—seems to be a habit of the lower strata of society?—Yes, it is decidedly a habit of the lower classes. I do not know of any well-to-do or respectable men who smoke opium. I know many respectable men who eat opium constantly, but I do not know a single well-to-do man who smokes opium.

3514. You are speaking of Hindus, not Chinamen?—I am speaking of Hindus and Mahomedans—the inhabitants of Bengal.

3515. You have had no experience of the Chinese as opium-smokers?—Not of any value.

3516. What do you think is the reason why so many people take opium habitually in this country?—The majority of people that I know, who take opium, do not begin it until their vital powers are failing, that is to say, until they are 40 or 50 years of age, and then it is usually on the advice of their elders, who advise them to take it, to improve their health, when they begin to break down in any way and are not up to their former condition. I now have a native patient in the town, who is suffering from heart disease, and he is being constantly urged by the members of his family to take opium. They tell him to take it for his stomach's sake and his many infirmities. Those are almost the words he used himself.

3517. Not as an aphrodisiac?—No, not all—not in such a case.

3518. It has been said that wine is the old man's milk. Is it in that sense you mean it?—It is in that sense that they take opium.

3519. For what other purpose is it taken by the poorer classes?—The belief enables them to withstand the effects of chills. It is taken also as a preventative of diarrhoea and dysentery, and for the treatment of chronic diarrhoea and dysentery, and for asthma. I have found it useful in the treatment of diabetes, and also as a prophylactic in the treatment of malarial fevers.

3520. Do you agree with the opinion that the excessive use of opium is apt to diminish the fertility of families?—I am unable to give an opinion upon that point, but there is evidence, I believe, to bear out that suggestion, especially that of the late Dr. Vincent Richards, who studied the subject in Orissa (*vide Indian Medical Gazette* for August 1877). I think I ought to say something more about the use of opium in malaria. When one comes to India the first thing that strikes one is what seems to be the rooted and unreasonable objection that the natives have to being treated with quinine. Even now one has sometimes to prescribe quinine under a synonym, because the patients have very often such a strong objection to it, that if they know there is quinine in the medicine they will not take it. After a time one finds out that this objection is not unreasonable, and that there are a great many fevers,—I might almost say the majority of cases of fever which I have to treat in Bengal,—which are not only not benefited by quinine, but which are aggravated by it. That we find out after some years, and we are able after a time clinically to distinguish those cases which are aggravated by quinine from those which are benefited by it. I treat a large number of cases of fever without any quinine excepting in convalescence.

3521. That is to say, you distinguish more than one type of fever which is prevalent?—Not only more than one type. I believe that there is more than one infection. Though they are lumped under the name "malarial" and appear in the records of the hospitals as malarial fever, I am convinced that they are not really malarial, and in these cases quinine would cause an aggravation of the symptoms. I think that is the common opinion of all medical men of any experience in India.

3522. Your remarks point to the conclusion that the distribution of quinine would not replace opium in these districts?—No, not at all; quinine is of very limited application. I am not betraying any confidence when I state that Dr. Birch, who was recently Principal of the Medical College at Calcutta, suffered frequently from fever. He constantly took laudanum for the relief of the symptoms, and he assured me that he never got the same benefit from any other drug in the Pharmacopœia. Brunton, who is a great authority upon therapeutics, mentions the same circumstance, and gives reasons for the benefit of opium in cases of fever. So also does Garrod. They both mention circumstances in the treatment of malarial fever in which opium is beneficial. The same opinion is held in the Fen country in England where the people use large quantities of opium for the same purpose, both in the treatment and prevention of fever.

3523. You have already given evidence to the effect that opium does not cause crime and violence?—Opium is not a cause of crime and violence or brutality. According to my experience alcohol is the intoxicant of brutality; ganja is that of sudden and uncontrolled violence. Chevers quotes a case of amok, "running-amuck," which was attributed to opium. In all my experience as a Jail officer and the Superintendent of an asylum, as well as an expert relating to criminal lunatics, I have never known a case of "running amok" produced by opium. In my experience it has invariably been caused by ganja. I know the case of a young Fenzali who indulged in a single debauch with ganja. He went round the house at night and slew seven of his own relatives in their beds. Cases of men killing three or four of their neighbours under the influence of ganja are quite common in Bengal. But it is invariably ganja, and not opium, which is the cause of these cases.

3524. What do you say as to the practicability of limiting the use of opium in India to its purely medicinal purpose?—I believe that such a proposition could only originate with people who were absolutely unacquainted with the conditions of life which obtain in this country. It presupposes that there are places other than ordinary vendors' shops where it could be obtained under medical advice; but there are no druggists or druggists' shops in the swamps of Bengal; it presupposes that there are medical men available who would be capable of giving that advice with discretion; and it also presupposes that there are means of communication available to the people which, as a matter of fact, do not exist. I think it is desirable that

25 Nov. 1893.

the Commission should know something of the conditions of life obtaining in a place such as I have lived in for a great part of my service in India,—I refer to Eastern Bengal. There when a man wants to build a house, he first of all digs a tank and with the earth from which he has dug the tank he raises a mound, and on the top of that mound he places his house. The elevation of that mound depends entirely upon the height to which the annual floods rise. The floods rise with fair regularity; but sometimes they go two or three inches higher than the average, and then the inhabitants of those houses have to live on rafts inside their houses; and their cattle are tethered up to their bellies in the water. These people have generally no boats. They paddle about on rafts made of the plantain tree, and the boys go to school in what I call wash-hand basins. They are earthen gum-las. The boy squats at the bottom of the gumla and paddles to school. This is the only means of communication. Some of those dwellings are extremely isolated. There may be only one household within four or five miles. There is no native doctor or dispensary within five or ten miles of them. I am convinced that to deprive these people of the possession of opium, except under medical advice, would be a terrible and wanton cruelty. It is the only medicine of any value that is available to them, and if you deprive them of it I should not like to be one of those who do it. The best practitioner in that part of the world available to the people is the Civil Hospital Assistant; he is educated at one of our Vernacular Schools, but he is of no avail whatever as a person of responsibility in whose hands to place opium for distribution purely on medical grounds. There are only a very few of them scattered throughout the districts, and they are as a rule very poor and altogether dependent on the good-will of their neighbours; to them, a matter of four or eight annas or a rupee would be sufficient to let any man in the country obtain opium. I ought also to mention another thing, that here in Calcutta, which swarms with practitioners and with hospitals in every direction, where people can obtain free advice, and there are medical practitioners of every persuasion, fifty per cent. of the people die without any medical attendance whatever—that is even in Calcutta. These statistics were given by the Health Officer of Calcutta in 1891, and they will be found at page 5 of his report for that year, which I now hand in.

3525. (*Lord Brassey.*) In the country districts, how would it be?—If it is fifty per cent. in Calcutta, I should say it is 75 per cent. in the mofussil, people dying without medical advice. The only medicine available of any value to them is opium. Instead of restricting opium any more than is done now, I think that every householder in this part of the world ought to have opium always in readiness in case of emergency. I never travel without it. Even when I came from England the other day, my wife provided me with laudanum as a safeguard for the journey. I did not take it, but I always travel with it. There are one or two points which I have omitted and which I ought to mention. Besides my other duties here in Calcutta, I am Consulting Physician to the East Indian Railway, and I have obtained figures as to the number of natives employed on that Railway, which extends from Calcutta to Jubbulpore on the one hand, and to Kalka on the other.

3526. (*Chairman.*) What was the number of employés?—850 Europeans, 525 East Indians, and 39,750 Natives at the present moment.

3527. About 40,000?—Practically 40,000 natives. I have been Consulting Physician for five years, and all the reports from the different medical officers of the districts are submitted to me half-yearly. During these five years the name of opium has not once appeared in any of the reports. On questioning the medical officers, they tell me that it does not come before them either professionally or officially, yet this Railway passes through the opium-growing and opium-eating districts of Behar and the North-West Provinces. One medical officer said that the native doctor sometimes pointed out to him that a patient was an opium-eater, but he himself was unable to discover the fact.

3528. Has it come within your knowledge whether any of the servants of the Railway have been dismissed in consequence of opium-eating?—I asked Mr. Wagstaff, the Secretary of the East Indian Railway, who has been in the head office in Calcutta for 28 years, and this is his reply—"During the 28 years I have been in the head office here I do not remember a single case being reported of a native of any grade being unfit for duty owing to the use of opium, and the experience of the Deputy Traffic Manager, with about the same length of service on the line, is precisely the same. There have, however, been one or two solitary instances of suspected cases of indulging in 'bhang'

but nothing proved. You may make what use you choose of this information." I am also in another capacity Depot Surgeon to three Emigration Agencies which send coolies to the West Indies. A large part of these are recruited in the North-West Provinces, and a considerable number, though a smaller proportion, in Behar. During the last six years 48,170 coolies have been despatched to the West Indies from these three depôts. The proportion is 100 men, 42 women, and 15 children. That leaves 32,000 male statute adults. During those five or six years it has only come to my knowledge twice or three times that the man I was examining was an opium-eater. It has not been because I discovered it for myself, but because the man has asked for opium, and then it was discovered that he was an opium-eater. As regards his physical and mental condition, he was not to be distinguished from the other coolies. I ought to mention that every coolie sent to the West Indies is first examined by the Civil Surgeon up-country, then by myself, then by the ship's Surgeon, and then by the Inspector of Emigrants; also by the Protector of Emigrants, all of whom have, for many years past, been medical men; and yet we are sending a considerable number of opium-eaters to the West Indies. It is against the rules to send opium-eaters as emigrants to the West Indies, but we are so unable to detect an opium-eater that we are constantly sending them, as is discovered when they reach the West Indies.

3529. What is your opinion as to the attitude of the people towards the opium question?—I have made many inquiries, and I have had a great deal of conversation with opium-eaters and opium-smokers and with people who are neither, and I think there is a consensus of opinion among all of these, including the opium-smokers themselves, that the chandu and madat manufactures should be abolished. I distinguish between that and the mere abolition of the opium dens. I think that measure is absolutely futile, and that it will have no effect whatever on the consumption of opium as madat or chandu. Of that I am perfectly convinced. There is as much opium-smoking in Calcutta now as there was before the opium dens were closed. I myself believe that it would be a good thing to close these manufactories, to forbid absolutely the manufacture of chandu and madat in Calcutta. There would be a little discontent, among the Chinamen especially, but they are a small number, and special arrangements might be made in their favour. What would happen would be that the majority of those who now smoke opium would eat it, and there is no question that that is a comparatively harmless way of using opium. As regards the trade with China and the prohibition of it except for medical purposes, what the people ask themselves is—"who would benefit by such a prohibition?" They exclude themselves. Asked what would be the consequence of prohibiting opium, I believe their universal reply would be that it would lead to the increased use of both alcohol and ganja. There is, therefore, a suspicion, which, of course, I know to be absolutely unfounded in fact, that the agitation against opium is being got up in England in the interests of the liquor traffic. I have heard it repeatedly since I came back from Europe, and there is no doubt that the belief is very widespread.

3530. Of course you do not for a moment suggest it?—On the contrary, I know that those who are most actively engaged against the opium traffic are also equally strong against alcohol, but I share the belief that prohibition of opium would lead to a largely increased consumption of alcohol in India. This very morning I received a letter from a Missionary whom I have known for a considerable number of years, which I should like to read.

3531. (*Mr. Pease.*) Where does he reside?—I have not permission to mention the gentleman's name. I should like to be able to mention his name, but he has not given me permission. He is a resident in this part of India, and I have known him for 10 or 12 years. He says:—"I have seen the ill-effects of ganja and alcohol both in Bengal and Calcutta, but I have failed to discover the ill-effects of opium. I believe that any attempt to deprive the people of this country of this stimulant would prove as abortive as would any attempt to deprive the people at home of their beer and their pipe. It was said in a tramcar yesterday morning that the people of England were trying to make the people of India give up opium for alcohol, and that Government was trying to make the people here what the people in England are. 'What is that, I asked?' Quick as lightning came the reply 'Drunkards.'" Then, he adds "one swallow does not make a summer; but I must not take up more of your time."

3532. Have you nothing further to tell us?—I think I have said everything that I desired to say.

3533. You mentioned that a sensible proportion of the coolies, who were despatched under your supervision to the

West Indies, were, without your knowing it, opium-eaters ?
—Yes.

3534. Do you receive any complaints from the West Indies with regard to the inefficiency of those men for labour ?—It is made a matter of complaint that we pass those men. A complaint is made by the Colonial Government, but I do not know their reasons.

3535. You are inclined to draw the inference that some of those opium-eaters you send are, when they arrive, found to be, in consequence of their eating opium, inefficient as labourers ?—That possibly is the opinion held in the West Indies.

3536. May I take it that, so far as your experience in Bengal extends, the moderate use of opium in the eating form does not impair a man's efficiency for labour ?—In moderate use it certainly does not.

3537. Do you suppose that these people complained of in the West Indies were immoderate consumers ?—I think that when they go there they are probably brought under other influences, combining alcohol with opium, and under those circumstances the opium has probably a more deleterious effect than it would have in their own country where they are abstainers and live on vegetable food.

3538. I understand you to make a special recommendation that the preparation of chandu and madat should be forbidden ?—I should not be sorry to see it stopped. I will go further and say that I think it would be a good thing for the people who indulge in smoking opium if that could be stopped.

3539. Are those establishments, to which you refer, places where the operation is carried on, under license from the Government ?—The sale of chandu and madat is carried on under license; the smoking of opium is now carried on privately in what are called clubs.

3540. But the preparation is done in establishments under Government license ?—Yes.

3541. You think that no such licenses should be given ?—I should be glad to find that they were stopped altogether.

3542. (*Chairman.*) You know that chandu could be introduced from China ?—It could, and it could be made in India, but it is rather difficult to make; it requires to be made in quantity, and very few people would be able to afford the outlay to make a large quantity. Besides, the possession of a large quantity is, I believe, illegal.

3543. (*Mr. Pease.*) You have spoken of the difference between the effects of madat and chandu. Will you give us your opinion a little more fully ?—I think that the class of people who smoke madat are of a lower moral and general physique than those who smoke chandu. I have seen more madat-smokers with deteriorated health without any apparent cause except the madat; and then I have seen madat-smokers who are themselves of opinion that madat-smoking is extremely deleterious to the health. I think the belief is almost universal among them, and yet I have seen madat-smokers who have smoked 20 or 30 years and still retain a perfect physique. A considerable number of them, however, are of very poor physique, and I believe of very low moral standard generally. The way in which they smoke it in company leads to excess, as well as the effect which it may have itself. I am unable to explain why madat should be more deleterious than chandu, because madat is smoked through a hubble-bubble and ought to part with some of its ingredients to the water; nevertheless, whether it is from some difference in the preparation or whether because it is smoked in terribly hot and confined places, the effect is distinct upon the madat-smoker. I think I could recognise an habitual madat-smoker without any difficulty; I could not do so with an opium-eater or chandu-smoker.

3544. Are the chandu and madat-smokers men who belong to the same race, and are they of the same social position ?—They are of the same race; they are both Mahomedans and Hindus, but I think that, for some reason, the madat-smoker is of a lower social grade.

3545. I gather that you think landanum, opium, and morphia have less effect upon a European in India than upon one in England ?—I am not quite sure about that. It is many years since I practised in England. When I was a practitioner in England, I was very young; my impression is, however, that we give more opium here than they do in England, specially to European children.

3546. (*Mr. Wilson.*) I think you said you always carry opium about with you ?—When I travel.

3547. Is that chiefly with a view to fever or diarrhoea ?—Diarrhoea and cholera are chiefly in my mind. I never

suffer from fever. In the course of 21 years I have only been six days absent from my work from any cause, and that was from fever.

3548. With regard to the respective qualities of madat and chandu, I think we have had evidence from more than one witness—we certainly had it from one yesterday—just the opposite of what you state ?—I know the other opinion is held. I am aware that Mr. Westmacott, Excise Commissioner for some years, has expressed exactly an opposite opinion; but I disagree with him.

3549. In reference to the coolies whom you send to the West Indies you say that many come from the North-West ?—The larger number.

3550. Who pays the passage from the North-West to Calcutta ?—There are local agents who are supplied with money to send them down.

3551. And if you reject any of them here on whom does the loss fall ?—On the local agent for forwarding an opium-eater.

3552. He is supposed to keep a sharp look-out ?—Naturally.

3553. Purely for his own protection ?—Yes.

3554. I have a statement before me made by a medical practitioner at Sobagpur, who is M.R.C.S. and L.R.C.S., Edinburgh, a Parsee, and he says that in his opinion some 50 per cent. of native children who die die from taking opium.—Yes.

3555. I did not understand your evidence to relate to Sobagpur or the Central Provinces ?—No.

3556. So that it might prevail there ?—I can say nothing as to what happens in the Central Provinces.

3557. You were not referring to that district ?—No, only to Lower Bengal and Burma.

3558. Will you tell us a little more than you have told us about the dens you visited ?—Perhaps I may read an account of one of these visits, which was written on the very same day, and submitted to my companion to verify and correct, so that it may be taken as an accurate account of the visit :—

“Agreeably to my promise I re-visited the same opium den in the evening of Sunday, the 1st May. On this occasion I was accompanied by Dr. Tull Walsh, 1st Resident Surgeon of the Calcutta European General Hospital. The ‘back-shop’ was not so full as on the preceding evening. The farther end was empty, and only three opium lamps were burning. Round these were grouped fifteen men and one woman, evidently a prostitute. She was smoking a hookah. Only three men were actually smoking opium. The others were, as before, squatting or reclining on the platforms, several of them smoking tobacco, the others chatting. None of them were asleep. They were, all with one exception, Mahomedans. The exception was a Hindu. Twelve of the fifteen were strong muscular, plethoric men. One was a man of apparently sixty-five years of age, who, when the subject was broached, was loud and persistent in his denunciation of the opium habit. It destroyed, he said, the health and dried up the body. He had himself smoked opium for thirty-two years, and when it was pointed out to him that he for his age was in very fair condition, he explained that that was due to his always having had plenty to eat, and he modified his expressions by limiting his remarks to the case of those who, being poor, were unable to supply themselves with sufficient food along with opium. There was a very general consensus of opinion among those present that, under those circumstances, the habit of smoking opium was very pernicious, but with the ability to take a sufficiency of food, the habit, they said, was harmless enough. They certainly bore testimony in their own broad frames and brawny muscles and healthy-looking skins, bright eyes, and intelligent view of the question, to the harmlessness of the practice as far as they were concerned. Another old man of some fifty-six or sixty years of age, a lamp-lighter on board a steamer, had smoked opium for thirty years, and was to all appearance a hale man of his age. The gharami of the previous day was again present, and greeted me with a smile. He said he came every day at about 3 P.M. after his day's work and stayed till 6 or 6-30 P.M. He had been there for three hours then, and was intelligent, cheerful and bright, and was certainly not under the influence of opium in the ordinary acceptance of the expression, unless his brightness and intelligence were evidence of it. The smiling, shame-faced youth was also present. A deaf-mute, though not in the same rude health as the others, was still in fairly good condition. One individual did certainly look much below par, but that was due, the others said, to his not having enough to eat,—an opinion in which he seemed

*Surg.-Lt.

to acquiesce. Questioned as to the comparative harmfulness of alcoholic drinks and opium-smoking, they said—'Look at us, you find us here after two or three hours opium-smoking, sitting, talking quietly together; if we had been drinking like the sahibs (they referred probably to the European sailors who frequent the brothels of the neighbourhood) we should have been quarrelling and fighting.' We then went behind the counter where the good-natured landlord had my new opium pipe ready. He had cemented the 'bowl' to the stem with 'blubber' and lashed it on with string, and it was ready for use. He and I took up the correct position, reclining on the mat on either side of the 'fairy' lamp, and he proceeded to prepare the charge of chandu for me, and when it was ready, placed it on the 'bowl' (really a slightly convex surface with a small pin-hole in the centre, over which the 'bubbling opium mass is placed). Inverting the bowl over 'the flame of the fairy lamp I proceeded to inhale the smoke, which came in considerable quantity. It was perfectly non-irritating, and I filled my lungs with it at each inspiration as much as possible. The small hole over which the opium was placed was constantly getting blocked, and an iron wire had to be constantly used to clear it. I had the pipe charged three times, and smoked with the interruptions inseparable from the process for about ten minutes. The effect was absolutely nil, and getting no 'forrader' by that time, I did not think the game worth the candle and stopped. After my own experience of opium-smoking I was not surprised at the small effect noticeable in our friends of the 'den' several of whom stood on the other side of the railed counter and watched my performance with good-humoured curiosity. We paid two rupees each for our pipes, the landlord refusing to take anything for my smoke.

"Dr. Walsh tells me that while we were behind the counter altogether about a quarter of an hour or twenty minutes, about ten or twelve persons came to purchase chandu. It was sold to them in shells by two Chinamen seated there for the purpose. A shellful cost about three annas, but the usual quantity purchased was about five or six pice worth ($1\frac{1}{4}$ to $\frac{1}{2}$ annas). One man took away a rupee's worth in a small cylindrical wooden box."

Wishing to be extremely accurate, I sent my notes to Dr. Walsh and asked him to correct any error he might notice. On returning it, this is the remark which he made. "The man said that the boxes were made of cow's horn, not of wood." That was the only correction he had to make, so that I think the account may be taken as accurate.

3559. Was the consumption of opium on the premises prohibited at that time?—Not at that time.

3560. I believe you have paid a more recent visit?—Yes, I visited the same place on Thursday evening with yourself.

3561. Will you tell us what you saw?—We saw a very active sale of chandu going on. We asked the Chinaman to show us the process of smoking chandu, which he did. There was one man asleep, but he instantly woke up, and he assured us that he was not an opium-smoker. Another man was lying in bed, but on going to him I found that he was suffering from colic; he was not asleep. In the premises behind, which I mentioned as the back-shop, the description was no longer applicable. It was divided into a number of rooms, and in each of those rooms there were one or two what might be called divans or platforms surrounded by musquito curtains. Those are places used by Chinamen for smoking opium. There were, I think, three or four of those rooms, and they were capable of accommodating from four to six men each. On questioning the Chinaman, who accompanied us, as to how it was, that these places were there, he said they were used by their own employes, those employed in making chandu, which was being actively prepared in a shed close by. We then went to visit three or four opium clubs in the immediate neighbourhood.

3562. (*Chairman*) Will you tell us what number of persons were making chandu in comparison with the amount of accommodation provided for smoking?—I think there were four Chinamen behind the counter. There was one man taking the cash, another was ill with colic, and there were three or four perhaps employed in making chandu. That would be altogether about a dozen men.

3563. And there was accommodation for how many smokers?—Fourteen or fifteen I should think, not more. We then went to visit the opium clubs close by. We went to three or four of those clubs, and found four or five men in each of them. There was generally one engaged in smoking opium assisted by one of the others because

the process of smoking chandu is a rather difficult one. There was a woman in one of the clubs who was asleep, but she woke up; all the others were mates. One of the men frequenting the place was in extremely bad health. I had no opportunity of examining him to tell whether he was an opium wreck, or whether his appearance was due to some disease; but he certainly was a wreck.

3564. (*Mr. Wilson*.) Will you tell the Commission whether you got any information in one of those places as to the terms on which people came there?—Yes, we inquired into that point. Chandu must be apparently smoked by three or four people. They told us that when the chandu pipe is new it costs a rupee, but when old and seasoned it costs from four to six rupees. Apparently they smoke not only for the effects of the opium but for the flavour. An old opium pipe, like an old tobacco pipe, seems to be in favour, and it is beyond the resources of those men to have a pipe of their own, and they club together to smoke through one pipe. They stated that they purchased the opium individually at the chandu shop close by, and brought it there to smoke in company. The keeper of the club in one or two instances said that he made his profit entirely out of the refuse made from the pipes; that he was paid nothing by the smokers, and that the contents of the pipes were his perquisite, and that he sold this "dirt," as he called it, to the chandu makers, as it seems to be necessary for making chandu that the refuse of the pipes should also be used.

3565. I believe you had some conversation also with the people outside?—Yes, we had a conversation with some of the people, several of whom were opium-smokers, and others were not; the general feeling was in condemnation of the habit unquestionably. Even the opium-smokers themselves condemned it, and stated their willingness to give it up if they could do it. They also expressed an opinion that it would be well if those places were abolished altogether.

3566. In reference to the Railway experience that you have had, do you think that if a man were known to be an opium-eater or an opium-smoker he would be employed in a position of responsibility, for instance, as a signalman?—I think certainly he would be employed.

3567. It would not be any bar?—It would not be any bar to employment. The most intelligent servants we have in India are many of them opium-eaters. The men who do work in big offices in Calcutta, merchants' offices, the men in charge of the cash and of the discipline of the office, are generally, three out of four of them, opium-eaters.

3568. In reference to the deaths of children, I do not know what system of registration of deaths or the causes of death prevails in India; have you any means of getting at them?—There are no means of getting at the truth. I used to make it a point to go round the villages on my tours and inquire as to the number of deaths that occur within a specified time. I used to take notes of these and go to the police office in the neighbourhood to compare them with the registration that takes place there, and I found that the number registered was about 1 in 3.

3569. Of the deaths?—Yes, that was my experience.

3570. Is there any system of registration of deaths in Calcutta now?—The system in Calcutta is explained in the book of the Health Officers which I have handed in. It is done at the burning ghâts and the cemeteries. The agents of the municipality sit there and question the relatives of the deceased as to the cause of death. The statistics I allude to are obtained from these relatives as to who attended the patient during his illness, and so on. The object of Dr. Simpson was to get more exact statistics of the causes of death, and the discovery was made that 50 per cent. of the people died without any medical attendance.

3571. You said that within your own knowledge you had no cases of deaths of native children from opium though you had with Europeans?—Yes.

3572. The object of my question was to ascertain whether there were any statistics available in support of that information?—No statistics, but I may mention that besides the cases you are alluding to, these mofussil cases, my hospital was in a city of 80,000 inhabitants. The inhabitants of cities are much more given to alcohol, ganja and opium than people living in the mofussil. They are very fond of their children, that is one of the great points in the native character—their fondness for children; and I am certain if there had been any cases of opium-poisoning of children in Dacca, while I was there, they would have been brought to me for treatment.

3573. Do you believe that the people of Bengal at large are acquainted with the antiperiodic properties of opium,

and that they ask for it for fever?—They never ask me for it, because it is available to them without asking the doctors; it would never occur to them to ask me for it, because they can buy it from the opium vendor.

3574. Do you prescribe it as a prophylactic?—No, I have never done so.

3575. Neither to natives nor Europeans?—No, I have never served in an extremely malarious district. Dacca is not one of the extremely malarious districts. If I were serving in the Tarai, or spending the night in the Tarai, I should take quinine, but I would also take opium.

3576. (*Mr. Mowbray.*) With regard to the coolies I understand that the restriction is imposed by the Colonial Governor, not by you?—Yes, it is one of the conditions under which we work.

3577. I also understand that if the matter was within your own discretion you would not impose such a restriction?—I think not. If I were employing coolies, I would not inquire whether they were opium-eaters.

3578. With regard to your visit to the chandu shop, I suppose there is no special exception in favour of the Chinese in Calcutta?—Not as to the shops; this was spoken of as their private residence.

3579. The manufacture of chandu and madat can only be carried on under a license, I believe?—I believe so. It is open to any one to make chandu or madat, but practically it is difficult to make it in small quantities, and stopping the manufacture of chandu and madat would practically mean the extinction of opium-smoking by natives of India.

3580. (*Mr. Pease.*) Under a recent rule no one is permitted to manufacture madat or chandu even for private consumption?—That is the law of Bengal. I may be wrong, I have been absent from India for six months, and there may be a new rule now in force.

3581. (*Mr. Mowbray.*) If you prohibited licenses you would prohibit the manufacture of chandu altogether?—That is my belief.

3582. At present chandu is manufactured under license?—I believe so.

3583. Therefore by refusing to grant the licenses you would make the manufacture in any shape illegal?—Yes.

3584. That is what you are disposed to recommend?—Yes, with regard to chandu and madat, as used by the natives of India.

3585. You were two years at Rangoon?—Yes.

3586. I do not know whether you have formed any opinion with regard to Burma being on all fours with your experience in India?—I have not had sufficient experience to give an opinion of any value with regard to Burma.

The witness withdrew.

SURGEON-LIEUTENANT-COLONEL O'BRIEN called in and examined.

3599. (*Chairman.*) I believe you are Professor of Surgery and Descriptive Anatomy in the Calcutta Medical College?—Yes.

3600. Have you had many opportunities of studying the effects of the opium habit on health?—I have had a fair opportunity of doing so, especially as a Civil Surgeon, that is, a District Surgeon, in two large districts in Bengal.

3601. Before you had your present post?—Yes. I was Civil Surgeon of the large district of Burdwan off and on for 3½ or 4 years, and I served in Shahabad, in Behar, for about 18 months.

3602. Did you see a good deal of the opium habit?—I had numerous opportunities of observing it, inasmuch as I lived amongst an opium-eating race in a greater or less degree. I believe opium is more consumed in Behar than in Lower Bengal, but I can say that very little of this habit presented itself to my notice.

3603. What has your experience led you to conclude with regard to the opium habit? In the first place do you distinguish between the opium habit as moderate and as excessive?—Yes, I draw a marked distinction between the two. It would be impossible to recognize a moderate opium-eater. You might as well expect to recognize whether a man drinks tea or coffee. When opium is taken in moderation it has no ill-effect upon the constitution that I am aware of.

3604. What do you say as to the question of excess apart from the subject of disease?—Let me premise by saying that my evidence refers entirely to eating opium. I have

3587. (*Mr. Fanshawe.*) With regard to what you have stated as to the habit of opium-eating being taken up as a rule in advanced life, you are speaking of Eastern Bengal and Calcutta?—Eastern Bengal and Calcutta.

3588. The experience may be different in other parts of India?—I only speak of my own experience.

3589. The broad result of your general experience is that opium is common to most houses as a domestic remedy?—I should not say it was common, for I believe that a great many houses would be searched without finding any opium at all. The point I wanted to make was this, that if repressive measures are used, they will soon become oppressive, so that those who wish to have opium for legitimate purposes, for disease as well as for the failing of old age, will be unable to get it.

3590. You say that it is commonly used as a domestic remedy in Eastern Bengal?—I believe it is.

3591. (*Mr. Wilson.*) With regard to your visits to the dens on Thursday, I did not ask you what was the nationality of most of the people?—Most of them were Mahomedans unquestionably. I did not take a note of their nationality. I saw no Chinamen inside the opium clubs. I should think that nine-tenths of those present were Mahomedans. I cannot say whether there were Hindus there or not; those that I remember were distinctly Mahomedans.

3592. You mentioned just now to the Commission that the Chinamen said that these divans or platforms were for the use of those employed about the place?—That is what I understood.

3593. You would not like to tell the Commission that you were convinced of the accuracy of that statement?—I should not like to give an opinion. I only saw a certain number of men. I do not know the actual number employed.

3594. You simply repeat what you saw?—Yes.

3595. You would be sorry to endorse it from your impressions?—I could not endorse it: I do not know.

3596. (*Mr. Fanshawe.*) You are not prepared to express any opinion on the subject?—I am not prepared to express any opinion on that subject.

3597. (*Mr. Mowbray.*) Was an explanation given to you of what was *prima facie* an illegal position?—I should be sorry to say that it was illegal. I have no grounds for saying it at all.

3598. (*Chairman.*) Have you any medical or chemical explanation of the difference in the effects of chandu-smoking and of madat-smoking?—I have no grounds to go upon for giving any opinion. I have heard opinions expressed, but I think they are only fanciful. I know of no real grounds for an opinion.

no experience whatever of smoking opium. I was not aware that it was smoked at all, or at any rate to any noticeable extent in the two big towns in which I served. I was in Burdwan for 3½ years, I think I knew every hole and corner of the town. I was consulted most extensively by natives; I knew them and was familiar with them, rich and poor. I attended the dispensary every day—two large dispensaries with an aggregate of 300 patients per diem.

3605. You knew that a considerable number of those did use opium?—I knew that a considerable number used it, but I think the number has been exaggerated. I would be inclined to say that the number of adult males using opium in a malarial district like Burdwan did not exceed 5 or 6 per cent of the total population. Five per cent. would be I think a high estimate of adult males; indeed, I would say elderly males, because I never knew a young opium-eater in my experience.

3606. Will you tell us whether you have heard the evidence given by Dr. Harvey and Dr. Crombie, and whether you substantially agree with that evidence?—Yes, I substantially agree with all that was said by Dr. Harvey, because his experience like my own relates to the eating of opium. Dr. Crombie gave a good deal of information about the smoking of opium as to which I know nothing. There is another point upon which Dr. Crombie gave his opinion and the results of his experience as to the use of opium in larger doses amongst children and people generally in this country. I have had no such experience. I have confined my doses of opium to doses similar to those administered at home, as a rule. Except in the case of opium-eaters, when a much

larger dose had to be given. Latterly my experience has been enlarged in the treatment of fevers, and I have come to recognize what Dr. Crombie has also recognised, *viz.*, the disadvantage of quinine in many cases and the undoubted remarkable benefit to be derived from the use of opium.

3607. Would you like to call the attention of the Commission to anything that has come within your own experience?—In 1881 I lived in Burdwan when cholera and fever were enormously prevalent. The death-rate in the last quarter of this year or 1882 exceeded a decimation rate. People died at the rate of about 12 per cent. as far as I can remember in that quarter. Cholera was prevalent and fever prevailed everywhere. Every European in the station was laid low with it. One day I had fever myself and I had a letter from every European in the station asking me to go and see him because he was ill with fever. At that time I had as my assistant a medical practitioner of great intellectual power and professional ability. He was a very weakly man, tall and thin, with a very poor physique. He escaped through all this illness that laid us low on every side. I said to him "How has it happened that you managed to escape, a weakly fellow like you, when we are all knocked down?" "I think," he said, "that I owe my immunity to the fact of taking 3 or 4 grains of opium every day." I have known opium-eaters who have taken over 100 grains.

3608. (*Mr. Pease.*) In what period?—In the 24 hours, the morning dose, consisting of 2 pills about the size of small marbles. Among my acquaintances was a gentleman, respected, benevolent, and intelligent, connected with the Burdwan Raj, occupying a position as Minister in the Raj. He died at an advanced age, about 75. His daily dose was over 100 grains, but he was well nourished, active, rarely ill, and, to the best of my knowledge, exempt from the attacks of malaria which were so fatal in the town. I was consulted by his family and I saw many people in his house, but he was never ill himself. He was a large opium-eater, but he did not suffer in any degree from the opium cachexia. As I look back over my twenty-three years' experience of India, most of which was spent in the mofussil and in Assam, a long period in the hills, and a good deal in Bengal, I can only recollect three or four cases of pronounced opium cachexia, that is, ill health due to opium only. I do not think this opium cachexia could exist without my knowledge.

3609. (*Lord Brassey.*) In your experience would you say that the consumers of opium in moderation were the many, and the immoderate consumers the few?—In my experience I may say that the moderate consumers form the large majority.

3610. (*Mr. Wilson.*) I understand that, except in the point specially mentioned, you substantially agree with Dr. Harvey and Dr. Crombie?—Yes, with reference to eating opium.

3611. With regard to its use as a domestic remedy

The witness withdrew.

SURGN.-LT.-COL. JAMES FREDERICK PARRY MCCONNELL called in and examined.

*Surgn.
Lt.-Col.
J. F. P.
McConnell.*

3622. (*Chairman.*) I believe you are a Professor of *Materia Medica* in the school here?—Yes.

3623. That would naturally lead you to study the opium question from a professional point of view?—Yes.

3624. What opportunities have you had of observing the opium habit in India?—My opportunities have been confined to Calcutta. I have been stationed in Calcutta nearly the whole of my service.

3625. Has your experience been confined to any class or grade of society or pretty evenly through all grades?—Through all grades. I have been connected with one of the largest native hospitals here, and my practice as a consultant has been one of the largest among the native population.

3626. Will you tell us how far this opium habit in Calcutta prevails?—I have never inquired into the matter particularly, but I should say, roughly speaking, about one per cent.

3627. Of adults not more than one per cent.?—I think not; my experience would lead me to say not more than one per cent.

3628. In the cases you have observed in which opium has been used habitually, what results have you noticed?—My experience has been, that where it has been used habitually, the use with very few exceptions is moderate, and as to the results, so far as I have been able to judge, no harm has been done either morally or physically.

would you say that people keep it in their houses for that purpose or purchase it when they want it?—I think they purchase it when they want it, as far as my knowledge goes.

3612. I believe you are connected with one of the large Insurance Associations?—I am.

3613. Will you tell us the practice of your Association or your experience in connection with it?—My experience in connection with it is that but very few acknowledge the opium habit, and I have no means of detecting it. One of the questions that I have to ask is "Do you consume ganja or opium?" Everybody almost without exception says "no." Occasionally, I dare say, one may take some, and perhaps one in a hundred will acknowledge it. I have no means of detecting it.

3614. You had no cases in which you could say from the man's appearance that he consumed opium?—Of course any one who is a pronounced opium cachectic would not come to me because he would know that he would be rejected; the sub-agent would not bring such a man.

3615. He would be stopped before he came to you?—Yes; I should think so. I never see such cases.

3616. Then practically except for the question being in the proposal form, you would not recognize it in connection with the Insurance Company?—I do not recognize it because I do not see it.

3617. My point is that the Company would equally accept proposals for insurance from persons who take opium and from persons who do not?—For my own part, if a man said that he was a moderate opium-eater, and if his condition was good, I should feel inclined to pass him; but as I have told you, such cases have not really come to me. If I asked the man how much opium he took and he said four grains, I should not consider that a case for rejection.

3618. In your dispensary at Burdwan did you give opium to the people who came with fever?—No, we never used opium for the treatment of fever, unless insomnia occurred.

3619. Did you recommend opium to Europeans under your charge as a prophylactic?—I never recommended it, but I know it was largely used as a prophylactic.

3620. Do you think it was employed in Burdwan in order to cure fever?—Not that I know of. It is employed as a prophylactic in small doses.

3621. (*Mr. Mowbray.*) Do I understand that you agree with the last two witnesses, not only in their opinion as to effects of opium-eating, but also as to the practical difficulties, amounting in their opinion to impossibilities, in limiting the consumption to what is required for medical purpose?—I think it would be absolutely impossible. It would give rise to smuggling and to difficulties of all descriptions which it would take some time to think over and point out. As far as I have thought over the question, the difficulties appear to be practically insurmountable.

3629. Have you seen examples of opium used in excess by itself?—I have.

3630. I should be glad to know whether in any case of that sort, where there has been no sickness or poverty or starvation or semi-starvation, what the effect of the isolated opium habit in excess has been on the state of health?—I have only seen it used in excess in a few cases; I do not suppose I have seen more than three or four, and they have been all in consequence of disease; the habit has been acquired in the first instance in consequence of disease, and has grown until large amounts have been taken.

3631. You have not seen an opium drunkard pure and simple?—No.

3632. From your knowledge generally would you agree with the conclusions arrived at by Dr. Harvey and Dr. Crombie?—Yes.

3633. Have you any further particulars which you wish to give?—No.

3634. (*Mr. Pease.*) I believe you are of opinion that there should be some restriction upon the unlicensed sale of opium by retail vendors? Have you any suggestions to make on that subject?—I do not know how it would be carried out, but I think it would be desirable.

3635. You say it is necessary, in order to prevent suicide?—Yes, because the numbers of cases of suicide are very numerous, and the drug is easily procured. There is some restriction, but it is a slight one. A person cannot

obtain more than one rupee's worth from each shop. That would be more than sufficient for suicidal purposes; but if it were not, there is nothing to prevent a person from going to half a dozen shops and getting a rupee's worth from each. I do not know how it can be worked, but it would be well if some means could be devised of limiting the quantity that could be purchasable.

3636. What do you say is a sufficient quantity to kill a woman?—Ten or twelve grains would be sufficient

3637. What would a rupee's worth amount to?—430 to 440 grains.

3638. Then a fatal dose might easily be obtained for one rupee?—Yes.

3639. (*Mr. Wilson.*) How much is sufficient to kill?—From 8 to 10 grains.

The witness withdrew.

SURGEON-LIEUTENANT-COLONEL R. C. SANDERS, M.D., called in and examined.

3644. (*Chairman.*) I believe you are Professor of Ophthalmic Medicine and Surgery in the Medical College?—Yes.

3645. Have you in your previous service had many opportunities of observing the opium habit?—I was many years in the North-West Provinces, and when there I came across a considerable number of people who admitted having taken opium. I was in the North-West Provinces from 1874 to 1884.

3646. Did you pay special attention to the opium habit?—I noticed the people carefully.

3647. Did you notice any ill-effects?—I never could see any ill-effects. I had to find out by asking them, and it was only when they had a certain confidence in me that they would tell me; but I have never seen anybody badly affected from the opium habit in any case that I have attended in India.

3648. In cases where you have known opium to be used habitually, were they moderate cases?—Moderate.

3649. Did you see many cases, apart from disease, where the dose is increased by the habitual eater?—I think as people get a little older they slightly increase the dose, but they do not do so to any very large extent. It is

The witness withdrew.

BRIGADE-SURGEON-LIEUTENANT-COLONEL PURVES, F.R.C.S.E., called in and examined.

3653. (*Chairman.*) Have you had considerable opportunities of witnessing the effects of the opium habit in India?—I have, in my general practice and work during the last 2 years.

3654. In Calcutta?—In different parts of India. For a short time I was in the North-West, then I was in Assam three years; Assam was then part of Bengal. The rest of my service has been in Bengal.

3655. I believe, according to your experience, the consumption of opium in Bengal does not obtrude itself on one's observation in the way that the effects of alcohol do at home?—It does not.

3656. And you do not consider that the moderate use of opium produces evil effects on the physical and moral condition of the people?—I do not.

3657. In malarial tracts do you think that the people look upon the drug as a kind of prophylactic against disease?—Yes.

3658. Are you of opinion that it does help in malarious districts?—That is my opinion. I have known in malarious districts a great number of people take opium in small quantities: they say it relieves them of fever and complications connected with malarial disease, such as dysentery and rheumatism.

3659. What was your experience in Assam?—When I went to Assam almost fresh from home, I was prejudiced against the use of opium in the way it is used in India. At first I thought that some of the miserable cases that came into the hospital were due to opium, but after more experience I found that they had taken opium on account of malarial disease, and that probably it had prolonged life and relieved their sufferings.

3660. You have not seen any real damage to health from the opium habit standing by itself?—I have never seen a case where I could trace death to opium alone, without disease having been present at the same time.

3640. That would only be 2 pice worth?—Yes, I am talking of persons unaccustomed to use opium and buying it simply for the sake of committing suicide.

3641. A person habituated to opium in what might be called moderation would require more?—Yes.

3642. In the same way in your practice, if a person has become what I think you professionally call tolerant of opium, you have to give a larger dose medicinally to accomplish the same purpose than you would give to a person who is not accustomed to it?—That is quite true.

3643. You have no statistics on the subject?—I have roughly worked through my own cases, and I find that last year, 1892, in my own wards in the hospital we had 53 cases of opium-poisoning.

Surgn.-Lt.-Col. J. F. P. McConnell.
25 Nov. 1893.

quite an exception for a man to take an enormous dose of opium.

3650. The tolerance becomes greater perhaps?—It may be slightly greater. I do not think it comes on quickly; they do not go on month by month or week by week, but perhaps in five years or so they will slightly increase the dose.

3651. Have you seen any cases of injurious effects from decided excess in the habit?—I have never seen any cases of decided excess.

3652. You have heard the evidence that has been given at great length by Dr. Harvey and Dr. Crombie: may I assume that you agree with their evidence?—I agree with their evidence almost in its entirety. I do not know much about opium-smoking. There is one point to which I should like to refer. Dr. Crombie stated that it was a common opinion amongst the people in this country that the Opium Commission has something to do with the distilleries of whisky and gin. I have heard it in five different places in Calcutta within the last three days, that the whole question has been brought up in order to get more whisky and gin imported into this country. I have tried my best to deny it absolutely; but there is that opinion, and I have no doubt that it will increase.

Surgn.-Lt.-Col. R. C. Sanders, M.D.

3661. Have you seen poverty induced by the opium habit in excess?—Not where I have been able to verify it personally.

3662. Would you agree generally with the evidence that has been given this morning of the effects of opium on health?—I generally agree that the moderate use of opium in this country is rather beneficial than otherwise. If opium were stopped, they would take to much worse things, such as drink and ganja, to a greater extent than at present.

3663. Is there anything else that you would like to state by way of supplementing the evidence that has been given?—The great difficulty is to find out the signs of opium-eating. In this country a great number of respectable inhabitants amongst the middle class natives eat opium to a considerable extent, nobody suspecting them. They carry on their duties in such a way that nobody would suspect them of taking opium. Only a few days ago I met a native gentleman who said that most of his friends who lived near him (about 24), took opium more or less, and that all were driven to it on account of disease and fever and general ailments, and that they were now doing their work in a way that they had never been able to do before they took opium. This gentleman did not take it himself. Only yesterday I discovered to my surprise that two of my best servants had been opium-eaters for years. I had never suspected them.

3664. Is there any further remark you desire to make?—It has been said that the use of opium is a very common cause of suicide. I quite agree with Dr. Harvey that no doubt in different parts of India people have different methods of committing suicide. The other day I asked a native gentleman his opinion, whether he thought prohibition would prevent suicides, and he said, "If opium is to be done away with in order to prevent suicide, clothing will also have to be done away with,

Brg.-Surgn.-Lt.-Col. Purves, F.R.C.S.E.

Brg.-Surgn.-Lt.-Col. Purves, F.R.C.S.E.
25 Nov. 1893.
because there are far more suicides from ropes made from garments than there are from opium." During the last year out of 35 police cases sent in as suicides, only 6 were from opium. Twenty-seven cases were cases of suicidal hanging, two were from drowning, and six were from opium.

3665. Those numbers are official?—Yes, from the Howrah District.

3666. Is there any further remark you desire to make?—I have only to say that to stop the growth and sale of opium in India would be almost impossible on account of the amount of smuggling that would go on.

The witness withdrew.

Surgn.-Lt.-Col. E. G. Russell.

SURGEON-LIEUTENANT-COLONEL E. G. RUSSELL called in and examined.

3667. (*Chairman.*) Have you had considerable opportunities of studying the habitual use of opium?—Yes. Considerable in Assam for several years. For seven years I was in Assam, and since then in a great many districts of Lower Bengal, 24-Pargauas, Hooghly, Rajshahi, Nuddea and Patna.

3668. You mentioned Assam first, I think?—I was in Assam first. I was there seven years.

3669. What part of Assam?—Lower Assam, in the district of Kamrup.

3670. Is that a large town?—Kamrup is a district, the town is Gaubati.

3671. What percentage of the population are opium-eaters?—From 5 to 10 per cent.

3672. What province does that apply to?—To the Province of Bengal.

3673. You mean 5 or 10 per cent. of the total population of adult males?—Adult males.

3674. Have you observed any racial difference in the susceptibility to opium of the different Indian races?—No, I cannot say that I have.

3675. Have you had any experience in Orissa?—None in Orissa. No personal experience.

3676. What is your experience with regard to the diffusion of the habit through the mass of the population?—High and low. I do not think that the opium habit is confined to any special social stratum of the people.

3677. What is your impression as to effects of opium-eating on the health and morals of the people?—I think that in the malaria-stricken regions, especially among a population insufficiently and unsuitably clothed and indifferently fed its effects are decidedly beneficial, leading to a healthy life and longevity.

3678. You do not know of any disease produced by the habitual use of opium?—None. I do not think that any disease or any susceptibility to disease is produced by the moderate and habitual use of opium.

3679. You have heard the views expressed by Dr. Harvey and Dr. Crombie: does your experience coincide with theirs?—Practically.

3680. So far as the effect on health and morals is concerned?—Yes.

3681. Is there anything else you wish to add?—I may add a word to what the other medical witnesses have said as to the opinion that is extant with regard to the connection of the anti-opium agitation with the interests of the

distilleries of home. The fact that it is groundless will scarcely interfere with the spread of the belief among the population of India.

3682. (*Mr. Wilson.*) I think you are the author of a book on malaria?—Yes.

3683. I have a copy of that before me published in 1880. Do you adhere to the views therein expressed, or have you modified them materially since you wrote that book?—I have to some extent modified them. I have had 13 years' more experience.

3684. You say in the second chapter:—"The opium-eater enjoys considerable immunity from malarial affections, in the early stage—the first few years of indulgence in the habit, before organic visceral changes are set up, and the general shattering of constitution results, which prematurely break down the consumer of opium, and render him an easy prey to diseases of every kind." And further on there is something of the same kind as to the opinion of other surgeons, which would look as if you thought that it did some good at the beginning, but ultimately destroyed the man?—The mischievous effects of it are confined to the opium sot, the drunkard, the excessive habitual user.

3685. You refer to the "opium-eater," which would hardly convey the impression of an opium sot?—It is to be taken with that meaning, as you will see if you look at the context. I desire it to be so taken.

3686. Further on you say:—"The prevalence of this habit is the curse of our jail populations in Lower Assam. No work can be got out of the long-confirmed opium-eater." That does not seem to convey to an ordinary lay reader the idea that you speak of an opium sot?—It is the opium sot that I am speaking of, as will be seen from the context in the next few pages.

3687. Further on you say:—"The observations of several surgeons, of extensive experience in opium-eating regions, confirms the popular belief that the opium-eater, in the early stages of the habit, while as yet not constitutionally broken by its long continuance, does, as a matter of fact, enjoy considerable immunity from malarial affections." I think you will agree that the term "long continuance" is hardly the same as excessive use?—It means excessive and long continued use.

3688. You quote, apparently with approval to Dr. Garrod in his *Materia Medica* that "there are other remedies which possess greater anti-periodic powers, without the narcotic properties." You agree with that probably?—Yes.

The witness withdrew.

SURGEON-MAJOR R. COBB, M.D.

Surgn.-Maj. R. Cobb, M.D.

3689. (*Chairman.*) You are a Surgeon-Major in the Indian Medical Service, I believe?—I am.

3690. How long have you been in the service?—About 17 years.

3691. What have been your duties during that time?—During a greater part of the time I have been in civil employ in Lower and Eastern Bengal. I have had charge of some hospitals in various parts of Bengal.

3692. Have you had charge of any lunatic asylums?—Yes. I am at present in charge of the Dacca Lunatic Asylum. I have held executive and medical charge of Central and District Jails, and I have charge of the Mitford Hospital at Dacca.

3693. Have you exercised your profession among Europeans and Natives?—Yes.

3694. In what part?—In Dacca.

3695. How far, in your large experience, do you think the opium habit has extended amongst the classes you have to do with?—I estimate from about 3 to 5 per cent. of Hindus in Dacca and the neighbouring parts.

3696. Do you mean adults or the whole population?—The whole population.

3697. Then that would be about 20 per cent. of the adult population; is it so common as that?—Very common; it may be as much as 20 per cent.

3698. Is it confined to one class?—No; the Mahomedans take it to a greater extent than the Hindus.

3699. Do the rich and poor take it?—Yes.

3700. Is any stigma attached to the practice?—Not to the moderate use; only to opium-smoking.

3701. Is opium-smoking unfashionable in Dacca?—It is not fashionable amongst the higher classes; the poorer, low class people may smoke to some slight extent.

3702. They smoke madat?—I do not know whether it is madat or chandu; I do not know the composition.

3703. I believe madat is smoked in an ordinary pipe like tobacco?—I do not know; I see it so little; one does not come across it.

3704. After all your experience do you think that the opium habit is an innocuous habit in India?—I believe the moderate use of opium to be quite an innocuous habit.

3705. In your district do you consider that on the whole the use of opium does the people more good than if they

did not use it?—I believe in a large number of cases it does, essentially.

3706. Do you think that without it the public health would suffer?—I think it would deteriorate if they did not use it.

3707. Of course you recognise that it does produce ill-effects when taken in excess?—I have never been able to distinguish between the ill-effects of an excessive use of opium and the effects of the diseases for which the opium is taken. Men are admitted to the jail who are said to be excessive eaters and smokers, and they beg for opium, but I have always found that they were suffering from chronic disease.

3708. You have had medical charge of hospitals and jails?—Yes.

3709. Have you seen anybody brought to the hospital from the results of opium-eating?—Never. I have seen them in jails, as I have explained, but not in hospitals.

3710. You have never had any applications for treatment for the opium habit?—No.

3711. Was it your practice to cut off the supply of opium-eating prisoners?—In nearly all cases the supply was cut off immediately. Just as the use of tobacco is prohibited.

3712. Did you cut off the supply of opium to the prisoners?—In nearly every case.

3713. Not in all cases?—Not in all. There are some cases in which men are admitted with chronic diarrhoea and in which I have deemed it wise to continue the habit, at any rate for a time.

3714. With regard to the others, do you stop it at once?—In the case of moderate eaters I am in the habit of stopping it at once.

3715. In the case of people who take 10 or 12 or 14 grains a day you stop it gradually?—I try to let them down gradually.

3716. Does that represent the common practice in India do you think?—The common practice is to stop it at once in the case of moderate eaters. The excessive eaters are very few. Perhaps you may come across one case in a year in a large jail with 1,300 prisoners.

3717. Have you seen much suffering from stopping opium in the case of prisoners?—Only in those rare cases in which chronic diarrhoea exists; then diarrhoea breaks out and causes a certain amount of suffering.

3718. Sometimes very sharp suffering in the case of these excessive users?—For a short time very considerable suffering.

3719. For a few days, or weeks?—Perhaps a few weeks if the opium is stopped suddenly.

3720. One witness told us that the work done in jail by habitual opium-smokers was apt to fall short of what it ought to be if the opium was withheld; have you noticed that?—No, except in these rare cases.

The witness withdrew.

SURGEON-CAPTAIN J. H. TULL WALSH called in and examined.

3738. (*Chairman.*) I think your experience with regard to the use of opium has been confined to the Lower Provinces?—Almost entirely as Civil Surgeon of Puri, which is a large district in Orissa, as Health Officer of that district, and as Medical Officer of the Presidency Jail here, and of the Jail in Puri; that has been principally where my experience has been, apart from such use of opium as is made regimentally, among transport coolies and the like.

3739. I believe your experience has been that opium is largely consumed?—I believe it to be largely consumed; I know it from my experience to be very considerably consumed.

I have seen in Puri itself, which is yearly filled by a large number of pilgrims, lakhs of people; and being Health Officer in charge under the Lodging-house Act, and having personally examined all these places, I say without hesitation that among these persons opium is freely used.

3740. (*Mr. Wilson.*) What are they?—The principal inhabitants of the Province of Orissa are Ooryas.

3741. (*Chairman.*) Have you seen any ill-effects from the moderate use of opium?—From the moderate use I have never seen any.

3742. What have you observed in regard to the excessive use?—It has been stated to me that certain

3721. May one assume that the majority of these prisoners would be opium-users?—Yes. *Surgn.-Maj. R. Cobb, M.D.*

3722. You agree substantially with what you have heard?—Yes. *25 Nov. 1893.*

3723. Have you anything else to add?—I think that sufficient stress has not been laid on the use of small moderate doses of opium as a dietetic. In the damp climates of Eastern Bengal the poor natives are in the habit of eating largely of rice, and a peculiar sensitiveness of the bowels seems to exist in those damp climates. As a man advances in age, digestion fails to some extent, and the food is hurried through the intestines. Opium is a remedy to prevent this. The effect of hurrying food through the intestines is to cause diarrhoea, dysentery and other allied affections. Opium in small doses prevents this, and it is largely used among the poor in Eastern Bengal.

3724. That seems paradoxical to us medical men from England?—It does.

3725. You see a distinct difference?—It is in consequence of the large rice meals they take.

3726. Have you noticed constipation to be a troublesome symptom in the case of opium-eaters?—Not in the moderate use.

3727. When they take their food well?—When these men are advanced in life it helps them to digest their food.

3728. Are they usually spare and thin?—No.

3729. You have not noticed any loss of flesh?—Only in the case of excessive eaters; in which disease may have equally had something to do with the spareness.

3730. Have you anything else to say?—I do not think that any restriction can be placed on the use of opium. Indeed, I think it should be distributed more widely. The Government of Bengal lately sent quinine to all parts of the country through the post offices, and I think it would be a good thing if opium were sent in a similar way and distributed with equal facility.

3731. You have had no experience of madat-smoking?—No; very little.

3732. (*Mr. Pease.*) Is there any public feeling in Dacca on the subject of opium consumption—any feeling averse to the practice?—No, except with regard to these smokers, and they are not much thought of.

3733. Were you in Dacca in the spring of 1892?—No, I was not.

3734. You cannot give me any information with regard to a meeting that was held there at that time at which resolutions were passed strongly adverse to the opium trade?—No.

3735. (*Mr. Wilson.*) You have been speaking chiefly about opium-eating?—Yes.

3736. A question was put to you about prisoners who had been in the habit of opium-smoking; perhaps that was only a slip, and you spoke generally about eating?—Yes; I had seen one or two cases of opium-smoking.

3737. But what you have said about prisoners referred principally to eating?—Yes.

persons admitted into the jails in an emaciated condition are excessive opium-eaters, but I am utterly unable to say from any symptoms that I have seen that the man has been suffering from opium-eating rather than from starvation. I do not believe it possible for any one to distinguish an excessive opium-eater.

3743. Have you ever made a *post-mortem* examination of an excessive opium-eater?—I have made several in jails of persons who have been said to be opium-eaters, but I have had no knowledge on the subject, and I say further that such knowledge is impossible except from the statements that are made.

3744. There is a great contrast in that respect between alcohol and opium?—Distinctly. There is no such degeneration in any organ of the body as is seen in the case of alcohol. There is a certain amount of congestion of the vessels of the brain with its concomitant reactions, nothing farther, but that is from poisonous doses, and it is only a temporary, not a permanent lesion.

3745. It appears that apprenticeship to the opium habit is very much like apprenticeship to smoking?—Very much indeed.

3746. For what purpose do you think people usually begin the habit?—I think partly from the tradition that opium is useful for disease, which they find to be confirmed

Surgn.-Capt. J. H. T. Walsh.

Surgn.-Capt. J. H. T. Walsh.
25 Nov. 1893.

by experience; also partly from social habit. Persons who take opium find enjoyable effects from it, and it becomes a use amongst them as wine does amongst other people. Then in India, where the standard of health is always low, even for the most healthy, it is used to combat various pains, aches, and diseases.

3747. You mean chiefly in malarial districts?—Not only there, but very largely among the people; without any prescription from the doctor. A man takes opium because it is traditionally good for disease, and the tradition is borne out by experience.

3748. Have you noticed the practice of giving opium to infants?—I have no absolute instances to bring forward, and I can only repeat what is the general opinion as to the custom. It is stated by the natives themselves, and I agree entirely with Dr. Crombie on the subject that it is a common practice among mothers, and that it extends to European children who are nursed by ayahs, much to their injury.

3749. It is injurious when given to a European child?—I take it that large doses would be injurious, but I have no personal knowledge on the subject; I simply say that a large dose would be injurious to any child not accustomed to it.

3750. Have you had any experience of the effect of malarial disease in the district of Dacca?—I know nothing at all about the Dacca district.

3751. In Orissa?—Certainly. I was in charge of the large native hospital in Puri, and as Civil Surgeon I had to direct the energies of my assistants in the smaller dispensaries throughout the district.

3752. Did you find cases of enlarged spleen?—Yes, but fevers accompanied by enlarged spleens are not so common as the type of fever not so accompanied.

3753. There is more than one type?—I believe there are two distinct diseases which have got muddled up under the head of "malaria."

3754. You have not encountered these enlarged spleens in infants?—Not actually in infants, but in very young children.

3755. Two or three years old?—From one to four or five.

3756. Do you attribute that to malarial influence?—Always.

3757. Do you agree with the evidence we have heard?—Yes, generally.

3758. You think that to cut off the supply of opium to the people of these districts would do more harm than good?—I think distinctly it would do more harm than good.

3759. Have you any further information that you would like to lay before the Commission?—I agree entirely with Dr. Cobb in his explanation of the dietetic use of opium. The diet of the native of India is to start with most indigestible and productive of a loose form of fæces. I think that

opium would probably prevent their suffering from diarrhœa produced by unwholesome dietary articles which from their poverty they are obliged to eat. There are some forms of rice which the natives would tell you at once are bad because they produce diarrhœa, but the poor man is obliged to eat them because he can get no other. With regard to the fact of opium being easily obtainable, it must have occurred to every Civil Surgeon to have opium sent to him by the Magistrate of the district in which he has lived, as confiscated, that he may see whether it is fit for human use. Of course it always is. It is generally adulterated with sugar, and sometimes with lime. Although I have been Civil Surgeon only a short time in the district, on eight or ten occasions large lumps of opium, as big as one's fist, have been confiscated and sent to me to state whether I considered that they were fit for human use or not. Having stated that they were, I returned them. It is quite easy to obtain opium; and any attempt at a preventive service when dealing with those who, so far from preventing would assist people to attain it would be a more waste of time.

3760. (*Mr. Wilson.*) You are aware that opium is a much higher price in Orissa than in other places?—I am not aware of it.

3761. Do you consider that Orissa is a very malarious district?—In parts, but there are parts that are extremely healthy. You can obtain evidence of its malarial condition from the Sanitary Commissioner, who ten months ago presented a special report on the subject.

3762. Some parts are healthy and some bad?—Yes. It is more or less due to geological distribution. The hilly north-west portions are not malarious.

3763. Do you agree with the opinion that has been expressed that where people are very poor and have great difficulty in getting food opium helps them?—It helps them to bear up. One must admit that it would be far better if they would buy more food and no opium. But we know what human nature is. I think that opium does hold them over their difficulties, both as regards disease and as regards the indigestibility of the common food they have to buy.

3764. You mentioned particularly Puri; where is that?—It is one of the most sacred cities in India; and it contains the second largest Hindu Juggernaut Temple.

3765. Is the town a healthy place?—The town itself is particularly unhealthy. It is kept away from the sea breeze by high banks and by the European quarter. During the rains the greater part of it is under water.

3766. Are the people poor?—Not very poor, except in certain confined districts. They make a very rich living out of the pilgrims who visit the place. The pilgrim is often poor when he gets there, and poorer when he goes away.

3767. Do you know what is the death-rate?—I ought to know perfectly well as I have written reports on it, but I cannot carry it in my head.

The witness withdrew.

Surgn.-Lt.-Col. Crombie.
M.D.

SURGEON-LIEUTENANT-COLONEL CROMBIE, M.D., recalled.

3768. (*Chairman.*) I believe you wish to make a statement?—I wish to explain what I meant when I alluded to the stopping of the manufacture of chandu and madat. I was asked if I would advocate the stopping of the manufacture of madat and chandu. I wish to say I am not here to advocate any policy. I merely express an opinion as to the comparative deleteriousness of certain ways of using opium. When I expressed an opinion as to the clos-

ing of those places of manufacture it had reference to the one thing which is constantly in my mind, that is, that the subject of opium is inextricably mixed up with that of alcohol. If you can close a number of chandu shops without increasing the consumption of alcohol, I would do so; but if there is a doubt that they would take to alcohol instead of opium, I would say, leave them alone.

Mr. J. G. Alexander,
L.L.B.

MR. JOSEPH G. ALEXANDER, LL.B., recalled.

3769. (*Lord Brassey.*) I believe you wish to make a statement?—I observe from the evidence given this morning by Dr. Harvey that in my cross-examination I failed to note an important distinction between the suggestions put to me by Sir James Lyall and those put forward by our Society in paragraph 9 of its general memorial to Lord Kimberley, and thus appeared to accept Sir James Lyall's views as to

our proposals. We have never urged that opium should be sold only on medical certificate, which should be going much beyond the law at present in force in the United Kingdom. Our proposal is that the sale of the drug should, in India as in England, be entrusted to responsible and qualified persons, with the additional provision that these persons should have no interest in the sale of the drug.

Adjourned to Tuesday next at 10-30.

At the Council Chamber, Writers' Buildings, Calcutta.

FOURTEENTH DAY.

Tuesday, 28th November 1893.

PRESENT :

SIR WILLIAM ROBERTS, M.D. (IN THE CHAIR).

THE RIGHT HONOURABLE LORD BRASSEY, K.C.B.
SIR JAMES B. LYALL, G.C.I.E., K.C.S.I.
MR. R. G. C. MOWBRAY, M.P.
„ A. U. FANSHAWE.

MR. ARTHUR PEASE.
„ HARIDAS VEHARIDAS DESAI.
„ H. J. WILSON, M.P.

MR. J. PRESCOTT HEWETT, C.I.E., *Secretary*.

DR. KAILAS CHUNDER BOSE called in and examined.

3770. (*Chairman.*) I believe you are President of the Calcutta Medical Society?—I am.

3771. Are you officially connected with the Government?—I am an independent practitioner.

3772. Are you engaged in private practice in Calcutta?—Yes.

3773. What opportunities have you had of studying the effects of the opium habit?—I have been practising here, in Calcutta, for upwards of eighteen years. I have practised mostly among the people of Rajputana, the North-West-Provinces, the Central Provinces, and Bombay and Madras. I also pay professional visits to Burmese and Chinese people stopping here, in Calcutta. These men are more or less addicted to the use of opium.

3774. How far does your experience lead you to consider that the opium habit prevails amongst your countrymen here?—Amongst the permanent residents of Calcutta only 10 per cent. of the people actually take opium, whilst amongst those who come from other portions of the country, nearly 20 per cent. use opium in some shape or other.

3775. So that the practice is very generally diffused among adults?—Yes, they commence it after a definite period of their adult lives,—probably after they have attained the age of 35 or 36. But such is not the rule of the people of Rajputana, they practise the habit at a comparatively early age. In the lying-in room pillules are given into the mouths of new-born babies.

3776. What is the result of your experience which seems to have been considerable, as to the effects on the health and physical state?—Opium does not have any deleterious influences upon the health of habitual consumers. On the contrary, it is a prop to old age, and elderly men pull well under its influences.

3777. What would you call a moderate quantity of opium?—From 2 to 10 grains I would call a moderate use.

3778. Is there a tendency to increase the dose?—Not the slightest tendency, except in exceptional cases.

3779. Have you noticed that it had any deteriorating effect upon their moral characters?—They do not manifest any symptoms of demoralisation. On the contrary, they are harmless people.

3780. Have you anything to say with regard to their mental acuteness and intelligence?—It does not deteriorate the intellect of the habitual consumers; on the contrary, I should say it acts as a stimulant to their brains. The Marwaris, who are noted for opium-eating, are the most intelligent class of merchants in India.

3781. May I take it that you are speaking from an intimate personal knowledge of the lives of those gentlemen who use opium habitually?—I am.

3782. You have an amount of intimate personal knowledge which is scarcely within the reach of a European?—Exactly so.

3783. No doubt you have seen cases of the excessive use of opium?—I have seen cases of the excessive use of opium—excessive according to my estimation of the dose of the drug, not according to their estimation. I have seen a religious mendicant in my presence take about Rs. 3 as. 8 worth of opium. That would be 11 or 12 tolas of crude opium. If you do not doubt my veracity, I may tell you that he is a perfect model of health and vigour; he can walk for miles together without being tired.

3784. You consider that to be an instance of high tolerance for opium?—Yes.

3785. Have you seen injurious effects from opium-eating?—I have not yet been able to trace out any injurious or deleterious effect of opium upon the habitual eaters; especially in the case of my patients, although they are addicted to this vice, if you call it so: I have never seen any injurious effect upon the constitution.

3786. Do you consider that there is a higher tolerance for opium among the Marwaris than amongst the Hindu population?—I do not think so.

3787. What is your opinion as to the effect of opium as a popular remedy in malarious districts against the various ailments of those districts?—Opium and its preparations are powerful antidotes against malarious fever. I have had some experience in the matter, and if you permit me, I will describe it to you. During the autumn every year, people come down from the Tarai,—from the Darjeeling hills, with malarious fever, and enlarged spleens. They say that because they did not abide by the instructions of the opium-eaters they contracted the disease. The opium-eaters in that place are notably a healthy class of people.

3788. They are not so liable to enlarged spleens?—No.

3789. What is your impression of the way in which the opium habit is generally begun, what induces people to take to it?—On inquiry from patients who have contracted the habit, we find they are almost certain to say that they took it for some physical infirmities—for rheumatic pains, rheumatism or chronic bronchitis. I do not believe this statement; the habit is a fashion; opium is used as a luxury by the people.

3790. You mean much as we take tobacco or wine?—Exactly so.

3791. But there is of course an additional incentive in cases of the opium habit in the way of beginning; because opium is an anodyne and hypnotic, and wine and tobacco have not that medicinal effect?—I should consider opium at the commencement may exert a stimulating effect upon the constitution of the people, and that is the reason why they take to the habit.

3792. We may assume from your observation, that in the habitual opium-eater, the hypnotic effect does not appear?—Sometimes it appears, because the hypnotic effect of opium has been moderate, the man possessing his faculties and energies in first-rate order. Still there is a tendency towards sleep, in some cases I have observed it, especially in elderly people.

Dr.
Kailas
Chunder
Bose.

28 Nov. 1893.

Dr.
Kailas
Chunder
Bose.

28 Nov. 1893.

3793. Do you regard that as unfavourable?—No, it does not injure the health; the man can be roused in a moment.

3794. Of course you cannot test the anodyne property unless there is pain for it to quell?—That is so.

3795. What has been your experience with regard to opium-smoking preparations?—There are two methods of smoking opium, one is called madat, and the other is called chandu. The madat is generally taken by the lower class of people, Hindus and Mahomedans; whilst chandu is generally taken by the comparatively higher class of men. Only a nominal percentage of the permanent residents of Calcutta take chandu. Opium-smoking does not interfere with the process of healing of wounds. I have performed serious surgical operations upon chandu-smokers with the most satisfactory results. Amongst the people of Bengal, however, opium-smoking has a tendency to deteriorate the health to a certain extent. Upon close observation, I have come to this conclusion. As I have said before, opium-smokers belong to the low class of people, not blest with a convenient share of prosperity. They have only one scanty meal, and they generally employ their time in preparing the opium stuff, and they neglect their food. That is the only reason why their decay is so notably marked in their appearance. The Chinese who take to opium-smoking at a comparatively early age, do not suffer from any such premature decay.

3796. Reverting for a moment to opium-eating, have you observed whether habitual opium-eaters if they become poor suffer in health in any way, can you say that it is from the opium habit, and not merely from poverty?—No.

3797. Have you any further observations that you would like to make with regard to the effect of opium upon the health and the mental and the moral character of opium-eaters?—Opium-eaters are generally a quiet sort of people, and even when they take opium in very large quantities, they are still a peaceful class of citizens. Opium is in no way destructive to its consumers; it is perfectly inoffensive to their friends, they are less prone to criminal offences. Altogether opium-eaters, as a rule, are a peaceful class of citizens.

3798. There are some questions you might answer as a simple citizen. Do you consider that the people of this country would view prohibitive measures with regard to the growth of the poppy with satisfaction or approval?—It would simply create dissatisfaction. The poppy is taken by some class of people as a vegetable, and they prepare curries and chutnies out of poppy capsules. The people of Marwar are known to take green young poppy plants as an article of food. I have seen people living in Calcutta take curries prepared from opium capsules. Those capsules they procure from their own gardens. They cultivate poppy capsules simply for the purpose of making curries. Besides this, the poppy is generally used by people of all classes in Bengal. Poppy-oil is extensively used in this country by confectioners, and it is also used as an ingredient of green and white paint. The poppy is now extensively grown in every part of the country. You might see a few plants in the Calcutta gardens; but here they are planted for the purpose of bearing beautiful flowers.

3799. Have you anything further you wish to say on the subject?—There are one or two things I should like to say with regard to prohibitive measures. I do not think prohibitive measures are at all needed in this country. If prohibitive measures were to be adopted at all, it would simply encourage smuggling and the surreptitious cultivation of the poppy. Notwithstanding the severity of the law and the vigilant eye with which the officials connected with the Opium Department take care that the Act should not be contravened, smuggling is of daily occurrence. I have seen people at Burra Bazar get their daily supply from their own native places, as well as opium, which comes into Calcutta quite surreptitiously from Malwa. Most of the gentlemen prefer Malwa opium to Bengal opium. I do not think that prohibitive measures would be effective; and besides that, they are not needed. Opium, of course, is a social necessary and is indispensable in receiving nobles, chiefs and men of rank among the Rajputs, both Mahomedans and Hindus, and the people of Ahmedabad and Surat. I know of an instance where a maund and a half of opium was consumed in celebrating the funeral ceremony of a moderately rich old man. The process of welcoming guests with opium, either in the form of a decoction or high-scented extracts, is called Kusumba. Opium is not restricted to men only: it is also given to domestic animals, bulls, camels, and horses. The Kutch people use it largely in their stables; they give it to their horses simply to make them strong.

3800. Is that from your personal knowledge?—I have received information from some friends who came from Kutch, and I have also seen it recorded in a book.

3801. We have heard something about opium being used as an aphrodisiac: you know, no doubt, as a highly educated medical man that in modern medicine we scarcely recognise the existence of any special substance which acts as an aphrodisiac?—I do not believe that it possesses any aphrodisiac powers, neither do the people of Malwa take it for that purpose.

3802. You do not think it is taken for that purpose, so far as your own experience is concerned?—I do not think so.

3803. (Mr. Wilson.) Would you tell us whether the greater part of your evidence relates to smoking or to eating or to drinking opium?—Different sets of people observe different modes of taking opium. Some prefer to take it in the form of crude opium; whilst others prefer to make extracts out of it. They have got separate formulæ for preparing it and mixing it with saffron, musk, and camphor and other ingredients to make boluses or pills. Others prefer to take it in the form of a pure decoction. I have seen some of the Marwaris take poppy capsules, soak them in hot water, and then strain and drink the fluid.

3804. I asked you whether the greater part of your evidence referred to smoking or eating or drinking?—Opium-eating and drinking more particularly.

3805. Is it your opinion that the consumption of opium has been daily increasing?—It is.

3806. Do you regard that with satisfaction?—Yes.

3807. You are glad that it is increasing?—I should say that, because I know that opium acts as an antidote to many diseases; it acts as a stimulant, and it wards off the depressing effect of an Indian climate, especially in the lower part of Bengal, where people are so subject to malarious fever and asthma.

3808. Would you be glad to see the general consumption doubled?—Of course I do not like to go so far as to say the usual quantity should be doubled. I should allow it to patients in a hospital; and if I could introduce the system into jails, I would do so. I think it would be economical, as the people would be able to work better under its influence.

3809. Do you consider that the abuse of opium is not in the least destructive to its consumers?—By abuse I mean when opium is taken in immoderate quantities—more than 20 grains. I know people who take one tola of opium every day,—some of the higher class men, and they are still healthy and quite peaceful. One tola would be more than 200 grains.

3810. In your opinion does opium-smoking shorten life?—This much I can say, that the Marwaris, who are habitual opium-eaters, and who consume opium in some shape or another, live longer than the abstemious Bengali gentlemen.

3811. Is it your opinion that opium-smoking does not in the least interfere with society?—That is my opinion.

3812. I believe you have performed serious surgical operations on chandu-smokers?—I have.

3813. Do you recommend alcohol for dietetic purposes?—Certainly not. Alcohol is decidedly more injurious than opium. I have some special arguments against the use of alcohol and the introduction of alcohol into this country.

3814. I am afraid you do not understand my question. My question was, do you recommend alcohol in the form of beer or wine or spirits for daily dietetic use?—I do not.

3815. Have you any Europeans amongst your patients?—I have Eurasians, no Europeans.

3816. Do you recommend opium to them for daily dietetic use?—No, I do not recommend it, unless it is urgently required for medicinal purposes, for some special disease, for neuralgia, or something like that, to relieve the patient of pain and suffering. I do not recommend it otherwise.

3817. As far as you know, may I take it that the universal conviction of educated medical men is that for Europeans opium is not desirable for dietetic purposes?—I am prepared to say that opium taken for dietetic purposes exercises no deleterious effect upon the health of the people.

3818. My question was whether in your opinion medical men do recommend opium for daily dietetic use for their patients?—Not unless it is urgently needed. If a European patient were to consult me about his living in a marshy place, I should at once recommend him to use small doses of opium daily.

3819. Would you consider that a medical man who did recommend the regular dietetic use of opium was doing a very evil thing for his patient?—It depends entirely upon the discretion of the medical man who recommended it. If he thought it were indispensably necessary for the health and well-being of his patients, he would be perfectly justified in recommending it. As a medical opinion I should say that a medical man ought to recommend opium, or rather prefer opium to wine or alcohol as a dietetic thing.

3820. Did you ever know a medical man who did recommend it so?—No.

3821. You never did it yourself?—No.

3822. I think you said you regarded opium as a stimulant?—Yes, to a certain extent: not always.

3823. In that sense you would compare it in some degree with alcohol?—As far as the stimulating effect goes I should say we can compare it with the stimulating effect of alcohol, but we cannot compare it as far as the physiological action is concerned. Alcohol, of course, exercises a deleterious effect upon the health of the people who drink it. The intoxication of alcohol is prolonged whilst that of opium is only transitory.

3824. I suppose you have seen a great deal of malaria?—Yes.

3825. Have you ever prescribed opium alone as a cure for malaria?—I have not—not crude opium.

3826. If you had a patient who was accustomed to take opium regularly you would have to prescribe him a much larger dose, would you not, to produce the effect you desired?—No, not at all. Opium is given to relieve pain and check diarrhoea, and when an opium-eater comes to me and complains of diarrhoea I prescribe some other astringents; I should not give an increased dose of opium.

3827. Where a patient has been accustomed to the continuous use of opium, will it not require a larger dose to produce a medicinal or curative effect than in the case of a patient who was not accustomed to use it?—Yes.

3828. Therefore the more opium a man takes, the larger your medicinal doses would have to be?—A medical man is required to use discretion.

3829. If you were living in a malarious district where people do not use opium, would you recommend them all to begin using it in small quantities?—Yes, the poor people: I would at once advise them to use opium.

3830. Generally?—Yes; generally.

3831. I think you told us that the Bengalis commonly begin the habit after they are thirty-five years old or something like that?—Yes.

3832. Are persons of that age more liable to malaria than other people?—No. Malaria attacks elderly people as well as babies and young people.

3833. If people take opium as a precaution against malaria, I do not understand why they do not begin it earlier. Can you explain that?—I cannot explain it. If they commence the habit at a comparatively early age, it will be a perfectly safe and wise thing for them to do.

3834. If it is usually taken in old age, would not you expect that those more liable to malaria would be the greatest consumers?—Not necessarily. It depends upon the preference of the individual. If persons know that it always succeeds in checking malarious fever, they take it.

3835. I was not speaking of individuals. Taking the people of a district, would you not expect to find that where there is most malaria there the most opium is consumed?—I have no experience about malarious districts. I have never been out of Calcutta. I am forty-two years old, and I only once went out of Calcutta. I therefore have no experience. Generally people come from malarious districts for treatment, and I consult their views on the matter.

3836. I think you are President of the Calcutta Medical Society?—Yes.

3837. Can you tell us how many members that Society has?—Two hundred.

3838. Do you know what is the total number of practitioners according to the European system in Calcutta?—About three hundred.

3839. So that you have a great bulk of them in the Society?—Yes.

3840. I think you have handed in the supplement to the *Indian Medical Gazette* for July 1892 as part of your evidence?—Yes.

3841. You were present when Dr. Crombie read a paper before the Calcutta Medical Society and a discussion took place on the subject?—Yes.

3842. I find in your speech you are reported to have said this:—"Theoretically speaking opium-eating might be thought more injurious than smoking, as the fire removes most of the deleterious effects of the narcotic, but practically we find that smokers suffer more"?—Yes.

3843. You speak of "deleterious effects." I have not gathered from your previous evidence that you thought there were any deleterious effects?—No, there are none, as far as I can see from personal observation. Before that time I was under the impression that opium always acted injuriously upon the human constitution; but since I have commenced practising amongst the Marwaris I have given up that idea. In the quotation you have read I simply remarked that if opium was thought to act injuriously upon the system, opium in the solid form would be more likely to do it than smoking. Smokers are generally a weak and emaciated class of people. On inquiry I have made up my mind that these people belong to a low class of filthy men—poor indigent beggars, who scarcely get two meals a day. When they get accustomed to smoking opium, they simply spend their time in preparing their madat or chandu; and they neglect the regular hours of their meals. That is the reason they get weak and poverty-stricken.

3844. You used the expression that opium-smokers suffer more than opium-eaters: I understand you now to say that you attribute that not to smoking, but to their general poverty?—Yes. But the Chinese who smoke opium constantly in the form of chandu or madat—I should say 18 hours out of the 24—are not so weak or emaciated as the people of Lower Bengal.

3845. With reference to the physical appearance of the madat smoker, I see you said at the meeting I referred to:—"His complexion and lips become dark, his limbs waste, his face becomes pinched, his abdomen protrudes, and his voice becomes hoarse"?—Yes.

3846. I want to be perfectly clear. You practically withdraw that now, and you think his condition is owing to his being a poor and low class man?—I do not withdraw that. I have explained later on that that hoarseness is brought on by constant smoking, just as the voice of cigarette-smoker becomes hoarse by constant smoking. It is a catarrhal condition of the vocal chords induced by constant smoking.

3847. I do not quite understand yet whether you think opium-smoking does the man any harm or not?—I say emphatically it does no harm.

3848. You referred to the chandu-smokers of China. Have you been in China?—No; I stated what I knew of the chandu-smokers from China who have come down to Calcutta for trading. They are dealers in precious stones. They bring stones from Siam and settle in the Colootolla section of the town.

3849. Further on you said:—"The hypnotic effect is more or less seen in all persons who take opium in whatever form and in whatever doses. However active and muscular the opium-eater may be, he is apt to yield to its hypnotic effect, and is drowsy at times"?—That is so.

3850. Further on you said:—"During the last epidemic of influenza opium-eaters suffered most severely, and some succumbed to the disease." I suppose that was so?—Yes.

3851. You referred towards the end of your speech to the question of taking morphia, and you mentioned some cases where morphia had been taken in considerable quantities habitually?—Yes.

3852. Do I understand that you quote that with any degree of approval?—No.

3853. You referred to a certain maharaja who took a large quantity every day, and also to a pleader in one of the courts?—Yes, he took an enormous quantity of morphia. I condemn the habit of taking morphia to such an inordinate extent as 90 grains.

3854. There is no condemnation of it in this speech of yours; but I suppose you do condemn it?—I condemn the habit. Taking 90 grains daily is an expensive habit.

3855. (*Mr. Mowbray.*) You told us that you think the consumption of opium is increasing?—Yes.

3856. Is that increase among people over thirty-five, or do you think there is a tendency for a larger number of people to take it at an earlier age?—Diabetes of late has increased in Calcutta to an inordinate extent, and people are addicted to the use of opium as a preventative measure against diabetes. The number of them is daily increasing. I

Dr. Kailas Chunder Bose.

28 Nov. 1893.

Dr. Kailas
Chunder
Bose.
28 Nov. 1893.

cannot give you a correct estimate of the percentage of men, but so far as my personal observation goes, I can say that the habit of opium-taking has been daily increasing, at least in this portion of the country.

3857. And as far as I understand for medical reasons?—Yes.

3858. (*Mr. Haridas Vcharidas.*) You have said that the people of Kutch generally give opium to their horses to make them strong. Where is Kutch?—Kutch is just below Gujerat. The people who come from Kutch are called Chulias.

3859. Is the Kutch you mean near Sind?—Yes.

3860. (*Mr. Fanshawe.*) There is one point I should like to make clear. In speaking of the opium habit being acquired later in life, are you referring to its use as a stimulant, or to its use in connection with malaria?—As a stimulant. That is the purpose for which people take to it after a definite period of their lives.

3861. I suppose you admit that madat can be smoked in excess?—No.

3862. Is there no such thing as smoking in excess?—No.

3863. It has not come within your observation?—No.

3864. (*Mr. Wilson.*) How many medical papers are there published in Calcutta?—There is the *Indian Medical*

Gazette, and very recently another was started, called the *Medical Record*. There are only those two.

3865. Are there any other medical papers in other parts of India?—In Bombay we have the *Bombay Medical News*; and in Madras we have another paper. In Calcutta there are only two.

3866. Do both these papers discuss the opium question?—I do not know.

3867. Can you refer us to any Indian medical authorities—text-books used in the medical schools in which your views on opium are stated as authoritative by the writers?—No. The authorities mostly live in Europe, and they have no personal knowledge or observation about the opium habit in India. The books written are founded on the physiological effects the writers have observed in their own countries. I must say—and I am sorry to have to say—that my views are not supported by medical authorities at home. There is Dr. Christison, however, who does not condemn the opium habit so largely. I am sorry to say I am not supported by the medical authorities abroad.

3868. Is there such a book as Chevers' Medical Jurisprudence?—Yes.

3869. Is not that entirely Indian?—Partly Indian.

3870. Does that support your views?—No.

The witness withdrew.

Dr. Juggo
Bundo Bose.

Dr. JUGGO BUNDO BOSE called in and examined.

3871. (*Chairman.*) You are, I believe, an independent medical practitioner in Calcutta?—I was in Government service for nearly 25 years. Now I am an independent practitioner.

3872. What opportunities have you had of studying the effects of the opium habit in this neighbourhood or elsewhere?—As a teacher in the Campbell Medical School, I had charge of the second physician's ward, and there I had ample opportunities of studying the effects of opium taken in moderate doses by the patients. Then I had a very large practice among the Chinese, and there of course I had ample opportunities of studying chandu-smoking. My native place is a malarious district. I go there almost every year, and there I have had ample opportunities of observing the effects of opium in malarial complaints. I have also had a pretty large practice in Calcutta for nearly 40 years; and there, too, I have had ample opportunities of studying the effects of opium.

3873. What convictions have grown in your mind with regard to the opium habit, as to its effects upon health and morals?—Opium is generally taken by the patients first, not of their own accord, but on advice or of necessity. I am now speaking of the people of Lower Bengal. Then people also take it, because they hear that it has a very good effect on certain diseases. If they suffer from one of these diseases, they take to the opium habit. But independently of these, I do not think the people of Bengal, as a rule, take opium.

3874. In the case of those who use opium habitually, what dose do they get to?—Generally speaking, as far as I have known, those who are called opium-eaters take from 2 to 6 grains. That is the general dose among the Hindus in this province. The Mahomedans take it in a little larger dose. The Marwaris, the Rajputs and the Sikhs take it even in larger doses. They generally go up to 20 grains. Their dose is from 2 to 20 grains.

3875. Has it any effect upon the general health?—I think it keeps the people who use opium moderately in very good health.

3876. Is there a tendency to increase the dose?—Those who have commenced it under the advice of a medical man, and those who suffer most from painful diseases such as rheumatism, etc., are obliged to increase the dose. Some of them increase it a great deal.

3877. Then there is not much tendency to increase the dose in those who take opium as we take tobacco or wine?—There is, but not to a very great extent.

3878. You have seen cases?—Yes.

3879. When opium is taken in too large quantities, it does affect the health I presume?—I have seen a great many cases of opium-eaters. Some of them have taken in my presence at least 2 bhuries; I think $2\frac{1}{2}$ drachms make a bhuri. That would be about 5 drachms.

3880. How many grains would it be?—300 grains. The effects have not been very bad. I knew a singer, who after singing for 3 or 4 hours, would take 2 bhuries of opium at once, and then would go on singing again, keeping accurately to time and tune.

3881. Do you think that habitual opium-eaters live as long as anybody else?—That is my impression. It has been an impression from time immemorial that opium conduces to longevity and to the preservation of health. This impression was created by the kabirajis.

3882. Have you come to any conclusion as to whether it is a protective in any way, or a help to people suffering from malarial complaints?—I consider it to be a sovereign remedy for malarial diseases such as fever, malarial cachexia, and all other malarial complaints which people suffer from. It relieves also pains and aches, rheumatism, asthma, and bowel complaints. For all these diseases it is a sovereign remedy, and that is the reason why the people take to it. It is also good for chronic coughs and consumption. It retards the progress of consumption.

3883. We may take it that your experience is that habitual users of opium are not morally deteriorated?—Not in the least. On the contrary, it sharpens the intellect and fortifies the mind. With alcoholic drunkards the case is different. Their brains are muddled. Opium-eaters will talk for hours and keep exactly to the point when they begin a subject. They are very reasonable. Their judgment and reasoning power are in no way affected, even if they take large doses of opium.

3884. Have you seen the effect of opium-eating on the poor people?—Yes, I have seen many instances. In my country, which is a malarious district, many poor people take small doses of opium to keep off the effects of malarial diseases.

3885. Have you seen any effect indicating that the habit leads to any form of crime or lunacy?—No; opium-eaters as a rule do not become criminals. It is the drunkards whose criminal propensities are strong. It is wine which increases the criminal class. They are murderers; they do not care for their wives or their children or anybody, and they dash them to pieces when they are under the influence of grog. But the opium-eater will never do anything of the kind. The only harm the opium-eater does is to himself. But the drunken man is a great nuisance to his family, and to society at large.

3886. What have you to say to the proportion of adults amongst those of your countrymen that you have known who eat opium?—I think is about 2 per cent.

3887. Do you mean 2 per cent. of adults?—Yes, 2 per cent. of adults.

3888. (*Mr. Wilson.*) Adult males?—Yes, females very seldom take it.

3889. (*Chairman.*) Do you mean to say only one or two in a hundred adult males use opium in the country?—Yes.

3890. What about the towns?—In the towns the percentage may be higher among the Hindus and Mahomedans; it cannot be more than 4 or 5 per cent.

3891. Have you any suggestion to make as to why some take to opium and others do not: what is the difference?—Those who take it, do so either on medical advice or of their own accord when they suffer from any painful disease. This is the class of people who take opium

most. Then there are others who take opium after they attain 36 or 40 years of age. There is an impression in the country that after a man is 40 years of age, if he takes opium in moderate doses, it will conduce to the preservation of health and to longevity. Well-to-do people therefore generally take opium after they are 40 years of age.

3892. Have you any further remarks to make with regard to the habitual use of opium-eating?—I have nothing further to say of my own accord, but if I am asked any question, I shall be most happy to answer it.

3893. Do you think if prohibitive measures were carried out, your countrymen would be willing to contribute towards the expense of such measures?—No. My countrymen will oppose such measures to the best of their power; they will say: "we will not bear prohibitive measures." Why should they? What have they done? It is a perfectly innocent thing for the people to take. It is far better than alcohol. It does not increase crime, but on the contrary decreases it. Hindus and Mahomedans who take opium, are not more criminal than are Englishmen and other Europeans who are given to drinking.

3894. Do you think it is necessary to restrict the free sale of opium?—Yes; I think it is very necessary to restrict the free sale of opium by the opium vendors in large towns, so that it may put a check to the easy accessibility of opium for poisoning purposes.

3895. I presume by that you mean for the purposes of suicide?—Yes.

3896. I suppose opium is the favourite mode of suicide?—Not necessarily so: another favourite mode is hanging. Opium is one of the means of suicide. There are various means,—drowning, hanging, arsenic poisoning, opium-eating, and many others.

3897. (*Lord Brassey.*) Do you find it rather difficult to give a general opinion as to the effects of opium? The effect of the opium habit, whether the opium is taken in solid or liquid form, depends upon the quantity?—Yes, it depends entirely upon the quantity. But if it is taken in the solid form, or, as is generally the case, as an infusion in cold water, the effects are not so bad as when taken in the form of smoking, as chandu or gooli.

3898. Am I to understand from you that while a large quantity of opium, whether taken in the solid or liquid form, does undoubtedly do harm, you do not observe any evil effects when taken in moderate quantities? Is that what you wish to tell us?—Opium-smoking in immoderate quantities certainly does harm, but I have not observed any ill-effects in people who have eaten opium in large doses.

3899. (*Mr. Pease.*) You say opium-smoking always does harm?—That is my conviction. I have seen opium-smoking among the Chinese. Leaving that race out of the question, if opium-smoking is taken to by Hindus and Mahomedans it generally does harm. I do not speak of the Chinese. Leaving the Chinese aside, if you only ask me what effect opium-smoking has on Hindus and Mahomedans, I am bound to say that it does produce very bad and serious effects.

3900. You say the opium-eater does harm to himself, but then you say that the effects were not so bad as madat and chandu or gooli-smoking. Have you met many instances in which opium-eating has done decided harm?—If anything does harm, it is the chandu and gooli-smoking. That does more harm than opium-eating. Even when opium is taken in excess, it does not do so much harm as opium-smoking.

3901. I think you were comparing the effects of drinking alcohol and eating opium, and you said the opium-eater does harm to himself?—Yes; the most he will do will be to injure his own life, by taking a large quantity of opium. He will not be boisterous or quarrelsome; he will not do any harm to anybody except to himself; he will only lie down and be quiet; that is all.

3902. In your opinion, I gather it would be better to abstain from taking any opium except for medicinal purposes?—No; I would allow people to take it of their own accord, as it benefits the health.

3903. Would you advise it?—I would certainly advise it.

3904. Have you seen many instances of excessive opium-eating?—Yes, I have seen some instances.

3905. (*Mr. Wilson.*) Did you hear the evidence that was given by Dr. Kailas Chunder Bose?—Yes.

3906. Do you agree substantially with all he said, or do you wish to express any dissent from any part of it?—He spoke about eating opium capsules as a vegetable; I have no experience of that. Poppy seeds are taken in the form of condiment, but no capsules or leaves are taken by anybody as far as I know.

3907. Do you agree with his general approval of the practice of taking opium, and his desire to see it extended?—Although I would not like to see it extended, I certainly agree with him in thinking that opium-taking does not do any harm.

3908. You think that the use of opium in moderation is not demoralizing, and that its effects are not deteriorating. I want to have it quite clear whether you consider it beneficial?—I certainly consider the moderate use of opium to be very beneficial.

3909. I think you use the expression that it brightens the wits and the intellect?—Yes, it does.

3910. May I ask you whether you take it regularly yourself for that purpose?—I am not an opium-eater. I do not take opium at all, except when I am advised by other medical men.

3911. I want to know if it brightens our wits and improves our intellect?—It does. The effect of opium, when taken in a moderate dose, is to stimulate the brain. It brightens the intellect, and a person can talk and think well and devote his attention to a subject very well.

3912. Would it not be a very good thing for all of us to take it?—That depends upon your own choice. I cannot say whether it would be a good thing or not. I would not like the whole world to be opium-eaters, but I say let those who like it, take it.

3913. If you think it has such a beneficial effect, you must think it is a deplorable thing that only 2 per cent. of adult males should take it?—It is not so much needed when a person enjoys his general health. Although I advise people to take opium to preserve their health, of course I would not advise them to take it regularly for diet.

3914. You have said you think it very necessary to restrict the free sale of opium?—Yes, as it is sold in the towns.

3915. Not in the country?—No; because there are very few people to take opium to poison or kill themselves in the country.

3916. How would you propose to restrict the sale in the towns?—I have not thought over the matter. I leave it entirely to the Commission to find the ways and means of doing it. With regard to the towns, I think the sales should be restricted, and that people should not have easy access to opium generally.

3917. May I ask you whether you are a member of the Calcutta Medical Society?—I am.

3918. Were you present at that discussion to which I referred the last witness?—No, I was not present.

3919. As a matter of fact, do the doctors prescribe opium for malaria, and in malarial fevers?—Yes, I think all the doctors that I have known do it. Men prescribe it whom I have consulted and together with whom I have seen patients. It is even put down in our books, and we were taught; when I came out of college, that opium did increase the antiperiodic effect of quinine.

3920. You would not use it alone: you use it to increase the effect of quinine?—I use it alone occasionally.

3921. Can you give us any reason why so small a proportion as 2 per cent. take opium if they find it is so beneficial?—Why should they take it? Everyone does not take wine because it is very beneficial in moderate doses. There are many people who do not touch wine although it is a very good thing.

3922. I understand you to say that you estimate it at 2 per cent., and they are chiefly the well-to-do classes?—Yes; the rural population of the villages and of the country very seldom take it, except when advised by medical men.

3923. Do you consider the people in the country districts more or less liable to malaria than people in the cities?—The people in the country are more liable to malarial diseases than people who live in towns.

3924. But they take much less opium?—They take much less opium.

3925. I think you used the term non-medical use of opium. Would you explain exactly what you mean by that?—I mean the taking of opium by those who have not been advised by medical men to do so. It is generally the impression in the country that opium does good when a man is advanced in years. After he is 40 years of age he commences to take opium of his own accord.

3926. Do I understand you to say that very few women take opium?—Yes. Why should they take it unless there is a necessity?

3927. Are they not equally liable to malaria?—Yes.

3928. Yet they do not take opium?—No; they do not like it.

3929. In the case of an opium-eater who might be attacked

Dr. Juggo Bundo Bose.
28 Nov. 1893.

Dr. Juggo
Bundo Bose.
28 Nov. 1893.

with dysentery, what would you give him?—I would give him medicines which I thought most appropriate in his case. You cannot prescribe the same thing in every case. It would depend upon the sort of dysentery he was suffering from, his general health and the stage at which he called in the medical man. All these things would have to be taken into account. You cannot treat a patient without seeing him.

3930. I am sure with your experience you would have no difficulty in telling me two or three principal remedies?—My principal remedies are ipecacuanha, opium, some preparations of mercury, and what we call coorchee or the bark of *Wrightia anti-dysenterica*.

3931. Do these medicines take effect exactly in the same way on an opium-eater as upon a man who does not eat opium?—In the case of an opium-eater you have to give him a larger dose of opium.

3932. Do you ever give chloroform in cases of dysentery?—I very seldom use it, except for external blistering purposes. I do not give chloroform in cases of dysentery.

3933. Neither to opium-eaters or others?—No.

3934. (*Mr. Fanshawe*.) Kindly tell us what experience you have had in the country districts. Most of your medical experience has been in Calcutta?—As a medical practitioner I have had very frequent occasions to go to Krishnagar,

The witness withdrew.

Dr. Surji
Comar
Surbadhicari.

DR. SURJI COMAR SURBADHICARI called in and examined.

3940. (*Chairman*.) I think you are a medical practitioner in this neighbourhood?—Yes.

3941. You have gone in and out amongst the people very largely in the course of your practice?—Yes, I have.

3942. And you intimately know their ways and habits?—Yes.

3943. Is the practice of opium-eating very much spreading in Calcutta?—The practice of opium-eating is confined to persons of advanced years. After 35 or 40, when the powers fail, people take opium under advice, as nice, and supporting and bracing. It improves their digestion and keeps up their vital powers.

3944. They take it under that impression?—Yes, they take it under that impression.

3945. Is it your professional experience that that impression is correct or incorrect?—Correct.

3946. How many people after they are 40 years of age do you think take it?—4 or 5 per cent.

3947. So that it is not a very widely spread habit?—No, it is not a very widely spread habit.

3948. Is opium taken as a popular remedy besides that?—Yes, for rheumatism. It is very much taken in cases of diarrhoea, dysentery, diabetes and asthma. I have had to give it,—not crude opium, but one of the active principles of opium—narcotine, when quinine was scarce. At Ghazipur, where I was in 1856-7-8-9 when the sepoy mutiny broke out, there was a great scarcity, and disease followed in the wake of famine. We had a large number of patients in our hospital. We had no European medicines, and we had to depend greatly on indigenous drugs. Opium was the great staple remedy. We gave curchi and bael, but the greatest use of opium was in extracting the narcotine as a substitute for quinine. I found it to be of very great use.

3949. What has been your observation with regard to opium being used as a popular remedy with children: is it used for children?—No, not in our country, nor in Beugal, but at Ghazipur I have seen mothers giving their infants, 5 or 6 years of age, small doses of opium.

3950. What for?—I anposse to lull them to sleep in the first instance, so that they may go to their work, but I have not found any bad effect from it. They grow up fine and healthy children.

3951. Used they to give their children little bits of crude opium?—Yes, crude opium.

3952. To what would it amount?—It might amount to $\frac{1}{2}$ th of a grain.

3953. That would not be much more than a couple of drops of laudanum?—No.

3954. Is it the practice to give it daily?—Yes, in the cases I saw they used to give it daily, one dose in the morning.

3955. Taken without the advice of a physician?—They have no physician. It is a popular medicine.

3956. I think you said opium was consumed habitually as a protective by persons in malarious districts, as a popular

Hughli, Burdwan, 24-Parganas and several other districts. I have seen how people in those districts take opium, and I know their disposition towards it.

3935. Do you admit that liability to malaria varies very much in different districts?—Yes.

3936. You have expressed an opinion that only about 2 per cent. of the adult population takes opium: you are speaking generally of the whole Lower Provinces?—Yes, Lower Bengal. I say that in the districts of Patna, Bhagalpur, Munshidabad and Gya, opium is much more consumed than in the Lower Provinces.

3937. You stated that 2 per cent. of the adult population in your country districts are opium-eaters. Have you founded that upon any statistics?—No, not upon any statistics, but upon personal experience.

3938. Would not you admit that it varies very much in each district?—Yes.

3939. (*Sir James Lyall*.) Dr. Kailas Chunder Bose expressed an opinion that opium-eating was increasing very much in Calcutta: is that your impression?—No; on the contrary I think that opium-smoking, which was very prevalent when I commenced medical studies, in the form of gooli and madak by Hindus and Mahomedans, has not increased at all. Of course among the Chinese it is the same as it was before. Opium-eating generally speaking among the Hindus and Mahomedans has not increased.

3957. As a protective?—Yes.

3958. What dose would be taken for that purpose?—I do not think more than a grain.

3959. A grain once or twice a day?—Once a day.

3960. Taken first thing in the morning?—Yes, taken first thing in the morning.

3961. Are you speaking of country parts?—Yes, of country parts.

3962. I do not know the habits of the agricultural population: do the men and women turn out early to their work in the morning?—Men and women both go to the fields to work.

3963. Do the women take this opium as well?—I have not known that, but I have known women take opium after the age of 35 or 40.

3964. I was thinking whether they took it as well as their husbands as a protective in the morning?—That I do not know.

3965. Have you seen any ill-effects from the use of opium in that way?—In moderate doses I have seen no ill-effects.

3966. But you have seen opium taken in excess?—I have seen it taken in excess, and with of course evil effects.

3967. What ill-effects have you observed?—I mean when they have taken more than their habitual dose, they were under narcotic effects.

3968. Have you sometimes seen that habitual use has been carried to excess?—Never.

3969. In the field of your experience a person that might be called an opium drunkard is unknown?—I have practically not seen any. I have known Eurasian patients who have taken laudanum, but they have been very few.

3970. Are they able to control the quantity they take with perfect ease?—I have seen some Eurasians take laudanum in lieu of other stimulants, but not with evil effects.

3971. You think that the habit of taking opium, either in persons getting on in life or those who take it as a protective against malaria, affects neither health nor morals?—It has not affected their health prejudicially.

3972. Has it affected their health favourably?—Yes, it has.

3973. You have not been able to trace the occurrence of crime or lunacy to the opium habit?—No, not to the habit of eating opium; but I have to the habit of smoking opium,—gooli.

3974. I think your experience has extended over a period of 36 years?—Yes.

3975. Do you think that the habit of smoking opium is more prevalent now than it was at that time?—I think it is diminishing.

3976. You think it is going out?—I think it is going out.

3977. I do not know whether it is a fair question to ask you: do you happen to know what the composition of madak is?—No, I do not know.

3978. So far as your knowledge goes of the feelings of your countrymen, would they object to pay the price which might be necessary to pay for prohibitive measures?—They would object to pay any increased taxation in any shape.

3979. As far as you are concerned, you would not approve any steps that might be taken to diminish the cultivation of the poppy and the production of opium?—There is no necessity to do so whatever.

3980. (*Mr Pease.*) In the statement before us you say—“Smoking opium is confined to the very dregs of society, and is generally looked down upon by the respectable classes of the community. I had come across some miserable specimens of humanity amongst them. Their lean, lanky appearances were due to want of proper food after indulging in the smoke of opium. Having become addicted to this form of stimulants, and not having sufficient means at their command, they often resort to pilfering, and thus join the criminal classes and become inmates of prisons.” Do you think that under these circumstances the Government ought to give licenses for the sale of madak and chandu for the purposes of smoking?—I would certainly not advocate the licensing of any system of intoxication which would lead to crime and increase the criminal classes and the ill-health of the people.

3981. Do you know what care is taken at the present time as to the character of persons who obtain opium licenses, and to the place where the sale takes place?—I do not.

3982. You state also that the abuse of opium has been a prolific source of mischief?—Yes.

3983. Will you kindly tell us in what way?—Opium is a sovereign remedy for disease. When it is taken to destroy life it is a most terrible thing. It can be bought in any locality here, and suicide has rather been on the increase owing to the facility with which opium can be bought. I would, therefore, suggest that some sort of restriction should be placed on the sale of opium. I should say that persons who are conversant with the habits of the people should be entrusted with the sale of opium, so that a young boy failing in his examination and taking it into his head to get 8 annas and buy opium could not get it. That sort of thing should not happen. Of course nobody can help it. They can get it from their servants; but I think the indiscriminate sale of opium should be restricted.

3984. You do not think sufficient care is taken as to the persons to whom licenses are given at present?—I do not know anything about licenses. I cannot say whether sufficient care is taken. I do not know.

3985. But you think there ought to be some care as to the persons who sell, whether they hold licenses or not?—Yes, and that care should be taken as to those persons to whom they sell it.

3986. Do you approve of the places in which it is at present sold,—many I believe are withdrawn from public observation?—I have not seen many. I have seen them on the roadside.

3987. Have you any further suggestions to make as to the restrictions which you suggest should be put upon the sale?—It is very difficult to carry out any suggestions. What I would like to do would be to entrust the sale of opium to men who will be able to use their discretion as to whom to sell and to whom not to sell. Of course you cannot prohibit people from taking it if they are regular opium-eaters. My suggestion is that it should be given to men who will be able to use their discretion in selling it to the proper persons.

3988. You would advise that it should be given to persons who had not a direct interest in the increased sale of the drug?—I would, if I could, prohibit all sorts of intoxicating things, whether it be opium, ganja, wine or anything of that sort; but it would not be practical to exclude opium. It could not be practically carried into effect; therefore such suggestions would be valueless.

3989. I ask whether you would be in favour of giving the sale of opium to persons who are not directly interested in the increased sale of the drug?—Certainly, I would.

3990. (*Mr. Wilson.*) You have referred to Ghazipur?—Yes.

3991. Is there any opium grown in that district?—Yes,

largely; that is the head-quarters of the Benares Opium Agency.

3992. Is it a malarious district?—It was not in my time; it may be now.

3993. Is there much consumption of opium now?—There was a very large consumption while I was there.

3994. I suppose the cultivators probably help themselves to a little?—They may; but if they do, they preserve themselves very well indeed.

3995. Speaking generally, do you disagree in any respect with the first medical man who came to-day?—I do not disagree with him in the main. As regards the minutiae, I have not studied them. My general impression is that opium is not deleterious when taken under advice or in old age.

3996. The first witness desires to see the consumption of opium increased; is that your desire also?—My desire is that no sort of intoxicating thing should be used.

3997. You do not agree with him in that important particular?—No.

3998. You have devoted two or three paragraphs in your printed statement to the medicinal use: you attach great importance to that?—Great importance.

3999. I suppose you are aware that nobody has ever challenged that at all?—So far as I know.

4000. You are aware that what may be called the anti-opium party have always admitted that there must be ample supplies for medicinal purposes?—So much the better.

4001. Therefore you have no necessity to prove what is not questioned, I presume?—There is no necessity for me to prove it.

4002. It would shorten your statement very much?—Yes.

4003. (*Mr. Mowbray.*) I rather gathered from you that if you had your way you would prohibit the sale of all stimulants?—Yes.

4004. Opium, alcohol and ganja?—They are not absolutely necessary for the preservation of human life or of health.

4005. If you had your way, which would you begin with, prohibit the consumption of opium or prohibit the consumption of alcohol or ganja first?—Ganja first and foremost.

4006. And after ganja, what?—Alcohol.

4007. May I take it that you consider opium as a stimulant the least harmful?—Yes.

4008. Do you consider that if the consumption of opium were put a stop to without putting a stop to the consumption of alcohol or ganja, there would be any danger of people who had taken opium falling back upon more deleterious stimulants?—I believe so.

4009. (*Mr. Fanshawe.*) In your printed statement you say that suicide by means of opium has considerably increased. Are you speaking of Calcutta, or are you speaking generally?—Of the people of Calcutta.

4010. (*Sir James Lyall.*) When you said that the abuse of opium has been a prolific source of mischief, were you alluding to suicide or to other kinds of mischief?—To suicide, and also to homicide.

4011. Have you formed that opinion from any statistics?—No, from my own observation.

4012. You said that suicide was increasing in consequence of the facilities for getting opium?—Yes.

4013. Are the facilities for getting opium greater now than they were in former times, or are they less?—I have not the means of knowing. When I speak of the facilities of getting opium, I mean that it can be got at the four corners of Bowbazar, Burabazar, and so on.

4014. I believe that the shops are not more numerous now, and that the price is higher than it used to be?—The price is higher.

4015. Do you think that if opium was not so readily available, a certain number of lives might be saved?—That is my belief.

4016. (*Mr. Wilson.*) Do you agree with the witness who preceded you in his statement as to the effect of opium on the mind, sharpening the wits and improving the intellect?—I have no personal knowledge of that.

4017. You do not take it for that purpose?—No, I do not take it.

4018. Do you recommend it to anybody?—I never recommend any kind of stimulant unless it is required medicinally.

4019. Then you do not agree with the last witness?—I do not.

The witness withdrew.

*Dr. Surji
Cumar
Surbadhikari.*

29 Nov. 1893

Dr. Hira Lall
Ghose.

DR. HIRA LALL GHOSE, called in and examined.

28 Nov. 1893. 4020. (*Chairman.*) I believe you are a medical practitioner living in Calcutta?—Yes, I practise in Calcutta and the surrounding districts.

4021. How many years have you practised?—Thirty years.

4022. Is your experience confined to the neighbourhood of Calcutta?—Calcutta and the districts surrounding.

4023. You have been engaged in your work, going in and out amongst the people all these years, so that your experience of their habit has been very considerable?—Yes; I know many opium-eaters.

4024. Speaking roughly, what is the proportion of adults in your experience who use opium?—In Calcutta it may be from 5 to 10 per cent. amongst the adults above 40 years.

4025. Are you speaking of adults who use it in the latter period of life as a sustainer?—Not only as a sustainer but as medicine. Those who are 30 or 35 use it when they are ill of some disease, such as rheumatism, dysentery and diarrhoea; they use it medicinally.

4026. Taking the two classes together,—those who use it as a popular medicine and as a preventive of malaria, and those who take it as a habit, much as we use tobacco,—they would only amount altogether to 5 or 7 per cent. ?—That is so.

4027. What doses do they usually take?—The average quantity would be from 2 to 5 or 8 grains.

4028. I suppose that is regularly from day to day?—From day to day. They come to the dose of 8 grains after using it for some time; they commence with 1 grain, then they take 2, 3 or 4, gradually increasing the dose.

4029. Have many cases fallen under your observation where the quantity has been increased to an injurious extent?—I have seen 50 and even 100 grains taken by a man.

4030. And continued?—Continued from day to day.

4031. For years?—For years.

4032. Many years?—Yes; they continue it for ten or twenty years.

4033. Then there could not have been much effect upon the health?—Yes, there has been a bad effect upon the health.

4034. Still they manage to live on?—They go on living but bad effects are manifested.

4035. In what way?—In the form of jaundice, enlarged liver, dysentery, and diarrhoea. Of course those who are well-to-do and can live well do not show the same bad effects as those who have no such means of living.

4036. Have you observed those effects which you speak of from the taking of excessive quantities in some of the persons who are able to live well?—Yes. I may say that I divide the use of opium into two classes, the medical use and the non-medical use. For medical use poor people go to the vendors' shop; they cannot afford to go to the apothecary's for a prescription, because they are too poor, and they go to the vendors to get cheap medicine to cure their disease. With regard to those who take it for the sake of pleasure, that is a thing that I deprecate altogether.

4037. Those who take it medicinally do not consult the doctor?—Not always.

4038. They take it as a domestic remedy?—Yes, there is a bad impression amongst them generally, spread from their opium-eating friends, that unless, when they are above 40, they take opium, they cannot reach the full period of life. Such persons take it generally for non-medical purposes.

4039. Do you believe that there is any truth in that theory?—No.

4040. When it is taken for that purpose in the after part of life you say that the quantity taken is from 2 to 7 grains?—From 2 to 7 grains, and in some rare cases more.

4041. Do you recognise that there is a difference, a constitutional difference between those people and others?—Yes. The general complaint is costiveness. Whether they live well or not, they all complain of costiveness, and some of uneasy sensation in the abdomen. For that there is a medicine generally known among Bengal opium-eaters, a decoction of the *Convolvulus repens*.

4042. I think you said that, speaking generally, the opium-eating habit under the conditions that you mention does not generally affect the health?—When it is used

non-medically when there is no disease there is a deleterious effect on the health no doubt.

4043. Under what circumstances do you say?—When it is not taken for any disease, it acts on the health deleteriously.

4044. Even if those who take it as a sustainer in the latter portion of their lives?—Yes, there is a deleterious effect.

4045. I think you said that you thought that it had a sustaining effect, in some cases at any rate?—Not if there be no disease.

4046. Have you noticed that the use of opium affects the moral character?—Hardly.

4047. It does not lead to crime or lunacy?—No.

4048. Then I take it from you that your view distinctly is that the habitual consumption of opium, except as a preventive of disease, is deleterious to health?—Yes.

4049. I think you also said that these opium-eaters live long?—Those who do not take it live longer. I have many instances before me of people of 90, 80, and 70; they do not take opium at all, but they smoke tobacco.

4050. As a matter of fact, have you known whether persons who have taken opium as a luxury have shortened their lives or not?—I cannot say positively; because I have seen persons of 80 and above that age taking opium.

4051. Have you any further information you would like to give us from your experience?—I have asked many opium-eaters whether the opium has acted prophylactically against malarious fever, and they have all told me that just for 5 or 6 or 8 months after taking the opium they were well, but not afterwards.

4052. You distinguish between the prophylactic effects in the case of malaria and the effects on rheumatic pains, diarrhoea and so on?—In all cases they take opium, and if they leave it off after the cure of the disease, it is all right, but if they continue the habitual use of it there is a relapse of the disease.

4053. That is it does not act as a continuous prophylactic?—No.

4054. From year to year?—No. A year ago two persons came to me living in a malarious village in the district of Hughli who had taken opium for 20 years. They complained to me of the bad effects of the opium, and I told them to leave it off. They were two brothers; one of them took about 8 grains, and the other 20. They both left off the use of opium, and they are now quite hale and hearty. Then there is another man who used it for six years; he had repeated attacks of fever for which he took opium. He left it off, and after eight or ten months he was quite well.

4055. None of these three seem to have had much difficulty in leaving it off?—There was some difficulty, but for a few days only; want of sleep, a chewing and aching pain; and for fear of these symptoms they could not leave it off easily.

4056. Does that complete what you have to tell us?—Yes.

4057. (*Lord Brassey.*) Have you anything to say with reference to the regulations for the sale of opium? Do you think that it is desirable to be more stringent in those regulations?—Yes.

4058. Do you think that there should be more stringency in granting licenses for the smoking of madat and chandu?—I wish that the madat dens were closed for ever. With regard to chandu I have no knowledge.

4059. (*Mr. Pease.*) Have you any statement to make with regard to gooli?—There is a preparation of opium (mixed up with fried bits of guava leave) called gooli or madat, which some of the low and poor classes of Mahomedans and Hindus are in the habit of smoking. They are generally ill-fed, unclean, averse to bathing, and look like skeletons. Having contracted this bad habit for a long time, they cannot avoid it, and, when out of pocket, pilfer at home and abroad. They are the most useless members of society, and are a bane to their family and neighbours. It would be a beneficial act of Government if gooli addas or "dens" are closed for ever. This is generally used by the Chinese. Very few of the Bengalis take chandu.

4060. You say in your printed statement "There is a general impression, though wrong, that unless a man takes some sort of stimulant at the age of 40 and above, he

cannot reach the full period of life with vigor and energy. This impression has taken such a deep root in them that it is hardly possible to remove it, although they see many persons of seventy, eighty and above are enjoying good health without the use of a single grain of opium or other stimulants except tobacco."—Yes.

4061. That is a clear expression of your views?—Yes.

4062. You further say that you are of opinion that the use of opium for truly non-medical purposes is not only not necessary but injurious?—Yes.

4063. I believe you would be in favour of the sale of opium being placed in the hands of persons who knew those to whom it was being sold, and had power to refuse it?—Yes, some one who knew the neighbourhood and the opium consuming people in the neighbourhood. My suggestion is that they should not sell opium to a new man—in a poisonous dose I mean.

4064. They should have power to exercise discretion as to whom to sell it to?—Yes; and in a town there should be one vendor selected for each ward who knows all the consuming people. In the case of new-comers after inquiry he might sell opium to them.

4065. Do you think it well that the person who sells the opium should have a direct interest in increasing the sale of the drug?—No.

4066. (*Mr. Wilson.*) Do you know any European practitioners in India who recommend opium to their patients for dietetic purposes as distinguished from medicinal?—I do not.

4067. Do you know any Indian practitioners who so recommend it?—Yes, kabirajis, native physicians.

4068. Not those educated and practising according to European methods?—No.

4069. Kabirajis do recommend it?—Yes, of course for disease, not as a dietetic. I do not know any person who recommends it for non-medical purposes.

4070. Do you know any practitioners who recommend it to persons who are in no way diseased as a prophylactic against fever?—No. I have seen in books that opium is recommended as a preventive of disease.

4071. You have heard the evidence of the witnesses who preceded you?—Yes.

4072. I take it that you do not agree with the first two?—In general points I do not agree with them.

4073. You differ widely from them?—Yes.

4074. You have alluded in your printed statement to "respectable Mahomedans"?—Yes.

4075. Do you mean that taking opium implies that they would not be regarded as very respectable?—No. I mean those who are in a higher state of society.

4076. Have you been speaking chiefly of opium-smoking, or eating, or drinking; or do you include them all?—Eating of course in some cases of disease I recommend; smoking I do not recommend at all.

4077. Do you know anybody who recommends it for malaria without other medicines?—I do not know; I recommend other things than opium.

4078. May I ask where you received your medical education?—In the Calcutta Medical College.

4079. Did any of your professors ever recommend it for that purpose?—I do not know.

4080. (*Mr. Mowbray.*) Do you agree with the last witness that of all stimulants in general use, opium is the least injurious?—Yes.

4081. Would you propose to give discretionary power with regard to the supply of alcohol, just as you would in regard to the supply of opium?—No, not at all.

4082. What is the difference in the case of alcohol?—My recommendation is to use opium not for non-medical purposes, but for medical, for diseases only.

4083. You would give discretionary power in the supply of opium for medical purposes as I understand?—Yes; for medical purposes I would recommend opium as well as alcohol.

4084. You recommend both for medical purposes?—Yes, but not for non-medical purposes.

4085. Would you prohibit both of them absolutely for non-medical purposes?—Yes, opium as well as alcohol.

4086. Absolutely?—Absolutely.

4087. You have told us that you would allow people to supply opium to persons whom they knew?—To persons whom they knew—persons who are ill, not otherwise. Of course there are persons in the villages who are very poor,

who cannot go to the apothecaries' shop. One pice of opium will answer the purpose of 8 annas worth of medicine. For that I recommend the use of opium.

Dr. Hira Lall Ghose.

28 Nov. 1893.

4088. You would require a large number of people to distribute the opium in this way?—Not a large number of people. When the cultivation is decreased, and when it is only used for medical purposes, the sale of opium will be less, and more vendors will not be required.

4089. Do you think that the number of people required to distribute opium with these discretionary powers would be larger or smaller than the number at present?—Smaller.

4090. It is part of your idea that they should be sufficiently numerous to have a personal knowledge of the persons who apply to them?—There should be a vendor in each ward. There are only eighteen wards in Calcutta.

4091. Would it be possible for one person in an eighteenth part of Calcutta to have a personal knowledge of everybody who came to him?—He would gain the knowledge gradually; that is my suggestion.

4092. What is a poisonous quantity of opium?—More than two grains.

4093. Do you know how many places there are for the sale of opium in Calcutta at present?—I do not.

4094. (*Mr. Fanshawe.*) You admit, do you not, that amongst the people in this country opium is used as a domestic remedy?—Yes.

4095. I think you will admit that a large part of the population is necessarily cut off from any medical advice, either from gentlemen educated according to the European methods, or according to Native methods?—Yes. There are many villages where there is no qualified medical man, and for these poor people I say that these vendor's shops should be kept.

4096. But have you had any personal experience amongst the Marwaris, whom you have mentioned as living in Calcutta?—Very limited; I see them now and then, but my experience is very limited.

4097. May I take it as a fact that opium-eating is a habit in moderation among them?—Yes.

4098. Does it affect their health so far as you know?—It affects their health, but they are prospering tradespeople, and they can live well.

4099. Let us stick to the Marwaris. Does it affect their health?—In the case of those who take a large quantity their health is affected.

4100. Do you say that the habit of opium-eating in moderation exists among the Marwaris, who are, I believe, a prosperous community?—Yes, and they can live well.

4101. Then does it affect them injuriously?—Not so much as the health of the Bengalis is affected.

4102. (*Sir James Lyall.*) The opium-vendor whom you recommend would have to be a medical man, would he not?—Of course not.

4103. If he was not a medical man, how could he tell whether the person who wanted to buy opium required it for medical purposes or not?—Of course he would have to believe the patient.

4104. If the patient said he wanted it for his health, he would have to give it?—Yes. There are many persons that we do not know. Sometimes a person comes who says he takes opium. He looks pretty well, but he says he has got colic, or pains somewhere; but pain is a subjective symptom, and it cannot be detected easily.

4105. What improvement would there be in your suggestion as compared with the present system? Because a person who wanted to buy opium would, if he thought it necessary, say that he wanted it for his health?—The vendor should be a resident of the locality, and being a resident of the locality, he would know all the families residing in it, and he would know who was ill and who was not.

4106. I believe in the country districts there is only one opium shop of any sort for fifty square miles in about ten villages, or perhaps five or six villages?—It may be six or seven or eight villages, but a member of one village knows the families of the others. That is not so in Calcutta.

4107. You must get a very honest man?—Of course.

4108. He might get some inducement offered to him to give the opium?—That must be guarded against. I cannot make any further suggestion.

4109. You have said that persons who have been ruined by alcohol have been cured and made useful

Dr. Hira Lal Ghose.
28 Nov. 1893.
members of society by taking opium?—Yes, I know many. I knew a beggar in the street who would beg nice to buy alcohol. He has left off alcohol, and he now takes twenty-four grains of opium. He is a clerk in an office, and can do the work of an ordinary man.

4110. Then in some cases opium is a very good thing?—In those cases of course. It is better than alcohol. My meaning is that the use of opium in that case is better than alcohol.

4111. Is it not very difficult to draw a line between the medical and non-medical use of opium?—Yes. When people come to take our advice as to the use of opium, we ask them, and they say they have some disease, but apparently they are looking well.

4112. (*Mr. Wilson.*) Am I right in understanding that the Marwaris are among the wealthiest men in Calcutta?—

The witness withdrew.

Yes. The Marwaris are residents of Rajputans, Jodhpur and other places, and they come here to trade.

4113. They are amongst the wealthiest men in Calcutta?—They are tradesmen, and doing well with their work.

4114. Are many of them poor?—There are poor among them, and many of them are well-to-do.

4115. If I understand you rightly, in reply to Mr. Fanshawe you said that if they are well fed they do not suffer much?—They do not suffer much, but I cannot say that they do not suffer at all.

4116. But if they are poor and badly fed they do suffer?—Of course.

4117. (*Sir James Lyall.*) Do you mean in all cases, or when they take it in excess?—Almost in all cases. Of course when they take it in excess they suffer severely; and in some cases when taking a small quantity, some may suffer and some may not.

Miss LILLIAS HAMILTON, M.D., called in and examined.

Miss L. Hamilton, M. D.
—

4118. (*Chairman.*) I think you are a doctor of medicine?—Yes.

4119. Practising in Calcutta?—Yes.

4120. Will you kindly tell us in what way you have had opportunities of observing the opium habit?—I have been three years practising amongst the natives, chiefly among the upper classes of natives; I have also seen the lower classes in the hospital, but as our hospital is a zenana hospital, even there I chiefly see the upper classes.

4121. Have you also a dispensary?—Yes, I have a dispensary where we see from sixty to one hundred and eighty patients every morning.

4122. In that way you acquire considerable knowledge in the use of opium?—We do not have a great many cases of opium-eaters who eat it to such excess that they suffer in any way. I have never seen anybody in this country who has come to me really suffering from opium-eating.

4123. Only incidentally?—Yes. In prescribing I have found that patients for whom I have prescribed are in the habit of taking opium, and I am therefore obliged to prescribe opium in larger quantities if I prescribe it at all.

4124. Have you formed any estimate of the proportion of adults who use opium habitually in smaller or larger quantities?—No, I have not. I should say that among the upper classes it was comparatively rare.

4125. Does it exist among the lower classes?—Yes, it is more common among them.

4126. Would you say that half the adults consume opium?—Perhaps in the lower classes, but not if you include the upper classes.

4127. As far as you have observed, is the result confined to adult males; do the women and children indulge?—I have never seen a child who has taken opium. I have no experience among men; but among women in the upper classes I do not think I have seen more than half a dozen who I could distinctly say took opium in such a way as to interfere with treatment.

4128. Are you speaking of children now?—I am speaking of women in the upper classes.

4129. In the zenanas?—Yes.

4130. There it is comparatively rare?—I think it is.

4131. You have seen a little of the practice of giving opium to infants, have you not?—I have not seen it given, but I have ascertained that it is done.

4132. Does it get into a confirmed habit?—No, I have never seen a child of ten or twelve take opium at all.

4133. So that the habit amongst women, so far as you have observed, is not commenced until adult life?—No; generally speaking in the upper classes of women it dates from some illness that they have had.

4134. And it is continued even after the illness has been cured?—Yes, it is.

4135. Do you think that in that class there has been a deterioration of health or morals?—I have never seen any such thing in this country.

4136. So far as you have seen, the opium habit amongst the ladies in the zenana and other women has been commenced first for the relief of some ailment and continued afterwards?—Exactly.

4137. But continued in moderation?—Yes.

4138. And you have not really seen deteriorated health from this habit?—Never.

4139. Nor deteriorated character?—Never.

4140. Have you any idea how much opium would be used in those cases?—I have had a few cases in hospital, and in those cases a pice worth (a pice is about a farthing) would last about two or three days.

4141. That would be only four or five grains?—I am not quite sure. I only know how much they send out for.

4142. It is a very small quantity?—Yes.

4143. It would be not more than a grain or two?—No.

4144. And is there any tendency to increase the dose?—They do increase it; they begin with a smaller quantity than that originally, and no doubt when they are older women they take more. Many natives I know do take a great deal more, but they have not come into my practice.

4145. Is the habit of taking opium regarded as disgraceful in the circles in which you move?—They will never admit taking it unless you press them. Generally, you are drawn aside, and it is confided to you that they do so. I do not think that the taking of opium is considered disgraceful, as I think smoking is, but I have never seen any opium-smoking at all.

4146. I suppose it is something like cigarette-smoking by ladies in our own country. What reason have you heard given by natives who are opium consumers?—I do not think they look upon it in any favourable light. I have heard people say that it makes them more intelligent for the moment.

4147. Has it not a deleterious effect upon them physically or morally?—No.

4148. But you think there is a tendency gradually to increase the dose?—Yes.

4149. The deleterious effect is increased?—I have seen no deleterious effect in this country.

4150. How would the absolute prohibition of the consumption of opium be regarded by the consumers and the public generally? What opinion have you arrived at on that point?—I think they would look upon it as a very great hardship. They would think it unwise.

4151. You have not observed any public intoxication in connection with opium?—Never.

4152. Does any portion of the population consume spirits or hemp drugs?—They consume hemp drugs. A large number of natives consume bhang, that is, the leaves, but I am not aware of that being intoxicating, except in large quantities. It is somewhat exhilarating, and even children take it.

4153. Have you seen much alcoholic drinking among Native women?—Never among the women. I have seen it among the men.

4154. Would the prohibition of opium, do you think, lead to the enlarged use of these other stimulants?—I fear it would certainly.

4155. You would regard that as an unfortunate occurrence?—Yes, because I have seen evil effects from the others, and I have never seen any from opium.

4156. As far as you have studied the question, do you consider that the granting of licenses for the sale of opium

for other than medical purposes should be abandoned?—No, I do not.

4157. You think that the present system is, on the whole, the best?—I think so.

4158. (*Lord Brassey.*) From your experience, would you say that the use of opium for medical purposes was more necessary, and that its effects were more valuable, in this country than in England?—Certainly, it is more necessary in Indian complaints; in certain complaints nothing will replace it. I have seen much more taking opium with evil effects in England than I have ever done in this country.

4159. Do you think there is anything in the climate of India which would make the use of opium as an indulgence and a luxury more innocuous than in England?—I can hardly say. But it is so much taken here that I fancy it must be so. There are diseases here which require the use of opium very much more than is the case in England.

4160. (*Mr. Pease.*) I should like to ask whether you would advise people in England to take opium for dietetic purposes?—No, I should not.

4161. Would you advise it here?—No, I should not advise it in England or here.

4162. You think it is a practice better avoided?—Yes.

4163. (*Mr. Wilson.*) What is your practice in regard to recommending alcohol?—Do you in certain cases recommend it in the form of beer or wine or spirits as a dietetic?—Yes. I order spirits and very occasionally wine. I do not order much of any. I find that the ladies here especially are very disinclined to take either.

4164. You do not regard opium from the same dietetic point of view as you do alcohol?—No.

4165. As far as you know, would that be the general opinion of your European colleagues in this country?—I should think that is so except up country, and I have no experience of that. I have heard it urged that it was much more necessary in the more malarious parts of the country, but I do not personally know about that.

4166. You would never recommend it for dietetic purposes to anybody?—Never.

4167. Did you ever hear anybody that did?—I only know from what I hear. I should not like to say so. I have heard it said that it is done, but I do not know.

4168. Would you consider that a medical man who did recommend opium for dietetic purposes was doing a very safe thing for his patients?—I should not do it.

4169. You would be afraid that it was a rather seductive habit?—I do not see the necessity for it.

4170. You are not a total abstainer yourself?—No.

4171. And would not personally recommend any of your patients to refrain entirely from alcohol?—Certainly not, unless it was necessary.

4172. Would you advise an European patient to break off the opium habit?—Yes, if it had become excessive.

4173. If it was moderate?—I should still think he was wise not to take it.

4174. Have you recommended it as a prophylactic against malaria?—I have never done so.

4175. Do you know any European practitioner of your own knowledge who has done so?—I have never seen it prescribed. I have heard it stated at the Medical Society that it is prescribed in that way. I allow any patient who comes to the hospital to continue the opium she has been

in the habit of using, because if she does not take it she does not get better.

4176. Do you in the case of malarious fever give opium alone as a medicine?—No.

4177. Is the dispensary that you mention a public dispensary or a private one?—It is the Dufferin Dispensary.

4178. Are the women who come there mainly of the poorer classes?—No; we have some of all classes, most of them are purdah women.

4179. In reference to infants and children, I understand you to say that you have not seen them taking opium?—Never infants.

4180. Do you mean that you have not actually seen it, or that you are not acquainted with the fact that they do take it?—I have seen children who appear to have very bad digestions, and to be generally upset; and knowing that it is popularly believed that they do give the children opium, I have constantly asked the question. I think it is only done among the lower classes here, but I think it is also done in England. Syrups of various kinds are given by mothers to keep their children quiet while they are at work, that is all. I have never seen a child suffering from the slightest symptoms of opium-poisoning; it is only that the digestion may be upset by the opium.

4181. Have you known or suspected cases of European children having had opium given to them by ayahs?—I know of one who had opium given, not by an ayah, but by a European nurse.

4182. Is it a common impression that it is so given?—I believe so; but I have never come across it.

4183. You consider that in the case of your patients you have not seen either moral or physical deterioration from the opium practice?—That is so.

4184. I do not know whether you come sufficiently in contact with them, or know sufficiently of their history and progress, to be able to form a definite opinion about their moral deterioration?—I know them very well. I know a good many families in the zeuanas.

4185. Not those who come to the dispensary so much?—I do not know those at all, or very slightly.

4186. You have been practising for three years?—Yes.

4187. So that you have not had longer than that time to watch their progress?—No, but I have seen women who have taken opium for ten years, and they have been quite as intelligent as anybody else.

4188. I do not understand why they draw you aside and confide it to you?—The upper class ladies do not appear to like you to know it; they do not like to talk about it publicly; that is all I mean. I was asked whether it was considered disgraceful: I do not think so, but it is not a thing that they do publicly.

4189. I gather that they would tell you about most of their symptoms in the presence of other persons?—Yes.

4190. But when they get to this they hesitate?—They are little shy about it. I do not think it is considered disgraceful.

4191. (*Mr. Mowbray.*) Is this reluctance that you speak of in confessing the truth about opium only in the case of women, or is it a disgrace in the case of men?—I do not know anything about men professionally. I see them in their houses, and I ask them the question, and they have told me that it is not considered disgraceful, but that they consider opium-smoking rather disgraceful.

4192. Your remark applies to women?—Yes.

The witness withdrew.

RAI BAHADUR KANNY LALL DEY, C.I.E., F.C.S., called in and examined.

4193. (*Chairman.*) Are you a medical man?—Yes, I am a graduate of the Medical College, Calcutta. I was over 30 years in the service of Government, for the first ten years I was Assistant Professor of Chemistry and Chemical Examiner to the Government. For the next nine years I was a teacher of practical chemistry in the Medical College and additional Chemical Examiner to Government. For one year I was officiating Professor of Chemistry, and Chemical Examiner to Government, and for the last ten years of my service I was teacher of Chemistry and Medical Jurisprudence in Campbell Medical School. I am an Honorary Member of the Pharmaceutical Society of Great Britain.

4194. What opportunities have you had of studying the effects of the opium habit from personal observation?—As a medical practitioner I have had occasion to visit families, and among the higher classes I have a large practice, and among them I have known the elderly people, even among the ladies, taking opium with advantage in cases of illness rheumatism, pain or any other chronic disease, such as asthma.

4195. Amongst the people that have fallen under your observation during this long period, would 5 or 6 per cent. of the adult males use opium habitually?—I believe so. I cannot give it accurately. It is somewhere about 5 or 6 per cent.

Miss L.
Hamilton.
M.D.

28 Nov. 1893.

Rai Bahadur
K. L. Dey,
C.I.E., F.C.S.

Rai Bahadur K. L. Dey, C.I.E., F.C.S. 4196. And the dose would be from 5 to 7 grains a day?—I suppose so. They commence it from half a grain to a grain, then gradually increase it provided the ailment is not properly cured. Generally they do not exceed 4 grains as far as I know amongst the aristocratic classes. It is only in exceptional cases that they take larger doses medicinally; 4 grains is always sufficient.

4197. Four grains per dose or 4 grains per day?—Four grains per dose. People take a dose once or twice in the course of the day.

4198. Then that would mean 8 or 10 grains per day?—Perhaps it would.

4199. Altogether I dare say you have noticed a large number of these habitual opium-eaters?—Yes, a great many.

4200. What effects have you noticed on their health and morals?—Generally they keep in good health. Those who are ill-fed or under-fed may lose flesh. Generally when they are under-fed they fall back in weight. The poor man will generally suffer if he is an habitual eater, provided he cannot have his usual amount of food; he will waste and he may get bowel complaints, diarrhœa and so on.

4201. So that in the case of a poor man he would be better without the opium?—Yes.

4202. He had better spend his money on additional food?—Yes.

4203. In the case of persons who are well fed, you have not observed any disastrous effect on their health and morals?—I have not had many opportunities.

4204. Do they continue in health for an indefinite period?—Yes.

4205. Have you traced any crime or lunacy to the use of opium?—I have never observed any opium-eater who has done any criminal act, nor any opium-eater who has become a lunatic.

4206. What has been your experience with regard to the effect of opium-eating in malarious regions?—I have had an opportunity of seeing various people coming from malarious districts; and I know that many of them have taken opium and have got well. There are many persons who have become opium-eaters on account of the malarious state of the country.

4207. And is it your impression that they would be worse if they did not?—They would certainly be liable to fever, and the fever would carry them off. The opium arrests molecular change and the wear and tear of the body, so that they can continue their work for a long period by the use of opium, but they will fail to do so if they are deprived of their quantity.

4208. Speaking generally I suppose that skilled medical relief is quite outside the reach of large portions of the population?—That is perfectly true. There may be one per cent. who can obtain medical relief. A large portion of the community in the mofussil cannot get it; and even in Calcutta there are many who cannot get medical relief if they do not go to the hospital.

4209. So that as a popular domestic medicine it is in great request?—Yes.

4210. So far as opium is concerned, you think that on the whole measures taken to prohibit it would be injurious to the population?—Certainly.

4211. You think that?—Yes.

4212. Comparing the opium habit with the alcohol habit or the habit of using bhang, you think it less injurious?—Opium is decidedly less injurious. In cases of alcohol drinking the liver will generally be upset, the heart will be diseased, the brain will be muddled, and many complications will ensue; whereas if opium is taken to excess, it seldom produces any disease except emaciation and diarrhœa.

4213. I think you have made some interesting observations with regard to the composition of opium. Will you kindly mention it?—When I was Chemical Examiner I had the opportunity of examining the contents of the stomach in the cases of people who had died from the effects of poison. In every poison case, I always tried the Reinsch's test to detect the mineral poison; whenever there was any Indian opium in the stomach, it was sure to show purple color, owing to the presence of hydrochloric acid. This purple color is due to one of the ingredients of the Indian opium, *viz.*, porphyroxine. In examining the opium from other countries I found in the Malwa opium a very minute trace of it, but in the Turkey opium I did not find a trace. This is one of the trial tests for the

presence of Indian opium in the stomach. One-thirtieth of a grain can be detected with hydrochloric acid, after being treated with modification of Stast's process.

4214. Is there any other statement you would like to make?—I think the presence of this ingredient porphyroxine is the reason why the Indian opium is preferred in China. It is not to be found in the opium of any other country. Perhaps it tempers the quality of the opium, and that is why the higher classes among the Chinese like to have it, just as the higher class Europeans prefer champagne to any of the inferior qualities of alcohol. That is my impression as to why the Chinese so much like the use of Indian opium.

4215. That is only hypothetical on your part?—Yes.

4216. (*Mr. Pease.*) You have stated that under the influence of opium the labouring classes are capable of prolonged exercise?—Yes. Opium arrests wear and tear of tissues and so tends in many conditions to sustain or prolong life.

4217. How long will that last?—The effect will last a much longer time than the effects of alcohol. I think it will last 8 or 10 hours.

4218. What is the state of the man at the end of that period?—In 24 hours the whole effect is exhausted. There may be a certain amount of languor, when they are incapable of work.

4219. You look upon it as a stimulant to which there is attached a certain amount of depression?—Yes. There is more depression in cases of alcohol.

4220. Do you think that the continued practice of taking opium as a stimulant has an injurious effect upon the constitution?—I do not think so. After a certain age the force is restored and the digestion improved. Those who suffer from various chronic diseases get over them, because they can digest their food; their food is retained.

4221. Have you known many cases in which persons who have taken considerable quantities of opium have given it up?—Very few. They have diminished the quantity, but not entirely given it up.

4222. Does it require much effort?—A great deal of effort.

4223. What effect has it upon the health?—The nervous system would become irritable, and then the person will become sleepless, and there will be a general waste; he will not be able to take his food properly.

4224. After that is there a full restoration to health?—Not in the case of elderly people, but the young may recover.

4225. So that your view is that they suffer from having indulged in the practice in earlier life?—Yes.

4226. (*Mr. Wilson.*) Where did you receive your medical education?—In the Calcutta Medical College.

4227. Where have you resided?—In Calcutta.

4228. How long?—Since my birth. Nearly 62 years.

4229. Were you in the Opium Department?—No. I was in the Chemical Department of the Medical College as Chemical Examiner.

4230. Were you Opium Examiner?—No. Whenever opium used to come from Government I had to examine it.

4231. It comes once a month, does it not?—No. Generally in the opium season.

4232. I believe you have retired from that now on your pension?—Yes, for nearly ten years.

4233. In reference to your views about the special property of porphyroxine, are you supported or corroborated by other scientific men?—Yes.

4234. Is it your own view?—The tempering of Indian opium is my own view, but with regard to the presence of porphyroxine, Drs. Macnamara, Palmer and others have already tested it.

4235. Can you tell me why milk is taken by opium-eaters so much?—Milk being assimilated thoroughly by the opium-eaters, it becomes conducive to their health. The opium-eaters who take preparations of milk with sugar, Indian sweetmeats, cream and the like, are always found in a healthy condition, like the alcohol drinkers who take meat. The opium-eaters will generally suffer and fall back in weight, if they are deprived of milk food, like the ganja-smokers who are deprived of oleagenous food.

4236. Their stomachs are not in a very good state?—When they do not take opium. Those who take milk are always in a good condition; they assimilate it much better than any other food.

4237. Milk is one of the easiest things to digest, I suppose?—Yes, particularly by the influence of opium it is retained in the stomach. Those who cannot take milk can by means of opium retain it and assimilate it properly.

4238. Are there many who cannot take milk?—Many. It ferments in the stomach, and they do not take it.

4239. Do they take opium in order to help them with the milk, or do they take milk in order to help them with the opium?—Milk is taken by the opium-eaters, not so much for assimilating milk as for counteracting the evil effects of opium.

The witness withdrew.

Mr. KHURGESHUR BOSE called in and examined.

4244. (*Chairman.*) I believe you are Medical Officer to the Eastern Bengal Railway?—Yes.

4245. What have been your duties?—I have only been there a year.

4246. I believe your official work is done at Sealdah?—Yes.

4247. Where is that?—Near the Railway Station.

4248. I believe you are Medical Superintendent of the Hospital?—Yes, I am in charge of the dispensary.

4249. Are you also engaged in practice?—I only see a few patients between 11 and 3.

4250. Is your experience as to the opium habit confined to your district about Sealdah?—No; I have always lived in this country among the people.

4251. And what has your impression been as to the effect of the habit of using opium upon the people whom you have observed?—The effect of a moderate dose of opium is not very marked.

4252. Do you mean by that, that you cannot tell whether it does harm or good, or is it indifferent?—It is indifferent.

4253. You say in your printed statement that you believe it retards physical decay and death in those whose health had already been undermined by diseases, that in those cases, therefore, its effects are salutary?—Yes.

4254. When healthy people take opium, you do not think it does good or harm, that is your view?—Yes.

4255. Does it affect the moral character in any way?—It does not.

4256. What do you call the moderate use of opium?—One grain to eight grains.

4257. Is there a tendency to increase the dose?—Yes, they generally increase the dose.

4258. Does that increased dose act deleteriously?—No.

4259. You think that there is an increasing tolerance as people grow older?—They become gradually accustomed to it, and increase the dose.

4260. Still it does not do them harm?—No.

4261. Have you noticed much difficulty when people try to give it up?—Only for a few days. I have known persons give it up all of a sudden, and there has been a difficulty the first few days.

4262. Have you also seen the same effect in the case of alcohol and hemp drugs?—Yes.

4263. You say in your printed statement that opium is used for medical purposes by about 25 per cent. of the middle and upper classes: do you mean of adult males?—I mean those who have attained forty years and upwards.

4264. People in towns?—In the country too. It is used by the shopkeepers, weavers, tailors, and those who follow a sedentary life. The cultivating classes, as a rule, do not take opium. The non-medical use of opium is rather prevalent among the artisan classes, particularly the mill hands and menials. Among the upper and middle classes, this vice is only noticed among those whose education was neglected. The non-medical use of opium generally begins in the shape of smoking, and at an early age, say twenty or so; and this habit is invariably contracted from bad company. In time these smokers of opium, losing all their energy, turn into idlers of society, and are hated by all, even by their dear and near relations. The poorer class, as may be expected, gradually take to stealing, in order to provide themselves with their usual dose, and thus become a constant source of annoyance to society. Starvation in their family is inevitable in most cases.

4240. (*Mr. Fanshawe.*) I understood you to say that the habitual use of opium in moderation generally grew out of some disease?—Generally so. *Rai Bahadur K. L. Dey, C.I.E., F.C.S.*

4241. Did you not say that the habit of eating opium in moderation has had its origin generally in disease?—Generally, opium is first prescribed when a person is suffering from any malady, and that leads to its habitual use. *28 Nov. 1893.*

4242. Apart from that, has it come within your professional knowledge that there is a habit of taking opium in moderation as a dietetic stimulant late in life?—Yes.

4243. You mean us to understand that you know both?—Yes.

4265. Have you observed those consequences from opium-eating?—Yes. As a rule people begin after 40 in consequence of some ailments. Smokers generally take it for luxury or intoxication, and they begin very early. They become indolent, and do not like work. Sometimes they give up smoking, but they eat opium in large doses.

4266. From opium-smoking, arising from bad company and so on after a certain time, they go on to opium-eating?—Yes. The use of opium is also to be found among another class of men, who had been in the habit of hard drinking in their younger days. To this class opium has often proved beneficial, both mentally and physically; and this change of habit has often saved them from untimely death, and their family from starvation and ruin.

4267. Do you believe that opium is used as a popular domestic remedy?—I refer to those who begin to take opium on account of disease.

4268. Not under the advice of the doctor?—As a rule they do not consult the doctor. The medical use of opium, I believe, is more prevalent in the districts of 24-Parganas, Nadia, Hooghly and Howrah, Jessore and Khoolna, Faridpur, Birbhoom, Gya, Shahabad, Patna and the Sonthal Parganas, than in Purnea, Rungpur and Mymensingh, where ganja takes the place of opium as far as my experience goes in the province of Bengal. I noticed the prevalence of non-medical use of opium (smoking) in the districts of Akyab and Kyoukphyoo in Burma. I also noticed opium-smoking in Naini Tal, in the North-Western Provinces, among the Mahomedan menials chiefly, who accompany their masters from the plains during the summer months. The inhabitants (natives) of Kumaun are not fond of opium. They prefer hemp (bhanga and charas). In Deoghur, in the Sonthal Parganas, almost all the children of the proper inhabitants of the place are given a small dose of opium, almost from birth, at night, in order to keep them quiet, up to the age of 5 or 6, when the habit is gradually eradicated by substituting bhanga. The Sonthals, I believe, are not addicted to opium. A few confirmed opium-eaters or smokers I found in all the jails among the prisoners with which I had any connection during my service extending over 23 years, but the proportion was small, say 2 or 3 per cent., except in the Kyoukphyoo Jail, where the proportion was about 10 or 12 per cent. of the jail population.

4269. What do you think is the opinion of the people of Bengal as to prohibiting the use of opium for non-medical purposes?—The people of Bengal are generally against the use of opium for non-medical purposes, but they are not willing to bear any cost of the prohibitive measure.

4270. What is your opinion as to the prohibition of the growth of the poppy?—The growth of poppy and the manufacture and sale of opium in British India should not be prohibited. I think prohibition is not possible. No change in the existing arrangement is necessary. If prohibited, the poorer classes will take to ganja and the richer to alcohol, which change is not desirable.

4271. You think that the growth of the poppy and the manufacture and use of opium promote the commercial prosperity of the country?—Yes, the poppy is largely cultivated in Gya, Patna and Shahabad as far as my experience goes; it brings into the pockets of cultivators and landholders about double the amount that they could expect otherwise from the same land. Neither the landholders nor the cultivators are willing to give up the cultivation of the poppy.

4272. (*Mr. Pease.*) You have spoken of persons taking a moderate quantity of opium. Is not four grains a fatal dose to a person not habituated to opium?—Habitual eaters generally take much more than that.

Mr. Khurgeshur Bose.

Mr. Khurgeshur Bose. 4273. What would you consider a fatal dose to a person not used to taking opium?—Six grains.

8 Nov. 1893. 4274. You consider a moderate allowance eight grains, while six grains would be fatal to a person who had not become tolerant of opium?—I refer to those who take opium gradually. They begin with one grain or less, and then gradually go on to eight grains or more.

4274. (*Mr. Wilson.*) Will you tell me who in your opinion

suffer most in Bengal from malaria, the ryots or the well-off people in the cities?—The villagers suffer most.

4276. Yet you say that those people rarely have recourse to opium?—Yes.

4277. So that where they suffer most they take the least?—A very few people know that opium is a preventive of malaria.

The witness withdrew.

Adjourned till to-morrow at 10-30.

At the Council Chamber, Writers' Buildings, Calcutta.

FIFTEENTH DAY.

Wednesday, 29th November 1893.

PRESENT:

THE RIGHT HONOURABLE LORD BRASSEY, K.C.B. (CHAIRMAN, PRESIDING).

SIR WILLIAM ROBERTS, M.D.
MR. R. G. C. MOWBRAY, M.P.
„ A. U. FANSHAW.

MR. ARTHUR PEASE.
„ HABIDAS VEHARIDAS DESAI.
„ H. J. WILSON, M.P.

MR. J. PRESCOTT HEWETT, C.I.E., *Secretary.*

Dr. DONALD MORISON called in and examined.

*Dr. D.
Morison.*

29 Nov. 1893. 4278. (*Chairman.*) Kindly state your position in this country, the nature of your duties, and the length of time you have been here, and the parts of the country in which you have resided, and generally the circumstances which have given you experience with reference to the question with which we have to deal.—I have been a medical missionary in the town of Rampore Bauleah for about sixteen years. I have taken a deep interest in the social, moral, temporal, and spiritual condition of the people. I was for years a member of the Municipality and District Board. I mention this to show that I was not indifferent to their temporal welfare, and I endeavoured to aid the Government and local bodies in every attempt made to improve the condition of the people, or to alleviate their sufferings. I have had two dispensaries under my charge for nearly all these years. I also itinerated all over the District of Rajshahye twice a year in the rainy season, and during the cold weather, and visited the adjoining Districts of Maldah and Pubna occasionally. During the rainy season, when the rivers were in flood and the rice fields inundated, I itinerated among the villages. I may say that I have during those itinerations visited more than once most parts of the district. In my double capacity as physician and missionary, I have been brought into the closest contact with all classes of the people, especially the poor. During those years from six to ten thousand patients annually were treated by me.

4279. Will you inform us whether the districts with which you have had experience were of a malarious character?—Rajshahye District is everywhere malarious, in some parts intensely so. When fever is very severe, as during September, October, and November, I have found sixty to eighty per cent. of my patients suffering from malarious fevers or their complications.

4280. Is the use of opium common in the Rajshahye District?—The use of opium is by no means common among the ryots of Rajshahye. I should say it is quite exceptional to find an agricultural labourer an opium-eater. In the towns, smoking opium is prevalent among day labourers and

other workmen who are disreputable, and some of them are very young men. Opium is not used by the people of Rajshahye either as a prophylactic or for the cure of fever. This remark applies to the districts of Maldah, Pubna, and indeed I may say to Lower Bengal.

4881. Have you anything to say as regards the view that is taken among the people with whom you have been in contact in Lower Bengal as to the opium habit? Is it regarded as a discreditable habit?—The habit of using opium in young people is always considered a disgraceful thing: in elderly people it is excused on the general ground of failing powers.

4282. Would you say that the opium habit is common?—It is by no means common in the districts I speak of, or in Lower Bengal generally.

4283. What do you say about other classes? Take the Mahomedans?—It is by no means true to say that as a rule elderly people take to opium. Among Mahomedans, a few headmen in villages, a few shop-keepers, tailors, merchants, and house-servants generally in European employ take to the habit; and among Hindus a few elderly people. That it is considered disreputable in most cases is manifest from the secrecy with which they eat it, and the fear they have of being branded as “opium-eaters.”

4284. Have you any explanation that you can suggest as to the circumstances under which the opium habit is first contracted?—Young men begin it from vicious habits or from seeing others take it. Old men or middle-aged men from 40 to 50 years begin the habit by taking it to restore or revive the failing natural powers.

4285. Is opium in your opinion used as a domestic remedy?—It is used very little, if at all, as a domestic remedy in Rajshahye; but I have seen men who began it on account of chronic rheumatic pains—pains of various kinds common to the labouring classes in all countries. Some begin it for pleasure, some for pain, others from curiosity, most from the contagion of bad example; but I never heard of it being recommended by any doctor, European or

Native, either to ward off or cure malaria; and, as I have already stated, the people themselves never take to it as a prophylactic.

4286. Do you consider as a medical man that the use of opium is necessarily injurious?—I consider that no one can take to eating it without increasing the dose, and suffering deterioration of bodily vigour. The progress may be slow and undoubtedly is so in some cases; but in the majority of cases emaciation is speedily manifested, and the bodily vigour deteriorates. The opium-smoker is so demoralised that his very surroundings suggest how low he has fallen; but the opium-eater with ample means keeps up a fair exterior for years. The poor man cannot afford suitable food to counteract the injurious effects of the opium, but must encroach upon his already too scanty meal to supply his unnatural craving.

4287. Have you anything further to say with reference to the use of opium from a medical or scientific point of view?—I should like to say something in regard to the tolerance created by the drug in the system when it is either taken in the form of smoking or eating; and I do not think I could bring forward a better authority or one that is more universally assented to in his general statements by the medical officers of the Government than Dr. Russell, who has been before you here as a witness, in his book on *Malaria and Injuries of the Spleen*, which was published about thirteen years ago. As far as my experience goes with regard to the use of opium, I might say that from the day I was instructed by the Professor of *Materia Medica* in the Glasgow University to the present day I have not found that any one can begin the use of opium and limit himself to a small quantity. If he uses opium at all for pain or disease he must of necessity increase it gradually until he comes up sometimes, as you have heard, to enormous quantities. As to the cause why with such unanimity people say opium-eaters must take milk if they are to resist the debilitating effect of opium, I would quote from a book. My own opinion is of very little consequence, but I quote from a book by Sir William Roberts on "Dietetics and Dyspepsia," at page 68.

4288. (*Sir William Roberts.*) I do not see what relevancy that has to the question before the Commission?—If you will allow me, I will connect it. The opium-eater is known to be a great drinker of milk. He cannot resist the influence of opium, unless he takes large quantities of milk. That is the universal testimony of the opium-eaters themselves; and every one who investigates the matter will find that it is so.

4289. (*Chairman.*) I do not think we need detain you further on that particular point. What have you to say as to the influence of opium-eating upon physical energy?—With regard to the influence of opium-eating on the physical energy, I may say that there is a common fallacy, when speaking of the stimulating effects of opium. It is stated that the opium-eater can do a great deal of work when he has taken his opium. In speaking with two men, who were utterly opposed to my views on this matter and who were employers of labour, and among the labourers were a good many opium-eaters, I put the question to them; given two men with equal physique, one an opium-eater and the other not, would you find in your experience that the opium-eater would do more work and sustain more fatigue than the healthy man, with equal physique, who did not take opium? One of the men to whom I spoke was the Captain of a ship, and the other was an agent of a steamer going to Orissa. They both said they could not say so, and the Captain distinctly stated that his experience of opium-eaters on board his ship was, that they do not and were not able to perform the same tasks that healthy men of the same physique would do.

4290. Have you any remarks to offer with reference to the difficulty of giving up the habit of taking opium when it is acquired?—I have experience of attempts that were made by my orders with opium-eaters. I find in my notes I have these cases. The first case was a native Christian who was suffering from disease of the bones of the legs, the tibia. He was recommended to begin opium-eating by a doctor in Calcutta. I saw him some years after, and found him emaciated and weak. No doubt his disease had some share in the debility, but he, of his own accord, wished to give it up. I tried by reducing his dose, and giving him another anodyne instead of opium. He suffered such agony, chiefly from the want of the drug, not on account of the pain in his leg, but from the general craving for the drug, that he could not endure it, and went back to his habit, and died a confirmed opium-eater. The second case, a native of Orissa, was a young man whom I engaged as my dispenser. I found out that he was an opium-eater. He had no disease whatever. He was a

walking skeleton. As long as he could get his opium he could do his work, but not at all satisfactorily. I found these two men in the employ of the mission, and both of them I urged to give up the habit, but with no effect. They threw up their situations rather than undergo the agony which would follow the giving up of the drug. The third case was an opium-eater in Cuttack, named Rundo, forty-five years of age. He was a day labourer; he became feeble, and could no longer work on account of the opium. His wife tried to help him for a time by working; but she found she could not support her family and give him money for opium. Others refused to give him money to buy opium. In desperation for want of the opium, he committed suicide by hanging himself. The fourth case I would like to refer to is that of a gentleman in Glasgow. A few years ago he consulted Dr. Yellowlees; and he told me of the incident. This Glasgow merchant felt that he was enslaved by the habit of injecting morphia into his system. He had endeavoured again and again to give it up, but had failed. He at length delivered himself up to Dr. Yellowlees to be cured. The doctor locked him in a padded room, where dangerous lunatics are confined, took from him his morphia, and kept him for a week or ten days till he was cured of the habit.

4291. Have you any remarks to offer with reference to the effect of opium upon children?—The result of dosing children with opium is most injurious. The fatal case of a child of a high official of the Bengal Government comes before my mind. The mother of the child told me of this case. She said:—"The medical officer of the Bengal Medical Service gave my child an over dose of opium, and it died." I think that we, medical men, ought not to depart from the instructions we have received from our Professors of *Materia Medica*, that opium given to children is always risky and dangerous. No doubt some do give opium to children in very minute doses, but that heroic treatment cannot be carried on for any time without the medical officer regretting that he has ever begun it. There was another case of poisoning a child. I saw the photograph of the child, and it was probably from 4 to 5 years of age. The ayah gave it opium in minute doses; the child withered away, and when it was very ill, in fact nearly dying, the medical officer discovered it was through opium. This woman was charged before the magistrate with chronically poisoning this child, and was punished with three years' imprisonment, but I understand if it had been her own child she might have gone quite unmolested, because it would not be known that she had done it.

4292. Does that complete what you wish to say with regard to the effect of opium upon children?—I think there should be some control exercised over opium, so that women could not possibly obtain it in order to drug their children. I learn, although it does not occur in my own district, that in other parts of India there is a heavy mortality from this habit.

4293. Have you anything to say with reference to the facilities that now exist under the system of licenses for the sale of opium? Do you consider the facilities are excessive?—The facility with which opium can be purchased places a great temptation before a morally weak people. Hence the great number of suicides in our cities and opium-growing districts. Only two months ago the little town in which I labour was thrown into excitement by the news that a boy 16 years of age reading in the Government Collegiate School had poisoned himself by swallowing opium because he was unable, or thought he was unable, to pass an examination. The next case, which occurred only quite recently in this little town I am speaking of, was that of a young widow, 18 or 20 years of age, who for some domestic trouble or other took opium and died. The third case was that of a married woman, who, on account of a quarrel with her husband, took opium and died. I think the sale of opium should be controlled, and that the quantity which an ordinary person should be allowed to purchase should be very much reduced.

4294. Have you now said all that you wish to say on the subject before us in its general aspects?—Yes.

4295. I understand that you have recently visited Orissa?—I have.

4296. How long were you there?—I was there for about one whole day, in Cuttack.

4297. Do I understand that you visited that place with a view of obtaining information, so far as the length of time permitted, with regard to the subject which has been referred to this Commission?—That was my object.

4298. And you desire, I believe, to make a statement which will represent the results of the enquiries you made at Cuttack?—On my way to Orissa by steamer in

Dr. D.
Morison.
29 Nov. 1893.

Dr. D.
Morison.
29 Nov. 1893.

November 1893, I met on board a number of native gentlemen (Hindus) returning to Orissa. All except one were connected with the Government. They were all men of intelligence and education. Two of them were M.A.'s and two had read up to the B.A. of the Calcutta University. I explained to them in a few words my object in going to Orissa. These young men acquiesced in the following statement in the presence of a witness: "We deliberately state that our experience of Cuttack, and generally over most parts of Orissa, has led us to consider Orissa peculiarly free from malaria with spleen and fevers, as compared with Calcutta, Burdwan, Nadya, and other parts of Lower Bengal with which we are acquainted. We even know some friends of ours who have settled in Cuttack, Orissa, on account of its freedom from malaria. We know that in Angul and other parts there is fever, probably malarious, but Orissa generally is not considered by us to be malarious. We are decidedly of opinion that the habit of taking opium in Orissa is not due to malaria, as the people themselves do not attribute the habit to that cause." The witness in this case was Babu Hari Das Banerjee, 65, Nimitolla Ghat Street, Calcutta, who stated—"I am a zemindar and have estates in Orissa. The above evidence was taken before me on 15th November 1893." I would state that one European Government official, also one native of Orissa, a zemindar and manager of a large estate, gave me similar evidence to that recorded above. I was at Cuttack on the 17th November, and I was taken to see a retired Deputy Collector, who is interested in this question. I learned from him that a few days before he had prepared a statement on ganja and opium in Orissa. He said in answer to my questions:—"I am a Hindu, a native of Orissa. I have been for many years Deputy Collector, and have had occasion to reside in Balasore and Cuttack. I never heard of opium being given to cure or ward off malaria, for here in Cuttack we have little or none. I have known families come to Cuttack from Bengal with their members suffering from spleen and fever, and after residing here for some time without taking medicine, they have been cured of their malarial ailments." "Were you aware that opium was cultivated in Balasore or in any part in Orissa in the time of Warren Hastings?" "No, I was not aware of that; that may account for the prevalence of the habit. At Balasore a friend of mine, a Government official, complained to me that he could not get his clerks to work after 5 p.m., however great the pressure of work. He said all his clerks took opium, and as that was the hour when they took their opium, they could not go on without it." "Had you any experience of the Orissa famine (of 1866)?" "Yes. I was on relief works and gave the starving food." "Did you ever hear the starving people ask for opium to allay the pangs of hunger?" (Laughing.) "No, I never heard of that; their one cry was 'Rice! Rice!'" "So you do not think the people could buy opium (a dearer article than rice) when they had no money to buy rice?" "Certainly not." I quote from the note prepared by this gentleman on opium and ganja, above referred to. He says:—"I know of many instances in which heirs to large estates brought ruin upon themselves by smoking and eating opium; not that the expenditure attending the habit was great enough to cause the ruin: but that the vice made the men on the one hand so lethargic, and weakened their intellects so much that they almost entirely neglected the management of their estates, leaving them in the hands of their servants, who robbed them right and left; and on the other hand, they were made exceedingly fond of carnal pleasure of all sorts, in which they indulged freely and most extravagantly. I have known the want of means to buy the drug turn men into thieves and burglars in numerous cases, which came before me officially. People have let their wives and children starve rather than do without the drug. The drug is used by men of all classes everywhere in Orissa: that is to say, the use is not confined to any particular race, class or district. *It is regarded as a curse by all, except, of course, those who are eaters or smokers of the drug.* Anything short of total prohibition of the cultivation of the poppy, except for medicinal purposes, would be a partial measure ill calculated to save the country from the destructive effects of opium. As regards the Native States, those in Orissa draw their supplies from the Government stores; in none of those States is the poppy grown or opium manufactured. I think the sympathies of the rulers of these States could easily be enlisted in the noble cause of abstinence from this drug. There need be no special police force to detect smuggling in the case of opium in this part (Orissa) of the country. It would not be easy to grow the poppy or manufacture opium without being noticed by the ordinary police. The existing police force, considered sufficient to prevent illicit preparation of the drug in districts under the Government, would prevent its being smuggled into them from Native States, where it is freely grown with-

out any restrictions. Should the rulers of these states be induced, as they easily could be, to prohibit its growth in their territories, the need for providing against smuggling would be reduced. The prohibitive measures recommended are not, therefore, likely to increase the charge on account of a detective force, as far at least as Orissa is concerned. One of the grounds of objection is the loss of revenue to Government, which would certainly result from it, supposing that such measures are enforced. I would simply answer that, where body and soul are at stake, as they undoubtedly are in the case under notice, no pecuniary consideration should stand in the way of reform. If opium-eating and smoking is a vice, as it is on all hands admitted to be, the traffic in the drug cannot but be considered immoral. This being so, there can be no justification whatever for the Government continuing the trade for the sake of filthy lucre. The revenue derived from it every righteous man would look upon as ill-gotten money; as the gain from gambling houses and those worse than these, would be. It is for the statesmen who are at the helm of Government to devise means by which the charges of governing the country could be met from legitimate sources, without having recourse to measures so immoral and so unrighteous as the opium traffic."

(Signed) JOGON MOHON ROY,
Deputy Collector (retired).

My next visit, in company with Mr. A. C. Das, was to the head teacher of a Government Normal School. He testified to the fact that opium was not taken in Orissa to ward off fever, or to cure fever, and that most parts of Orissa were not malarious. His name is Babu Modhu Shudhan Rao. I was referred when I was in Cuttack to Sir Romesh Chunder Mitter, who lately retired from the position of Judge of the High Court in Calcutta. That gentleman has on several occasions gone to Cuttack to improve his own health and that of his family. On my return to Calcutta, I had an interview with him, and I spoke to him with regard to this point. In a letter to Mr. Alexander, dated Bhowanipur, 26th November 1893, after speaking of his visits to Cuttack, and the benefit he and his family always derived, he says:—"Having a very favourable opinion regarding the salubrity of Cuttack climate, I advised a relative of mine, who had been suffering here from the affection of the liver accompanied by high fever to try Cuttack. He took my advice, and went there. He shook off the fever in a short time and, after staying there for about four months, returned to Calcutta completely restored to health. During my stay on these occasions, I heard from several gentlemen that residents of Lower Bengal suffering from repeated attacks of malarious fever, get well there within a short time. Cuttack is much drier than Lower Bengal, and, I believe, is free from malaria. Would you be kind enough to hand over this note to Mr. Morison."

4299. In what way do you connect the letter which you have read from Sir Romesh Chunder Mitter with this enquiry?—As corroborating the evidence that I have read to you that Orissa generally is not malarious. That is the point. It has been asserted again and again that Orissa is intensely malarious, and that the excessive consumption of opium there is due to its malarious climate. I have also the evidence of Mr. Macmillan, who was for over thirty years Executive Engineer of Orissa. In answer to my questions, he said:—"I was Executive Engineer of Orissa for over thirty years; but I am now retired from Government service, and living in Cuttack. I have travelled over every part of Orissa, at all seasons, and along the low-lying coast line as well as in the higher plains towards the hills. I had charge of all the Public Works in the District, and many of the roads and bridges were designed and executed by me. I constructed that large break-water you saw on the river as you approached Cuttack in the steamer. I have come to know the people and their habits well. I know the malarious parts, but Orissa is not considered malarious by those who live here. During all these forty years I have never had fever except once, and then not very severely. In all my intercourse with the people I have never heard them say that they took opium as a prophylactic, and I am sure they do not use it either to cure or ward off fever. I have heard some say that they began it for rheumatism. The habit here is merely a vice. I can remember two instances when the habit, after long continuance, was abandoned. One, a good workman, a mechanic, who was called 'pagol' or fool by the others on account of the effect of opium upon him. He was unreliable, although naturally a good workman. He dreamt a dream and on that account, so he said, gave up the habit. Soon after leaving off the habit he became a steady and industrious workman, and began to look quite different in appearance; even the very color of his face was changed; he looked fairer and became sensible and

reliable. The second man was a merchant, and was also called 'pagol' or fool on account of his manner from excessive opium-eating. He had neglected his business, and things were going to the bad; but he left it off and became a competent and prosperous man."

4300. I may also state that while I was in Cuttack there was a meeting of the Total Abstinence Society of Cuttack. I happened to be present, and I was asked to speak a few words. The meeting was a crowded one. I should say there were between eight and nine hundred people present. I put the following resolution to the meeting, and it was unanimously adopted:—"At a public meeting of the Total Abstinence Society of Cuttack, convened on the subject of Total Abstinence from intoxicating liquors and drugs, we hear with surprise that the cause of opium-eating and smoking, so prevalent in Orissa, is due to malaria. We believe the habit to be due to bad example, so contagious in evil, and we have never heard of opium being used either to prevent the influence of malaria or to cure an attack of malarious fever in Orissa." Then, again, the Baptist Missionaries, who have a very large Mission in Orissa, happened also to be assembled at the time of my visit. I naturally looked to them to give some expression of opinion in regard to this point. The following Resolution was passed:—"We, the Baptist Missionaries from various parts of Orissa, at present in conference assembled, hereby re-affirm what we have hitherto acted upon, that opium-eaters or smokers are not eligible for baptism or admission into Church Fellowship in any of our churches scattered throughout Orissa." The conference really represented a Christian community of three to four thousand members.

4301. You have dealt with your experience in Lower Bengal and your visit to Orissa; is there any other point you would like to bring before us?—I should rather like to discuss the question as to whether malaria is a real cause of the excessive consumption of opium in Orissa. That this theory has been accepted by the Government of India will be proved from the following extract from the Blue Book "*Consumption of Opium in India*," which is known to the members of the Commission.

In a Despatch, dated 14th October 1891, the following sentence occurs:—"We regard the general facts about Bengal as on the whole satisfactory, when the enormous area and population are considered, and when further it is recognised how large a proportion of the area consists of alluvial, malarious tracts in which the use of opium by the people is not a vice, or even a luxury, but to some extent a necessity of life."

4302. (*Mr. Fanshawe*.) Does that include Orissa?—Bengal generally.

4303. (*Chairman*.) Have you anything further to say?—I should like to mention that I had occasion to bring this matter before the Anti-Opium Society. A discussion was held on "The Medical Aspects of the Opium question," on the 31st May, 1892. I wish to put in the pamphlet in which that discussion is reported as evidence, and I will quote from it in order to show what I consider to be the weak points of this theory of malaria accounting for the excessive consumption of opium in certain districts in India. In that discussion I stated:—"The first assertion affirms that the excessive consumption of opium in Assam and Orissa is due to the fact that these parts are more malarious than other parts of India, and that it is taken as a prophylactic by the poor ryots. There are three outstanding facts which prove, to me at least, that the above theory is not the true one. Many districts in Bengal, which are more malarious than Orissa and Assam, do not consume opium in anything like the proportion of these oft-quoted districts. I instance the district of Rajshahye, some parts of which have been depopulated by malaria; yet opium, though known, is not largely consumed in that district as a whole. The excessive consumption of opium is not confined to malarious tracts, which it would be if the malarial theory was true, either as regards India or China. In both these countries people, living in parts comparatively free from malaria, are excessive consumers of opium. High above the malarial zone, in China and India, where malaria is endemically unknown, opium is consumed to excess. In such places as Simla—the highest town in the Himalaya range—we find the habit established, and the drug consumed to excess. It seems clear from these facts, which I can only merely mention, that whatever cause or causes have brought about the excessive consumption of opium in Assam and Orissa, it is not malaria alone. We must look a little more closely at these malarious tracts, and find a cause or causes, which are equally applicable to other parts of India, very different in climate, race, social habits, and religious restrictions. If we glance back

over the history of opium cultivation, we learn that it was formerly cultivated in these very districts of Assam and Orissa, where it is now so excessively consumed."

Dr. D. Morison.

29 Nov. 1893.

In the "Return of an article on Opium, by Dr. Watt. Reporter on Economic Products with the Government of India, recently written by him, and intended to be published in the 6th Volume of the Dictionary of Economic Products of India," (which I believe has been handed in to the Commission), Dr. Watt states, at page 22:—"At length, in 1873, an end was put to all disputes by the Governor of Bengal (Warren Hastings), who assumed, on behalf of the English East India Company, a monopoly of all the opium produced in Bengal, Behar, and Orissa." On page 20 this sentence occurs:—"That it was once on a time cultivated there" (that is on the Coromandel Coast) "as well as in Orissa and Bengal generally, there can be no doubt, for we have the East India Company's orders that its cultivation should be restricted to Patna and Benares. Doubtless the danger to the community, and the difficulty in preventing illicit transactions with a widespread, almost promiscuous, cultivation, must have forced on the Directors of the Honourable Company the necessity for confining the traffic within narrow limits, where fiscal restrictions could be brought to bear on it." In my speech in the discussion I have referred to, I further say:—"The dangers to the community which they dreaded were real dangers—dangers with which the cultivation of opium have ever been associated in India—the demoralisation of the ryot, and the forming of habits of opium-eating by the community." I do not wish to quote any more from this pamphlet which I put in. I will conclude by saying that my experience and my evidence from Orissa enable me to say that the following points, so far as Orissa is concerned, have been proved:—That Orissa generally, instead of being a hot-bed of malaria, is a kind of sanitarium for Bengal, where those who can afford to do so go to get rid of Bengal malaria, and are not disappointed. That opium is not taken in Orissa as a prophylactic, for the people do not know the antiperiodic properties of the drug, nor do they need it for malaria. That opium is never taken by the people themselves to cure fever. That the opium-eaters, who are saturated with the "prophylactic," are at least as liable to fever as others. That the use of opium is looked upon as a curse by all intelligent natives of Orissa who have the welfare of their people at heart. That the Balasore District, where the cultivation was carried on, as might be expected, is the most deeply tainted with the vice.

4304. (*Mr. Wilson*.) You have mentioned that you were a member of the municipality of the town in which you reside?—That is so.

4305. How were you appointed to that position?—I was nominated by the Government of Bengal.

4306. Are you acquainted with a book on malaria by Dr. Russell, who has been a witness before this Commission?—I am.

4307. Is there anything in that book which either confirms or contradicts the views you have put before us?—I think there are passages in that book which confirm my views.

4308. Will you refer to them, and give us your opinion about them?—In speaking of the opium-eater, he says, at page 37: "The opium-eater enjoys considerable immunity from malarial affections in the early stage, the first few years of indulgence in the habit, before the organic visceral changes are set up, and the general shattering of constitution results, which prematurely break down the consumer of opium and render him an easy prey to diseases of every kind." He then goes on to say: "In the plains of Assam this habit is almost universal. In this district the writer has made a series of exact observations on the prevalence of this habit, among the large circulating population of the jail. He finds that nearly four-fifths of the men of the plains, who enter jail, are more or less addicted to this habit, consuming from five grains to three drachms of the drug daily. On the other hand, he has never yet in seven years met with a hill man who was an opium-eater. They are usually spirit-drinkers. The prevalence of this habit is the curse of our jail populations in Lower Assam. No work can be got out of the long confirmed opium-eater. He can digest nothing but light food, milk or soups. On ordinary diet he suffers from diarrhoea, tending to rapidly run to dysentery. His system has very slight heat-making power, he is extremely susceptible to any changes of temperature, and cannot stand cold; he is thus especially liable to both chest and bowel disorders. Again and again he may be nursed, by a system of milk diet, gradually on to ordinary food, again and again he recurs to hospital, suffering from diarrhoea, dysentery, or dyspepsia. The emaciation of the opium-eater is characteristic and extreme. Eventually, after

Dr. D.
Morison.
29 Nov. 1893.

having been a source of infinite care, after repeated courses of medical and dietary treatment, after having caused large expenditure in sick diet, extras, etc., he perishes, usually of a chest or bowel disorder, or perhaps from practical starvation, from eventual inability to digest any kind of food, even the lightest and most delicate. On *post-mortem* examination, all the viscera are usually found wasted and anæmic, except the liver, which is commonly large, pale, and very fatty."

4309. Do you think that supports your view?—It does entirely.

4310. Do you wish to say any more with reference to that book?—There are other passages I might quote from it, that go to support my views in the matter.

4311. Were you present when Dr. Russell gave his evidence?—I was.

4312. Did you hear his explanation of that?—Yes, I heard him state that he referred to the "opium sots," but the word here is "opium-eater." Four-fifths of the people in jail could hardly be opium sots. He says "Nearly four-fifths of the men of the plains who enter jail are more or less addicted to this habit, consuming from five grains to three drams of the drug daily."

4313. Is there anything in the context which would lead the ordinary reader to suppose that it relates to opium sots?—I think not, because he calls opium "the curse of the Assam jails."

4314. Can you give us the date of the memorandum which you quote here, signed by Jagon Mohon Roy, the retired Deputy Collector?—It was written two or three days before my arrival, with the object, as I understood, of being presented to this Commission, in some form or other.

4315. You have given us the account of several statements and conversations which you had on a recent occasion on your way to Cuttack, with reference to this matter. I must apologise for asking you this question, but I think I must do so: did you hear any evidence of a contrary character?—I did not. I heard expressions from Europeans on the steamer that the difficulty of revenue was the great question, and that they had no sympathy whatever with this agitation against the opium traffic.

4316. You have been strenuously combating the doctrine of the connection of malaria with the consumption of opium?—Yes, I have.

4317. Can you give us any information as to the time that doctrine first arose?—I cannot exactly state who first started the theory; but it is only within recent years that it has come before the public: I think it was coincident with the agitation against opium.

4318. (*Mr. Mowbray.*) I understand that you have been in Bengal for sixteen years?—Yes, excluding my two visits to England.

4319. What sized place is Rampore? What is its population?—It is a town of 20,000 inhabitants, and it is the administrative head-quarters of the district of Rajshahye.

4320. Are you speaking from your experience of the town, or of the town and surrounding districts?—Of both; my experience extends to the whole district.

4321. What would be the population of the surrounding districts?—The population of the whole district of Rajshahye is somewhat about one million five hundred thousand, but I cannot give you the exact figures.

4322. Rampore is in the same part of India as Murshidabad, is it not?—Yes, on the opposite side of the river.

4323. Will it be described as being in the same district as Murshidabad?—No.

4324. Adjoining?—The Ganges separates them.

4325. Since you have been there, have you devoted your attention largely to this subject of opium?—Only within the last four years.

4326. Then the evidence which you have given us to-day from your own personal knowledge is based on four years' experience?—It is not: it is based on the experience extending over my whole term of service in Rajshahye.

4327. I thought you told me that your attention had only been directed to this subject four years ago?—I should have said that it was specially directed to it about four years ago.

4328. Do you remember your friend Mr. Donald Matheson, the Chairman of the Committee of the Anti-Opium Society, writing a letter to the *Times* in 1889, in which he referred to some letters which he had had from you?—Yes.

4329. This is what he says—"I wrote to Dr. Morison, the excellent medical missionary, who has been in charge of the

station for the last twelve years. His first reply was to the effect that he knew very little about it, but would make enquiries;" that is what you now substantially say, that it is only about four years ago that you began to make enquiries?—That is so.

4330. You have told us also that some further control should be exercised over the sale of opium: I should like to know what you mean by further control than what exists at present: in what direction do you think that control should be exercised?—I think it would be for the interests of the community at large, that the quantity of opium procurable by any person should be very much reduced, I should say, to non-poisonous doses.

4331. What would you call a non-poisonous dose?—Under four grains.

4332. What is the present amount that anybody can purchase in Rampore?—I understand that it is about five tolas: I am not quite certain, but I think that is the amount.

4333. Is it the case that within the last twelve months, the amount has been reduced from five tolas to one tola?—No, I am not aware of that.

4334. You would wish to go a good deal further than that?—Yes, I would make it difficult for a person to obtain opium, except for very necessary purposes.

4335. How would you define "very necessary purposes"?—Medicinal to begin with.

4336. How would you define "medicinal"?—Opium taken for the alleviation of bodily suffering.

4337. We have been told in evidence, by some witnesses who have appeared before us, that a large number take opium as a domestic remedy, for the alleviation of pain: is that in your view a medicinal taking of opium?—It is.

4338. With that you would not interfere?—I would not. I would simply guard against the abuse of that.

4339. From the evidence which other witnesses have given, you are no doubt aware that the amount taken by these people medicinally, in that sense of the word, is far larger than two grains?—Yes, because they are opium-eaters. They have become accustomed to it.

4340. In your opinion, we may take it, that for medicinal purposes, as a domestic remedy, a dose of two grains would be sufficient?—Yes. To begin with, that certainly would be a large quantity. I should say, to begin with, a half or a quarter of a grain would be the proper amount.

4341. I am not speaking of beginning. I am speaking of the maximum limit you would propose, with regard to the restriction of the sale?—I would guard it in this way: that those who are eating opium at the present time should not be deprived of it, and in order that they should receive what is necessary for them, they, of course, should be allowed to have larger quantities; but it should be known by those who are in charge of the shop that those persons are habitual consumers of opium. For those people there should be an exception made undoubtedly.

4342. Do you think, from your practical experience of the country, that it would be possible to vest that discretionary power in any persons selling opium?—I think it would be quite possible. I cannot go into details, but I see no difficulty in it. I think the Government could do it quite easily if they chose to give their attention to it.

4343. In order to apportion the amount of opium that any person was entitled to buy to the quantity which he had been in the habit of consuming, you would require, would you not, a very large number of people to be employed in that distribution?—I think not.

4344. Would it be possible for any small number of people to have sufficient personal knowledge of the applicants?—Yes, if certain shops were placed at certain centres, in a very short time the shopman would be able to know all his customers. I do not think there would be any difficulty in that. I am speaking of Bengal.

4345. I do not wish to ask you anything except with regard to your own personal experience. How many shops are there in Rampore?—I think there are three or four.

4346. Do you think that it would be possible for three or four people to have a sufficient knowledge of their customers to be able to say to one man, "you may have one grain," and another man, "you may have two grains"?—I think so.

4347. Without risk or serious abuse?—I think there would be no difficulty in a man recognising and knowing his customers if they were first registered. If they came to him to be registered, he would have no difficulty in knowing them.

4348. Now you have put in something you never suggested before: you mention a register?—I am not prepared to go into details; but I think in some parts of India a register would be necessary.

4349. Is not the difficulty in dealing with this matter, really a difficulty of detail?—It is entirely a difficulty of detail, therefore I do not wish to go into detail.

4350. It is very easy to say generally that a thing should be prohibited, or that more control should be exercised, but is it not necessary, before you say that, to think out the details before that could be controlled?—That is true generally. Undoubtedly one should think out as many of the details as one can. I have thought out some, but I am not prepared to lay them before the Commission, because I do not think that stage has arrived; but generally, I think that there would be no difficulty in manipulating the details of such a system of controlling opium-selling in Lower Bengal.

4351. Your view is that the maximum limit which should be provided for any person should be reduced to a very small quantity?—Any person who is not accustomed to opium.

4352. That it should be reduced to a very small quantity, and that discretionary powers should be vested in those who distribute the opium, and that they should know in some way who was a habitual smoker, and who was, therefore, entitled to have a larger dose: is that a fair summary of your recommendation?—I think that is what I mean.

4353. (*Mr. Fanshawe.*) Speaking from personal experience, you have said that there was no knowledge in Rajshahye of the use of opium as a prophylactic?—None whatever.

4354. You say that it is known as a domestic remedy?—Yes.

4355. Is it not so known in connection with fever (without using the word prophylactic) as enabling a man to withstand chills or pains caused by chills?—I have never heard of it used in that way. I have known it used sometimes for rheumatism and other pains that might arise.

4356. Not connected with chills, ague or fever?—Not with chills. For rheumatism I have again and again heard it spoken of, and very often for syphilitic rheumatism.

4357. You have not heard of it being used in connection with fever?—I have not.

4358. You said that opium is always considered disgraceful; is that quite what you intend to say, even when it is used by elderly men?—I do not think I made that statement in regard to elderly men.

4359. You do not mean it to apply to elderly men?—No, because public opinion among Hindus and Mahomedans is that elderly people who are failing in health from various causes may take opium without being considered to be addicted to a very demoralising habit.

4360. You also mentioned the habit of taking opium among the young men in the Rajshahye district. Did I gather that that was very unusual?—I think that is very unusual. I meant rather in regard to smoking.

4361. Is there now any shop in Rampore for the sale of chandu and madat?—I am not aware of any chandu shops; there are three for the sale of madat.

4362. You also said that there was a distinct tendency to increase the dose on the part of people addicted to the opium habit?—That is my deliberate opinion.

4363. Is it not the case that a number of these older men go on for long periods without increasing the dose to a point that does them any injury?—I think when they take it not for any pain, the tendency to increase it is not so very great; but when they take it for rheumatic pain or pains of any kind, and the pains are not removed or kept in subjection, there is a tendency to increase the dose.

4364. May we take it that generally in these cases the habit does not go on to an inordinate use of opium so as to do injury to the health?—I would not say that it does not interfere with the health. I believe there is a certain amount of influence upon the health. It is not very marked in some cases, but in long-confirmed cases it does become marked.

4365. Is it not a question of quantity; when an increased dose is taken it may not affect the health if it does not go to an excessive dose?—It is my experience that they usually do go to excess ultimately.

4366. Even in the case of men who begin later in life?—Yes. What I mean is that they usually go to five or six grains.

4367. But would that be excess as regards their own individual health?—My opinion is that a man cannot be an opium-eater without suffering in health, be he young or old.

4368. Do you think it would make any real difference in the number of suicides if opium were not available?—I think it would.

4369. You are aware that in Bengal suicides are common, and that there are many other modes of committing suicide?—Yes, I am aware of that.

4370. Then how would you apply that knowledge that there are many other means of suicide available and ordinarily used?—I would apply it in this way. If a man was a cutler and left his razors about his room and his children took to cutting their throats, I should consider that that man ought to move his razors out of the way. Opium has been such a prolific cause of suicide that a paternal government should remove it from the reach of the people.

4371. When you say a prolific cause of suicide, are you speaking of the Rajshahye district?—I have no statistics; I am speaking of India generally.

4372. In what part of India is it such a prolific source of suicide?—I have heard that Calcutta is one, and Rajputana another, and the opium-growing district of Gya, and other places.

4373. How would this fact affect your opinion, that in last year's Police report for the Lower Provinces, it is stated that in the district of Nuddea, 142 women committed suicide, and in every case death was due to hanging?—Probably opium was not at hand, or they would not have hanged themselves.

4374. Are there not always means available for suicide?—It is my opinion, and I think the opinion of the native public generally, that opium should not be so easily obtainable for suicidal purposes.

4375. In referring to Native opinion are you speaking of what has come within your own knowledge?—From my intercourse with the natives, which is pretty considerable.

4376. (*Mr. Wilson.*) Mr. Mowbray asked you what was a poisonous dose, and I think you said four grains?—Four grains is the usual dose mentioned in text-books.

4377. Does that mean a fatal dose?—Yes, there are no doubt exceptions where individuals can take larger doses, but generally, I think, four or five grains is considered fatal.

4378. Of course you mean in the case of persons entirely unaccustomed to its use?—Yes.

4379. (*Mr. Mowbray.*) How many grains are there to a tola?—I cannot tell; about 180, I should say, but I do not know exactly.

4380. (*Chairman.*) You have clearly given us your views with reference to the opium habit: may I ask whether you draw any parallel or see any analogy between the opium habit and the drinking of alcohol?—Yes; I think they are both sources of great evil in the world.

4381. You would not recommend the use of alcohol as an ordinary article of diet?—Yes, if it was necessary; as a medical man, I certainly would.

4382. You would recommend it for medical use?—For medical use.

4383. But not as an ordinary article or diet?—Not usually—not in the case of a person in ordinary health.

4384. To a person in ordinary health would you recommend abstinence from alcohol?—Not absolutely. Circumstances would modify my views—the constitution of the individual and other factors that might enter into any judgment that I should form. I do not think I can put it more clearly. I could not possibly state a general view upon the question. I am a total abstainer myself, but I do not in the least suggest that alcohol in its many forms may not be and is not beneficial. I know that in a great many cases it is most beneficial.

4385. Still you would regard it as useful rather as a medicine than as an ordinary article of indulgence?—Yes. The dangers that surround it to the community I think would make me careful not to encourage a young man to begin the use of the article.

*Dr. D.
Morison.*

29 Nov. 1893.

Dr. G. R.
Ferris.

29 Nov. 1893.

Dr. GEORGE RICHMOND FERRIS called in and examined.

4386. (*Chairman.*) Will you make a general statement of your professional position and of your views as to the question with which this Commission has been appointed to deal?—

I am a Member of the Royal College of Surgeons of England, and have been in India 40 years.

From early in the year 1856, I have been in private practice in Calcutta as Medical Officer connected with the dispensary known as Messrs. R. Scott Thomson & Co. I have, therefore, had nearly 38 years of experience in this country. During the whole of this period I have had daily to attend to the ailments and prescribe for all classes of patients, Europeans, Eurasians, and natives from all the Indian provinces, as Burmese, Bengalese, up-country men, Punjabis, Afghans, Gurkhas, Sikhs, and indeed men of all castes, races and religions. This large practice has made me familiar with Indian diseases and the habits and customs of the people, and, among other things, has drawn my attention to the habit of opium-eating. I have had no experience of opium-smoking except that many years ago I visited an opium den. In that den I found a mixed lot of men, but they were all orderly, respectful, and in possession of all their faculties. Very early in my practice I noticed that many patients were opium-eaters. My attention was first called, early in 1854, to this habit, when, as Surgeon in the Honourable East India Company's Bengal Marine, I had medical charge of troops and followers being transported between Calcutta and Burma. On a voyage in the Honourable Company's *S. S. Tenasserim*, carrying a large number of Sikhs, who exhibited a special immunity from sea-sickness, this appeared, considering the weather, so unusual and so peculiar, that I made inquiries, and to my astonishment I found that these men, who, I also noticed, took but very small quantities of food, were all opium-eaters. From that time I have never ceased, in the course of my practice, to investigate, so far as my opportunities allowed, the opium habit and the effect of opium on those who use it. Before going further, I may say I have never known Turkey opium to be used by an opium-eater, and I should regard four grains of such opium as a dangerous dose, that is, pure Turkey opium. The opium, which I have known to be eaten by my patients, is Bengal opium, and as to this class of the drug, I should consider pure opium in eight grains to be dangerous,—that is, eight grains in one dose. When the habit is commenced, usually one pice worth of opium is purchased. This is about four grains, and I may mention that this rate of sale has, so far as I know, not varied in all my experience. At the beginning, the opium-eater will divide his one pice worth in various ways, taking the dose morning and evening; the maximum dose being taken in the evening. After a time he may increase the quantity to six grains, and even eight grains, but I have noticed that a man will continue to take the same quantity daily for a very long time. There are cases where the quantity taken may be as much as twelve, and even sixteen, grains per day, but this I regard as extreme and connected with some special disease—it may be diabetes—against which the patient is combating. In one case, which has recently been before me, a native, remarkable for his intelligence and physique, but suffering from diabetes, actually got up to forty-five grains of extract of opium per day. The effect he desired having been produced, he is reducing the quantity. No one would be able to tell from that man's appearance, from his conversation, or his business aptitude, that he was an extreme opium-eater. It is a common rule with me to ask my native patients if they take opium, and in this way I have become acquainted with a great many circumstances not ordinarily known to medical men in connection with the opium habits and with its effects upon diseases. Generally, I may say that it has never made any difference in my treatment whether the patient took opium or not. I have not found opium deleterious in its use or interfere with the exhibition of any other drug. I have not found opium taken as a habit productive of any disease. I have not found it induce emaciation or dulling of the mental faculties or a withering of the tissues or of the patient's physical strength. I do not know of an instance of what may be called an opium drunkard from the eating of opium, though there may be opium drunkenness as the result of excessive smoking, especially if the opium be adulterated, but no such case has come under my observation. My experience of chandu and bhang is so small that I must refrain from expressing any opinion as to their effects. As a rule, the opium habit is not common to young men; but I have to point out that, when for any cause whatever, young men have taken to opium, they become in a marked and peculiar manner protected, so to speak, against

diabetes and dysentery—that is, against two diseases which are, so far as my experience goes, the most fearful scourges and the most feared and dreaded by all natives of this province, and indeed by all natives of India with whom I have been brought into contact. I have noted that a great deal is due to the food common to the people of India, the Hindus particularly, whose main food is rich in starch. The Mahomedans, who take more animal food, are not so prone to diabetes as their Hindu neighbours, but all natives suffer enormously from the effect of poor food, damp, cold, and exposure inevitable from their ordinary avocations. It is very remarkable amongst the poorer classes as proof that opium prevents a waste of tissues—that an opium-eater can do with much less food than a man not given to the habit; and this being so, it may possibly be that the poverty of the man may maintain the habit at a given minimum as to quantity, say 4 grains per day. Besides dysentery, natives suffer from a variety of intestinal complaints and from the results of malarial poisoning. I have noticed that in such cases the patient invariably seeks relief from opium; and I have also noticed that when opium-eaters are subjected to the same malarial influences as non-opium-eaters in cases where such remedies as quinine and arsenic and other preparations would be useless, the opium-eaters enjoy an immunity which is remarkable when contrasted with the condition of non-opium-eaters in exactly the same circumstances. I have never hesitated in cases coming before me to recommend my patients to continue it, and I have found that where natives have come to me suffering atrociously from the effects of alcohol, and I have been able to substitute opium for the alcoholic habit, the patient has recovered his status in society exactly in the same proportion as the substitution of opium for alcohol has been less or more complete. This I consider a very noteworthy fact to the credit of the opium habit. So far as I can judge, crime is very rarely met with amongst opium-eaters. I can never tell an opium-eater by casually looking at him; his habits and his appearance will not guide me. Of course I should know if I examined him for this particular matter. I find that opium-eaters are healthy men, and their muscular development is good, and that mentally and bodily they contrast favourably with non-opium-eaters. The conclusion I have been obliged to come to is that in a country like India, having regard to the habits of the people, the character of their avocations, the peculiarities of the climate, and the particular character of their food, opium is distinctly beneficial—that it is not harmful, that it is not a vice, that it does not promote in any way immorality, that it does not increase but distinctly decreases mortality, and that without it the vital returns of many parts of the country would be simply appalling. My experience is that men, as a rule, with rare exceptions, will resort to either a stimulant or sedative, and as far as Europeans are concerned, the majority use a stimulant; natives are so constituted that when they resort to stimulants they do so to a degree almost incredible to ordinary European experience, and the extreme way in which they indulge renders them, as native reformers continually urge, pests of society and dangerous to themselves and all about them. Opium, on the other hand, because it is a sedative, absolutely prevents them from becoming obnoxious in any way. I am convinced that the native will have one or the other, the sedative or the stimulant. If the Government prevents the resort to the sedative, then we must expect to find the wealthier classes giving themselves up to the more refined forms of alcohol produced by Europe; while the poorer classes will develop a very wide use of native rum, arrack and spirits, and the result will be widespread vice, misery, crime, and an increased mortality, at the very idea of which I, as a medical man, stand aghast. No doubt distillers here and in Europe would look not to the effects to be produced, but to the profits which such a tremendous demand would yield; but I doubt if Government can take this view; and, as a man who knows something of India and its people, who has learned to take a strong interest in their welfare, and who has a stake in the prosperity of the country, I deprecate such wholesale degradation as this would be; and, as I cannot imagine a cheap, a good, and a harmless substitute for opium, I am as convinced, as any one can be, that it should be let alone, and that it has been not only a necessity, but I would even go to the length of saying, a blessing to the people.

4387. I gather from the statement you have made that you are in private practice here?—I have been in private practice for 38 years within a month or two. I have been 40 years in India without leaving the country for a single day.

4388. You are in private practice, as distinguished from members of your profession who are in Government employ?—Yes. When I left the Government employment in March 1856 I joined my partner (at whose solicitation I left Government service) in private practice in April 1856. From that time I have not ceased practising in Calcutta.

4389. So that your experience as presented to us is that of an independent practitioner?—Perfectly so.

4390. (*Sir William Roberts.*) You have given a very full account of your opinion with regard to the opium habit. Have you ever endeavoured to divide the effects of opium into the anodyne or hypnotic effect which we value medicinally and those other effects that opium-eaters experience?—I have not gone into its separate effects as a sedative or hypnotic. I have simply taken the effect on the opium-eater. As a medical man I sometimes give opium as a hypnotic; that is a different thing.

4391. Of course you recognise the opium-eater as having a sort of tolerance for the drug?—Yes.

4392. You do not recognise that the susceptibility of the opium-eater to the anodyne powers of opium is altered; he is still susceptible to the medicinal effects of opium as an anodyne?—Certainly.

4393. What has been your experience with regard to the increase of the dose? We have been told again and again by certain witnesses that there is an inevitable tendency among opium-eaters to increase the dose?—The word "inevitable" is misplaced. I know persons who have been opium-eaters for at least 20 years, and they are now taking the same dose as they did when they first consulted me; so that it is not inevitable. There may be opium-eaters who have begun the habit by the inducement of their friends or some other cause of that kind, not for any particular ailment. Those are the men who increase the dose. A man at first buys a pice worth and perhaps divides it into two days, but he may go on gradually, as I have said, up to six or eight grains, which I look upon in the great majority of cases—99 per cent.—to be a maximum.

4394. That is the limit of tolerance?—Not the limit of tolerance, because they take it with perfect impunity, but they may go on to very large doses. We know that even among the Europeans by gradual use the tolerance becomes much greater.

4395. I presume also that there is a very great difference in individuals in regard to their tolerance?—Certainly.

4396. Have you ever seen anything like that tolerance among the European residents in Calcutta?—Very rarely. I have had several cases, but the percentage is very small.

4397. To what do you attribute the marked difference between the opium-eating habit among Europeans and the same habit amongst the natives of Calcutta?—The Europeans as a rule are considered healthy; they have means at their disposal, and can afford to buy stimulants.

4398. You mean alcohol?—Yes. The native is so poor that although he may be able to spend one pice in a day or two days, or even two pice a day, that would buy very little alcohol; so he takes to the sedative from poverty.

4399. That applies to poor natives, but we have evidence before us that the habit is diffused amongst the rich as well as amongst the poor?—Yes. The opium began with the natives before stimulants were known to any excess in India. I cannot go back, but I fancy that opium was eaten long before stimulants were generally known amongst the natives.

4400. Taking persons in easy circumstances,—Europeans and say the Marwaris here—how do you account for the difference—the Marwaris becoming opium-eaters and the Europeans not?—The Marwaris who take opium are a peculiarly satisfied, docile, quiet, harmless set of men; but if they took stimulants, it would be otherwise.

4401. You do not see my point. I want, if possible, as a scientific enquirer, some key to the fact that Europeans do not, except in rare instances, become opium-eaters, while the people of India, as we hear, commonly or frequently become opium-eaters; have you thought of that?—The European has more means at his disposal, and if he has any ailment he will consult a European doctor, who will not make an opium-eater of him. There are very few natives who can afford to go to a European to be prescribed for; but the Kabirajis and their friends for any ailment recommend them to take opium to begin with.

4402. Has it never struck you that there was a difference of tolerance depending upon race or climate or food, or the environment of Europeans on the one hand and of the

inhabitants of India on the other?—No. In Calcutta I have seen the greatest quantity taken by Europeans. The maximum I have seen has been taken by a European.

4403. You have seen opium used in excess?—I have.

4404. To the injury of the health?—I cannot say; that I have not seen.

4405. Then you merely consider excess from a speculative point of view?—Entirely, because I have not seen any injury to the health from opium in any respect.

4406. Not in large quantities?—No.

4407. Have you had experience amongst the poor natives, or among a rather better class?—I have. Members of this Commission, if they would come some morning unknown to me, and simply sit down and see the class of people for whom I prescribe daily, would be astonished. They would see all classes, from the poorest coolie woman with her child to the richest native in the country. They come during six or seven hours of the day, people of all classes, including wealthy Europeans. They all take their turn when I am dealing with sick people. I would guarantee that on any one day you would see every class of Bengali, from the highest to the lowest, as well as Afghans and other up-country men like the Sikhs, and also the poor unfortunate woman who will go and sell a piece of jewellery to come to me under some idea that I can do her good—she will come with her infant child to be prescribed for. You see that every day going on, week by week, month by month, and year by year.

4408. You say that when opium is taken in large quantities you have not seen mischief produced by it?—No, I have not.

4409. (*Mr. Pease.*) You say, "I can never tell an opium-eater by casually looking at him; his habits and his appearance will not guide me. Of course I should know if I examined for this particular matter." In what way do you examine?—If you examine the opium-eater you will find that the Iris dilates and the pupil becomes smaller; that is from the effect of the opium upon the motor nerves. If I see a person with a contracted pupil, I immediately know that he takes opium or bhang, and then he tells me which it is. It is only from that that I am able to discover it—not from any emaciation or other appearance of that kind, but from a dilatation of the iris.

4410. You have also said that without the use of opium, the vital returns from many parts of the country would be simply appalling. Will you tell us what parts of the country you have specially in view?—I have travelled outside of Calcutta in the Eastern districts a good deal, and I have seen the poor people there, my name being pretty well known amongst them. Many of the natives have constantly flocked to me, and the Kabirajis have come to speak about diseases. They have said to me: "Well, sahib, your quinine does nothing—it has no effect at all, but a little aphim (opium) has acted beneficially." That has been so particularly in cases of famine. If it were not for opium during famines I believe the death-rate would be ten-fold. It makes up to a certain extent for food. Say that a person has one anna a day. (I am speaking now of starvation times; these people do not spend anything on clothes.) Suppose a man to spend four pice for his family for food, they might yet be starving; but if he spends one pice in opium and three pice in food they will pass through the famine until relief has come round.

4411. Your answer to my question is "Eastern Bengal"?—Yes, my information is from the records of the famine. I am in a position to get general information freely from well-informed parties.

4412. An estimate was given to us yesterday that the number of opium consumers in Bengal would be about 2 per cent. of the population; do you agree with that estimate?—I should think that that was very far below the real figure. Mine are the sickly people; I cannot tell you about the healthy people. Leaving out the Eurasian and European elements, I should say that, taking the natives of all classes, not less than 30 per cent. of the male native adults who come to me as sick people take opium; I will not say how many more, as I have not gone into statistics. I see opium-eaters every day. Yesterday a wealthy zemindar came to me to be prescribed for. He was a man of high status. I naturally asked him, as I usually do: "Do you take opium?"—"Yes," he replied. "How much?" I asked, "I take about two annas a day." That means sixteen grains, which is a very large quantity. That man is about fifty-five years of age, and he is a stalwart, powerful, healthy man. He came to me with regard to some ailment, and I did not consider it necessary to interfere at all with his opium-taking.

Dr. G. R. Ferris.
29 Nov. 1893.

Dr. G. R.
Ferris.
29 Nov. 1893.

4413. Your estimate is 30 per cent. of the people who come to you as patients?—Yes—I say not less than that, it may be much more. I exclude Eurasians and Europeans, and refer to the native male adults only.

4414. These are people who have previously been in the habit of taking opium?—Yes, I am speaking only of them.

4415. Are you aware of any distiller or brewer who has ever joined the Anti-Opium agitation?—I have not gone into that; I stick to my profession. The information I have gathered has come naturally to me. This question has not come before me until I was asked on Sunday. I was once before asked by a person whether I would give evidence, and I declined. On Sunday I received a requisition, and then I said I would not decline. I have not gone into this matter in any form beyond what I have given you information about, as the result of my experience as a resident for forty years in India (which I have never left for a day) and having a constant knowledge of these people.

4416. (*Mr. Wilson.*) I think you spoke of opium-eating as being peaceful?—Yes.

4417. I think I have heard it said that it goes further, and that it sometimes makes them rather cowardly?—I have not seen it, and history proves the contrary. The Rohillas and Sikhs, who are opium-eaters, are amongst the most warlike and fearless men we have in India.

4418. You have not seen that yourself?—No, certainly not; I have never seen opium make them cowards.

4419. Are you a member of the Calcutta Medical Society?—No. My time is so fully occupied that I have no time for it. I have been invited.

4420. In reference to the dispensary practice, what are the fees for which Messrs. Scott Thomson & Co. permit the poorest people to come?—There are none. I treat them for nothing. Scott Thomson & Co. pay me as a medical man for giving advice there. In many cases the poor people get medicines for nothing, or at the lowest figure. I receive no fee from the richest or poorest. I prescribe for these hundreds for nothing, as far as the patients are concerned.

4421. I am ignorant of the customs of this country; will you tell me whether the medicines also are supplied?—No.

4422. They purchase the medicines?—I prescribe for the patients, and the medicine is made up from my prescription. Scott Thomson & Co. have to deal with that.

4423. The patients purchase the medicine?—They have to pay for the medicine.

4424. In a European establishment of that kind, would the cost of medicine be within the reach of the poorest people?—Yes. I have to use a certain amount of caution. If I require an expensive article for these poor people, I see if I cannot get a substitute for it. I use my discretion in these matters.

4425. Speaking generally, do you think there is any necessity for any kind of further restriction in reference to the sale of opium in this country?—Not the slightest.

4426. Would you be in favor of any increase in the facilities of getting it?—I think the supply and the demand, after this Commission, will be greatly increased.

4427. That was not my question. I asked whether you would be in favor of anything that would tend to

increase the use of opium in this country?—No; I would allow things to shape themselves naturally, so that people who wanted opium might obtain it.

4428. We had a witness yesterday who thought it would be desirable that there should be further facilities, and he hoped to see the consumption of opium increasing; is that your view?—My view is that amongst the Bengalis it is so beneficial that I should prefer to see an increased consumption rather than a decrease.

4429. My question is, are you in favor of increasing the facilities for the consumption of opium?—I am.

4430. You have stated that you noticed that the Sikhs had a special immunity from sea-sickness. Do you wish us to understand that you think opium is a useful remedy against sea-sickness?—No, I do not bring it forward in that way. I bring it forward as the starting-point of my first inquiry, which induced me to take up this opium question.

4431. Do you occasionally recommend alcohol for daily dietetic use?—There are certain cases of course where the stomach requires it. I do not order alcohol for a healthy man and say—"You must take it;" but medicinally I prescribe it.

4432. I ask again, do you occasionally prescribe alcohol for daily dietetic use?—Yes.

4433. Do you do the same with regard to opium?—Only in cases of disease.

4434. Do you prescribe it for daily dietetic use as you would alcohol?—No.

4435. Then you would not look on opium, for Europeans at all events, as being of the same dietetic value as alcohol?—Quite the opposite.

4436. So far as the people of this country are concerned, do you say the same? Do you as a matter of fact prescribe opium for daily dietetic use to the natives of India?—I do not.

4437. Then I suppose I may take it from your answers that you think there is a marked distinction between alcohol and opium for daily dietetic use?—A very marked distinction.

4438. If you heard of a medical man so recommending opium for daily dietetic use, would you think that he was doing a safe thing or rather a dangerous thing?—Before I could answer that question, I should want to know what that medical man had in view before he prescribed the opium for dietetic use.

4439. Did you ever hear of any medical man that did so prescribe it?—Simply as an article of diet, no. Medicinally I would recommend it.

4440. (*Mr. Fanshawe.*) I think you said you had a requisition to attend here; will you tell us what that communication was?—If I used the word "requisition," I meant invitation. I was left a perfectly free agent. I was asked whether I would be willing to come.

4441. (*Sir William Roberts.*) You have been asked whether you ever heard of any medical man ordering opium as a dietetic; have you ever heard of any medical man ordering tobacco as a dietetic habit?—Not as a dietetic, as a medicament I have known it. In bronchial and chest affections I have known it prescribed.

The witness withdrew.

KABIRAJIS GANGA PRASAD SEN GUPTA, BIJAYA RATNA SEN, AND PEARY MOHUN SEN, called in and examined, through an interpreter.

Kabirajis
G. P. Sen,
Gupta,
B. K. Sen
and Peary
Mohun S. n.

The following statement was read as the evidence of Kabiraj Ganga Prasad Sen Gupta:—

4442. Opium is considered to be a beneficial medical ingredient, specially for the poorer classes of the various districts in this province. It has been generally found to be efficacious in bowel-complaints, asthma, rheumatism, diabetes, etc., which require a costly treatment, but opium alone, when used in such cases, proves a specific remedy by those who can ill afford to meet the expenses of the generally costly medical treatment. The use of opium also enables persons to give up drinking liquor.

4443. The moderate use of opium increases appetite, power of digestion, energy, and the habit of working. It also prevents premature oldness and increases vitality. From time immemorial the native physicians have been

using this article with other ingredients in innumerable chronic cases with great success. Both the higher and lower classes, under these circumstances, use opium.

4444. I do not think the use of opium degenerates the moral and physical condition of the people, though excessive consumption sometimes brings drowsiness, but such cases are rare and found to exist in the lower classes only, and also in many cases in other classes in old age, when the dose is generally increased to obtain a staying power.

4445. Generally no one uses opium unless suffering from disease where its effects are marvellous, although some take it to keep up health and obtain staying power.

4446. In my opinion no one views with hatred the moderate consumption of opium like the use of other intoxicating ingredients, such as spirits or liquor, ganja, charas, chandu, goolee, etc.

4417. The expense of using opium is generally met by the consumers themselves. This being a poor country, the prohibition or restriction of the traffic in opium by the introduction of any heavier duty will be keenly felt by the poorer classes of Her Majesty's subjects and make them starve.

4448. Opium is very extensively used in this province, and as it is very difficult to give it up when once habituated, it is difficult to prohibit the growth of the poppy and manufacture and sale of opium, and it is impossible to do so.

No change short of prohibition in the existing arrangements for regulating and restricting the opium traffic in Bengal is needed, but some measures should be adopted to discourage the manufacture and use of *chandū* and *gooli*, which are made of opium and doing injury among the poorer classes to a great extent.

4449. (*Chairman.*) Does this statement represent the views of the other two witnesses? (*The Interpreter, after inquiring from them*)—Yes.

4450. I notice that you recommend that some measure should be adopted to discourage the manufacture and use of *chandū* and *gooli*, which are made of opium and are doing injury among the poorer classes to a great extent. Would you suggest to us what practical measures you would recommend for the purpose of carrying out the reform which you think so desirable?—(*The Interpreter.*) Kabiraj Ganga Prasad Sen Gupta is of opinion that the habit which they contract of opium-smoking is a bad habit, more especially when they smoke in shops in company. The others agree in this opinion, hence they want to put a stop to the shops being kept open. If any one has contracted a habit of smoking, he should be allowed to smoke in his own home, not in a place where there will be a congregation of smokers.

4451. They desire to see the abolition of smoking-shops?—Yes.

4452. Are all three in favour of the abolition of licenses for smoking opium and *chandū* on the premises?—Yes.

4453. In licensed shops?—Yes.

4454. (*The Maharaja of Darbhanga.*) Would they have any objection to people smoking in their private homes, getting a number of people together, and forming a smoking club?—They object to people clubbing together and smoking opium.

4455. Do they object to eight or ten men smoking together in their own houses *madat* and *chandū*?—They say it is not a good thing; it is not at all desirable, but when people buy opium and smoke in their own homes, no law would be able to restrict that.

4456. (*Mr. Wilson.*) I should like to know if all the three gentlemen present practise what is called the Ayurvedic system of medicine?—They do.

4457. Are there text-books and authorities on this subject which are accepted by them?—They say there are heaps of them.

4458. Do those text-books express the opinions that the witnesses hold on this subject?—They say that they practise what is taught in their books, and in their experience they have found that what they have been taught in their books is quite correct.

4459. When were those books written?—They say that in *Bhavaprakasha* these views are distinctly laid down, and that book was written nearly eight hundred years ago.

4460. And opium is mentioned in it?—Yes.

4461. Is that a book itself or a collection of books?—It was a collection by Bhava Misra from several text-books.

4462. (*Mr. Haridas Voharidas.*) Are there any other books beside *Bhavaprakasha* in which the use of opium is laid down?—They say there are many, *viz.*, *Rashendra Chandrika*, *Rasaraj Sundar*, *Jogachintamani*, *Rasendrachintamani*, *Rasendra Sarsanghbraha*, etc.

4463. Are they of ancient date?—They say they are.

4464. Is opium mentioned in *Sushruta*?—They say *Sushruta* does not mention anything about opium. The books which deal with opium are of ancient date. *Bhavaprakasha* was edited eight hundred years ago. *Charaka* is of a more ancient date still.

4465. Is opium mentioned in *Rajnighanta* and *Nighanta*?—They say, yes.

4466. Is there also a work called *Nighanta Ratnakar*?—They say, yes. Opium is mentioned there. Opium is mentioned in the most ancient works. *Charaka* treats only of medicinal oils and medicines prepared from the juice of plants. *Sushruta* is a book mostly on surgery and anatomy. *Harit* deals with medicine, but there is no mention of opium in it. *Bogbhata* is also a very ancient book, more ancient than the others, and opium is mentioned in it. *Rasabaghat* is nearly two thousand years old.

4467. What authority is there for saying that the *Bhavaprakasha* is eight hundred years old?—They say that *Chakrapani* edited some books during the Pal dynasty which is nearly a thousand years old. In *Bhavaprakasha* *Chakrapani* is mentioned, hence *Bhavaprakasha* must be of later origin.

4468. What is said about opium?—*Ganga Prasad Sen Gupta* has a quotation from *Bhavaprakasha* in Sanskrit which he put in with the following translation;

“The different names of poppy-heads are:—

Tilbheda, *Khastila* and *Khakhasa*.

Its juice is called opium.

(1) It is absorbant. It excites the function of the lymphatic system, *i.e.*, it dries up the watery portion of the tissues. For this reason it is applied externally in the following diseases as absorbant, *viz.*, *Eadema*, swelling and inflammation, and rheumatism, etc.

(2) It is astringent, *i.e.*, it diminishes and checks the secretion almost of all the organs, and so it is used in diarrhoea, dysentery, diabetes, gonorrhoea and hæmorrhages.

(3) It checks the bronchial secretion, and so it is used in different kinds of lung diseases, *viz.*, asthma, pulmonary phthisis and bronchitis.

(4) It increases biliousness, *i.e.*, the biliary secretion of the liver is checked, and so the effete matters which would have otherwise been eliminated through bile, accumulate in the blood and produce body-heat; and it is excitant to the nervous system. It produces nervousness and excites the brain. It is diaphoretic, *i.e.*, increases perspiration.

(5) It is a sort of poison, and according to the *Shastras* it, in combination with other drugs, produces longevity and prevents decay and death.”

4469. (*Mr. Fanshawe.*) Are these gentlemen Brahmins?—They are not Brahmins, they are *Vaidas*; they come next to the Brahmins.

4470. Are they hereditary *Kabirajis*?—They are hereditary practitioners—physicians.

4471. (*Mr. Pease.*) Do they use modern books?—They say no book on medicine in Sanskrit has been written lately, and therefore they do not use any.

4472. What is the most modern book they use, and what is its date?—They say that the latest book on the Hindu system of medicine is *Rasendra Sarsanghbraha*, and even that is not less than six or seven hundred years old.

Kabirajis
G. P. Sen
Gupta,
B. R. Sen,
and Peary
Mohun Sen.

29 Nov. 1893.

The witnesses withdrew.

Adjourned till to-morrow at 10-30.

At the Council Chamber, Writers' Buildings, Calcutta.

SIXTEENTH DAY.

Thursday, 30th November 1893.

PRESENT:

THE RIGHT HONOURABLE LORD BRASSEY, K.C.B. (CHAIRMAN, PRESIDING).

SIR JAMES LYALL, G.C.I.E., K.C.S.I.
 „ WILLIAM ROBERTS, M.D.
 MR. R. G. C. MOWBRAY, M.P.
 „ A. U. FANSHAWE.

MR. ARTHUR PEASE.
 „ HARIDAS VEHARIDAS DESAI.
 „ H. J. WILSON, M.P.

MR. J. PRESCOTT HEWETT, C.I.E., *Secretary*.

*Mr. Sudam
 Chunder
 Naik.*

30 Nov. 1893.

MR. SUDAM CHUNDER NAIK, Assistant Superintendent, Tributary States, Orissa, called in and examined.

4473. (*Mr. Fanshawe.*) Will you tell us to what district you belong?—I come from Orissa, and I belong to the district of Cuttack.

4474. Is that your native district?—No; I am a resident of the Balasore district.

4475. How long have you been in the Cuttack district?—I have been in the Cuttack district for the last 22 years.

4476. In Government employ?—I have been in Government employ for the last 17 or 18 years.

4477. I believe your experience extends not only to the Cuttack district proper, but also to the Tributary States?—Yes, and also to the districts of Balasore and Puri.

4478. How many years' experience have you had in the Balasore district?—About two years in the Balasore district, and about six months in Puri.

4479. The rest of your time has been spent in the Cuttack district?—Yes.

4480. The Tributary Mahals are the low-lying hills between the country of Cuttack and Central India, I believe?—Yes, that is so.

4481. Is that where you now hold your appointment?—Yes.

4482. In these Tributary States there is some amount of cultivation in the valleys, is there not?—Yes, paddy cultivation, and also the cultivation of other cereals.

4483. By whom is that carried on?—It is carried on by all classes of people.

4484. To what race do they belong; are they largely Ooryas?—Yes, and also aborigines.

4485. Ooryas are Hindus, speaking the Oorya language?—Yes.

4486. Are there aboriginal tribes living amongst the hills and jungles in the Tributary States?—Yes.

4487. Will you tell us what you know about the habit of opium-eating among these people: first with reference to the people living in the low-lying lands, and then with reference to the people in the hill tracts?—I may say that, both as a Government officer and as a resident of that province, I possess some knowledge of the nature and habits of the people, not only of Orissa proper, but of its hill tracts known as the Gujarat or the Tributary Mahals. So far as my knowledge extends, I can say that the consumption of opium by the people of my province has had no bad effect on them either morally or physically. On the contrary, I know people taking opium for 20 years or more to have kept very good health. They never use opium for non-medical purposes. At least I have no knowledge of this, though opium-smoking is resorted to by some for pleasure or for other purpose, an excess indulgence of which leads to some mischief. But such cases are few.

4488. Can you tell us whether this habit is common among the people?—I cannot say that it is common.

4489. What information can you give us about that?—The percentage perhaps varies from 5 to 10 per cent.

4490. Among the adult population?—Yes.

4491. Can you tell us at what age the people, so far as you know, take to this habit?—People take to the habit after they are 40 years of age; and there are some also who take to it after they are 20; but speaking generally they take to it after they are 35 or 40.

4492. Speaking generally, can you tell us what is the ordinary sort of dose, the ordinary amount of opium that is taken?—They would not take more than two grains a day on the average. There are others of course who take it in excess; but on an average they do not take more than two grains.

4493. Can you tell us whether this opium is taken in the morning or in the evening? What is the habit in reference to that?—It is taken both in the morning and in the evening.

4494. Is it also taken during the day?—No, as a rule it is taken in the morning and evening only.

4495. Among the people who take opium is there any tendency to increase the dose, so far as your knowledge goes?—No.

4496. You have already stated that you consider it has no bad effect upon them morally or physically?—That is so.

4497. Have you anything to say with reference to a class of people called Páns: are they an aboriginal tribe?—Yes; they live in the Tributary States and also in the plains. They are known as a criminal class.

4498. What do you wish to say about them?—Of a class of people called Páns, known as the criminal class in some of the hill States, I can say that seldom a Pán takes opium, and I never saw one who committed any crime the cause of which could be attributed to his habit of opium-eating. I may here state that opium has, on the other hand, a very deterrent effect on crime. Of all people, opium-eaters and opium-smokers have a terrible dread of jail, which deprives them of the free and timely use of the drug, and it is an intoxication which brooks no delay.

4499. Do these aboriginal tribes use opium?—A very few.

4500. Do they indulge in country liquor?—Yes; they do.

4501. Can you tell us for what reason, as far as you know, people take to this opium habit?—They take to it for medicinal purposes.

4502. What do you mean by that?—I mean by that that they take it for bowel-complaints, fever, and for a disease known in this country as elephantiasis, swelling of the legs and hands and the sympathetic fever which comes from it.

Opium is taken to prevent the people from getting those diseases, and it is also taken for dysentery.

4503. Is elephantiasis common in your country?—Yes.

4504. In Cuttack and in the Tributary Mahals is this opium habit regarded as disgraceful?—It is not disgraceful.

4505. How is it regarded, in what light do the people look upon it?—The people are rather indifferent to the matter. They do not think ill in any way of a man who takes opium. They do not think that he has disgraced himself by it, unless a man is found to smoke it excessively.

4506. I am speaking of eating for the moment.—Eating opium is regarded rather indifferently.

4507. Does the habit extend to women as well as to men so far as your information goes?—It extends to women, but it is the exception. Very few, as far as I know, take it.

4508. What would be the general feeling, so far as you know, with regard to prohibiting the use of opium?—With every deference to the Commission, I should say that it will not only be highly impolitic, but extremely unwise to introduce any prohibitive measure for the suppression of consumption either entirely or to a limited extent. People of my country are not and will not be prepared to bear in whole or in part the loss of revenue that would inevitably be the result of such a measure, giving thereby a rise to widespread discontent.

4509. Have you any remarks to make with regard to the licensing system?—No; except to say that I do not consider the existing system to be bad in any way. I think the Government has prescribed a very good method of restriction, both with regard to the sale of raw opium and smoking opium.

4510. What can you tell us about opium-smoking in this district; is it commonly practised?—It is not common. Of course there are people who do smoke, but I cannot say it is common.

4511. What do they smoke?—They smoke only opium.

4512. In what form—what is it called?—Gooli or madak. Chandu is not common in our part.

4513. Can you tell us what is the opinion with regard to smoking gooli or madak?—The opinion is not in favour of it.

4514. Is there any other point you would like to mention?—I heard Dr. Morison state yesterday that Cuttack is not a malarious district. Perhaps he meant the town proper. If he meant the district I should not agree with him, for I think there are certain parts of the country which are malarious.

4515. You wish to state, as far as your knowledge goes, that certain parts of the Cuttack district are malarious?—Yes.

4516. And certain parts are not malarious?—Only Cuttack town and within a radius of 7 or 8 miles.

4517. And are the tracts known as the Tributary Mahals regarded as malarious?—Yes.

4518. (*Mr. Mowbray.*) You have told us that the people of Orissa never use opium for non-medical purposes; will you explain what you mean by non-medical purposes?—I mean that after a certain age the people of my country take it for the sake of their health—if they are weak, or have any complaint, such as a bowel-complaint, fever, rheumatism, dysentery or something of that sort, or if they live in the malarious parts, such as in the northern part of the Balasore District.

4519. Do you mean they take it because the doctor advises them to take it, or because they think it themselves a good remedy?—It is commonly known in our part of the country, and the native physicians prescribe it.

4520. What number of European medical men are there in Orissa? Can you give me any idea?—The number would not be more than half a dozen, I think.

4521. Can you tell what is the population of Orissa?—In the plains they are Brahmans and other high castes, such as Karans, Mohánaeks and Khandáits, and there are agriculturists.

4522. Can you tell me how many opium shops there are in Orissa?—I cannot exactly say.

4523. What is the price of opium in Orissa now?—The Government price, *i.e.*, the upset price, is 32 rupees per seer; it is sold in the bazar, varying from 10 to 12 annas per tola, which is equal to 180 grains.

4524. That is the price at which the Government supplies it to the vendors?—Yes.

4525. Do you think that if the number of shops in the Cuttack District was further reduced, the people would be able to get opium when they wanted it for medical purposes?—No, I do not think they would be able, because the Government takes good care to reduce the number, and to fix the number too. The local officers know whether to increase the number or decrease it.

4526. (*Mr. Wilson.*) Will you kindly tell me what your duties are as Assistant Superintendent?—I am Assistant to the Superintendent of the Tributary Mahals, who is Commissioner of the Orissa Division. I assist him in all executive work and in correspondence. I also try criminal cases, boundary disputes, and make inquiries in succession cases. I am a Deputy Magistrate with powers of a Magistrate of the 1st class and powers of a Sessions Judge in the Tributary Mahals.

4527. With reference to the medical use of opium, are you aware that no one has objected or challenged the medical use?—No; I am not aware of that.

4528. The question which this Commission is discussing is chiefly the dietetic use, apart from disease, and in the questions I am about to ask you, I shall be obliged if you will not refer to the medical use but to the dietetic use. Generally do I understand you to say that smoking is not a good thing?—Yes.

4529. Do respectable people smoke?—They do sometimes.

4530. But it is not considered respectable?—No; smoking is not considered respectable.

4531. What is the general opinion of respectable people in your part of the country, in reference to smoking chandu?—Chandu is not prevalent in my part of the country.

4532. Is it not used?—It is not used.

4533. What is the opinion with regard to smoking gooli?—The opinion is that it is not good.

4534. People do not approve of it?—They do not.

4535. Do I understand you to say that people do approve of eating opium?—I do not say they approve of it; I say the people are indifferent about it. If anybody eats opium, they would not think ill of him.

4536. I am not sure whether you stated distinctly which parts of the district you consider the most malarious?—The most malarious parts are the western and eastern parts of the Cuttack district, and the north and eastern parts of the Balasore district, as well as certain parts of the Puri district, and also some of the hill States which form politically the western part of the district of Cuttack.

4537. Do you know anything about the proportion of the consumption of opium in those different districts?—No.

4538. Do you know in which district the largest quantities of opium are consumed?—The largest quantity is consumed in the Balasore district.

4539. Do you know in which district the least is consumed?—In the district of Puri and the Tributary Mahals, which forms part of the Cuttack district.

4540. Do you think there is any relation between the consumption of opium and the prevalence of malaria in those proportions?—I think there is, because in the Balasore district proportionately, the population being less than that of Cuttack, people consume opium largely.

4541. Do the European medical men recommend people to take opium regularly?—I am not aware that they do.

4542. Do you know if the native physicians recommend it?—Yes, they do.

4543. Do Indian medical practitioners recommend people to take opium regularly to prevent attacks of fever?—Yes, not only fever, but in other diseases too. They recommend it for rheumatic fever, but I do not know whether it is recommended for malarious fever or not.

4544. I want to know, not whether they give it as a remedy when a man has fever, but whether they recommend it to be taken regularly as a preventative?—The physicians recommend it as a preventative.

4545. Who are these people that are called Páns; are they a tribe or caste?—They are an aboriginal tribe and they almost form a caste.

*Mr. Sudam
Chunder
Naik.*

30 Nov. 1893.

Mr. Sudam
Chunder
Naik.

30 Nov. 1893.

4516. In what spirit are they specially criminal?—They are robbers and thieves.

4517. (*Chairman.*) May I take it that you meant to tell us that from 5 to 10 per cent. of the population of your district use opium for non-medical purposes?—Yes; of course it includes others who may take it for pleasure: I

mean a larger proportion of that number take it for medical purposes.

4518. You have referred to cases of what you called excessive indulgence. Are those cases numerous among your population?—No; they are not numerous; they are few and far between.

The witness withdrew.

Mr. Gourree
Sunkur Roy.

MR. GOURREE SUNKUR ROY called in and examined.

4549. (*Mr. Fanshawe.*) Are you a resident of the Cuttack district?—Yes.

4550. Are you in any way connected with the Government?—Yes, I was formerly a translator in the Judge's Court at Cuttack.

4551. I believe you are now a pensioned servant?—Yes.

4552. Where are you living now?—Cuttack.

4553. Has your experience been entirely in the Cuttack district?—In the Cuttack district entirely.

4554. Tell us what you know about the habit of eating opium in that district as far as your experience goes; is it common?—Opium is largely consumed in the district of Cuttack, of which I am an inhabitant, but I have not noticed any marked ill-effect on the physical or moral condition of those who use it. The generality of opium-eaters take it moderately, and they not only keep good health and enjoy long life, but are as sober and well behaved as those who do not take it. I have seen some of my friends restored to good health after long suffering by taking opium. There is no doubt some persons abuse it by indulging in excessive smoking for pleasure or immoral purposes, and suffer in consequence in health and reputation. Some persons are giving up the habit of drinking by resorting to opium.

4555. Do you mean by resort to opium-smoking or to eating?—They used to drink liquor first, and they gave it up by eating opium.

4556. You say this habit is fairly common: can you tell us what quantity is generally taken,—how many grains? Have you any knowledge on that subject?—Those who use it moderately take about half a pice or one pice worth of opium a day. Most people take less than one pice worth: that would be the average amount.

4557. Can you tell us when they take it?—In the morning. Some take it once a day and some twice a day—morning and evening.

4558. Do any take it in the evening only, or is it taken in the morning? Which would be the general practice?—Most people take it only in the evening; others take both morning and evening.

4559. Can you tell us at what age the opium habit is generally acquired,—opium-eating?—After twenty. Many take to it after thirty-five or forty; but some take to it after twenty.

4560. Speaking generally, among habitual opium-eaters what would the age be?—About thirty.

4561. Have you any knowledge of women eating opium?—Yes but they have been very few in number.

4562. They would be women among the cultivating classes; is that what you mean?—There are very few women among the cultivating classes who take opium.

4563. Are the women who to your knowledge take opium among the artisan class in towns?—They are seen in the towns only.

4564. You have known some cases perhaps of people taking opium in excess; are those cases common or not in your experience?—It is difficult to make out an excessive opium-eater.

4565. Is it at all common for people to take opium in excess?—I have known some persons take as much as 2 annas worth of opium every day. They take it to excess.

4566. When you say excess, do you mean it causes them harm,—that it injures their health?—No, I have never seen an opium-eater suffer in health except who is too poor.

4567. What do you mean when you say they take it to excess?—They take it in large quantities.

4568. In your district how is this habit of taking opium generally regarded?—Opium-eating is generally excused. People do not think much of it. Of course taking it to intoxication is regarded as a bad thing.

4569. That is the view of the people in your district?—Yes; but they tolerate opium-eating.

4570. Can you tell us anything about the tendency to increase the dose among people who eat opium habitually; is there a tendency to take larger doses?—Yes; but it is very exceptional.

4571. Most of the people who eat opium habitually do not increase the dose; is that your experience?—Yes.

4572. For what purpose do they take opium?—They mostly take it for the sake of their health.

4573. Will you tell us what you mean by that?—It is the prevalent opinion that if a man takes opium he keeps good health. I have seen some people who have suffered most severely. One man that I know tried all sorts of medicines but he could not get any relief. Afterwards some of his friends advised him to take opium. He took it and he is now all right, and has been so for the last ten years.

4574. Is it used among the people as a domestic remedy, that is what I want to know?—Yes, it is both eaten and used as an external application.

4575. For what class of disease or suffering do the people use it?—For bowel-complaints, inflammatory fever and elephantiasis.

4576. Is there any belief among the people of Cuttack that the taking of opium protects them against fever?—Yes,—inflammatory fever. That is a very common belief. Any one who gets that disease is always advised to take opium.

4577. Have you anything further to say?—At one time there was much tendency to use opium for non-medical purposes. It is not so now, and the consumption of opium is on the decrease. I attribute this to the beneficial measures taken by Government to check its consumption, especially the prohibition of smoking in licensed shops. Such being the case no more prohibitory measures are called for, and therefore any additional taxation for the purpose of meeting the cost thereof would be regarded as a great injustice and grievance by the people who feel the burden of taxation heavily and are too poor to pay more. The very suggestion has alarmed the people, and they wonder that while such an injurious intoxicant as alcohol is freely sold and imported, they should be called upon to pay for prohibiting the use of opium which many resort to, to give up the habit of drinking, and which is admittedly beneficial in several diseases.

4578. You say that there was a tendency to use opium for non-medical purposes: what do you mean by "non-medical purposes"?—For luxury.

4579. Is it within your knowledge that opium is also used as a stimulant?—Yes.

4580. Is it used in this way among the poorer classes, or the better-off classes?—Among the better-off classes, as well as among the artisan class. After they have finished their day's business they go to the madak shop and smoke there.

4581. In your previous answer were you referring to opium-eating, or to opium-smoking?—I was referring to both.

4582. You say that opium is used as a luxury or indulgence among some of the better-off classes?—Yes.

4583. If opium were prohibited except for medical purposes, do you think that the people in Cuttack will be able to obtain it as a domestic remedy,—what are your views as regards that? Do you think there would be any difficulty in their getting it for the purposes for which you say it is used?—If they can get it for medical purposes nobody would mind prohibition as far as other purposes are concerned.

4584. Can you give us any opinion as to how the people in the villages would obtain the opium which you think they want, if it were prohibited except for medical use?—No.

4585. (*Mr. Wilson.*) I do not quite understand your opinion about smoking opium. You say that the Government have taken beneficial measures to check the consumption of opium, and especially the prohibition of smoking in licensed shops, and that such being the case, no more prohibitory measures are called for. But at the end of your printed statement you say you would like to see further restrictive measures in regard to opium-smoking?—Yes.

4586. I do not understand that. What do you mean?—I mean that the prohibition of smoking in licensed shops has been one beneficial measure, but since that prohibition some people gathered in private places, and there they smoked. If that could be checked, it would be still better. That is what I mean.

4587. You would like to see some prohibition of that?—Yes.

4588. What I do not understand is, why you say no more prohibition is necessary?—I mean as regards the sale in licensed shops.

4589. I think you said that the cultivators do not take much?—I live in the interior of the district surrounded by cultivators. They do not take much: it is the artisan class that take the most.

4590. Do the cultivators live in malarious districts?—Yes.

4591. And they do not take much opium?—No.

4592. I think you said that the women do not take much opium?—That is so.

4593. Are they less liable to malaria than the men?—No.

The witness withdrew.

Mr. BHAGBAN CHUNDER DASS called in and examined.

4604. (*Chairman.*) I believe you are a resident of Orissa, a native of that country, and belong to a family of landholders?—Yes.

4605. You therefore may claim to possess considerable knowledge of the people of Orissa?—Yes.

4606. Will you tell us if opium is extensively consumed by the people of Orissa for medical use or as an article of diet?—I am of opinion that the consumption of opium has not resulted in any bad effect on the moral or physical condition of my people. They use it for medicine and to avoid other climatic influences, as I know people of Balasore do it. It unfortunately sometimes happens that excessive use of it, not in its raw state, but when converted into some other preparations, such as madak or chandu, leads to some mischievous results. But of what I know, such cases are proportionately very small. If at all necessary, some restrictions might be put on certain preparations of opium, such as madak, chandu, morphia, etc.

4607. What restrictions would you suggest?—I would stop the public sale of madak and chandu.

4608. How do you compare the effects of the use of opium with alcohol?—Opium is not such a mischievous drug as alcoholic drink, more especially European alcohols.

4609. Do you consider that it cannot be fairly said that the use of opium leads to crime?—Opium-eating is not as bad as drinking strong wine.

4610. Do you approve of the proposal which has been put before us, that the use of opium should be prohibited for any purposes other than medical?—I cannot recommend its prohibition. It is a necessity, and its prohibition will be disastrous. The people of my country are extremely poor and have to pay taxes in various shapes, and their bearing any portion of the cost is out of the question.

4611. (*Mr. Wilson.*) Would you be at all in favor of prohibiting the use of alcohol?—Yes.

4612. (*Mr. Fanshawe.*) In what district has your experience been?—In the Balasore district.

4613. Is there a large consumption of opium in that district?—Yes.

4614. I believe you have no large towns in Balasore?—Balasore town is not larger than Cuttack.

4615. I believe the population is almost entirely composed of cultivators?—Yes, cultivators and official men also. The use of opium would be among the cultivating class. Rheumatic pains are prevalent in the Balasore district.

4594. You say that the very suggestion that the people would have to bear the burden of taxation has alarmed them already?—Yes.

4595. Who made that suggestion, where did you get that from?—It has been talked about that opium would be abolished, and that the people would have to pay the cost of it.

4596. Do you know who started it?—No, it was rumoured.

4597. Do you know Mr. Jagon Mobon Roy?—I know him very well.

4598. He was a Deputy Collector, I believe?—Yes.

4599. Are you aware of his views on the subject?—I know he belongs to the Total Abstinence Society.

4600. He says that using opium "is regarded as a curse by all except, of course, those that are eaters or smokers of the drug." Is he quite wrong?—I do not think he is quite right.

4601. With reference to some questions that were put to you about the domestic use, supposing that the mode of sale was altered, would it be possible in the villages of your part of the country to have suitable persons appointed to sell it who should get no profit themselves out of the sale, and who should have a certain discretion as to its sale for medicine and not for intoxication?—It would be very difficult to get such men.

4602. Do you think it would be impossible?—Perhaps so. I do not see how such men could be found in the villages.

4603. With reference to the use of opium against malarial fever, do any doctors, either European or Indians, recommend it to be taken regularly as a preventive against fever?—I am not aware of doctors giving such an opinion.

4616. For what class of ills is opium taken?—Opium is taken for rheumatism, elephantiasis, inflammatory fevers, bowel complaints, and dysentery.

4617. Is elephantiasis very common in your district?—Yes.

4618. Speaking generally, can you tell us at all what proportion of the population suffer from it?—About one-fourth of the population.

4619. I suppose rice is the ordinary staple of food in Balasore?—Yes.

4620. Dr. Walsh, Civil Surgeon of Puri, told us the other day that some forms of rice are bad and cause diarrhoea to the natives who eat it; but that the poor people are obliged to eat it: is that the case in Balasore?—It may be.

4621. Do you know that of your own experience?—No.

4622. In your district I suppose some parts are healthy and some parts are unhealthy?—The northern part of Balasore is malarious; fever is prevalent there.

4623. And are other parts healthy?—Healthy; but rheumatic pains are prevalent throughout the district.

4624. In your own experience is opium-eating more common in the parts where malarious fever is present than in other parts?—Opium is generally taken by those men who suffer from rheumatic pains.

4625. It is taken generally throughout the district by people who suffer from the different pains or diseases you have described?—That is so.

4626. You have no knowledge that it is taken more in the malarious part of the district than in another part?—No.

4627. Is opium taken in the morning, or in the evening, or when?—Some people take it both morning and evening, and some persons take it in the evenings only.

4628. Do many of those who take it habitually take it in the evening only?—Some, but not many.

4629. (*Sir James Lyall.*) Is it taken all the year round by those people who take it habitually; or is it taken more in cold or in the hot weather?—All the year round.

4630. Is the habitual use of alcohol common among certain classes in your district of Balasore?—There are no habitual drunkards.

4631. Do none of the cultivating class take alcohol?—Some of the lower caste people take alcohol, the Pans.

4632. Do the same class that take alcohol take opium?—Some of them eat opium.

Mr. Gourree Sunkur Roy.
30 Nov. 1893.

Mr. Bhagaban Chunder Dass.

- Mr. 4633. Do the same people eat opium and drink alcohol?—
Bhagban Chunder Dass. By taking opium those who habitually take alcohol give it up.
 4634. But while they take alcohol they do not take opium?—No.
 4635. (*Mr. Wilson.*) Could you give us any idea of the

proportion of the cultivators in the Balasore district who take opium regularly?—The cultivators generally take opium.

4636. Do you mean nearly the whole of the people?—No, not the whole.

4637. What proportion, half?—About three-fourths.

The witness withdrew.

Dr. Ram Mooy Roy.

Dr. RAM MOY ROY called in and examined.

4638. (*Chairman.*) Will you kindly state what is your position and the nature of your experience with reference to the subject-matter of this enquiry?—I am at present Medical Officer, Sambhunath Pundit's Dispensary at Bhawanipur, Calcutta, an institution made over to the Corporation of Calcutta since July 1890, and entirely independent of Government aid or control. I was in the service of Government for a good many years, but resigned it in 1890. I have been at Bhawanipur for upwards of fourteen years, where I have, I may say, an extensive practice also.

4639. What have you to say with regard to the value of opium as a medicine?—The multifarious uses of opium in divers diseases and complaints and its usefulness therein are well-known to those in the medical profession as well as those out of it. It is one of the *three* medicines the medical men have learnt to rely upon. If the practice of medicine be restricted and a practitioner called upon to treat all his patients with only three medicines and select them out of the legion in the whole range of the *Materia Medica*, both official and non-official, he would be sure to name quinine, opium, and mercury. Though mercury has, of late, somewhat lost its position, opium has maintained it and is likely ever to maintain it. From this it will be seen how opium is regarded in the practice of medicine, in the cure or relief of the sufferings, which mankind and brutes are subject to. But the subject-matter of this inquiry, I believe, is not so much its medicinal use as its use for dietetic purposes. I shall therefore confine myself to its effects such as are produced on persons habituated to take it either through sheer necessity or for luxury. As my practice has been almost entirely confined to the better class of people who never or very rarely smoke opium, I have not had much opportunity of observing what effect opium produces when smoked habitually. I have casually met with opium-smokers, but I have never had an opportunity of studying, and far less coming to any conclusion, as regards its effects. Besides, opium-smoking is considered to be a stigma, and people who indulge in it would not confess it even if they did it. And then when smoked in moderation it produces no symptoms, nor any particular appearance on the person using it to make one suspect it. I know some persons, though their number is not large, who smoke opium. They are in affluent circumstances, and thus in a position to command a good living. There is nothing in their person which can make one suspect them of the habit. They have not deteriorated in body or mind in the least, though they have been using it for a long time. It is only when a person indulges in it, and has not the means to supply himself with the proper amount of food, that he deteriorates in body and mind, and one can easily find him out by his appearance. Amongst the better class of people the habit is commenced under a fancied or real belief in its aphrodisiac power, which it certainly possesses, at least for some time.

4640. I understand that you have not had much experience in treating patients who are smokers of opium?—No, I have not.

4641. What is the result of your observation as regards the eating of opium?—With regard to eating opium I may say that here in India, especially in Bengal, in which the whole of my experience has been gained after a patient, careful and sifting inquiry and observation, extending over upwards of twelve years, since 1881, it is taken either in the shape of pills or in a solution of water, but rarely in the shape of alcoholic extract, or its active principle, morphia. It is originally commenced to be taken in the shape of pills, once, twice and sometimes, but very rarely, three times a day. It is only when in any case, after a long use in the shape of pills, it begins to show any of its bad effects, such as insomnia or loss of appetite, that the watery extract is substituted for it. Morphia is always taken under medical advice.

4642. Have you ever tried the effect of opium or morphia upon yourself?—Yes. Compelled by a sheer necessity for alleviating the most excruciating pains of rheumatism, in 1881, I commenced, under medical advice, to take morphia,

the first dose of which was given to me by the doctor himself. I took it in an increasing dose till it reached 3 grains or a little more, every day. I continued the habit for some time, even after I was cured, but gave it up in one day, without feeling any the worse for it. Almost simultaneously sugar was found in my urine, and I was advised to take opium. I was quite unwilling to take it before I was satisfied that it will do me no harm in the end, and I began my inquiry about its effects. I set myself to the work, and the extensive practice I have had offered every opportunity and facility for it. In a short time I got all the necessary information, and being satisfied I began the habit and took it up to 24 grains a day, *i.e.*, 12 grains morning and evening. The effect was all that could be desired. From the very first day I began to feel new life in me; gloominess and anxiety vanished; appetite returned; dyspepsia disappeared; the bowels gradually became regular; insomnia gave way to refreshing sleep; the power of fixing attention (which was lost) was restored, and that of endurance developed so much that I was better able to carry on my practice than ever before.

Except when I am ill, I work 19 hours a day regularly and sleep for 5 hours only. I would be quite useless and unfit for anything were it not for opium. The inquiry I set myself to in 1881, I have always continued, and I have failed yet to find a man the worse for it, who takes it in moderation. I have since reduced my dose to 6 grains a day, not for any bad effects produced on me, but because I have found it to have the effects I desire to have. I had constipation lasting for 5 or 6 days in 1889, and I reduced the quantity from 24 to 6 grains. I found it served my purpose, and as a less quantity was found to do as well, I have not resumed the larger. I can give up the thing any day I like, but as it does me good and has never produced any ill-effects, I have kept it up. It gives me much greater power of endurance to go through my arduous work, it gives me power to resist the effects of exposure to cold and heat better than I ever did before. Under it I can think better, understand things more quickly, talk better, write better, eat well and sleep well, and I am full of spirit and energy, and can undergo any amount of hardship and fatigue. No one, up to this, although I have been taking opium for over a decade, has been able to make out that I take opium, and there are not many persons even now who know that I do take opium, although I daily come across quite a multitude of people in the practice of my profession. Had it not been for the paper I read before the Medical Society in 1892, not more than four persons would have known it, *i.e.*, the shop-keeper from whom I buy it, my servant who brings it, my compounder who makes it into pills, and my wife who keeps it for me. I have brought some of the pills which I take with me for your inspection.

4643. Can you tell us in what light the people of Bengal regard the practice of taking opium—whether eaten or taken in a liquid form or smoked in a pipe: is it regarded as a thing one would be ashamed of and would desire to conceal?—It is never concealed, and it is never considered as a disgrace, otherwise I, as a professional man, would never give out my name: I would keep it a secret. The people of Bengal at least never take opium as a means to conviviality like wine would be. They take it as it suits their individual convenience; and so there is no opportunity for other people to see it. This as well as the fact that they manifest no external or objective symptoms, physical or mental, prevents other people from making out as to who takes opium and who not. He will have to wait long who wants to find out an opium-eater by appearance.

4644. I believe you have been giving careful inquiry and observation for a period of 12 years to this question of the effects of opium; will you give us the general result of those observations?—Yes. The result of a patient and careful inquiry and observation, extending over a period of 12 years, have led me to the following conclusions:—

(1) That it is a very useful medicine in acute and chronic diarrhoea, dysentery, diabetes, asthma, chronic bronchitis, dyspepsia and gastric colic, rheumatism, diarrhoea

stage of cholera, etc., etc., and that in all these diseases people take to it either under medical advice or at the suggestion of friends. It is quite a domestic medicine, and is resorted to by the people from their experience of its usefulness in those diseases.

(2) That it is really a blessing from Above in a country where scientific medical aid has not up to date been able to reach even 1 per cent. of its population. It is a blessing conferred by God on the people, and no man shall take it away.

(3) That it really prevents frequent relapses of malarious fever. India, especially Bengal, is essentially a malaria-producing country; its soil saturated with sub-soil moisture, and its atmosphere surcharged with humidity, and its temperature undergoing very great diurnal variation, sometimes a variation of 20 or more degrees from mid-day to midnight. People who are badly fed and badly clothed, through extreme poverty, having no means to protect themselves against such depressing influences, fall victims to the disease.

4645. (Sir William Roberts.) Do you mean any particular disease?—Yes, malarious fever. Opium may not be a prophylactic against malaria in the sense that quinine is, yet, by giving greater power of endurance and a power to resist the effects of cold and dampness, it acts as a preventive to malarious fever. People by experience, having come to know this well-known beneficial effect of opium, use it very largely for the purpose. Since the introduction of railway and artificial irrigation in India, and consequent increase of sub-soil moisture due to obstruction to the natural drainage of the country, malarious fever and its multifarious dire some sequelæ have increased to a very considerable extent, and the increased use of opium has kept pace with it. I am an inhabitant of one of the most, if not the most, malaria-stricken district (Hughly) of Bengal, and I know how malaria has been playing havoc and how the remnant of the people have been kept, body and soul together, by opium. That it would do so requires no stretch of reasoning. That opium is a stimulant is generally admitted, and that its stimulant action, unlike that of alcoholic drinks, lasts for a very much longer time is the experience of all who have used it habitually. It is a fact that habitual opium-eaters or smokers never feel anything like depression till the time for the next dose has passed away. It is also a fact that a stimulant, of whatever kind it may be, as long as its action lasts, supports a person and gives him sufficient power to withstand the depressing effects of climate, cold, dampness, privation, want of sufficient food and clothing, etc., and gives him protection against such agents. From these facts, it will be conceded that opium is such an agent, and it can give the protection attributed to it, and everyday experiences shows that it does so. To do away with such an agent will be fatal to the country. We are thankful to the people of Britain for their increased sympathy, but we should be more thankful to them if they had directed their energy and sympathy in other quarters than this. Their interference against the use of opium makes us exclaim, "God save us from our friends," and as the proverb goes "*Viksha nahin mangta bābā, kutta bula lijiye*"—"Recall your dogs, we do not want your charity."

(4) That people at or above 40 years of age use it more largely than those under it with a view to keep them ageing; younger people, who use it, generally do it under medical advice. Of course, it is considered to be a disgrace to smoke opium. It is no disgrace to eat it. Had it been so, I would keep my habit a secret. Being a native I know the feelings of the people better than any foreigner could be expected to do. If there is any public opinion in India, it should be in Calcutta, and I being in Calcutta would be very careful in giving out my name as an opium-eater. Some people begin the habit as a substitute for alcohol, when leaving off the latter.

(5) That it has never been known to do any injury to body or mind if used judiciously and in proper quantities.

(6) That the ill-effects attributed to its use are from its excessive or inordinate use, but even in this its evil effects are nothing compared to the evil effects of even the moderate use of alcoholic liquors.

How many of the brightest intellects whom any country on the face of the earth would be proud to call her sons have been lost to India in the prime of their lives through alcohol? Has anybody been able to attribute such deaths to opium? For a single death (even if that occurs at all) that may be attributed to the use of opium, thousands may not only be attributed to alcohol, but positively proved to be due to it. Has opium been known to cause a contracted liver and kidney, or a case of *delirium tremens* or any of the host of other ailments of a drunkard? Has it been known to impoverish a family or to cause its estates to be brought

under the hammer of a Collector for want of payment of Government revenue, but how many are such instances under alcohol? Has opium been known to cause deterioration of health, neglect of business, gambling, domestic unhappiness, sensuality, breach of public decency, dacoity, rioting, murder, crimes of violence, assault, robbery, house-breaking, drunkenness and disorderly conduct, or any other acts requiring Government interference? General experience is against them under opium, but very frequent under alcohol, and criminal reports are singularly free from record of violent crime as against opium-eaters, but as against alcohol they are conclusive. Does the use of opium lead to the degradation and depravity of alcohol-drinking? Has it been known to cause insanity and fill the asylums as does alcohol? An opium-eater when poor may commit petty thefts, but never a dacoity or any violent crime, such as an alcohol-drinker does. British people, who are quite conversant with the multitudinous evil effects of the use of alcoholic drink, should be the last persons to find fault with their inoffensive opium-eating fellow-subjects. Their misdirected sympathy and ill-conceived interference in this respect gives life to the adage: "*Chaluni bole chhunch ke tor ponde kena chhanda*"—a big sieve addressing a needle, asks it why it has got a hole at its back."

(7) That there are good grounds for believing that opium eating has not the same tendency as alcohol-drinking has to shorten life. Some of the religious books of the Hindus have authoritatively laid down that the practice lengthens life, and the doctrine is corroborated by everyday experience. A printed list of 215 cases of opium-eaters whom I have personally known with their synopsis annexed hereto will go a great way in corroborating the statement. It will also show that less than 4 per cent. of the cases examined were in indifferent health, the rest, 207, in good or fair condition of body and mind.

(8) That with opium-eaters who take it in moderate doses, it not only does no injury, but actually acts beneficially, inasmuch as it has been known to improve health, to improve the condition of both body and mind, to give greater power for exertion and work, to enable one to endure hardship and fatigue, etc., etc., etc.

(9) That like any other stimulant narcotic, it is liable to abuse, and its abuse or inordinate use may cause some bodily or mental injury to the person so using it, but it has never been known to give a tendency or capability to do injury to others as alcohol does.

(10) That the habit may be broken off without the least permanent evil effects caused thereby, but it requires strength of mind to do it.

(11) That it is a stimulant of no mean order. It may be and has been used with success in the collapse of fevers of various kinds, collapse following shocks and surgical operations and cases requiring stimulants. The late Dr. Annada Charan Khastogir always used opium for such purposes with equal, if not with greater, success than with the alcoholic stimulants. I had succeeded him in the medical charge of the North Suburban Hospital (one of the big medical institutions of Calcutta), and I can testify to his success in his treatment: He was considered to be one of the best Doctors in Calcutta.

(12) That it never makes a man dull, heavy or stupid, even when taken in a pretty large dose. None of the 215 cases I have given in my list—and equally or more numerous cases I can cite besides them—are dull, heavy, lethargic or stupid, or incapable of work in any sense of the term. They are all active, energetic, intellectually acute men and fit for any work, physically or mentally. Rajputs, Sikhs and Chinese are the instances of physical strength, of whom any nation on earth would be envious; and do the Marwaris fall short of the mark in acute business-capacities? It never makes an active, energetic man dull or lethargic. No man who knows me and how I work would ever take me to be dull or lethargic. It is only those with sedentary habits and initially dull, lethargic and heavy and stupid who would be found to be so, but they would be so whether they took opium or not. It is their nature to be so.

(13) That the action of the drug is the same whether only one grain or several hundred grains of it are taken for a dose, by a habitual eater, in point of excitement and depression and in point of time regarding the development of symptoms of the different stages; but there is an important difference in the action of opium and alcohol. The depression of alcohol comes on much sooner, whereas that of opium is delayed very much and depends entirely on how a person takes it. It never manifests itself till some time after the time for taking the next dose has passed away, i.e., after 12 hours, when the habitual eater is accustomed to take it

at the interval of 12 hours, and after 24 hours when he is habituated to take it every 24 hours. The depression is never felt unless the *habitué* exceeds his time. The depression is more like natural hunger which a man never feels till the time comes for his food.

(14) That the British people who know so well the multifarious evil effects of alcohol so common at their own doors should not have a word to say against it, nor would raise their fingers to save their fellow-subjects from sure ruination by imported and country-made spirits, is beyond our comprehension. This has led to various speculations.

4646. You say that you commenced using opium in 1881?—Yes.

4647. And the quantity you took is 12 grains twice a day?—Yes.

4648. And owing to some constipation you reduced the quantity to 3 grains twice a day?—Yes.

4649. You also say that you found that served your purpose, and that the smaller quantity did as well as the larger, so that you did not resume the larger quantity?—No.

4650. Did you try to reduce the dose still further?—No, I did not.

4651. So that when you say that you can understand things more quickly and talk and write better, you have really not tried whether you would do as well without opium?—Sometimes I went out to see my patients and was late by 5 or 6 or 7 hours; I then felt some amount of depression.

4652. When you postponed taking it you found yourself worse?—Yes, but slightly.

4653. You have not tried to give up the habit altogether?—I have not.

4654. You have put in a table of a very remarkable character which I think is by far the most valuable contribution that you can give for our information. I should like to know the way in which you got at the facts mentioned in that table of 215 cases; how long were you in collecting them?—I knew all these cases myself and all their ins and outs, and when I was called upon to read a paper on the subject I did it within ten or twelve days.

4655. The cases were all collected by yourself personally?—Yes, I took down all the figures and facts myself, having personally seen the cases.

4656. You took them down from the natives themselves?—Yes, I sent to many of them to come to me.

4657. You did not collect any of the cases by any agent or assistant?—No.

4658. Nor by any correspondence, but by actual personal investigation?—There was only one man who had died. But I knew him before, and that is the reason why I introduced his case.

4659. Are they males?—There are about 17 females. The statement shows who are males and who are females; you can also see by the names.

4660. We have ascertained from you that you collected these particulars yourself from the living patients?—Yes.

4661. I see there are two mentioned as dead?—Yes.

4662. All the others were alive?—Yes, I knew them. Once I thought of excluding them, but as I knew them personally and had treated them I included them. Any one can see them as I have given their address. There was one man who was known very well, everybody considered him to be a living wonder.

4663. You pledge yourself to the accuracy of the table?—I do. I can swear to the accuracy of the statement and to the facts having been taken down by myself with my own hands in the presence of the people.

4664. In the course of the debate at the Calcutta Medical Society you stated that these facts were collected in 10 or 12 days?—Yes.

4665. You knew where to put your finger upon them; I mean that, as you knew them before, you could do it without any trouble?—I knew all of them. I sent round to them to ask them to come to me; in the case of those who could not come, or whose position would not allow them to come, I went to them; otherwise they came to my dispensary or my house, and I had no difficulty in the matter.

4666. I can understand the reason for your paying attention to this subject. Having been a diabetic yourself, you began taking opium for it ten years ago?—Twelve years ago. I began in 1881.

4667. That directed your attention to habitual opium-eating?—Yes.

4668. Have you noted whether these opium-eaters of long standing do become very thin?—No.

4669. You saw no emaciation?—No. It is only opium-smokers who manifest that symptom, but I know some smokers who have not deteriorated in health at all; they can command good living.

4670. You distinguish between opium-smoking and opium-eating in that respect?—Yes, I do.

4671. You mean to say that opium-smoking produces emaciation, but opium-eating does not?—Yes.

4672. I suppose your experience in opium-smoking is very slight?—It is not large.

4673. So that you only speak of opium-smoking as producing emaciation from hearsay?—I have casually seen it. Many persons come to my dispensary, between 100 and 200 a day, so that I cannot go through all the questions and answers in that short time to inquire into things which do not belong to the proper work of the dispensary, and these people do not wait till I have done my dispensary work, so that I have not been able to investigate matters.

4674. (*Mr. Wilson.*) Are you not in favour of the prohibition of alcohol?—Yes, most decidedly.

4675. Are you in favour of any further restriction of any kind on the sale of opium?—I am quite satisfied with the present restriction that the Government has put on it.

4676. Would you favour any restriction on the smoking or manufacturing of chandu?—I would put any amount of restriction on smoking.

4677. Would you prohibit the manufacture of chandu?—If it is possible.

4678. I observe that in your list of 215 cases there are only 3 or 4 coolies or labourers?—I have not counted them, but it can be easily ascertained.

4679. I believe that most of them are clerks or persons in tolerably good position?—Yes.

4680. Do you think there would be any difference in the effects of opium on people who are well fed and the effects on people who are not so well fed?—There would be.

4681. What difference?—It may lead to emaciation or something of that kind. I do not believe in the absolute necessity of milk being given to the opium-eater. I know at least 5 or 6 cases of persons who never take any milk. In this list there is the case of one man who takes half a tola, or 90 grains, of opium per day, and does not drink a drop of milk; he is in very good condition; indeed you may even call him plethoric.

4682. You have given us a long account of your own case; would you wish to generalise from that, and say that it would be a good thing for everybody to take opium in some way?—If there is no necessity for a person to take it why should he take it.

4683. You take it for medicinal reasons?—Of course. I began it for rheumatism.

4684. You have referred to the introduction of Railways in India as having increased the subsoil moisture; will you explain how that occurs?—The fall is towards the river Ganges, and the East Indian Railway and Eastern Bengal Railway go by the river side, and have prevented the natural drainage being effected so smoothly and nicely as it was before. The water has to stagnate or stand for a time before it can get away. The soil of Bengal is alluvial, it absorbs water very much—more easily than would be the case otherwise.

4685. Do you refer to any particular place or any particular railway or are you speaking generally?—I am speaking of the East Indian Railway and Eastern Bengal Railway in particular.

4686. Do I understand you to mean that in the construction of that Railway there were not sufficient bridges and culverts made to allow the drainage to get off properly as it ought to have been done?—At the commencement there were not as many as there should be. Even if there are a sufficient number of openings and culverts you cannot expect the water to go out as easily as it would do if the country was free altogether.

4687. Do you know that that prevails to any considerable extent, or is it only in a few odd patches here and there that the Railway interferes with the drainage?—It is throughout the land.

4688. (*Mr. Mowbray.*)—I observed that you make a great distinction between the taking of opium and the taking of morphia, and you say that morphia is always taken on medical

advice. I wish to know whether there is any law regulating the sale of morphia?—Morphia is not sold by any shop-keepers, but it is sold in the dispensary. It is not sold in the opium shops; so that every one cannot have access to it, and the people generally do not know what morphia is.

4689. Is it sold under what you call druggist permits?—I do not think there is any law to restrict the sale by licensed vendors.

4690. People have to go to the chemist to get it?—Yes.

4691. Suppose the sale of opium were restricted to places where morphia is now sold, do you think there would be a sufficient supply of places to meet the medical requirements of the people who desire to obtain it?—Do you mean for medical purposes only?

4692. For general purposes—I wish to know what you mean by medical purposes?—Its use in the cure of disease.

4693. For the cure of disease?—Yes; I call that the medicinal use. I began it medicinally, and I am now taking it as a dietetic.

4694. You don't now take it medicinally?—I don't take it medicinally; now it is only a dietetic with me.

4695. Taking your own view of medicinal use—that is, the use for curing definite diseases—are you of opinion that if the sale of opium were restricted to places where morphia is now sold, that would be sufficient to meet the requirements of the people wanting it for these medicinal purposes?—If the treatment of all the cases of diseases throughout India were in the hands of men trained under and practising the European system of medicine, of course it would serve very well; but the treatment of the people in cases of disease is not in the hands of such

The witness withdrew.

Dr. JAMES ROBERT WALLACE, M. D., called in and examined.

4705. (Chairman.) Will you state your qualifications and position in the medical profession?—I am a Doctor of Medicine, and my experience concerning the use of opium has been gained during 14 years of work in Calcutta, both in Government service and as an independent practitioner. I studied medicine in the Calcutta Medical College, and when I obtained my diplomas as a physician and surgeon from Edinburgh in 1879, I was appointed Resident Surgeon and subsequently Resident Physician to the Calcutta Medical College Hospital. I also held the appointment of Resident Surgeon to the Eden Hospital for women and children in Calcutta. Subsequently I resigned Government service and entered independent practice in this city. During these 14 years I have had numerous opportunities of observing the habits and customs of all classes and sects of the Indian people in regard to the use of opium. My practice is a large and mixed one, dealing as it does with Europeans, Eurasians, Hindus, Mahomedans, Burmese, and Chinese. I would dismiss Europeans and Eurasians by saying that I have never met an opium-user among them. I have found opium-users chiefly among Chinese, then Burmans, then Hindus, and least among Mahomedans. On an average among my Indian patients, I would say the percentage stood about thus: Chinese 4, Burmese 3, Hindus 2, Mahomedans 1. I came to know the opium-using propensities of patients casually in the course of my inquiries concerning their diseases.

4706. What is the ordinary average dose of a moderate user?—The quantity generally taken was from one to three pice worth, or from 1 to 15 grains a day.

4707. Have you known such users to increase the daily dose?—The majority of such eaters of opium had taken a fixed daily dose for years without increasing it. I found a fair proportion, who had gone on slowly increasing the dose from half a grain of opium till in a year or so they had reached the use of ten to fifteen grains daily.

4708. What is the plea under which opium is ordinarily used? Is it taken definitely for the cure of diseases among ordinary users?—The majority of such opium-eaters had begun the use of the drug under the belief that it gave them strength and acted as an exhilarating stimulant. I have found some who started the habit simply by the example of others.

4709. What are the effects of opium in the case of moderate eaters?—In treating such cases medically I have invariably

doctors; many of them are treated by Vaidas and Hakims, and many by lay people, and many by grandmothers. You cannot provide opium from dispensaries in all these cases. The European system of medicine, as I have already said, does not reach even one per cent of the total population.

Dr. Ram
Mohan Roy.
30 Nov. 1893.

4696. For strictly medicinal purposes in the sense in which you use the word, the present facilities for obtaining morphia would not be sufficient for obtaining opium?—No.

4697. What do you say as to the further use which you call the dietetic use of opium?—It would be quite unsuited.

4698. You consider the dietetic use of opium a legitimate requirement on the part of the people of this country?—Certainly I do.

4699. (Mr. Haridas Voharidas.) Did you reduce the dose from 24 to 6 grains at once?—Yes, in one day. That was the thing I did at once. Before that I had given up 3 grains of morphia a day without any preliminary preparation.

4700. You were none the worse?—I might have felt a slight uneasiness, but that was nothing.

4701. (Mr. Wilson.) I think that this table of 215 persons was the table that you presented at the meeting of the Calcutta Society?—Yes.

4702. It is referred to in your speech?—Yes.

4703. Can you give me any idea of how many persons were present at that meeting?—It was a tolerably well attended meeting; that is my impression.

4704. Can you give me any idea of the number, was it ten or twenty, or forty?—It must have been something like twenty or more.

enjoined the stoppage of the drug, as I felt that in most cases the drug itself, or the dose taken, was incompatible with the line of treatment to be adopted. I have invariably found patients addicted to even small doses of the drug complain that they felt badly without it. Three or four days of abstinence from the drug in many cases was sufficient to lull the cravings for it. I have noticed great restlessness, digestive distress, looseness of the bowels, and severe pains about the body and abdomen attend the sudden stopping of the drug. I believe that many natives who eat opium do so under the advice of friends for its reputed relief in rheumatic pains, some bronchial affections, bowel complaints, and diabetes.

4710. What results have you observed from the effects of opium in case of malarial fever?—I have never heard any patient tell me it was taken to prevent or to cure malarial fever. I have never seen or heard of any physician in Calcutta or elsewhere who prescribes the use of opium for the prevention or cure of malarial fever. I have recently read of the good effect of opium in preventing and even curing malarial fever. I have given the theory a fair and honest trial during the past ten or twelve months, and I am thoroughly convinced that beyond relieving the bodily pains and aches of malarial fever, it in no way prevents or shortens its paroxysms. I firmly believe that the action of opium in malarial disorders, in which there is such a strong tendency to congestion of the liver, spleen and kidneys, is not only distinctly contra-indicated, but its administration in many such cases would be undoubtedly harmful. I base this opinion upon my own deliberate experience, as I have frequently found serious complications follow the use of opium when given as a sedative in cases where the liver had undergone inflammatory or degenerative change from any cause. I base this opinion further upon the teaching and practice of many able and experienced Indian physicians, such men as Norman Chevers, David B. Smith, Coates, Harvey, and McConnell, men whose lectures and practice I have attended and seen, and from whom I never heard a word of commendation for the use of opium in malarial fever; men who, as far as my recollection serves me, have always condemned the use of opium in congested conditions of the liver—a condition which sooner or later complicates every case of malarial fever. First as a student and then as Resident Physician and as Resident Surgeon to the Medical College Hospital, I had constant opportunities of seeing the practice of such able men as Doctors Chevers

Dr. J. E.
Wallace.
M. D.
30 Nov. 1893.

Dr. J. R.
Wallace,
M. D.

30 Nov. 1893.

Smith, Coates, Harvey, McConnell, McLeod, Raye and others, and I never knew one of them to prescribe opium in any form as a prophylactic or as a remedy in malarial fever.

4711. Have you anything further to say with reference to your personal knowledge of the practice and the opinions of other physicians?—I can recall the frequent condemnation of Dr. Norman Chevers while Professor of Medicine, and I know of his recorded opinions against the use of opium, both in his work on "*Medical Jurisprudence in India*" and his last great work on the "*Diseases of India*."

4712. Were you a pupil studying under Dr. Chevers, or did you attend any of his lectures?—I did.

4713. Then speaking of his opinions you are speaking of an authority of whom you have a personal knowledge?—Yes.

4714. What are the opinions to which you wish to call attention?—Quoting from page 453:—"A large proportion of the inmates of asylums for natives are found to be habitual *ganja* smokers and opium-eaters, and many of these are epileptic."

4715. Does the passage you have quoted refer to smokers or eaters?—To eaters and smokers, quoting from the latter book, page 576, Dr. Chevers says of opium-eaters and smokers:—"All who have seen much of these unfortunates recognise the fact that in India and China, those habituated to the use of opium are very liable to fall victims to diarrhoea. * * * Others, especially among the Musulmans addicted to the smoking of narcotic drugs, the abuse of which brings on a debilitated state of the system with nervous tremor, and not unfrequently temporary delirium, which sometimes ends in confirmed mania, while in all, sooner or later, the habit is followed by emaciation, weakness, indigestion and fatal diarrhoea. * * * Treatment is always unsatisfactory, and but seldom followed by a thorough or permanent restoration to health. * * * Men addicted to narcotics seldom remain longer than a month or two at duty, and are at last very generally lost to the service by death or by being discharged."

4716. Speaking from your own experience, do you draw a wide distinction between the effects of eating opium in the solid form and opium-smoking?—I have very little personal knowledge of opium-smoking.

4717. Have you anything further to say from your personal experience as to the effects of opium?—While the moderate use of opium by those in good circumstances, who are able to provide themselves with wholesome nourishing food, may not afford appreciable evidence of any marked harmful result, so long as the drug is regularly taken, I have seen otherwise strong and healthy men rendered almost helpless and unfit for work of any kind and even suffering from diarrhoea and pain when deprived of their accustomed moderate dose of opium. I would assume from this that, even in moderation, the use of opium exercises a baneful influence on the human economy. I have also seen many opium sots, men who were absolute physical wrecks from the excessive and continued use of opium. I have seen such specimens in three visits that I have made to opium dens in Calcutta. A report of one of these visits I published in the "*Indian Medical Record*" for September 1892, and I tender that report as part of my evidence:—

"On the 30th of July 1892, in company with Mr. E. S. Wenger, the energetic founder of the excellent mission work among Chinamen in this city, and Mr. Henry J. Ferdinands, Manager of the Indian Medical Record Office, I visited a well-known opium den at 9, Tiretta Bazar Street. We entered what was an ante-room with a bar on one side, where *chandu* was sold. Alongside of this was a little parlour specially reserved for Chinamen. Here we met the owner of the den. He spoke broken English, and readily gave us all the information we sought. He said that on an average thirty men a day visited this place to smoke opium, and about fifty others bought it to take to their homes. (I doubt this statement very much, as during the ten minutes we stood at the door no less than a dozen men came in, bought *chandu* and went out.) He sold only *chandu* and not plain opium. He manufactured his own *chandu*, from crude opium. On an average 240lb of opium were bought monthly for this den. He bought opium at Rs. 14 a pound, and, after converting it into *chandu*, sold it at Rs. 19 a pound. He paid a monthly license fee of Rs. 1,310 to Government. He sold on an average Rs. 5,000 worth of *chandu* monthly. We were next shewn into the *chandu* laboratory, where the manufacture of this form of opium was being carried on. There were two large quadrangular ovens, on one of which was a huge copper cauldron containing 16lb. of crude opium, to which had been added

6 lb of water. This is allowed to boil for two hours, when it is made to simmer, till the water has evaporated sufficiently to leave a semi-liquid residue of what resembles medicinal extract of opium. We now passed into the *chandu* smoking saloon. This was a low, dark, damp, dismal-looking tiled hovel, about twelve feet broad and forty feet long. On both sides were low wooden platforms to answer the purpose of beds, with dirty oil-stained lumps of something resembling what might be intended for pillows. Here and there a dim oil lamp and round each of them crouched two or three men, busy with the process of filling and burning and puffing at the pipes used for smoking *chandu*. There were in all eighteen men, one woman and three *little children*. Some of the men were lying asleep, and others were drunkenly dozing, and some were busy smoking. The woman sat by her paramour, but did not smoke. The children were going in and out among the occupants of the room. We next proceeded to inquire into the cases of some of the waking ones.

"Case 1.—A Mahomedan, aged forty, a resident of Kutch, a Cargo merchant, a thin weakly man, said he commenced smoking opium fourteen years ago. He took to it from pleasure in bad company. He did not take to it as a medicine or in consequence of disease at first. He is married, and has two children living at Kutch. He smokes three pice worth of *chandu*, or about twelve grains daily, in three doses, at 6 A.M., noon, and 6 P.M. He said:—"I was once a stout man, but have dwindled down to my present thin and weakly state. If I miss a single dose I get diarrhoea and pain in my stomach. I cannot leave it off now. I feel, and have always felt, that I am doing wrong in smoking opium, my conscience tells me so."

"Case 2.—A Mahomedan cooly, aged twenty-four, has taken opium for five years, and indulges in smoking four pice worth of *chandu* every day at this shop. He comes twice daily to smoke, and stays two or three hours each time. He was in fairly good condition. He said he began the habit in the bad company of other smokers, that he had often wished and tried to give it up, but he could not. He had gained no benefit from the habit, and felt it was shameful to indulge in it. He gets fever now and then."

"Case 3.—A Mahomedan butcher, aged thirty, thin and weakly-looking, has taken opium for ten years. He began it by the bad example of others. He was not suffering from any disease when he began opium. He takes five pice worth of *chandu* at one smoke, and stays about two hours. Missing his smoke for a few hours beyond the accustomed time, he suffers from pain about the abdomen, diarrhoea and shortness of breath. He has never suffered from fever. He would leave off the habit if he could, as he is quite ashamed of himself, but he fears the innumerable symptoms that would trouble him in consequence."

"Case 4.—A Hindu, a jute mill mechanic, aged thirty-four, out of work just now, lost his work a month ago owing to fever. He began opium six years ago, eats one pice worth of opium in the morning, and attends this shop to smoke two pice worth of *chandu* in the evening. He did not begin the drug for any disease, but took it in bad company. He often suffers from fever, pains about the body, and diarrhoea. He cannot give up this habit as his bowels become disordered if he does."

"Case 5.—A thin, lanky Mahomedan, aged sixty, a hackney carriage owner, has taken opium for forty years, and began it in the company of bad women. He did not begin it for any disease. He gets pains about his body and fever frequently. He smokes fourteen pice worth of *chandu* every day at one time, and stays for three hours in the shop. If he misses his smoke for a few hours, he suffers greatly from diarrhoea and pains all over the body. He says: "I would gladly give up the habit if I could, but it has taken too firm a hold of me, and I cannot get away from it. I am ashamed of myself."

"Case 6.—A Mahomedan, aged forty, has been taking opium for seven years. He began it for no disease. He is without work and begs for his food and for his smoke, and for the opium he also eats. His constitution is utterly broken down. He smokes several pipefuls of *chandu* while loitering in the shop all day. He also eats about four pice worth of the crude drug. He suffers constantly from diarrhoea and fever."

"Case 7.—A Mahomedan, aged forty-seven, very thin and decrepid, has taken opium and smoked *chandu* for twenty-five years. He eats six pice worth of the drug at 6 A.M., and smokes one pice worth of *chandu* at 1 P.M. and 7 P.M.; he remains an hour each time. He began the habit with a prostitute. He has completely lost his health and strength. He says: "I was a man of violent temper, but the opium has quieted me. I have lost all courage, both moral and physical. I feel guilty in this matter, but

cannot give it up. I get fever occasionally. If I do not take opium, twenty diseases are ready to take hold of me." "

"Case 8.—A respectable Bengali Baboo, aged thirty-six, well educated, a hardware merchant in Nimtolla Street, whose father is a wealthy man. He has smoked *chandu* for two years, and began it in the company of a prostitute. He smokes eight pice worth at noon, and stays for two hours in the shop. He often suffers from fever, and if there is any delay in getting his smoke, he suffers from indigestion and looseness of the bowels. He is ashamed of the habit and would gladly give it up if he could, as he sees it is making him thin and weak."

4718 Have you anything to say with regard to the value of opium as a medicine?—While admitting that opium is one of the most reliable therapeutic agents known to Science to assuage pain, to calm nervous irritability in various forms and that as a sedative, hypnotic and soporific, it stands unequalled by any other drug in the physician's hands, I cannot help regarding it as inimical to health, when taken otherwise than as a medicine. I know from numerous inquiries among Indians that opium-eating is regarded as a vice, its users are ashamed to admit the habit, that its continued use causes emaciation, bowel derangement, and general vital impairment, associated with marked moral delinquency. I have also seen and treated many cases of opium-poisoning, and in many who have been rescued from suicidal death, I have learnt that opium was chosen as the suicidal agent, because of its pleasantly intoxicating effects, robbing the act of suicide of much of its terror. I cannot read daily of the numerous cases of suicidal and homicidal deaths from opium, without believing that too easy, pleasant and effective a weapon is placed within the reach of the suicide and the murderer. Having regard to all these circumstances, I am strongly of opinion that the strictest limits and safeguards should be placed upon the sale and use of opium.

4719. Have you formed any opinion as to the practicability and advisability of the proposal which has been urged upon the attention of the Commission with reference to the total prohibition of the use of opium in this country?—I think it would be an utter impossibility.

4720. Do you think it is practicable, in the peculiar circumstances of the country, to lay down regulations which would give sufficient facility for obtaining supplies of opium for medical use while limiting it to such use?—I think it is possible.

4721. Do you compare in your mind the effects of opium with the effects of alcohol?—I do. In my humble opinion there are few physicians who would use opium in place of alcohol. Alcohol is a most valuable stimulant, and opium could never take its place in the way in which Western Science has taught physicians to use it.

4722. Do you approve of the moderate use of alcohol as an ordinary article of consumption?—Under medical advice.

4723. But without medical advice you would say that it would be well for all persons to abstain from the use of alcohol?—I do.

4724. (*Sir William Roberts.*) I do not think your view with regard to the true prophylactic effect of opium differs very much from the view generally held in the profession as far as I understand it?—I believe my view is in accordance with the opinion held by the profession.

4725. As stated by your predecessor, it is not held to be a special prophylactic like quinine?—Not at all.

4726. I believe that is what is generally held in the profession, but that it does relieve the incidental symptoms of the malarial condition as an anodyne?—As an anodyne.

4727. I think I have heard it stated that it is more risky, in regard to taking malarial trouble, to go out in the morning before breakfast on an empty stomach than it is after a meal?—I believe that to be a fact.

4728. Has it struck you that opium might act as a preventive in the same way that a meal is a preventive?—I think not.

4729. Referring to what you said about Dr. Norman Chevers, what is the date of the work from which you quoted?—It was published by Churchill in 1886.

4730. You quoted a statement to the effect that a large proportion of the inmates of asylums for natives are found to be habitual *ganja*-smokers and opium-eaters: are you aware that the statistics returned by the lunatic asylums contradict that opinion?—I am aware that statistics do not make ample provision for the record of the narcotic habits of the inmates of asylums.

4731. You also quoted a passage which stated that, men addicted to narcotics, seldom remain longer than a month or two at duty, and are at last very generally lost to the service by death or by being discharged. Is that statement consonant with the facts?—I believe it is.

4732. (*Mr Wilson.*) May we take for granted that, so far as you know, it is the universal conviction of educated medical men that for Europeans opium is not an agent to be recommended for dietetic purposes?—Certainly.

4733. You have practised among the natives of India also?—Yes.

4734. And if I asked the same question with regard to them, what would your answer be?—I would say it would be precisely the same in regard to the natives of India.

4735. Did you ever hear of any medical practitioner who advised his patients to take opium for dietetic purposes?—Never.

4736. Supposing that putting the question, I were to substitute the word "stimulant" for "dietetic"?—I cannot regard opium as a stimulant in the sense in which we generally use the word stimulant. I certainly would not recommend opium as a stimulant.

4737. You have seen a good deal of malarial fever?—I have.

4738. Do I understand your statement to be that you do not believe that opium is recommended to be taken as a prophylactic or as a remedy alone?—I believe that orthodox medical men do not so recommend it.

4739. It is sometimes used combined with other things?—Possibly, for symptoms that may arise, such as diarrhoea, pains, and so on.

4740. You spoke of opium as an anodyne: am I correct in supposing that an anodyne means a pain soother?—A pain soother.

4741. Solely?—Solely.

4742. You draw a clear distinction between an anodyne and a prophylactic?—Very clear.

4743. Are you acquainted with the report of a discussion at the Calcutta Medical Society a year and a half ago on this subject?—Yes.

4744. Are you a member of that Society?—I am not.

4745. (*Sir William Roberts.*) Why not?—I was Secretary to that Society some years ago; it came to be of a very official nature, and I resigned.

4746. You were in a tiff, and resigned?—Not exactly a tiff.

4747. (*Mr Wilson.*) I suppose I may take it that you do not agree with the majority of the gentlemen who spoke on that occasion?—Certainly not.

4748. Am I right in supposing that the gentlemen of that Society represent substantially the opinion of the orthodox medical practitioners in Calcutta?—I believe they do not.

4749. (*Sir William Roberts.*) Can you quote any names in support of that?—Very recently Dr. Lall Madhab Mukerjee, a past President of the Calcutta Medical Society, and Principal of the Calcutta Medical School, called on me and gave me his deliberate opinion that he himself and the staff of the institution with which he is connected were wholly against the opinions that were being expressed before this Commission.

4750. Are they orthodox practitioners according to the European method?—Yes, they are graduates of the Calcutta University.

4751. (*Mr Wilson.*) When you say that the Society partook of an official character, what do you mean by official?—I do not like to go into details, but I may say that the Society practically expresses its views through the official medical journal, the *Indian Medical Gazette*, in which its reports appear. At the time in question it was very largely membered by officials, and less so by general practitioners. That is why in a limited sense I say that it has been largely an official society, the official element predominating.

4752. Does it represent the profession in Calcutta necessarily?—Not necessarily nor in fact.

4753. (*Mr Wilson.*) Can you clear up that point as to the number of orthodox practitioners in Calcutta? Do you know anything about the numbers outside?—Yes, I do.

4754. Can you tell us how far the society represents medical opinion in Calcutta? I am sorry that the question was not asked of those who belonged to this Society. If I must mention it, I may say that the Society numbers

Dr. J. R.
Wallace,
M.D.
30 Nov, 1893.

Dr. J. R. Wallace, M. D.
30 Nov. 1893.

according to its last report, December 1892, 117 members, twenty-five of whom did not reside at Calcutta, but in other parts of India. *The Medical Register and Directory of the Indian Empire* shows there are 780 or more medical practitioners in Calcutta.

4755. (*Sir William Roberts.*) Qualified?—Qualified.

4756. (*Chairman.*) European?—European and Native. This Society is supposed to represent the medical profession, whether European or Native.

4757. (*Mr. Wilson.*) You mean according to the European system?—Yes; they are graduates of the Calcutta University.

4758. (*Sir William Roberts.*) What is the subscription to the Society?—The subscription for 1892 was fixed at Rs. 3 a year—it is a very small subscription.

4759. (*Mr. Wilson.*) Did I understand you to say that there are between 70 and 800 practitioners at Calcutta according to European method?—Yes.

4760. The Society numbers about 117, of whom 25 are non-resident; so that there are something less than 100 members in Calcutta?—Yes.

4761. (*Chairman.*) Yes. Out of 780 in Calcutta how many have graduated in the United Kingdom?—I could not tell, unless I went through the registered list of practitioners which is given in the *Indian Register and Directory* for 1892.

4762. (*Mr. Wilson.*) Do I rightly gather from this statement of yours that you think that this doctrine about the use of opium in malaria is a comparatively modern doctrine?—Yes, a comparatively modern doctrine.

4763. May I ask you to define "comparatively modern"?—I first heard of it in connection with the discussion at the Calcutta Medical Society when I read the report; since then I gave the theory a trial.

4764. (*Mr. Mowbray.*) With regard to the *Indian Medical Gazette*, do I understand that it is an official publication?—Official in this sense, that it is supported by Government.

4765. What is the *Indian Medical Record*?—An independent Journal, which I started 5 years ago, and which is supported entirely by the medical profession of India.

4766. I think you were in Government service yourself?—I was.

4767. How long ago?—From 1872 to 1883.

4768. Did you resign the Government service subsequently to or before you resigned the Secretaryship of the Medical Society?—That was subsequent to my resigning the Government service.

4769. When you say that many natives use opium under the advice of friends for its reputed relief in rheumatic pains, bronchial affections, bowel complaints and diabetes, does that refer to the medical use of opium?—To the medical use of opium.

4770. Therefore any provision of opium for medical purposes would, in your judgment, have to be sufficient to supply persons in that condition?—Certainly.

4771. Do you think that for the supply of people requiring it in that way, you could go much further than you have done in restricting the number of places at which it is sold?—I should not like to go into that matter, because I do not understand it. With regard to the sale of opium, I might say that it is sold for so many purposes, besides medical, that it seems to me that there is a superabundance of its supply. How that is to be restricted, I would not like to say: I cannot go into details.

4772. I want to know how, if you are to have those places opened for the sale of opium for the medical purposes which you have described, you can prevent those places being used for the sale of opium for other purposes—purely vicious purposes?—It is a very difficult matter to deal with; friends often prescribe medicines legitimately. The use of opium for the relief of pain and so on is legitimate; it is a use that will have to be met; but owing to the condition of the country, the supply of medical practitioners in outlying districts is so meagre that the people are obliged to resort to the relief which they can get at their own doors. If opium is prescribed under these circumstances, I do not know how Government is going to limit its sale in that kind of use.

4773. Can you give any practical definition of the distinction which may be drawn between persons requiring opium for such purposes as you have described and the

persons requiring it for purely vicious purposes?—I do not know how it can be defined, but it seems to me that it lies in the hands of the Government to prevent the sale for vicious purposes.

4774. We have had it suggested by some of the witnesses that persons in charge of these places should have discretionary power; do you think that is a discretionary power that could be safely given?—Such discretionary power would be worth nothing if placed in the hands of opium-sellers.

4775. (*Mr. Fanshawe.*) Can you tell us whether in the course of your own professional practice you have had any actual knowledge of lunacy caused by opium-eating?—No.

4776. You have stated that you know, from numerous inquiries among Indians, that opium-eating is regarded as a vice; will you kindly let us know to what classes you apply that?—I believe all classes; I have gained that experience during my Calcutta practice.

4777. Would you include the Marwaris?—I include the Marwaris also.

4778. They would regard it as a vice?—Yes.

4779. You have had some practice among the Chinese:—would it apply to them?—Yes.

4780. All the people among whom you have practised in Calcutta regard its use as a vice?—Yes.

4781. Do you think that among the natives, of whom you have had experience, if the use of opium were prohibited there would be a tendency to take to alcohol or ganja?—There might be.

4782. (*Sir James Lyall.*) I understand you to say that you consider that the use of opium as a drug for curing malaria or as a prophylactic against malaria is a new doctrine among medical men practising on the European system?—Yes.

4783. But is it not an old doctrine among the people of the country, among the uneducated natives?—I have never heard of it in my practice or experience.

4784. Not even among the country people?—Not among any of them.

4785. You think they never take opium to protect themselves against malaria?—I have never heard them say so.

4786. I have met at different times several persons in India who have told me that if they knew that they had to sleep out of doors or were likely to get wet without being able to change their clothes, or to be subject to any exposure of that kind, they would as a precaution take a small opium pill; do you not think that they would be right in doing that so as to keep themselves warm or prevent their getting a chill?—I would warn all persons under those circumstances to avoid that pill.

4787. (*Mr. Wilson.*) I believe you have lived most of your time in Calcutta?—Seventeen years.

4788. You do not know a great deal about the villages in India?—I know something of the villages of Oudh.

4789. Supposing any radical change were intended and it was thought desirable, if possible, to restrict the sale of opium, do I understand you to say that you see no way in which persons might be selected in the villages, having no direct interest in the sale of opium, not obtaining profit from it in any way, to whom a discretionary power might be entrusted?—Discretionary power of course differs so much according to the individual in whose hands you place it. I believe if such discretionary power were placed in the hands of one who was not interested in the sale, it would be a wise measure.

4790. Do you think that the able men who look after the Government of India would be able to devise some plan of that kind?—I think the Government is capable of meeting this evil in a thoroughly efficient way. The difficulty would only affect the present generation. Another generation would arise that would face the new disciplinary arrangement in a proper way.

4791. (*Sir James Lyall.*) Would not the man in the village be probably paid a salary, and have a stock of opium given to him to be sold at a certain price, for which he would have to account to the Government. Supposing such a man to have discretion to sell the opium when he thought it was required for medical use, and to refuse it when it was not, with your knowledge of the sort of people to be found in the villages (not highly paid or educated), do you think he could be trusted?—I do not think he could be trusted. It would be difficult to find a person who could be trusted.

4792. Could you trust them to sell the opium at the price named, or would they not put a higher price, and account to the Government only for the Government price?—Knowing as much as I do, I should be inclined to have a much better system than that.

4793. I do not see what other system you could have; even Indian statesmen cannot do more than is possible?—It would be sure to be surrounded with all sorts of fraud, and probably the last state of things would be worse than the first.

The witness withdrew.

Mr. K. G. GUPTA called in and examined.

4797. (Chairman.) I believe you desire to hand in some documents?—With Your Lordship's permission I wish to present certain papers which I have been instructed by the Board of Revenue to place before the Commission. One is a note giving an historical sketch of the law and the rules with regard to the supply and sale of excise opium in Lower Bengal; another is a short account of the system under which excise opium and intoxicating drugs manufactured from excise opium are sold in the Lower Provinces of Bengal; and the third is a table of statistics as regards the consumption and the revenue derived from opium in the several districts of Bengal in the past year 1892-93.

4798. Will you state your position in the Civil Service?—I am at present Excise Commissioner of Bengal. I have served 20 years, having come out in October 1873. During this period I have served in several districts of Bengal and Orissa in the usual grades from Assistant Magistrate to District Officer. I was Junior Secretary to the Board of Revenue for four years, and in that capacity had to deal with, among others, the Excise and Opium Departments. I have held my present appointment since March last.

4799. What are the chief stimulants in use in Bengal?—The craving for stimulants is satisfied in these provinces from three distinct sources, *viz.*, (1) country liquor (including toddy, or the fermented juice of the date and palmyra palm); (2) hemp drugs; and (3) opium. The first is preferred in dry districts with pronounced cold and hot seasons, and containing a large non-Mahomedan population, as in Behar and Chota Nagpur. The use of hemp drugs is largest in wet districts, such as Dacca, Mymensingh, and the 24-Parganas, or in malarious tracts, such as the low alluvial portion of the Bhagalpur Division lying to the north of the Ganges. Leaving aside Calcutta, where the use of all excisable articles is large, the consumption of opium is largest along the seaboard from Chittagong to Puri, with the exception of Noakhali, where the excise revenue from all sources is smallest owing to the presence of a large proportion of Ferazis, a sect of puritanical Mahomedans who are great abstainers. It is likewise considerable in districts containing a large element of Mahomedan town population as in Hughly, Burdwan, Murshidabad, and Patna, as well as in notoriously malarious districts like Rangpur, Dinajpur, Maldah, and Purnea.

4800. Have you anything to say with reference to madak and chandu?—There is very little madak consumed in these provinces. Outside Calcutta the use of madak is practically confined to the 24-Parganas, Midaapur, Hughly, Murshidabad, Maldah, and Cuttack. The majority of the consumers are low Mahomedans, and in Maldah these belong to the Jola or weaver class. The use of chandu is still more limited. In Calcutta the consumers are chiefly Chinese. The only other places where the consumption is at all large are Chittagong and Mymensingh. In 1882-83, out of 44 districts in which the province was then divided, madak was used in 40, and there were altogether 433 licenses in force. In 1892-93 it was consumed in 35 districts out of a total of 46, and the number of licenses was 263. The corresponding figures for chandu are 89 licenses in 21 districts in 1882-83, and 71 licenses in 20 districts in the past year. It can, therefore, hardly be said, as has been asserted by some of the witnesses, that the use of either drug is on the increase. The figures given above distinctly indicate considerable restriction in the past decade.

4801. You have given us the number of licenses which have been issued for the sale of madak and chandu: can you give us any statistics of the quantities of these articles that have been sold?—These are not separately shewn in the district returns; but I have the figures for Calcutta only.

4802. Will you give us the figures for Calcutta?—355 maunds and 9 seers were consumed as opium last year, 1892-93.

4794. Do you not think that when you put discretion or power into ordinary oriental hands, they would be inclined at once to see how they could make money out of it?—Exactly.

4795. Is not that the administrative difficulty of India?—Exactly.

4796. (Mr. Fanshawe.) I believe that two of the doctors, whose opinions you have mentioned (Dr. Harvey and Dr. McConnell) are the gentlemen who gave evidence before us the other day, is that so?—Yes.

Dr. J. R. Wallace,
M. D.

30 Nov. 1893.

4803. (Sir William Roberts.) Crude opium?—Crude opium.

4804. (Chairman.) What are the figures for the preceding years?—In 1891-92, 360 maunds 33 seers; and in 1890-91, 335 maunds. The amount of opium issued to madak shops in 1892-93 was 28 maunds; in 1891-92, 33 maunds 38 seers; and in 1890-91, 33 maunds 22 seers; and to chandu shops in 1892-93, 36 maunds; in 1891-92, 49 maunds 25 seers; and in 1890-91, 49 maunds 12 seers.

4805. So that in regard to consumption there is a decrease in Calcutta?—Yes.

4806. Your brief historical sketch shows, does it not, that under existing arrangements the farming system no longer obtains, but that the sale of excise opium in Lower Bengal is conducted under a system of licenses, and those licenses are put up to auction?—Yes.

4807. And the issuing of licenses by auction has increased the revenue to the Government?—Very much so.

4808. And the Government has not found that the system is open to objection on administrative or moral grounds; in fact, it has been found to work generally beneficially?—On the whole, I think the system has worked very well. From an administrative point of view, I see no objection to it at all; and from a moral point of view I do not see that it is open to any greater objection than any other system that might be suggested.

4809. I observe that, broadly speaking, the quantity consumed seems to be, approximately, stationary?—I may add that in the 20 years which these statistics cover, the population has increased by 18 per cent., the revenue from opium by 57 per cent., and the consumption by 10 per cent., comparing 1873-74 with 1892-93.

4810. Measured at per head of the population, there has been a slight decrease in the quantity consumed?—Yes.

4811. (Sir William Roberts.) You say that there is a puritanical sect of Mahomedans, called the Ferazis, who are abstainers: abstainers from what?—All kinds of stimulants?

4812. From tobacco?—Tobacco I do not properly regard as a stimulant: it is so commonly used. They smoke tobacco.

4813. Do you mean abstinence from opium and alcohol?—Yes, and from hemp drugs.

4814. Is madak cheap stuff?—It is slightly cheaper than opium, because in its preparation it is mixed with guava (custard-apple) leaves; so that the amount of opium in a given quantity is really smaller than in a like quantity of crude opium. The retail price is slightly cheaper.

4815. Cheaper to the user?—Yes, cheaper than the same quantity of opium.

4816. (Mr. Pease.) Can you give any information about Calcutta separately from the general statistics with regard to Bengal?—Yes. You will find the information given in the statement that I have already put in. Calcutta is shewn as a separate district. The number of licenses for the retail sale of opium, madak and chandu are given separately. In the past year, 1892-93, there were 57 opium licenses in Calcutta, which includes the town of Howrah and the suburbs (for administrative purposes it is considered a separate district), 30 madak licenses and 11 chandu licenses, of which last only 4 were open.

4817. Will you explain why persons should take licenses when they do not use them?—The number of chandu licensee has not been altered for many years. A man pays for all his licenses, but for his own convenience he actually keeps only four shops open.

Mr. K. G. Gupta.

- Mr. K. G. Gupta.
30 Nov. 1893.
4818. Why did you grant the licenses?—He could open all these shops if he liked.
4819. Why do you not withhold the license?—We get the license fees on account of these shops.
4820. Is it not the wish of the Government to reduce the consumption of chandu?—Yes.
4821. You grant seven licenses for which there is obviously no necessity?—That has been so for some years. The number has been kept up, not further reduced.
4822. You say that these licenses are sold by auction?—Yes.
4823. What regard is held at the auction to the locality in which the license will be used?—The site is always fixed before the shop is put up to auction.
4824. Do you mean the locality or the exact shop?—The exact shop.
4825. To whom does the shop belong?—The premises may belong to anybody. The man who purchases the license at the auction must arrange with the owner. He may make any arrangement he likes with the owner of the premises; if he fails to secure the premises, he must give up the license; he cannot use the shop.
4826. Then the man who owns these premises has special advantage?—Naturally.
4827. Does he charge an increased rent as compared with houses of the same character in the neighbourhood?—I cannot say.
4828. Is he not almost sure to do so?—I cannot say, he may or may not. I have not made any inquiry on the subject, and I am not prepared to give an answer.
4829. We saw a place the other day where chandu was being sold up a narrow passage and up some steps; is that the only place where the person who holds the license may sell chandu?—No; he makes chandu there, but he has three other places.
4830. I understood you to say that the license was granted to sell the article in one particular shop or place?—This man holds the monopoly of chandu shops; he has all the 11 shops, or rather, I should say, it is a firm. They have taken all the 11 licenses in Calcutta, and they keep open only 4 shops.
4831. Do you have any regard to the character of the man who purchases the license?—He has to produce a police certificate as to character and respectability.
4832. In the case of a person purchasing the whole of the chandu licenses what guarantee have you as to the character of the person who superintends the house?—We take a guarantee as regards the person to whom the license is given.
4833. With regard to the madak houses, how many are there?—Thirty.
4834. Are they held by separate individuals?—Yes.
4835. And they are strictly limited in the same way to the house in which the business is to be carried on?—Yes.
4836. Do you know that there is a Regulation that smoking shall not take place in connection with the houses where the license is held? How far do you interfere as to the premises belonging to those license-holders who are not immediately in connection, by a doorway or some other connection of that kind, where smoking takes place?—No such cases have actually been brought to my notice; but if any such cases came, I should try to prosecute them, if they could be prosecuted for a breach of a condition of the license.
4837. If I understand you rightly, no effort is made by Government to reduce the smoking of madak or chandu in Calcutta?—I am not prepared to say that. I do not know the actual number prior to the figures I have given which are only recent years' figures.
4838. What is the general description of the distribution of the 57 opium shops?—They are spread all over the town; they are not in any one locality.
4839. Are they more numerous in special localities?—I believe so.
4840. What is the character of the localities where they are rather more numerous?—It is according to the number of consumers in the neighbourhood.
4841. What is the social position of the people in the districts where there are the largest number of licenses?—I cannot say.
4842. Are the most licenses in the lowest parts of the town?—I do not know the localities of all the shops.
4843. Has there been any alteration in the number of opium shops in Calcutta for some years; if so, in what direction?—The number of opium shops in 1890-91 was 55; in 1891-92, 59, and in the past year 57.
4844. Why was there an increase from 55 to 59?—That I could not say without reference to the papers. It was not in my time.
4845. It is stated that under a recent rule no one is permitted to manufacture madak or chandu, even for private consumption, without a special license. Can you tell us how many special licenses have been taken out?—Only one; that is, in the district of Shahabad.
4846. There is no one in Calcutta who takes out a special license?—No. This rule has been introduced only since April last, the commencement of the present financial year.
4847. Who is responsible for the increase or the decrease in the number of licenses in the Province of Bengal and in Calcutta?—Eventually, of course the Board of Revenue; but the proposals come from the District Officers every year. The settlement proposals are submitted by the District Officers to the Excise Commissioner, and they are again considered by the Board of Revenue and finally passed.
4848. Has the Resident Magistrate power to grant the license for an additional shop or shops?—The District Officer cannot do so without the sanction of the Excise Commissioner. The matter comes up when a new shop has to be opened. It is very seldom now that a new shop is allowed in the middle of the year.
4849. (*Sir James Lyall*.) It used not to be the law in Upper India. The Collector of the day had power himself?—Most of these shops are old ones. In recent years there has been hardly any increase in the number of shops; on the contrary there has been a gradual reduction.
4850. (*Mr. Pease*.) Who originally fixed the sites?—It is impossible to say. It has come down from the administration of previous years. Many of the shops have existed for many years. I cannot say who was originally responsible for fixing them.
4851. Suppose a shop no longer becomes available, and a new one is thought desirable in the neighbourhood?—The site can be changed.
4852. Who decides what is a suitable shop?—In the first instance it is decided by the local authorities, but the matter has to come before the Excise Commissioner.
4853. In Calcutta?—It is decided by the Collector in Calcutta, and then it comes to the Excise Commissioner. But it is not merely that. There must also be a certificate from the Commissioner of Police as to the suitability of the site, and as to its being unobjectionable.
4854. I understand he does not interfere with the old sites so long as they are available, but he exercises discretion in regard to new sites?—In Calcutta the settlements are triennial. Before a new settlement is made a list of the shops has to be sent to the Commissioner of Police, and he can object to any he likes, and we are bound to listen to that objection.
4855. What is the character of the objection?—Generally on police grounds: it may come from residents in the neighbourhood, or it may be that the establishment of a shop in the neighbourhood might lead to greater crimes,—any kind of police objection.

The witness withdrew.

Adjourned to to-morrow at 10-30.

At the Council Chamber, Writers' Buildings, Calcutta.

SEVENTEENTH DAY.

Friday, 1st December 1893.

PRESENT:

THE RIGHT HONOURABLE LORD BRASSEY, K.C.B. (CHAIRMAN, PRESIDING).

SIR JAMES LYALL, G.C.I.E., K.C.S.I.
 THE HON'BLE SIR LACHHMESWAR SING BAHADUR,
 MAHARAJA OF DARBHANGA, K.C.I.E.
 SIR WILLIAM ROBERTS, M.D.

MR. R. G. C. MOWBRAY, M.P.
 „ A. U. FANSHAWE.
 „ ARTHUR PEASE.
 „ HARIDAS VEHARIDAS DESAI.
 „ H. J. WILSON, M.P.

MR. J. PRESCOTT HEWETT, C.I.E., *Secretary.*

The Honourable D. R. LYALL, C.S.I., recalled and examined.

4856. (*Chairman.*) I believe you have attended this morning for the purpose of putting in a note of certain corrections which you wish to submit to the Commission in reference to a memorial presented by the missionary body to the Viceroy, on the question under the consideration of this Commission?—Yes.

4857. (*Sir William Roberts.*) I think that the quotation from Dr. Brunton is put under the head of "Opium-eating," and that it does apply to opium-eating, not mere poisoning from opium?—He did not enter into the question. He did not discuss its good or bad effects: he dismisses it in the words quoted.

4858. He does not say whether the habit is good or bad?—That is my meaning. Page 780 may also be referred to as shewing his opinion of opium.

4859. I think it is affirmed that Dr. Brunton expressed the opinion that the practice of opium-eating is beneficial in those conditions?—Under those conditions.

4860. That is a different quotation?—Yes, I referred to that as shewing Dr. Brunton's opinion on the subject.

4861. Do you refer to Dr. Brunton again except in this first paragraph?—No.

4862. (*Mr. Wilson.*) The passage quoted in the appendix to the memorial is from page 778?—Yes.

4863. And the heading is "Opium-eating" in black letters?—Yes.

4864. And it is a general statement as to its effect?—Yes.

4865. On page 777 Therapeutics begins?—Yes.

4866. Therefore I should like you to explain how you say in the quotation in question that it is a subject of Therapeutics when Therapeutics does not begin till two pages further on?—The whole book is on Therapeutics.

4867. Is that your only answer?—The book is on Therapeutics, and I say that Dr. Brunton does not go into the

The witness withdrew.

Mr. K. G. GUPTA recalled and further examined.

4875. (*Mr. Wilson.*) Will you tell us, generally, how you would describe the policy of the Excise Department in reference to the issue of licenses?—The principle of issuing licenses is to see that a sufficient number of shops are licensed to supply the legitimate demands of the different localities. With regard to the location of sites and shops, the matter is first decided by the local authorities; and every year the proposals made by those authorities come before the Excise Commissioner. After they have been considered by him they are finally submitted to the Board of Revenue, who modify or alter them as they like. Orders are then finally passed. In the case of each shop an upset fee is fixed, below which no shop is usually settled. The shops

are put up to auction annually, except in Calcutta where the settlement is triennial.

4876. Is the same principle applied to the licensing of chandu shops?—Yes.

4877. Will you explain to me how that is reconciled with what I understood you to tell Mr. Pease yesterday, that a licensee takes licenses for eleven shops, and only establishes four. If the Board of Excise, or the Excise Commissioner, thinks it right to issue eleven licenses for the legitimate convenience of the public, how do you reconcile it with the fact that they do not insist on his opening the eleven shops?—The number of shops in Calcutta has not been

Hon. D. R. Lyall, C. S. I.
 1 Dec. 1893.

Mr. K. G. Gupta.

Mr. K. G. Gupta.
1 Dec. 1893.

altered for many years. One man has the monopoly of all the eleven chandu shops. We give him the monopoly of these shops and take the license fees; and he is at liberty to open as many as he finds necessary within that number.

4878. You say that the policy was to meet, as far as possible, what might be called a reasonable demand?—Yes.

4879. For that purpose you issue eleven licenses and then you permit the monopolist, for his own reasons, to abstain from making any use whatever of seven of those licenses?—He pays the license fees of all the eleven shops. If he finds that he can sell a sufficient quantity from these four shops to make his business pay, we do not insist upon his opening all the other shops.

4880. Then you do not care about the public convenience?—

4881. (Sir James Lyall.) Have the public complained?—The public have not complained, and we have not thought it right to interfere.

4882. (Mr. Wilson.) Will you try and answer my question? I did not ask about complaints. I ask why you issue eleven licenses for the public convenience, and then permit the man for his own convenience, and as you have said, to make his business pay, to use only four of them?—The only reason I can give is, that when we get the license fees of these eleven shops, we do not insist on all the shops being opened.

4883. But you do not reconcile that with your statement that this is done for the public convenience?—It may be slightly irreconcilable with that as regards the particular kind of shops.

4884. In your short account of the system under which excise opium and intoxicating drugs manufactured from it are sold in the Lower Provinces of Bengal, you use the word *Sadar*—what is the meaning of that word?—It means the head-quarters of a district.

4885. In paragraph 12 you state that the sale of opium by a licensed druggist is allowed for medicinal purposes only. I think he is allowed to sell 5 tolas?—That is so.

4886. What guarantee have you that it is sold for medicinal purposes only?—We have got our own detective staff to make inquiries, and we can also judge by the quantities taken by a druggist within a certain time whether he takes it in excessively large quantities or not.

4887. But if a man comes to the druggist and says that he wants 5 tolas for medical purposes, does the druggist sell it to him, or is he expected to make any inquiry?—He is expected to make inquiries. In this case the druggist is really the native Kabiraj or Vaid; he is usually a practitioner himself.

4888. He is called a licensed druggist?—That is for the purpose of opium only. These licenses are not taken by English dispensaries.

4889. Are they not allowed to be taken?—They are not disallowed, but as a rule they only use imported opium and medical preparations of opium.

4890. The Kabiraj takes out his license as a druggist?—Yes.

4891. Then he can sell 5 tolas to any person?—Apparently.

4892. Nominally for medicinal purposes?—Yes, but we rely on his honesty; and if he is found disobeying any of the conditions of his license, of course he is liable to prosecution.

4893. Will you explain what conditions are required to be fulfilled before a man can get his license as a druggist?—It is seen whether he is a *bona fide* native medical practitioner or not.

4894. Who certifies that?—The Collector who grants the license satisfies himself as to that point.

4895. He cannot personally know who informs him?—He can make inquiries; he has the whole district establishment to make inquiries in cases of doubt.

4896. As a matter of fact, does he do so?—I suppose he does. I have not made inquiries in every district, but I suppose he must do so, otherwise, if there was any illegitimate sale by these druggists the ordinary licensed vendors of opium would be the first to complain.

4897. Am I right in believing that you were the Secretary to the Board of Revenue before you became Commissioner?—Yes.

4898. Therefore you have been familiar with this matter for a long time?—Yes.

4899. Then you can answer my question. As a matter of fact, what inquiries are made and by whom?—Inquiries are made by the Collector through his subordinate establishment. There are Excise Sub-Inspectors, and there are the police, and if the Collector personally does not know or is in doubt, he satisfies himself in any way he thinks best. In these matters he chiefly relies upon the Excise Deputy Collector of the District, and he being a native of the country is supposed to know a good deal about these men.

4900. Does the person who desires to have a druggist license make application by petition?—Yes.

4901. Are these petitions filed?—Yes.

4902. Can you give us any idea how many have been rejected?—I could not say.

4903. Perhaps you could ascertain for us?—I could.

4904. We have a return of the licenses granted. I should like to know the number refused for the last few years—say five years. It is stated in paragraph 14 of your "short account" that the sites of the licensed shops are finally fixed by the Commissioner of Excise?—Yes, under the orders of the Board of Revenue.

4905. That I presume is with a view to the public convenience. The suitability of the shop is considered?—Yes, and whether any site is objectionable from any point of view. Objections are always considered.

4906. Will you tell us what are the "rare and exceptional circumstances" referred to in paragraph 16?—If there is any change in the course of the year in regard to the population of any locality, and if there is any demand for any particular drug, an application is submitted, and that application, together with the Collector's opinion thereon, is forwarded to the Excise Commissioner, who finally decides whether the new shop is to be allowed or not.

4907. I want to know what is the reason?—It may be that a new bazar, for instance, or a new market, is opened, or there may be some sudden influx of people owing to the starting of a railway, and it may then be necessary to open a new shop. An application is made for that purpose.

4908. Will you look at sub-section 2 of that paragraph "that on each license being sold the licensee is required to pay two months' fees in advance as a guarantee against loss to the revenue from sudden relinquishment and consequent closure of the shop or re-settlement at a lower rate"; there is nothing about public convenience there: is there?—In deciding these questions of course the revenue aspect cannot be lost sight of altogether; we do not pretend to lose sight of it.

4909. I only ask whether, as a matter of fact, there is any reference to the public convenience in that passage?—No. But this is only with regard to the revenue; it is a purely revenue matter.

4910. In paragraph 18 it is stated that the licensed vendor is not to sell by retail more than 5 tolas to any person at one time; there is no restriction as to how often the person may return?—No.

4911. So that if he likes to come ten times in a day he can get 50 tolas?—Yes. In fact unless he knew the person he would not be able to find out who took opium; the names of the purchasers are not entered in his books.

4912. I think in 1891, when you occupied a different position, you wrote a letter from the Board of Revenue on this subject, which is published in a Blue Book entitled "Consumption of opium in India," presented to Parliament in 1892?—Yes.

4913. You say "chandu shops, as the extracts annexed to the memorial correctly show, are distinctly places for producing temporary intoxication. The preparation of opium, which is called chandu, is of Chinese importation. It is smoked in order to bring about a brief period of intoxication, after sleeping off which the consumer usually leaves the shop and goes back to his work." A little further on, you point out what you have already told us is the state of things at the present time—that at that time, as now, eleven licenses were issued in Calcutta, and only four shops opened. You also state "at the present moment there are scores of illicit opium dens in Calcutta (in spite of the existence of the licensed shops) that are maintained in this very way against which war is waged incessantly by the Police"?—Yes.

4914. Does that state of things prevail still?—Yes, to a great extent.

4915. As much or more?—I should say more now, since the prohibition of consumption on the premises.

4916. Is this war still waged incessantly?—To the best of our power.

4917. Could you give us any statement as to the number of prosecutions that there have been?—I have not the figures, but I can give them.

4918. I should like the number of prosecutions and the number of convictions?—I should like to say that it is very difficult to get a conviction in these cases. That is one of the reasons why our men are very much discouraged in regard to proceeding against these dens, because, as the law at present stands, I do not see how most of these men can be touched at all.

4919. You also say—"Is it not after all a very appreciable advantage to the community that by the existence of these licensed shops which heavily penalise, but stop short of absolutely prohibiting opium-smoking, the criminal classes and inevitable scum of large towns which would otherwise shun police observation should to so large an extent be focussed and brought under their direct notice"? I presume that in putting that question you would yourself answer that it was a desirable thing to have them so focussed?—Yes, that was certainly the view we held then.

4920. It appears from the next paragraph that the Bengal Board of Revenue made recommendations for restricting the possession of intoxicating drugs to one tola, and that the Government of India disapproved of the suggestion?—It has since then been approved. At present the possession of more than one tola of chandu or madak is illegal, as you will find from paragraph 27 of my note.

4921. He may have five tolas of opium and only one of chandu?—Yes.

4922. I gather that your Board desire that the unlicensed manufacture of chandu should be prohibited?—Yes.

4923. I observe that you use this language: "Should the Government see its way to prohibit the unlicensed manufacture of chandu and madak, this would materially assist in the repression of unlicensed dens, and indirectly, therefore, lead to a reduction of the number of licensed shops"?—This has since been done, but I do not think it has led to the good result that was expected to be derived from it, because, as I said yesterday, only one license has hitherto been taken under that provision. On the other hand, owing to the prohibition of unlicensed manufacture in private houses, the number of prosecutions for such manufacture has increased largely in nearly every district.

4924. Then you say: "The number of chandu or madak shops in such districts as Maldah, Gya and Mymensingh and some others, cannot but arrest attention, and it seems quite possible that something may be done with advantage to reduce their number." I think something has been done since that date towards reducing that number?—Something has been done in that direction.

4925. The number has been reduced from 81 to 71?—Yes.

4926. I gather that in the opinion of your Board the number was excessive?—Yes.

4927. Who is the officer who had the responsibility of granting this number at Gya or Mymensingh or Maldah?—The number of shops for different kinds of excisable articles are not of recent date; a large number existed in former times, but in recent years our policy has been to reduce it. I do not think that many new shops have been created; on the contrary, many old shops have been done away with. Our action in this matter in recent years has been rather by way of reduction than of creating new shops.

4928. I think you have some information to give us as to localities?—Yes, I have a map of the town of Calcutta, shewing the opium, madak, and chandu shops. (The map was handed round.)

4929. You were asked whether you knew how the rent of one of these licensed shops compared with the rents of similar houses?—I am informed that the rents of such houses are usually 50 per cent. more than the rents of similar houses in the neighbourhood; and at the time of getting the lease the man has to pay a very heavy premium also, which varies according to the nature of the shop.

4930. He pays a premium and an enhanced rent also?—Yes, about 50 per cent. more rent.

4931. Do you know what the premium is?—It varies from about 10 to 20 rupees, or even to 500 for a large liquor shop.

4932. For opium shops it is not so much?—The largest premium is paid for liquor shops.

4933. What about the chandu shops?—For those shops they do not require such a high premium as for liquor shops.

4934. (Mr. Mowbray.) You have told us that there are only four chandu shops altogether, and that there are eleven licenses; does the same thing hold good with the madak shops?—No.

4935. There are thirty of those?—Yes; the object of keeping up the number is purely a revenue one; that is, we want to keep up the entire amount of license fees.

4936. These seven houses that are licensed but not kept open pay fees as if they were kept open?—Yes.

4937. The premises are otherwise occupied?—They are not vacant.

4938. But the license is paid to the Government just as if they were opened as chandu shops?—Yes.

4939. I understand that one of your arguments in favour of keeping a certain number of licensed chandu shops open is that there you get the assistance of the people, who have these houses, in keeping you informed as to the illicit places of consumption opened in other parts?—That is one of the objects certainly.

4940. Do you think that that enables you substantially to restrict the consumption of chandu?—Very much so.

4941. Not only to benefit the revenue but to restrict consumption?—Yes, because they act as spies and informers, and they have better means of finding out the existence of illicit dens than our men have, having to deal with the consumers themselves.

4942. I suppose that the revenue of these chandu shops, if they were all suppressed, would not be a matter of very great importance?—No. In the whole of Bengal last year the total amount was for madak R79,659, and chandu R31,032.

4943. That would be a little over a lakh?—Yes. It is not the revenue that is the chief point in regard to these shops, because the revenue derived from them is really very small.

4944. You think that the loss of revenue would not be accompanied by a smaller consumption but by a larger consumption?—It is very probable.

4945. Would it be possible to keep open these clubs and shops for the use of Chinamen only in Calcutta?—It could be tried, but I do not know how far it would be successful. The four chandu shops here do not supply the wants of the Chinese only: there is a large class of Mahomedans and others who also patronise these shops.

4946. How do you enforce the provisions with regard to the manufacture of madak and chandu for domestic use? Are they of long standing?—They have only been introduced since the 1st of April last.

4947. Have you had sufficient experience to say whether it is possible to enforce them?—No, so far I do not think we have succeeded very well. From every district we are having reports of a very large number of prosecutions for private manufacture and consumption. The difficulty is to get hold of the more influential people who make their madak at home. It is generally the poor people whose houses are quite exposed that are got hold of by our men. I think this order has led to a good deal of oppression in one sense.

4948. You say that if the chandu and madak-smoking were stopped, the loss of revenue from licenses would not be great; would it affect what you call the revenue from the duty on opium?—I do not think it would very much, because the consumption of opium in the shape of chandu and madak is not very large.

4949. May I take it that supposing it were thought desirable to close the chandu and madak shops so far as revenue goes, it would not be a matter of much importance?—No.

4950. The revenue, such as it is, goes to the Government of Bengal?—No; one-fourth of the excise revenue goes to the Government of Bengal, and three-fourths go to the Government of India. I do not know how far it will be practicable to prohibit madak-smoking and chandu-smoking altogether. We may prevent the licensed manufacture and sale, but whether we can stop private consumption at home is another question; I do not know that it would be possible or feasible.

4951. Would it be more difficult to stop private consumption at home than to prevent the manufacture?—Both private manufacture and consumption would be more difficult to suppress. As regards licensed manufacture and sale, we can always stop that.

4952. (Sir James Lyall.) You said that you relied on the druggists' honesty; I suppose your main reliance would be upon the limited supply of opium?—Yes. The figures will shew that these licenses are not generally used as a

Mr. K. G.
Gupta.

1 Dec. 1893.

Mr. K. G.
Gupta.

1 Dec. 1893.

cloak for illicit sales, because it is with the greatest difficulty that we can induce practitioners to take out licenses, and the number instead of increasing has a tendency to decrease.

4953. Why?—Because these people do not care to take out licenses.

4954. How much have they to pay?—It is a very nominal fee, only Rs 1 a year.

4955. Why are they allowed to sell five tolas?—It seems a very large amount for the druggists to be allowed to sell?—It is five tolas in the case of ordinary opium vendors too, and no distinction I suppose is necessary.

4956. You are sure that it is five tolas in the case of druggists?—Yes.

4957. With reference to the eleven shops for the sale of chandu, I suppose the contractor took the whole eleven though he only opened four to prevent other people getting the other seven?—That is so. Of course I cannot be sure whether other people would have come forward. The competition is very limited in the case of chandu shops, because they are only kept by Chinamen.

4958. In your official letter referred to just now, you state that madak and chandu are used for temporary intoxication which is slept off; what do you mean by intoxication?—Temporary or partial insensibility. They simply lie down for a little while.

4959. Is that based upon your personal knowledge and experience?—No.

4960. What sort of distinct intoxication or insensibility follows opium-smoking?—I have not seen chandu-smoking. I have seen madak-smoking.

4961. And would say that smoking is followed necessarily by intoxication or insensibility?—No, in the few cases that I have seen the men simply fainted down; they smoke and sit down quietly and talk.

4962. (Mr. Pease.) You said that in the district outside Calcutta the licenses were put up to public competition, but that such was not the case in Calcutta?—Yes, in Calcutta, too, but the settlement here is every three years and in the districts outside Calcutta once a year.

4963. Did you not say that in Calcutta it was done by private negotiation?—No, I do not think so.

4964. Does the same system exist in Calcutta as in the outside districts?—As regards competition certainly.

4965. (Chairman.) You have given us a good deal of information with reference to licenses for the retail sale of opium and chandu and as to the premiums and increased rentals which are paid for such shops; does the Government recognise that the licensed holders have any vested rights?—Not in the least.

4966. If you thought fit to close all or any of these shops, there is no claim on Government for compensation?—None whatever in the least; even an existing license can be cancelled by simply returning the advance fee and giving sufficient notice, 15 days or a month: that is all the liability that is incurred.

4967. If you have reason to believe that any of these shops are not conducted in a proper way, you withdraw the license?—We can, and we do in some cases.

4968. You would not hesitate to do so if you thought that the license-holder was guilty of misconduct and deserved punishment?—Certainly not; there is no vested interest recognised by the excise administration.

4969. (Mr. Pease.) The owner for the time being of a licensed house has the value of his property increased by 50 per cent?—Yes, but the same shop is utilised for other purposes when it is not taken up by a licensee.

4970. (Mr. Wilson.) You spoke of the difficulty in getting druggists to pay for licenses; they ought not to sell opium without it?—They ought not to; but they take only small quantities from the vendors and utilise it in the medicines, and we have not always the means of detecting that. We want them to take out licenses for the purpose of registration more than for revenue.

4971. (Mr. Mowbray.) I observe an extraordinary variety in the number of these druggists, varying from 2 in one district to 240 in another district or division?—In one district it is said that many people take out a license, because it is supposed to give them a certain position, as much as to say that they are recognised by the Government. It also depends on the activity of our own men in hunting up those men who do not take out licenses.

4972. Do you instruct your officers to keep their eyes on these people?—That has been done several times by special circular.

4973. So that you reap a crop of license fees?—There is not much in that—very little.

4974. But there is a considerable number?—Yes.

4975. (Sir James Lyall.) You are a highly educated man, and have been both in England and India, and being a native of India you know more about the habits and customs of the country than any of us, so that your opinion is of considerable value. What do you think as to the effect of the moderate use of opium in Bengal?—The moderate use of opium—and the great body of consumers in Bengal are moderate in its indulgence—is not known to have any prejudicial effects physically or morally; on the contrary, the common belief is that after middle age, moderate use helps to prevent waste and to keep the mental and bodily faculties unimpaired. Many pundits and other literary men habitually use opium without showing any sign of deterioration or loss of mental vigour. The moderate consumer is a sober, steady and respectable member of society. The opium habit seldom leads to crime, and in this respect it is far superior to addiction to alcohol. The drug is taken in the solitude of home, and there is no inducement to excess such as is afforded by the evil associations of a grog-shop. To my personal knowledge several promising young men have succumbed to the effects of excessive drinking (chiefly of imported liquor), but I do not know of a single case of death from habitual intemperate use of opium. The opium habit is also less degrading than, and does not cause so much loss of self-respect as, indulgence in liquor. The effects of chandu and madak-smoking are, however, distinctly harmful in the case of Indians, specially when they are unable to obtain nourishing food. Opium-eating is not looked down upon, nor does it cause loss of respectability. But smoking chandu or madak is regarded as a degrading habit.

4976. Is not the feeling against smoking chandu and madak among Indians to a certain extent, or to a large extent, dependent upon the bad character of these licensed houses and the bad company in them?—Not that alone, but the chandu or madak-smoker is usually known by his appearance, and he is also generally believed to have deteriorated in many respects.

4977. Do you think that applies as much to the man who smokes in a private house, as to the man in a public shop?—Yes, I think the effects of madak or chandu-smoking in this country cannot well be concealed.

4978. Do you think it has the same effect on the Chinese?—I have no knowledge of the Chinese.

4979. You have seen England?—Yes.

4980. You have seen the excessive use of stimulants and intoxicants, how would you compare the two?—I should say that the evil effects of alcohol are certainly a great deal more prominent than any of the effects of opium-eating.

4981. Do you think that the growth of the poppy and the manufacture and sale of opium in India should be or could be prohibited?—I do not consider that the growth of the poppy and manufacture and sale of opium in British India should be prohibited. From time immemorial the poppy has been one of the staple products over a large area, and to stop its cultivation would seriously disturb the agricultural economy of a large part of the country. On the other hand, prohibitive measures adopted in British India would be quite ineffectual so long as the growth and manufacture of the poppy could not be stopped in Native States. In several of them there is already a large and flourishing trade in opium, and other States in which there is no cultivation at present would take to growing it not only for consumption within their own border, but also for the purpose of smuggling into adjoining British territory. A very large establishment would be required to watch the frontier against such smuggling, and apart from the question of cost which must be borne by the general taxpayer, this must entail considerable annoyance and harassment to innocent people. Enforced abstinence from opium would in all probability lead to indulgence in other stimulants, such as ganja or country liquor, and in neither case would the result be satisfactory.

4982. (Mr. Wilson.) Let me ask your opinion as to the use of opium. If you had two or three sons growing up to maturity, would you regard with complacency their taking a daily dose of opium?—No, nor should I if they took no liquor.

4983. (Mr. Fanshawe.) It has been stated that there is a growing tendency among certain classes of native society to use alcohol in excess. Have you any experience on that point?—Yes.

4984. Do you think there is any such general tendency?—There is such a tendency.

4985. Is it marked in Calcutta itself?—Of course in Calcutta the population is larger, but I should say that in the districts also there is that tendency; it is more prominent in Calcutta on account of the population being larger.

4986. To what classes of native society does this extend?—

The witness withdrew.

Mr. E. V. WESTMACOTT called in and examined.

4989. (Chairman.) Will you kindly give us the particulars of your service in this country, and state the position which you occupied and which gave you the opportunity of forming your judgment as to the matter referred to this Commission?—I have served for more than 30 years in the Bengal Civil Service in the Lower Provinces of Bengal. I was for two years in Backergunge, in Eastern Bengal, then for some months in Cachar, which is now in the province of Assam; then I served for two years in the division of Chota Nagpore, being for part of the time in charge of a sub-division. After five years' service, I was appointed to Dinapore, in the Rajshahye Division, where, with the exception of 15 months' furlough, and other short intervals, I remained as Joint Magistrate or Collector for nearly ten years. On returning from my second furlough, I was for two years Collector at Noakhally, and for one year Collector at Dacca, both districts being in Eastern Bengal. During the last ten years I repeatedly acted as Commissioner of the Burdwan and Presidency Divisions, as Inspector-General of Jails for twenty months, and as Commissioner of Excise for four years. I am now Commissioner of the Presidency Division.

4990. Having had ample experience, what is your conclusion as to the effects generally from the consumption of opium, physically, mentally and morally?—I should draw a distinction between the smoking of opium either in the form of madak or chandu, and the eating of opium. I should say that the smoking of madak or chandu is somewhat deleterious in all cases, but that opium-eating is rather beneficial than otherwise. I have known a great many men amongst my subordinates, past middle age, who took opium regularly and who did their work extremely well. I have heard from natives that a man who has nothing to do, living on his rents, may take to opium-smoking, with the idea that it will incapacitate him for work, but as regards laborers, I have talked with them after they have been smoking a pipe and were coming out of madak shops, and they have spoken to me clearly and intelligently. They have said that they had done their morning's work, and were going back to do more work and were far from being incapacitated. Among the educated classes I should say that it does interfere with a good day's work.

4991. Have you anything to say to us as to the age at which it is customary among those who use opium to resort to that practice?—The habit is generally commenced after the age of 40, it is unusual for a man to take opium below that age.

4992. Do you think that it is then taken generally as a remedy for illness or disease?—Not always illness or disease, but on the ground of some physical discomfort or want; they feel that they want some stimulant; it does not always amount to disease or illness. In many cases it does; it is often taken in the first instance as a remedy for diarrhoea, and there is a general feeling that it is a good preventive for rheumatism.

4993. Do you consider that the use of opium may be fairly described as a vicious indulgence?—I cannot look upon it as a vicious indulgence. I consider that the abuse of alcohol is vastly more common among those who use it than the abuse of opium among its consumers. I may say that I listened to the evidence of the Honourable Mr. Lyall who said that he knew no cases in which men have disgraced themselves and become incapacitated for work by opium, and that he had known many cases in which that result had been produced by alcohol; my experience quite corroborates that.

4994. Do you trace any connection between the use of opium and geological or climatic conditions?—Distinctly so, the use of opium is confined, I may almost say, to the alluvial mud soils. Where you get higher or drier soils the people take to alcohol either in the form of spirit or of tari.

As regards imported liquor, it extends generally to the educated classes.

4987. Are they largely taking to the use of imported liquor?—Yes, I know of two or three cases that I recall to my mind even now where young men simply died from excessive drinking.

4988. You think there is a general tendency amongst the educated classes to take to imported liquor?—Yes, amongst educated classes.

4995. Exception has been taken before this Commission and elsewhere to the encouragement which the Government has given, or is alleged to have given, to the cultivation of the poppy by a system of advances, what do you say on that point?—With regard to the growth of the poppy and the making of advances, I think that there are very few people who deal in country produce without making advances to the cultivators either themselves or through middlemen.

4996. If any other kind of crop were cultivated, whether for the Government or for other persons, you say that advances would in such cases be equally necessary?—Certainly. With indigo it is distinctly the case.

4997. What is your opinion as to the effect which would be brought about in Lower Bengal if the use of opium were prohibited for any other than medical purposes?—I do not think that the consumption of opium in Lower Bengal would be materially affected by the prohibition of its use for other than medicinal purposes, because no one who wished to use it from the motives which I believe to be most common, would experience any difficulty in finding a medical practitioner to prescribe it for him.

4998. In your view prohibition for any other use than medicinal use would be ineffective in a moral point of view?—I think it would be entirely inoperative.

4999. What is your opinion as to the feeling which would be entertained by the natives of Bengal if the Government were to interfere in a rigorous manner with the use of opium?—There would be strenuous opposition on the part of the natives, not only on account of the loss of the drug which they consider beneficial and the necessity for replacing the opium revenue by means of other taxation, but especially because the missionaries have identified themselves with the anti-opium agitation, and because the natives would therefore look upon the prohibition of opium as associated with a movement for the promotion of Christianity. This is a new light to me, but it has come to my notice several times within the last two or three weeks.

5000. Thus far I have been questioning you with reference to the use of opium as an edible or in a liquid form; do you draw a wide distinction between its use as a dietetic and the smoking of opium, more especially in the form of madak or chandu?—Certainly.

5001. In the form madak and chandu, you recognize, do you not, that opium may be highly deleterious?—Certainly, when used in excess it may be highly deleterious, and I do not think that any one would pretend that he smoked it for medicinal purposes.

5002. Is the effect of smoking chandu practically a temporary intoxication?—My inquiries made some years ago on the subject shewed that there was a difference between madak and chandu-smoking; the madak-smoker would get up and walk out just as an English workman would go out after a pot of beer; but the chandu-smoker requires sleep before he is fit to go about his business.

5003. After smoking chandu, the smoker is temporarily incapacitated?—He needs some sleep. I do not know whether it would amount to intoxication,—I am not competent to say.

5004. In short, the smoking of madak, and more particularly the smoking of chandu, is, in your view, an objectionable practice?—As regards Chinamen, I believe that smoking chandu is their usual form of smoking or taking opium. I think it might interfere with their work, in the same way as the eating of opium would interfere with the work of the inhabitants of Bengal. The prohibition of chandu would do no harm whatever in Bengal; it would be beneficial.

5005. We have had much evidence before us to that effect. Such being the results of the smoking of madak and chandu, what was your policy as Commissioner of Excise, with regard to the number of licenses which you issued?—My

Mr. K. G.
Gupta.

1 Dec. 1893.

Mr. E. V.
Westmacott.

Mr. E. V. Westmacott. policy was to reduce the number of licenses as much as possible, without failing to meet the demand in any locality in such a way as to induce smuggling. If I found smuggling going on, I should think that I ought to have a shop somewhere in that neighbourhood.

5006. (*Sir James Lyall.*) Are you referring to chandu or opium generally?—I am speaking of the licensing system generally.

5007. (*Chairman.*) I was desiring to confine my questions to licenses for the smoking of madak and chandu.—I reduced them as much as I could. I took charge of the Excise Department with a system which had been inherited, and I introduced change very gradually. I find, looking at the figures, that I reduced the number of licenses from an average of 374 for the five years up to March 1890 to 263 up to March last for madak; and for chandu from 89 licenses to 71. The number of districts in which licenses were issued was reduced from 38 to 34 in the case of madak, and from 23 to 20 in the case of chandu. There were absolutely no licenses granted in the remaining districts.

5008. Do you think it is practicable to go further in the reduction of licenses of that character?—It is a difficult matter to say, because it would involve legislation. If we could get effective means of stopping smoking in unlicensed premises, I certainly would go further, but everything we do in disestablishing licensed places, only throws more trade into the unlicensed places. Besides that, these who hold licenses, and are no longer allowed to have smoking in their shops, have got places not very far off in a back lane or somewhere, dependent upon their shops, where smoking goes on just as much as it did in the licensed premises. My men frequently went into unlicensed places and found smoking going on, but it was impossible to prosecute, because we cannot prove sales. I do not see how we can deal with it. If we find 20 or 30 people sitting and smoking in the same place, and if they said they brought their own supplies with them, as they do say, I do not see how we could interfere. By closing licensed shops for smoking, we have thrown it into unlicensed shops. I was thinking of doing something in the way of insisting upon airy and wholesome premises, but that of course was stopped after the prohibition of smoking.

5009. As an item of revenue the sum obtained by Government for the issue of licenses for chandu and madak shops is quite unimportant, is it not?—A little over a lakh of rupees. I see that we ran up the average fee per license for both madak and chandu. The average fee per license for madak before 1890 was 227 rupees. It has gone up to 302 rupees; and for chandu it has gone up from 380 to 437. I have steadily gone in for the policy of raising the fees for licenses.

5010. Speaking as an officer of the Government, do you say that you would be glad if it were practicable to prohibit the sale of madak and chandu, but that you believe it to be impracticable?—We should give up the consideration of revenue altogether under this item if we could succeed in stopping it. The reason why we have gone no further in the matter is because it would simply throw it into the hands of unlicensed traders and encourage smuggling.

5011. Looking at the opium question in connection with revenue, do you consider that the policy of the Government should be to treat the revenue from opium as the Home Government regards its revenue from alcohol?—Yes, I should say so.

* 5012. You do not consider that the one article is more injurious than the other?—Certainly not.

5013. Both are luxuries at the best?—Yes.

5014. You think the Government would be doing well to check undue consumption of such an article?—Yes.

5015. Inasmuch as you cannot prohibit its use, you consider it is the policy and duty of Government to get as much revenue out of it as it can?—Certainly. There is one point which I observed this morning in looking up the figures with regard to chandu. I find that there is not a single license for the smoking of chandu issued in the three districts of Orissa, although it is the largest opium-consuming tract in proportion to population that we have in this province.

5016. (*The Maharaja of Darbhanga.*) You say in your statement, "With reference to the fact that opium is the only article of country produce for which Government makes advances to cultivators, I remark that

it is the only kind of country produce which Government receives, and that it is equally customary for dealers in other produce to make advances." Is it not the custom for the Government in making these advances not to charge any interest; and if opium cultivation were abolished, do not you think it would have the effect of driving the ryots into the hands of the village mahajans?—My opinion upon such a subject is a very general opinion. I have never served in an opium-growing district, and if you would allow me, I would rather not pretend to give information upon a subject of which I know very little.

5017. (*Mr. Pease.*) In your opinion, is there any connection between the large consumption of opium in Orissa and the fact that it was one time an opium-growing district?—I should say, absolutely none, because our opium-growing districts are the smallest opium-consuming districts.

5018. To what do you attribute the large consumption of opium in Orissa?—To the nature of the soil. Malaria so affects their constitutions that they feel a necessity for it more than any other districts.

5019. Is it not because you think the people of that district have adopted the habit?—They would not have adopted the habit in consequence of it being an opium-growing district.

5020. We know that in different parts of the United Kingdom there are different practices with regard to the character of the stimulants that are taken. May it not be possible in different parts of India that the consumption of opium is more a matter of custom in the district than anything arising from the nature of the soil or climate?—If you went through the figures of the consumption, and comparing them with what you know of the soils of the districts, found that there was a general connection between the use of opium and the nature of the soil, you might think that it had something to do with it.

5021. We have evidence that there is a very large consumption in the hill districts. Is it not also the case that there is a very large consumption in some of the districts which are low-lying and more malarious?—I have had nothing to do with hill districts except Darjeeling.

5022. I mean not in this district specially, but with regard to the Sikhs and Rajputs?—I could not tell you anything about that; my experience does not extend beyond these provinces. I am only comparing the consumption in the Bengal districts, one with another.

5023. You do not claim that opium is taken as a prophylactic?—I prefer to leave that to medical men. I have talked to a great number of natives; and in every case the information I have received corresponds very closely.

5024. Do you think there is any increase in opium-smoking in the aggregate, because opium-smoking takes place more extensively upon unlicensed premises?—No, I should not say so. I have no reason to say that it has been stimulated.

5025. In your statement you recognise that the missionaries have identified themselves generally with the opium agitation?—It has been brought to my notice lately.

5026. Has not the result of their experience, through mixing with the people, been that they have found that opium is injurious both to health and morality?—I should look upon information collected by missionaries with very great suspicion, not that I think they would intentionally mislead any one, but I think they take information very rashly and without proper check. That is my experience, not only upon this subject, but upon other subjects.

5027. You recognise that they would be actuated by the desire of promoting that which is best for the interests of the people they are labouring among?—Undoubtedly; but I should doubt the accuracy of their information.

5028. (*Mr. Wilson.*) In reference to the point just raised, is there any class of persons in this country whose express business it is to mix and converse with the people so much as the missionaries?—I should say that there are certain classes with whom the Government official who goes about on tour comes into contact that the missionaries have very little to do with, and amongst whom they are unlikely to get converts.

5029. If a Government official, whether of high rank or very subordinate or inferior position, is doing his duty, he has a variety of regular routine duties to go through, and he can have comparatively little time to gossip with the

* Note.—The witness explains that by "the one article" he meant opium.

people about opium, whereas a missionary, if he is doing his duty, mixes with the people and talks with them about their vices, their morals, their religion and everything else, and generally speaks to them in a different way from anybody else?—I should say that the district official who did his duty would understand much better how to get information from the people than any other class of men. I have been 30 years in the service, and from the first it has been my duty to go about among the people. Even lately I have sat down several times in licensed shops and talked with the people who are there. I should say that we know much better how to get information from the people than anybody else, because we meet with far more varied classes. In my opinion there are classes with whom the missionary has very little to do.

5030. You have been asked a variety of questions with reference to the smoking of chandu and madak: may I sum it up in saying that you consider these are distinctly apart from the habit of opium-eating, and that the smoking of madak and chandu are distinctly bad and indeed disgraceful. Is that right?—Not quite. I should be quite prepared to learn that chandu-smoking amongst the Chinese might not be deleterious; but amongst the people of Bengal I consider that it is. As regards madak among the educated classes, I should say that it was more or less a vicious indulgence, but amongst the hard-working classes it may sometimes be really a very legitimate stimulant. I would not say that madak-smoking in every case is deleterious.

5031. In the letter which you wrote on the 19th February 1891, you refer to the vice of opium-smoking. You say, "I am at present of opinion that the vice of opium-smoking would be fostered rather than checked by closing licensed shops and driving smokers to secret places to satisfy their terrible craving?"—I have since seen reason to modify that opinion. I doubt whether it is in every case a vice.

5032. In the same letter, a little further on, you complain a great deal that the magistrates in cases of prosecution inflicted inadequate fines?—It has been a very great difficulty in the excise administration.

5033. Does that continue?—I have not been in charge of the Excise Department for the last nine months, but I am afraid it does continue.

5034. I do not understand the exact subordination of the various officers and the interdependence of the different bodies, and so on; but is there no way in which that having been brought to public notice, the magistrates could be brought a little more into conformity with the necessities of the case, so as not to nullify the action of your Department?—That has been a question which has lately been much before the public, and there has been friction between the Government of Bengal and the High Court upon the subject. In my position, however, I would rather not give an opinion upon the subject.

5035. There is another point which I have found some difficulty in understanding. In the same letter you refer, as many other persons have referred, to opium of inferior quality and to good opium; does that refer to harmless adulteration or the what I might call injurious adulteration; how would you describe the difference between inferior opium; is it a question merely of flavour, or a question of strength, or of the actual ingredients?—I referred at that time to the difference between factory opium and to opium in the state in which it is brought in by the cultivator. In some cases it is purposely adulterated in order to get more money for the inferior product, but in other cases the adulteration is only due to carelessness in the preparation, to dirt, and so forth. I was not speaking of adulteration as making it deleterious, but rather in the sense of its being in the rough and crude state.

5036 Further on in the same letter you said, "We have also to consider the consumers of opium in the malarious alluvial tracts which form a great proportion of the area of those provinces. The use of opium by these people is not so much a vice as a necessity. Their vegetable diet would not keep them alive without stimulants, and I doubt whether it would be for their benefit to stop their opium and drive them to ganja or spirits." Are you aware that we have had a great deal of evidence, some of it yesterday, to the effect that the use of opium in some of these malarious districts is very limited, and limited both as to the number of persons who take it and as to the quantity they take, and especially in the case of women: I do not know whether you can qualify what has been said?—I think the reason why it is not used more than it is on account of the price. It is a very costly drug, whereas for opium brought into the factory the cultivator

receives only Rs. 5, the retail price in Calcutta is Rs. 15 and according to my most recent inquiries in the district round about it is Rs. 34. If the Government were not to interfere with it, and the drug produced by the cultivator went into the market, it would cost from about one-sixth to one-ninth of what it is now. If it were cheaper undoubtedly more people would use it.

5037. I am afraid I did not make myself clear. My point is that a good deal of the evidence we have had shows that the consumption of opium by the cultivator is really very small, and therefore he manages to live. You spoke of it as a necessity. Do you wish to say anything further about that?—I answer by saying that I admit the use of it is not so great as it would be, considering that it is to a certain extent a necessity; and the reason of that is because the price is very great. If it were cheaper, it would be far more extensively used.

5038. (Mr. Mowbray.) If your main object were the preservation of the revenue, is the present system of licensing which we have had described the policy which you would adopt?—Are you speaking with reference to madak and chandu only, or as regards the licensing system generally?

5039. With regard to the licensing system generally?—When I gave over the charge of the department, I had not worked up the licensing system on the lines upon which I was working to the point at which I arrived. Up to the time when I took charge the usual manner of fixing the upset fee for a license before the auction was to take the average of what had been actually paid for the license during the last three years. But when I came to examine this, I found that the fees compared with the consumption of opium or alcohol or whatever it was were disproportionate. One man might be paying Rs. 10 or 11 for a gallon or a seer, while a man a couple of miles off was paying only Rs. 2. It was my policy to raise the fees as much as possible to an equal proportion in each district per seer or per gallon, or whatever the measure was which was taken as the unit. After four years I had not succeeded in working that up. I should have tried to make the fees uniformly proportionate to consumption as far as I could. I should have taken the average consumption in the last few years, and fixed the upset fee at so much per gallon or per seer upon that consumption. When I took charge, the Excise Deputy Collector who was in charge of the auctions was very much afraid of being blamed if he did not succeed in making his settlement; and if he found the upset prices fixed were not given, that the bids did not amount to them at the auction, he would come up with a most plaintive request to be allowed to reduce them. That was generally granted. The consequence was the fees were not what the revenue authorities fixed, but what the vendors chose to give. Latterly, however, it has been much more what we chose to fix, and if they did not choose to give our upset price, we did not give them the license. That is the reason why the number of shops has been reduced,—partly that and partly because I struck them out of the list where I thought they were not wanted.

5040. I want to draw your attention to another statement of yours on page 71 in the Blue Book "*Consumption of opium in India*," and I should like to know whether you still wish to put that before the Commission as your view of the present policy. You state:—"I feel confident that by reducing the taxation on opium, or any other intoxicating drug, and by increasing the number of licenses for retail sale, I could increase the revenue to an enormous extent, whereas the policy which I am carrying out, in accordance with the wishes of the Bengal Government, is the very opposite of this." May I take it that the policy of the Bengal Government is to regard the revenue point of view as only one portion of this licensing?—That was distinctly the instruction that I received.

5041. Therefore, if you maintain the licensing of chandu and madak shops, it must not be concluded that you do it solely from the point of view of getting a certain number of fees, which after all are not a large amount for the revenue?—Certainly.

5042. Have you formed any opinion as to the effect of reducing the quantity of madak and chandu which any individual is allowed to possess?—The reduction in the quantity has been since I made over the charge of the Department. I cannot say I have any information to give upon the subject. I think it would make it easier to deal with unlicensed sales. When a man was allowed to hold 5 tolas without a license, it was certainly more difficult to catch him than when that quantity was restricted to 1 tola.

5043. You considered it rather a corollary of closing licensed premises for the purpose of smoking?—I did.

Mr. E. V.
Westmacott.

1 Dec. 1893.

Mr. E. V. Westmacott. 5044. As rendering the work of the police in interfering with unlicensed rooms more easy?—Yes.

1 Dec. 1893. 5045. You cannot suggest any form of words, or any draft, which would possibly cover unlicensed premises in such a way as to bring them within the law which now applies to licensed premises for the purpose of smoking? You said you would be glad if you could do it; have you any practical suggestions to make as to how to do it?—No. I have often thought it over; but I do not see how it is to be done. We have had the same difficulty as regards alcohol. We had what they call German Clubs, where men sit and drink. We know them to be nothing but drinking shops, but we cannot touch them because we cannot prove sales.

5046. Perhaps you have heard that there is the same difficulty in England?—No, I know nothing about England.

5047. (*Mr. Fanshawe.*) With reference to your statement as to the connection of the opium habit with geological and climatic conditions, do I understand that you are referring to the Lower Provinces only?—The Provinces under the Lieutenant-Governor of Bengal.

5048. Have you had any personal experience of Orissa?—No.

5049. Have you studied the diffusion of the opium habit in that part of the Province?—It has been my duty to watch the consumption.

5050. Have you studied the diffusion of the habit so as to be able to offer an opinion as to why it should be largely diffused there?—No.

5051. According to statements that have been placed before use the only places where chandu is consumed to any extent outside Calcutta appear to be Mymensingh and Chittagong: can you tell us the reason for that?—I am unable to explain why the number of licenses should be so large as it is in Mymensingh. In Gya, where there is a large consumption, I can understand it, because the place is full of vice. Every form of vice, I should think, is rampant in the city of Gya owing to the priests.

5052. Are there a number of Chinese in Chittagong?—Yes.

5053. That would not apply to Mymensingh?—No, as far as I am aware of. I am puzzled to know why there should be six licenses in Bhagalpore. I can give no reason for it. It is a matter I should like to inquire into. Murshidabad I can understand: that is another large city.

5054. (*Mr. Pease.*) You have stated that there is a great deal of vice in Gya. We were informed by the last witness that where there is a chandu shop, rogues and vagabonds congregate. Is it not possible that if you have a great number of centres, you will have a great number of rogues and vagabonds?—I am afraid the rogues and vagabonds in Gya are the priests of the shrines. I do not think they are attracted by the chandu shops. There is another point with reference to Gya. It is a Buddhist place of pilgrimage. I dare say a good many Chinese may go there. It is a very vicious place indeed.

5055. In answer to Mr. Mowbray, you said that you did not license places in regard to revenue. Have you any other ground for giving eleven licenses for chandu shops in Calcutta when only four are required by the licensee?—I am afraid that that is indefensible. The reason is that the settlements only take place once in three years, so that we have not been able to make reforms and gradual changes as we have done in the rest of the province. I have had only one settlement there, but I had one every year in the rest of the province.

5056. When was the last settlement?—In Calcutta, I think the last triennial settlement was in March last.

5057. Do you know whether there were only four before that settlement: we were informed that there had been eleven licenses given, but that only four shops had been opened for a considerable time past?—There is very great difficulty in a matter of that kind in this country. You may do everything you possibly can to prevent monopoly, but a man takes the shops in the name of his friends, and there may be a monopoly with which you have no power to deal. It has always been practically a monopoly.

5058. (*Sir James Lyall.*) Were the magistrates who gave such inadequate sentences in the cases of opium-smoking prosecutions Europeans or Natives?—Both. It has been specially brought to their notice by the excise officers. The magistrates, however, have spoken sharply about it, and say that they would not be dictated to by revenue officers. It has been brought to their notice that a man

has been convicted again and again, but the magistrates have repressed such observations.

5059. I suppose the great majority of such cases are tried by native magistrates, are they not?—I think not. I should say that they were about an equal number, Natives and Europeans. We certainly have shops both in the southern and northern divisions of Calcutta.

5060. I am speaking of the prosecutions in the province generally?—I had sufficient power and influence in the province generally to be able to bring this matter forward. I could, through the Collector, who is also a magistrate, draw attention to the inadequate sentences on the part of the subordinate magistracy. I am speaking of the native magistrates; but our complaints are principally in Calcutta.

5061. You spoke of fixing the license fees for the sale of opium: this was the upset fee, was it not?—Yes.

5062. The actual fee is fixed by auction?—Yes, by auction, above the upset price.

5063. Was it usually fixed by auction in the end, or was it usually the upset price which determined it?—It is several years since I held an auction myself. I should say that competition is rather rare. As a rule it is the man who has had the license before. It is a question whether he will give your upset price or not. There is competition sometimes, but as a rule it leads to the shop being thrown up. Two enemies will bid, one against the other, and they run the price up to an impossible fee. I think myself that the auction system is a mistake.

5064. It has been urged against the auction system, and the same argument would apply against a high upset price, that it brings a great pressure upon the vendor, and tends to drive him to take extraordinary measures to increase his sale. What do you think of that argument?—I do not see why it should be so. Like every other trader, he tries to push his business. I do not think the amount of his license-fee would influence him much in the matter. Few, if any, of them depend entirely upon their opium sales for their income. They are generally grocers besides, and many of them hold a ganja license, and sometimes a spirit license. In a shop I visited two weeks ago the man sells retail Rs. 34-4 per seer of opium; the Government price is Rs. 28 and the license is Rs. 3 more, making Rs. 31. The profit therefore is Rs. 3 per seer.

5065. What is the object of putting a heavy license duty, and not a heavy price, upon the opium which is given to the vendor?—We are checked in raising the price by the amount of smuggling. We have quite enough already without increasing the temptation by raising the price.

5066. If you put a high price upon the supply to the opium vendor, do you think the vendor himself would smuggle?—I think possibly he would.

5067. Nobody else has a chance?—No, I think not. I think most of the smuggling we have to deal with is for consumption in Calcutta and for export to Burma. I do not think there is much smuggling for local consumption.

5068. In that case, would it not be simpler to put a higher price upon the opium and make it over to the vendor, and get revenue out of the vendor in that way? There must be some object for defeating the duty in that way?—The matter has been considered year after year by Government and by the Board of Revenue. Not long ago we went into the question of how far we should raise the prices. They were raised as far as it was thought we could afford to go at present. Assam has been pressing us to raise our prices; but we thought we had raised them as far as it was safe to do.

5069. (*Mr. Pease.*) What do you mean by saying that Assam has been pressing you? Who are the parties in Assam that have been pressing you?—The Assam Government,—the Chief Commissioner.

5070. (*Mr. Wilson.*) In answer to Sir James Lyall, I understood you to say that the magistrates discouraged information as to previous convictions?—What they discouraged was the revenue officers pressing for a heavier sentence than the magistrates were inclined to inflict. They could not object to the excise authorities bringing forward evidence as to previous convictions: they objected to its being specially brought to the notice of the Court that so and so is an old offender, that he had been fined Rs. 200 before, and its being urged that the Court should take that into consideration. It has been very much resented by the magistrates.

5071. Is it within your knowledge at all that some seven or eight years ago reports were collected and sent in officially

from Orissa in reference to this opium question?—No, I do not remember anything about it.

5072. Who would be the proper person to ask about that?—The Government of Bengal or the Board of Revenue.

5073. (*Mr. Mowbray.*) Does the Board of Revenue fix the price to the vendors in all the different provinces? Assam is not under the Lieutenant-Governor of Bengal, but under the Board of Revenue, is it not?—No; the Board of Revenue's jurisdiction is strictly co-terminus with that of the Lieutenant-Governor.

5074. You said the Government of Assam pressed you to raise the price?—They would address the Government of Bengal on the subject. One Provincial Government would address the other, and then the Government of Bengal

would send the question to the Board of Revenue, the subordinate agency, for report.

5075. Is it the Board of Revenue who fixes the price in Assam, or is it the Government in Assam?—It was not the price in Assam, but the price in our border districts that they pressed us about.

5076. The Assam Government, I understand, have raised the price in Assam themselves: is that so?—Yes.

5077. And they asked you to raise the price in your border districts in order to prevent opium being smuggled over the border into Assam: is that what you mean?—Yes. There are full papers on the subject with the Government of Bengal and the Board of Revenue. The matter was thoroughly discussed. There was a very good minute by Mr. Stevens, Senior Member of the Board of Revenue, on the subject, which dealt with the matter exhaustively.

The witness withdrew.

The HONOURABLE SIR JOHN LAMBERT, K.C.I.E., called in and examined.

5078. (*Chairman.*) I believe you are Commissioner of Police in Calcutta?—I am.

5079. What has been the length of your service in India?—I entered the Government service a little more than 30 years ago. I was seven years District Police Officer, and then my services were transferred to Calcutta. In 1873 I became Deputy Commissioner of Police in Calcutta, and I held that appointment without intermission, except during two years when I officiated as Superintendent for the Suppression of Thuggee and Dacoity, up to 1889; I was then made Commissioner of Police.

5080. Having had long service and wide experience as an Officer of Police, you are fully competent to speak to us upon one important point which arises in connection with the subject that is before this Commission; I refer to the use of opium in connection with the commission of crime; do you say from your experience that there is such a connection?—Speaking from my experience, I fail to discover any connection between opium and crime of a serious nature. The average number of serious cases against personal property in Calcutta annually is about 500, and I cannot recollect any case in which a person was convicted or even suspected of having been concerned in the commission of any such offence, who was habituated to the immoderate use of opium in any shape.

5081. With regard to acts of violence, I presume you would say that in your experience you have known no such acts done by confirmed opium-eaters?—No.

5082. Take another class of crime, such as forging and swindling; have you known that persons convicted of those offences have been proved to be given to the use of opium?—Certainly not to the immoderate use of opium. In my experience a man who engages in any serious matter of that kind, whether coining, swindling, forgery, burglary, or robbery, always likes to keep his brain cool.

5083. (*Mr. Pease.*) We have had evidence that opium dens were the resort of bad characters, and were therefore a convenience to the Police, because they drew these men together: do you concur in that sentiment?—That is not my experience. It is quite true that the opium dens draw together a certain number of useless, worthless, idle fellows, but I should not look there for any person whom I considered dangerous or habitually criminal.

5084. Have you observed any connection between the consumption of opium and poverty?—The persons who frequent these dens for the smoking of chandu and madak are certainly as a rule very poor.

5085. (*Mr. Wilson.*) You spoke to us chiefly of violent crimes as not being committed under the immoderate use of opium?—Yes.

The witness withdrew.

Mr. F. WILCOX and Mr. H. DAWSON called in and examined.

5098. (*Chairman.*) You, Mr. Wilcox, are, I believe, District Superintendent of Police?—I am.

5099. Acting in Calcutta?—My district is outside Calcutta.

5100. In the suburbs?—It touches on the suburbs.

5086. I think what has been represented to us is that among persons who have adopted the regular habit of taking opium, if they fail to get their supply, there is a sinking or depression, or craving as it is called, and that that is one of the causes of petty theft?—I could not say that. I am not prepared to say that I have ever known of a case in which a man stole to enable him to buy opium. If a man is idle he picks up things as he goes along; I am not prepared to say that is an encouragement to commit crime.

5087. Are you prepared to say that that is a misapprehension?—I should not say that the persons who frequent these dens occasionally leave them because they have not the means of buying opium, and then commit theft and go back again. I have not known such cases.

5088. My question was not confined to chandu and madak-smoking, but applied to the ordinary habit of opium-eating. Among the poorer and improvident classes, who have no money, but with whom there is an imperious demand for opium, they satisfy that demand by getting somebody else's property and selling it for a trifle; you think that is not so?—Not in my experience.

5089. You are Commissioner for Calcutta City?—And the suburbs.

5090. Mr. Westmacott stated that in 1891 the Police establishment was not strong in numbers. Can you tell me what the total force at your command is?—All told we number about 2,600.

5091. What is the population in the same jurisdiction?—About 717,000.

5092. (*Mr. Fanshawe.*) I would ask you to distinguish between habitual and accidental crime: do I understand you to say that opium is in no way a direct cause of habitual crime?—Not in my opinion.

5093. It has been suggested that opium sometimes leads to theft: again let me ask you, is it your experience that opium leads to habitual theft?—I think not.

5094. Do you think that opium leads to accidental crime arising from sudden passion, sudden temptation, and so on?—Only very occasionally.

5095. We may take it then as your deliberate opinion, after long experience, that the opium habit in this country is not to any appreciable extent a direct cause of crime?—Yes.

5096. You have no doubt had some experience of alcohol in connection with crime; can you state the results of that?—It is frequently a cause of crime.

5097. Among many classes of natives of whom you have had experience?—Among many classes of natives.

Mr. E. V. Westmacott.

1 Dec. 1893.

Hon. Sir J. Lambert, K.C.I.E.

Mr. F. Wilcox and Mr. H. Dawson.

5101. How long have you been in the Police service?—Thirty-one years.

5102. And what is your position, Mr. Dawson?—I am Superintendent of the Customs Preventive Service, Calcutta.

Mr. F. Wilcox and Mr. H. Dawson. 5103. How long have you been in the Police service?—Thirty-one years.

5104. You are here to speak to us upon the important question of the connection between the use of opium and

crime; you have heard what testimony has been given by Sir John Lambert: may I ask whether you substantially agree with his views?—I entirely agree with it.

(*Mr. Wilcox.*) So do I.

The witnesses withdrew.

Adjourned to Tuesday next at 10-30.

At the Council Chamber, Writers' Buildings, Calcutta.

EIGHTEENTH DAY.

Tuesday, 5th December 1893.

PRESENT :

THE RIGHT HONOURABLE LORD BRASSEY, K.C.B. (CHAIRMAN, PRESIDING).

SIR WILLIAM ROBERTS, M.D., F.R.S.
THE HON'BLE SIR LACHEMRSWAR SING BAHADUR,
MAHARAJA OF DARBHANGA, K.C.I.E.

MR. R. G. C. MOWBRAY, M.P.
" A. U. FANSHAWE.
" HARIDAS VEHARIDAS DESAI.
" H. J. WILSON, M.P.

MR. J. PRESCOTT HEWETT, C.I.E., *Secretary.*

MR. JAMES FAIRBAIRN FINLAY recalled and further examined.

Mr. J. F. Finlay.
5 Dec. 1893.

5105. (*Chairman.*) On the occasion when you last appeared before us you put in on behalf of the Indian Government certain papers comprising a "Statement shewing Opium Revenue and Expenditure of British India under all heads of Accounts"; a paper relating to "Opium produced or consumed in India"; a paper describing the "Arrangements with Native States regarding Opium"; an "Account of previous proposals for abolishing the Government monopoly of cultivation, manufacture and sale of opium in Bengal"; and a copy of the Despatch from Mr. Spence to the Assistant Secretary of the Government of India describing his experiences with regard to the effect of the opium habit in China. We have to thank you for those papers, and to say that they give us in the clearest possible shape information which it was highly important that this Commission should obtain. The papers are so clear and full in regard to the several matters to which they relate that I can hardly suggest any further questions to put to you regarding them. I apprehend that as regards matters which fall more particularly under the control of Local Governments we shall obtain any further information that we may desire more satisfactorily in the course of the tour which we propose to take?—That was the intention.

5106. With regard to Assam, we shall have witnesses from that country in Christmas week. As to the Punjab, we shall reserve till our visit there any inquiries on matters of detail touched upon in your papers. The same remark applies to Bombay. With regard to Burma, a section of our Commission is going to that territory to-day, and will naturally deal with the details connected with it. In reference to Native States we shall, when at Indore, have the opportunity of making inquiries on matters relating to those States. Turning for a moment to the first paper you have put in, I notice that there is a sensible reduction in your estimate of the opium revenue for 1893-94 as compared with 1892-93; and I notice a sensible reduction in the five years 1889-94 as compared with the previous five years. Do you draw from the fact of such considerable reductions in recent years the inference that the opium revenue must be regarded as essentially precarious?—No, I should not draw that inference from the fact stated. The reduction in the year 1893-94 as compared with previous years is almost entirely due to the reduction in the amount of Bengal opium to be sold, which is owing to there having been bad crops for five years.

5107. What is your explanation of the fall in the net revenue from opium in the years 1884-89 as compared with 1880-84, the former average was Rx. 8,624,341 and in the sub-

sequent period it was Rx. 6,907,085?—The figures on page 3 of the second note do not go back to the earliest five years, they only begin at 1883-84; but I notice that in 1883-84 and 1884-85 the prices realized were much higher than in the following years, and there must have been variations in the quantity sold. The Malwa exports have also been less than in the earlier years. But I could not give any satisfactory explanation without going into each year separately and through the various changes from year to year.

5108. The Bengal sales appear to be considerably less at present than they were ten years ago?—The quantity to be sold this year is, I think, about 43,000 chests, whereas it used to be 54,000 or 57,000.

5109. There has been a reduction in the amount sold?—There has.

5110. Is that likely to continue?—It depends entirely on the crops. If the crop is good this year, we shall be able to sell more next year.

[*Chairman.*] Having regard to the observations which I have already made, I do not feel that it is necessary to trouble you with any cross-examination upon these papers. I only again on behalf of the Commission thank your department for the care with which they have been prepared.

5111. (*Mr. Wilson.*) In the paper that you have put in on opium produced or consumed in India, in reference to each of the various provinces, you have stated that the number of licenses and the locality of the shop were fixed by the authorities?—That is so.

5112. Are you able to tell us whether the authorities in each case require that the shops that have been licensed shall be open, or whether, as we learned was the case in Calcutta with regard to chandu shops, it is left to the option of the license-holder to open the shop or not?—If a license was granted, the probability would be that the shop was wanted and that it would be opened; but if the license-holder did not wish to open the shop for which he had been given a license, he would certainly not be forced to do so.

5113. I may take it that the license is issued for the benefit of the revenue and of the license-holder and with no regard to the convenience of the public?—Not at all, that is not correct.

5114. How would you put it?—That it is issued with reference to the demand in the place and to the administrative conveniences for the control of the sale and consumption.

5115. You state in your paper that the number and locality of the shops are fixed by the local authority?—Yes.

5116. I want to know whether that has regard to the public convenience or necessity, real or supposed?—Yes, the demand for shops in the locality.

5117. But the license-holder may please himself whether he opens the shop irrespective of the real or supposed public necessity?—He would not be forced to open the shop if he did not wish to and thought it would not be profitable.

5118. I observe in the part of the paper relating to Assam there is a table showing the quantity of opium issued in 1883-84, 56,000 seers, in 1889-90 it is 59,000 seers?—Yes.

5119. Can you explain to us how that is reconcilable with this statement of Mr. Luttman-Johnson in a letter dated December 30th 1890, that "Ever since we occupied Assam the suppression of the opium trade has been one of the cardinal points in our policy." Are you able in any way to explain that increase of 3,000 seers if suppression was a point of the policy?—I do not think there is any need for reconciliation. The policy may not be successful in reducing the quantity to be sold. The authorities aim at restricting the consumption, but they cannot control the actual amount each year.

5120. Would you argue from that, that the policy had not been successful?—No, I would not draw any such conclusion. There must be some fluctuations from year to year in the quantity of opium that is issued and that the people wish to consume.

5121. If you will look up the column in your table you will see that there was comparatively little fluctuation, and that in that year it was the highest but one of any?—If you will look at the three following years you will see that it went down again.

5122. Can you tell us how far those figures have any bearing on the alleged policy?—I do not think they have any bearing.

5123. On the same page under the heading of the North-West Provinces and Oudh the arrangement about the return of sales at the sub-treasuries is stated to be a valuable check on illicit sales. Can you explain in what way it works as a check on illicit sales?—It puts licit opium within reach where there is a great demand for it. If there are too great obstacles put in the way of obtaining licit opium, there will necessarily be illicit opium used by people who desire to have it.

5124. I thought it was meant that it was in some way a check upon the shops; am I to understand that it is supplemental to the licensed shops?—I should think that it is supplemental to the licensed shop. Of course you know that the shops buy from the Treasury.

5125. I will try and make my meaning quite clear. If the authorities can issue as many licenses as they think advisable and as may tend to check illicit sales, can you explain how the sale in retail at the Treasury acts as a further check?—In their desire to restrict the sales they might possibly underestimate the requirements for shops in the locality.

5126. Can you tell me when the cultivation of opium was prohibited in Assam, or about when?—In 1860.

5127. Can you tell me whether any and what compensation was paid to the cultivators who were then prohibited from cultivating?—I have not inquired into that subject, and have no information upon it.

5128. (Mr. Mowbray.) With regard to the apparent falling off in the opium revenue and the estimate for 1893-94, can you tell me whether the price of opium in Calcutta for the China market has been affected by the change of the currency in England?—It was seriously affected. The Currency Act was passed on the 26th of June last; the first sale thereafter was in July, and the price was then lower than it had been for years. I think it was Rs. 950 or Rs. 970. In the following month it went up, as far as I remember, to Rs. 1,155. In September it was about Rs. 1,050, and in October and November and December it has been between Rs. 1,075 and Rs. 1,100.

5129. What was the old average price?—In the Budget Estimate it was taken at Rs. 1,250, which was the average price of the previous year.

5130. When was this Budget Estimate framed?—It was framed in March last, and the price taken was what seemed most probable then.

5131. Therefore if you formed an estimate now of the opium revenue for 1893-94 it would be smaller than appears on these figures?—The receipts from Bengal opium would be smaller than those shown in the Budget Estimate.

5132. Do you anticipate that this change in the Currency is likely to have a permanent effect on the opium trade with China?—I hope the effect is only temporary. There has necessarily been a disturbance of the trade between the two countries from a great change like that, but I hope it will pass away and that things will settle down on the new basis.

5133. In your paper on opium produced or consumed in India it is stated in paragraph 3 that "interest is not charged on these advances," but you will find in page 3 where you have worked out the estimated cost price of a chest of opium, a column "Interest on advances." How do you explain that? I should like to know clearly what the meaning of that column is?—That column "Interest on advances" does not represent any actual payment; it is merely a calculation of interest for having paid the money before we need have paid it, before the produce was delivered. It is simply interest for these few months in order to get at the accurate cost of a chest of opium. Of course the money is taken out of the Treasury when advances are made, and therefore in order to arrive at the book or, as I may call it, the academic calculation of the cost of the opium to the Government, we take the interest into consideration, but there is no interest really paid.

5134. You mean that no interest is paid by the cultivator, but that in calculating your net revenue from opium, you charge yourselves with interest on the money that you have advanced?—Not in stating the net revenue, shown in the Accounts, but in calculating the cost of the opium, we take it into consideration.

5135. Do you not calculate the net revenue by the difference between the cost price of the opium and the price at which you sell in the Calcutta market?—No. We calculate the net revenue by the difference between the gross receipts and the actual expenditure. The interest does not come at all into the first statement that I put in, the statement of actual Opium revenue and expenditure.

5136. It is a matter of book calculation?—That is all.

5137. I observe that in paragraph 36 of your paper "Account of previous proposals for abolishing the Government monopoly of cultivation, manufacture and sale of opium in Bengal," it is stated the estimate of cost in the Government of India despatch of December 1881 includes an allowance on this account?—That is the estimated cost of the opium to the Government.

5138. You say it is a mere matter of book-keeping?—Yes: a book calculation altogether outside the accounts.

5139. You state in the paragraph to which I have referred "in pointing out that the interest on outstanding advances was an addition to the cost of the opium to the Government"—that is in estimating the cost of each chest?—It must be.

5140. On page 19 that passage is quoted?—That passage shows that the calculation is of the actual cost of a chest of Bengal opium made in exactly the same way as the calculation on page 3 of the other note in which the column for interest on advances is given.

5141. I suppose there is another way in which you get interest on your advances by fixing the price which you pay to the cultivator at a lower figure than you would do if you received from the cultivator interest on the advances?—Possibly. They might not be willing to sell the opium for the price we offer if they did not receive the money in advance, but I could not say for certain.

5142. You could not say whether the price paid to the cultivator is estimated on that basis?—It is not. The price is simply fixed at what seems necessary.

5143. (Mr. Fanshawe.) As a reference has been made to a statement by Mr. Luttman-Johnson, I would ask one question as to that. No doubt the statement of the general policy of the Assam Local Government would be correct, but of course Mr. Johnson does not necessarily represent the Assam Government?—I think he was Commissioner.

5144. He wrote as Commissioner of the Assam Valley to the Local Government; the general policy was no doubt correctly expressed by him?—I should say so.

5145. We can have further figures if necessary?—Yes.

5146. The general policy may be as he says looking back to the beginning of the separate administration of Assam without reference to the fluctuations of one or two years?—Yes. Certainly.

5147. In your paper on the arrangement with Native States, with regard to opium there is a reference to a précis

Mr. J. F.
Finlay.
5 Dec. 1893.

Mr. J. F.
Finlay.

5 Dec. 1893.

by Mr. Crawford—would you put it in?—It is available for the Commission if desired.

5148. (*Chairman.*) Has it been published before?—It has not been published.

5149. Would you kindly explain to the Commission the procedure followed as to fixing the number of chests of opium to be sold each year and the area of poppy cultivation?—The produce is brought to the Opium Agent or the Deputy Agent in April and May. They know by the end of May approximately what the total produce of the year will be. This is reported to the Board of Revenue who in the beginning of June make their recommendations as to the sale during the following calendar year. In doing so they have regard to the actual quantity available, the amount in the reserve, and the produce of the year. The amount to be sold is fixed for the following calendar year, about six months in advance.

5150. Fixed by whom?—It is recommended by the Board of Revenue and sent to the Bengal Government and the Government of India; the Government of India fixes it and publishes a notification towards the end of June that not less than a certain number of chests will be sold at the monthly sales in the following calendar year.

5151. Does that affect the acreage brought under poppy cultivation the next year?—When these recommendations are sent up, if there is any reason for considering the question of a decrease or increase in the cultivation the Board of Revenue and the Bengal Government mention it in their letters, and, if necessary, the orders passed by the Government of India will say whether there is to be a decrease or increase. Ordinarily the arrangements for cultivation would be made on the assumption that the normal quantity to be sold every year was the quantity that it was desirable to produce. Till a few years ago the normal quantity was fifty-seven thousand chests a year, now it is fifty-four thousand chests a year. In 1888 when the reserve grew very large the Bengal Government did specially recommend that the cultivation should be reduced. This was sanctioned by the Government of India subject to two conditions; first, that there should be no risk of the quantity to be sold in any year being materially reduced below 57,000 chests, which was then the normal quantity; and second, that the reduction should be so arranged that it would not be out of the power of the Government to expand the cultivation in future years in the event of a bad crop.

5152. (*Mr. Wilson.*) In reference to the question of interest, can you tell us at what rate the interest is calculated?—At 4 per cent.

5153. Can you tell us from what dates it is calculated?—I should say that it is calculated from the date on which the advance is paid till the date on which the opium is sold; but it may be until it is delivered by the cultivator to the Agents.

5154. That is an important difference in time?—It is.

5155. You are not sure which it is?—No, but I can find out.*

5156. With reference to the paper from China, the report of Mr. Spence, Her Majesty's Consul, can you tell me if the Consuls in China are in the habit of making frequent reports on these subjects direct to the Indian Government?—They or the Foreign or India Office send us copies of the reports they make to the Foreign Office or to the Minister in China.

5157. All the Consuls?—I think all of them do it.

5158. As a general practice?—It is a general practice that we get the reports.

5159. Is this a specially important one, or why is this particular one put in if you are getting such large numbers?—It seems to be very important. I did not have all the reports examined to see whether they should come before the Commission, but this came to the notice of the Government of India and the orders were to send it in with the other papers.

5160. (*Chairman.*) On the first page of the paper dealing with Bengal opium you give us a table shewing the total area of cultivation during each of the last ten years. I notice that the area under cultivation has been considerably reduced in certain years. For instance, from 1877-78, when the area under cultivation was 586,000 acres, there was a reduction to 459,864. Last year the area under cultivation is said to be 456,000 acres as against 505,845 in the first year.

* *Note by witness.*—I have since ascertained that the interest is calculated from the date of the advance to the date on which the amount of the advance is realised by the sale of the opium for the production of which the advance was made.

Would you say that that reduction of area is the result of the policy to which the late Mr. W. H. Smith committed the Government of India by his declaration in the House of Commons when he said that the area under poppy cultivation had been reduced and that it was the settled policy of the Government of India to continue that process of reduction?—I do not think I can add anything on that point to what Sir David Barbour said. He said "as regards the export of opium from Bengal the policy has been for some time to sell about the same amount every year, neither diminishing that amount nor increasing it. This means that the average area under cultivation would remain about the same, rising or falling according to circumstances." I can, if you desire, read extracts from the letters issued by the Government of India in 1888, 1891 and 1892, when the question of the extent of cultivators was raised.

5161. I believe you wish to put in a paper dealing with the statement which was made to us by Mr. Alexander to the effect that an Envoy had been sent on behalf of the Chinese Government to negotiate with the Government of India, with reference to the traffic in opium. I think Mr. Alexander was not sure as to the date, but he expressed his belief that there had been such a mission, and we said we would ask the Government of India to give us information with regard to that time. I believe that you desire to put in a return, which practically explains to us the nature of the mission to which Mr. Alexander referred?—I understood from the Secretary that the Commission desired to know whether we knew anything of such an Envoy. I got out the papers which appeared to be intended. They are of 1881.

5162. You put them in for the information of the Commission?—Yes.

5163. On examining the paper you have put in, I observe that the Envoy sent on behalf of the Government of China, visited India in 1881, and was sent here by the Imperial Commissioner at Peking, Li Hung Chang?—That is correct, except that he can hardly be properly described as an Envoy. He was sent by the Imperial Commissioner to collect by private inquiry information bearing upon the matter at issue, the matter at issue being the method of carrying out the clause of the Cheefoo Convention, in which it was agreed to place upon a new footing the taxation of the opium imported from India into China.

5164. In the 3rd paragraph of Major Baring's memorandum of conversations with Mah Kie Tchong, I notice that he states that Mah Kie Tchong had no detailed proposal to make, but that he wished to know in a general way whether, in the event of overtures being made by the Chinese Government to Her Majesty's Government, on the subject of the opium question, the Government of India were prepared to consider proposals with reference to the system under which China is now supplied with opium. I notice that the general nature of the proposal which the Chinese Government was inclined to make, was that the Government of India should supply the whole of the opium required by China, to the Chinese Government direct; that the latter should engage on their part to pay a fixed sum for a certain term of years,—which he said might be 30, 40, or 50,—and that the amount to be paid should gradually decrease. To that communication it appears that Major Baring stated that he was unable to express any definite opinion without being informed in greater detail as to the precise nature of the proposal which the Chinese Government was prepared to make; and then Major Baring proceeds to say "this is really all of importance that occurred, although we had a good deal of desultory conversation on the opium question." Then Major Baring pointed out to the Chinese Envoy that it would be exceedingly undesirable that anything should be done in China, which would encourage the growth of the smuggling trade. In answer to these remarks Mah Kie Tchong recognised the force of those observations. Then Major Baring says, "I endeavoured to find out whether the true aim of the Chinese Government was really to suppress the use of opium or merely to obtain a larger revenue than at present. I could not elicit anything very definite on this point. Mah Kie Tchong explained to me that there were two parties in China,—one of whom was desirous of stopping the growth of the native poppy, and deriving as large a revenue as possible from the importation of the foreign drug, whilst the other was in favour of encouraging the use of the native drug, with a view to rendering China independent of Indian opium. The impression, however, he left on my mind was that the Chinese Government attaches very considerable importance to the opium revenue, and are by no means inclined to abandon it."

Those seem to be the important points in the communication which were exchanged between Major Baring and the representative of the Chinese Government?—That is so.

5165. Have you any observations to make upon that mission?—No; I have nothing more to say than what appears in the paper.

5166. (*Mr. Fanshawe.*) Is it within your knowledge when the negotiations which led up to the agreement for the additional article in the Cheefoo Treaty began?—They

began in the year following the arrival of the Taotai, Mah Kie Tehong, that is to say, in 1882. They went on from 1882 to 1885.

5167. I see that the article was finally agreed to in July 1885; when did you say the negotiations began?—I think towards the beginning of 1882.

Mr. J. F. Finlay.

5 Dec. 1893.

The witness withdrew.

The Hon'ble A. S. LETHBRIDGE, M.D., C.S.I., called in and examined.

Hon'ble A. S. Lethbridge, M.D., C.S.I.

5168. (*Sir William Roberts.*) What is your position in the Indian Medical Service, and what has been your work?—I am General Superintendent of the Thuggee and Dacoity Department, and a Member of the Viceroy's Legislative Council. In my official career of over 25 years in India, I have served in the Punjab, Bengal and Burma, and during the last 20 months have been engaged in putting down organized crime in Hyderabad and in the Native States of Rajputana and Central India. In addition to this, I have been employed on four Commissions, and while on them have visited nearly all the districts of Madras, Bombay, North-Western Provinces and the Central Provinces. I can with some reason claim that my experience of India is at least a wide one. I have not made this subject a special study from a medical point of view, but I have had exceptional opportunities of observing the effects of the opium habit on the natives of this country. My first appointment in the service was that of a Surgeon of a Sikh Regiment, and since then I have been Superintendent of the large Central Jails of Lahore and Bhagalpore, Inspector-General of Prisons in Burma, Sanitary Commissioner of Bengal, and for 14 years Inspector-General of Prisons in this Province. In these various appointments I have had opportunities of observing a very large number of persons who were habitual users of opium.

with the deprivation of the stimulant to which these malarial-stricken people had been accustomed.

5171. What have you to say in regard to the therapeutic uses of opium in the treatment of diseases of malarious origin?—As to the therapeutic uses of opium in the treatment of diseases of malarious origin, I can only say that in my experience the medical officers in charge of jails in the more unhealthy districts of Bengal have been accustomed to use the various preparations of this drug in very considerable quantities, and I know this to be the case, not only from my personal observations in the Jail Hospitals which I have inspected, but from the checking and passing of the indents for medicines required for the treatment of prisoners in jails.

5172. What has been your experience with regard to the breaking off of the opium habit?—Where the opium habit is not complicated by disease we have never experienced any difficulty or danger in breaking opium-eaters of this habit by a sudden and complete stopping of the drug. As a rule, a slight tendency to diarrhoea is noticed in these cases, which is easily checked by appropriate remedies. In cases where the drug has been used to excess, the deprivation causes a certain amount of suffering, but this does not usually last more than 5 or 6 days.

5173. What is your experience with regard to the use of opium in excess?—The use of opium even in excess does not in my experience lead to any organic constitutional changes, such as those which result from the abuse of alcohol. Even the emaciation and tucked-up appearance of the opium drunkard disappears very rapidly after the drug has been stopped. Before I leave the consideration of this question from a prison point of view, I state that it is my deliberate opinion, after an experience of the criminal classes extending over a quarter of a century, that the opium habit in this country is not, to any appreciable extent, the direct cause of crime, and that its effect in this direction is not to be compared with the recognized evils that result from the abuse of alcohol, both in England and in India.

5174. What has been your experience with regard to the factory operatives?—As President of the Factory Commission in 1890, which was appointed to inquire into the social condition and well-being of Indian operatives, I made a careful inquiry into their mode of life, their work, their complaints and wishes. Many mill hands were examined at considerable length for this purpose, and we saw thousands of operatives working in the mills of Bombay, Ahmedabad, Cawnpore and Calcutta. In no single instance do I remember our attention being drawn by any one to the demoralization of the working classes from the use of opium. It is true we did not make any special inquiry in this direction, but if there had been any deterioration of the working power of the mill hands from this cause, we should most certainly have seen some indication of it in their appearance or power of work, or heard of it from the mill managers and subordinates, if not from the operatives themselves.

5175. You have been at the head of a large Department; have you had to discharge any of your employes under you on account of the excessive use of opium?—During the 18 years that I have been the head of a department with a large staff of subordinates under me, I cannot recall a single instance in which a subordinate was discharged for unfitness due to the excessive use of opium. I need hardly add that in this period hundreds have been discharged for incapacity brought on by the abuse of alcohol.

5176. What has been your experience in regard to the opinion of native gentlemen in the various parts of India which you have visited?—In my present appointment which requires me to visit Hyderabad and the Native States of Rajputana and Central India, I have had many opportunities of discussing this question with well-informed Indian gentlemen and Durbar officials. The deliberate conclusion at which I have arrived in this matter is that any

5170. What has been your experience as concerned with prison administration in regard to the effect of the opium habit?—As an expert in prison administration, I have seen a vast number of prisoners who have acquired the opium habit. Speaking generally of these men from what I saw of them in their prison life, I would say that their gentleness and good behaviour compared very favourably with the general character of those who had been addicted to alcohol and ganja in excess. It was the rule in the prisons under my control to cut off the supply of opium on the prisoner's first admission to jail. If, in any case, it was found necessary to continue the drug as a medicine, the prisoner was invariably admitted to hospital, and there treated for the disease from which he was suffering. In unhealthy jails, like those at Rungpore and Akyab, where the prisoners are received from very malarious tracts of country, and where the habit of opium-eating was general among the free population, it was not found possible to enforce the rule of complete prohibition on admission, and I have frequently been obliged to sanction the issue of opium to all the opium-eaters admitted to these jails to guard against the grave risks to life caused by depression from imprisonment combined

Hon. A. S.
Lethbridge,
M.D., C.S.I.
5 Dec. 1893.

attempt to interfere with the rights of Native States and the privileges of their subjects in regard to the growth, sale or consumption of opium, will result in the gravest complications and in serious danger to the stability of the Empire.

5177. I think this would be a good opportunity of laying before the Commission an account of the composition and character of the Indian Medical Service. Although you are a little detached from that service, I believe you are closely associated with it and know it well?—Yes

5178. What is the numerical strength of the Indian Medical Service?—The Indian Medical Service to which I belong numbers altogether between 443 and 450 European Officers. There are also a few Indian gentlemen who have competed in England and have been admitted into the service.

5179. How many?—I should think that there were now 12 or 15 out of the 450.

5180. What are the grades and duties of the medical officers in the Indian Service?—They are divided by a sharp line. Every officer when he comes to India is obliged to serve with the Native Army as Surgeon in charge of a regiment. After two years' service he may elect for civil employ. It is from the regimental officers that the Civil Surgeons of the different districts of India are recruited. The regimental officers go through the usual grades of Surgeon-Captain, Surgeon-Major, Surgeon-Lieutenant-Colonel, and pass on to the administrative rank of Deputy Surgeon-General and Surgeon-Major-General. The civil officers still keep their military rank and keep their promotion in the same manner; but they also rise from being Civil Surgeons of minor stations to larger ones. From the best of them are selected the officers who are brought to the presidency towns to be in charge of the large hospitals, and to be professors of the medical schools that are established in the three presidencies.

5181. What are the duties of the civil medical officers in charge of the dispensaries?—They have complete charge of the whole medical administration of the district. Then they have all the dispensaries in the district. The number of dispensaries varies according to the size of the district. Some districts have ten or fourteen, and others have five or six. The outlying dispensaries have to be inspected once or twice or three times a year; the head-quarters dispensary has to be visited every day. Many of these head-quarters dispensaries are very large institutions, with a large number of beds for in-patients, and a very large attendance of out-patients. The ordinary cases of out-patients are seen by the hospital assistants; but the interesting cases are reserved for the medical officer's special care. He sees every in-patient every day. Besides this he has a large practice among the native population. He is called into consultation in all serious cases by private practitioners.

5182. We are now speaking of those medical officers who have received European education?—Yes. They are in the covenanted Service. They would come very closely into contact with the Assistant Surgeons who would have charge of the outlying dispensaries.

5183. And often have communication with them?—Yes.

5184. He would also, I presume, be the medical officer to the jail?—Yes.

5185. Do you consider that in their work they would have opportunities of detecting the effect of the opium habit on the health and physique of the people?—I do not think there is any European in India who has such good opportunities of making observations on this particular point.

5186. Could he in any way test the effect of the opium habit on character—morality?—He sees a great deal of Indian life which very few officers have a chance of seeing, that is to say, the inner life of the Indian people in visiting the sick and making inquiries, and so on. He has a means of acquiring a knowledge of the inner life of the Indian people which administrative officers of the Government have not. He therefore has an opportunity of testing this particular point.

5187. I presume in regard to the jails they would be able to state if there was any connexion between opium and crime?—Yes. They are the administrative officers of the jails. They are the executive as well as the medical officers of the jails, in the smaller jails at all events—in the district jails.

5188. I believe you have travelled a great deal in the course of your official duties throughout India in the various presidencies?—Yes.

5189. Have you had much conversation with the members of the Indian Medical Service with regard to the effect of

the opium habit on the morals of the people?—I have been travelling a great deal lately. Within the last few weeks I have had conversations with officers; and have also had general conversations before then on this particular subject.

5190. What impression have you gathered? Do they agree with the views you have expressed?—It is curious how unanimous they are as to the fact that opium is not the curse to this country that it is supposed to be.

5191. Have you met with exceptions to your views?—I do not remember a single officer that I know who has any different view to this.

5192. This large staff of 450 men hold, so far as you know, the same opinion?—As far as I know they are unanimous.

5193. Can you tell us how this staff is selected?—They have all had an English education, I understand?—All, except the native members. There are a certain number of natives admitted into the Covenanted Service who go to England to compete, but they are trained in the colleges in India. They go to England to compete for this service so that they also are members of our service.

5194. That is, the twelve or fourteen?—Yes.

5195. How are the members of the Indian Medical Service trained? From what class of medical students do they come—high class or low class, or what class?—All I can say is that the competitive examination for the Indian Medical Service is the severest competitive examination for any medical service in the world.

5196. Is that in addition to their pass examination?—That is quite apart from their pass examination. Before you can compete for the service you have to be a qualified medical man. The qualifications of the candidates are supposed to be high, because this is the service which is supposed to have the highest qualifications; the best men compete for this particular service. It is the general belief that ours is the service where the competition is severest.

5197. It is attractive for the best men?—Yes.

5198. On account of the advantages it holds out?—Yes, the pay and pensions and the positions that are occupied by the medical officers in this country.

5199. (Chairman.) The advantages are superior to those offered by the Army or Navy?—Yes.

5200. (Sir William Roberts.) The competition is a real one?—There is no doubt about the competition being a real one.

5201. Looking over the list regarding the general status of the men who come over to India, would you regard them as pretty well representative of a high class of medical students?—It is my belief that they represent a high class of medical education.

5202. And are among the best educated medical men of England, Ireland and Scotland?—That is my belief.

5203. After they have been chosen in this way by competitive examination, do they undergo any special additional training for Indian service?—Yes.

5204. What is that?—They are required to go to Netley for four months. There they go through a special course, consisting chiefly of a course in the science of public health, sanitary science, military surgery, and of medicine in connexion with tropical diseases. After this special course which lasts four months they pass another examination on the subjects that have been taught at Netley; and it is from that examination that their position in the service is fixed.

5205. Could you say from your own experience of them that they are men who are well educated generally, as well as professionally, and that they are men of good social status and character?—I can say that they are well educated, both generally and as regards their profession. As to their status, we of this service have no ground for complaint. We occupy a position in India which is not an invidious one. We take our position with all other services, and we are on complete equality with other gentlemen who are serving the British Government. Therefore we may be said to be of the same class as other gentlemen who form the rest of the services in India.

5206. They would, therefore, be highly qualified for detecting the effect of habitually taking opium as the cause of disease or moral declension if it were there?—Certainly. No persons more competent exist in India.

5207. You also think that they are, speaking generally, men of that independence of character that their good faith may be depended upon to tell the truth without fear or favour?—Most certainly

5208A. In charge of these dispensaries there must be a considerable staff of Assistant Surgeons, who, I understand, are mostly, if not entirely, educated in India?—Yes.

5209B. What is the professional and general status of these men?—They undergo a medical education which in all respects conforms to the medical education required for degrees or diplomas in England. That is to say, a native of Calcutta, by going through lectures and courses in the Medical College here, can present himself for examination at most of the Universities and other Examining Public Bodies in England. The course of education is as complete as it is in England.

5210. They are fairly trained men?—They are well trained men. A certain proportion of them go to England and take their diplomas there, because it seems to carry more weight. They do not go through any education at home; their education is done here.

5211. I suppose their intercourse with natives where the dispensary is would be very close?—Very close. I should say they come from the middle classes of the people who live with them in their villages.

5212. What would be the opinion of that class of men?—My acquaintance with that class is not so large as it is with the European; but I should say that they would also agree that opium is not the curse that it is supposed to be, and that it is very largely used by the people in malarious districts, and that they themselves prescribe it very largely.

5213. You think that they likewise can be trusted to give a fairly skilled opinion on the opium habit as a cause of disease?—Yes, I think so. They have many opportunities of observing, even more closely than we have, the effects of opium.

5214. And you think that they might be fairly dependent upon to make truthful returns?—Yes; most certainly.

5215. (*Mr. Mowbray.*) Are there many Europeans in independent practice in India?—In the larger cities like Calcutta, Madras and Bombay, and among the larger European communities of Assam, Darjeeling, Tirhoot, there are private medical practitioners who are Europeans; but among the purely Native States there are not many.

5216. Have you any idea of what the number of independent European practitioners would be?—It is very difficult to say; I am afraid to speak upon the subject.

5217. (*Mr. Fanshawe.*) Can you tell us the number of the Assistant Surgeons?—I am sorry to say I have no means of knowing. There are a certain number in Government service; and there are a very large number indeed in private practice who have no connexion with Government at all. In every town in Bengal there are one or two of them.

5218. You have referred particularly to experience in the Rangpur jail. I believe that Rangpur is an exceptionally malarial district?—Yes, it is very malarious.

5219. May we take that as well established?—If there is anything established, it is the fact that Rangpur is a malarious district.

5220. Can you tell us generally what classes of crime are most prevalent in that district?—Would the jail population of Rangpur consist mainly of accidental criminals?—They are chiefly accidental. I think there are no habituals.

5221. May we take it then that the jail population of Rangpur fairly represents the population of the district?—Yes.

5222. (*Mr. Wilson.*) You have told us how you came into contact with these opium-eating soldiers. You were with the Native Army?—Yes.

5223. How much did they take?—I could not tell you; it is a long time ago. They used to take it out of a little box; but I could not tell you what the dose was in each case.

5224. You say that the native officers and the older soldiers took more than the younger ones?—That was my general observation at the time.

5225. Would they take larger doses or take it more frequently?—I mean that among the opium-eaters the larger proportion were the older men and the officers.

5226. You say they appear to use the drug more freely than the younger men?—The larger proportion of the opium-eaters were among the older men.

5227. Your remark refers to the proportion of men rather than to the quantity of opium?—Yes.

5228. Have you any information as to the actual quantity of opium which the men were in the habit of taking before they came into the jails?—No. It would be very difficult to judge from observation as to how much a man had been accustomed to take.

5229. In the last paragraph of your statement you refer to the opportunities you have had of discussing this question with certain gentlemen in the Native States?—Yes.

5230. What do you particularly refer to?—That is only recently. I have only been twenty months now in charge of this particular department, which requires me to go over India.

5231. I suppose we may take it that you really adhere to the last lines of your statement, "that any attempt to interfere with the rights of Native States and the privileges of their subjects in regard to the growth, sale or consumption of opium will result in the gravest complications and in serious danger to the stability of the Empire?—Most certainly I adhere to that. That is my confirmed belief, and the result of very considerable experience. I think any such attempt would be so unnecessary, and the grievance would be so great, that it would shake the confidence of the people in our justice and our rule.

5232. You told Sir William Roberts about the numbers of medical men in this country; can you give us any idea of what proportion of them have been detached from medical work, as, for example, in your own case?—Very few have been actually detached altogether from medical work as I am; I should think there were not more than twelve or fourteen of us.

5233. Does that include the Forest Department also?—As far as I know we have no officer in the Forest Department (I may be mistaken; I am speaking now from my general knowledge), unless you take Dr. King, who is in charge of the Botanical Gardens here.

5234. There have been medical men in connection with the Forest Department?—That would be before my time.

5235. Can you tell us what is the policy of the arrangement you have described to Sir William Roberts of so many medical officers being appointed as Army Surgeons, and then going off to civil practice?—I understand that it is due to the fact that the Government of India are extremely anxious to have a reserve of medical officers for the army. If war were declared the whole of the military medical officers who are now in civil employ would be called upon to take the field. They would have to join the army and take their share in the campaign. The civil stations would then be left in charge of Assistant Surgeons or other practitioners who could be got from England or elsewhere for the time so as to carry on the duties.

5236. Do I understand that all the medical men who are now practising with military titles in Calcutta would, on such a contingency, be liable to military service?—Yes, including myself. I should be liable to military service.

5237. By whom are these gentlemen paid?—Since the decentralization of the finances they are paid by their Provincial Government—those who are in civil employ. The Military Department pays those who have charge of the native regiments.

5238. Then the Civil Department are really maintaining a staff of gentlemen ready for military contingencies?—That is the case.

5239. (*Chairman.*) In answer to Sir William Roberts you alluded to instances in which opium is used in excess to the detriment of the natives concerned; you have not stated to us whether in your opinion there are cases in which persons make use of opium for daily consumption with direct benefit to their health. Do you think there are such cases?—There are undoubtedly such cases; but not having practised my profession, I am not in a position to give direct evidence upon that point; but knowing these men who have come into jail, I could say that they had not suffered in any way, either physically or mentally, from the use of opium. They take their position in the jail as prisoners, and I watch them there. My experience is limited to that.

5240. Is it your belief that the majority of the people in this country who are in any form consumers of opium are what you may describe as consumers in moderation?—I think so certainly. I am led to that opinion from the fact that on a special inquiry, when we made very close inquiries into the social condition of operatives, I saw thousands and thousands of them, and this question never obtruded itself to our notice. If an inquiry were made into the condition of operatives in England you would not

Hon. A. S. Lethbridge.

Hon. A. S.
Lethbridge,
M.D., C.S.I.
5 Dec. 1893.

have inquired for an hour without knowing that the drink question was at the bottom of a great deal of unhappiness and misery and sorrow. This particular question, however, of the consumption of opium by operatives was never brought to our notice at all. I think therefore that it does not affect operatives in their work or in their position if they use it moderately.

5241. Your view is that the majority of those who are consumers are what you may designate consumers of moderate quantities?—Yes.

5242. As far as you have had the opportunity of judging it does them neither good nor harm?—That is my opinion.

The witness withdrew.

Sir E. C.
Buck, C.S.I.

SIR EDWARD C. BUCK C.S.I., called in and examined.

5245. (Chairman.) Kindly state to us, what is your position in the service of the Government of India?—I am Secretary to the Government of India in the Department of Revenue and Agriculture.

5246. I understand that in 1883 you visited the Straits Settlements, on official duty. In connection with what object did you pay that visit?—In connection with the emigration of Indian coolies.

5247. On the occasion of your visit to the Straits Settlements, I understand that you visited the tin mines at Taipeng, the port of Perak?—That is so.

5248. Can you give us any statistics of the population of Perak at the period of your visit?—I am able to do so, because my visit to the tin mines led subsequently to the deputation of the Director of the Burma Department of Agriculture, Mr. Hall, whose report, which I place on the table, enables me to give statistics of the population of Perak in 1884, the year after my visit. There were then 60,000 Malays, 55,000 Chinese, and 3,000 natives of India. But the population of Taipeng itself consisted of something less than 100,000 Malays, 20,000 or 30,000 Chinese, and 2,000 or 3,000 natives of India. In 1887 there were 40,000 Chinese in Taipeng, and I believe there are more now.

5249. Will you give us any particulars of any points that came under your observation, on the occasion of your visit to the tin mines, which have a bearing upon this subject which is before this Commission?—I may say that on the day of my arrival I was taken over the tin mines, which are open excavations and easy therefore to inspect. The hard work, such as would be performed by navvies in England, was done entirely by the Chinese, subsidiary light work being performed by Malays and natives of India, chiefly the latter. I was told that the Chinese, almost without exception, worked two or three hours' overtime. They certainly appeared to be extremely vigorous, and in very healthy condition, notwithstanding the fact that the climate is exceptionally exhausting and malarious. I was given to understand that the Chinese all smoked or consumed opium, and in the evening I was taken over some of the large halls where they assemble to smoke opium. Some of the Malays and Indians take opium, but not so universally as the Chinese. On the following day I visited the hospital with the medical officer in charge—a Surgeon in the British Army. I noticed the comparatively small number of Chinese in the wards, *i.e.*, the number was small compared with the large proportion of Chinese in Taipeng. I was told by the medical officer that one reason was the greater protection from malarious and zymotic disease, which they enjoyed from their habit of using opium. This circumstance made some impression on me at the time, and I have thought it worth while to ask the Resident of Perak whether this statement can be corroborated by subsequent statistics and experience. I have been informed that statistics are being prepared, and will probably be in the hands of the Royal Commission before they leave India.

5250. Do you consider that Taipeng affords a field peculiarly useful for the observation of the effects of opium?—I do; Taipeng affords a field peculiarly useful for observation in view of the fact that the whole of the residents are under strict supervision by British officials; that there is a large proportion of opium consumers; that the population is mixed, consisting of both consumers and non-consumers of opium; that the climate is malarious and exhausting, and a good test therefore of the utility or otherwise of opium in protecting against disease; and that all seriously sick persons are treated in a hospital supervised by an English medical officer. It will be found in paragraph 21 of Mr. Hall's report that at first the Chinese insisted on being treated by

5243. As compared with alcohol in this tropical climate, as far as you know, the use of opium is less pernicious than the use of alcohol?—Most certainly.

5244. Do you see any analogy between the indulgence or use of opium in the population of a tropical climate and the use of alcohol among the inhabitants of a climate such as England?—Judging from the fact that these people do take opium in considerable quantities and in large numbers, one would draw that analogy as to its being a necessity as a stimulant just as in colder climates we know that the inhabitants take to alcohol.

Chinese doctors, but that on further experience they preferred the English medical officer, and that now Chinese doctors have been eliminated. There is every reason to suppose therefore that statistics and information provided by the medical officers of Taipeng will be of a definite and practical character.

5251. Have you any information to give us with reference to the cultivation of opium in India?—That covers a large field. There is one point to which I would draw attention in connection with the cultivation of opium in India. I produce two maps, the first shaded to shew the districts in British India growing over 1,000 acres of opium, and the second shaded to distinguish the districts in which the population is respectively over and under 450 to the square mile. It will be observed that opium is mainly grown in the most densely populated districts, which are on that account most in need of support and assistance. So far therefore as the capital supplied in the form of advances and payment for opium is useful to the agricultural population, it confers a benefit on the very tracts in India which most require aid of the kind. Moreover, as a rule opium is cultivated by the most industrious, skilled and deserving castes, and it is on them that the loss would chiefly fall.

5252. (The Maharaja of Darbhanga.) In case opium cultivation is abolished altogether, do you think there is any other crop that would pay the ryots equally?—I think that is a question which, to be properly answered, requires a very great deal of careful examination on the spot. Whatever I say upon that subject I would ask should be taken as the basis of inquiry rather than as positive evidence on the subject. My own belief is that opium cultivation is best carried on on certain land and by certain cultivators. I would explain that by saying that the opium land *par excellence* is that which is fit for market garden crops and is cultivated by market gardeners. That land would be wasted on such crops as sugarcane and wheat, and it could only be made to pay as opium makes it pay by growing on it crops such as are included under the term of market garden crops in all our agricultural returns: these consist of aromatic herbs, spices, tobacco, and such like. Where the demand for such crops is sufficient to enable a market to be found for them, I think they could be substituted for opium without any loss, but in the districts where opium is grown, the opium is grown on other land as well as this land which is specially suited for opium and by cultivators specially qualified by experience to grow opium. A certain amount of outlying land is now used for opium, and is cultivated by castes who did not originally cultivate it. These mainly are the industrious castes—the Kurmis and Lodhas; and even some other less industrious castes to a certain extent have taken it up. On outlying land, that is to say, land which is not fit for market garden crops and which is cultivated by other than those gardeners, tobacco and market garden crops could not be substituted. It would be impossible to substitute there wheat, sugarcane and potatoes, but it is a question which requires inquiry whether these crops do not require a very much larger quantity of coarse and heavy manure than opium. If that is the case, I am under the impression that those crops could not be substituted for opium in what I may call the second class opium land, the land lying outside the market garden crop area. Thus we have opium land divided into two classes: the market garden class cultivated by market gardeners—Kachis, Koeris, Malis and the like; and the second class which requires special manuring cultivated by, what I may call, the farming class—Kurmis and Lodhas and the like. The examination of the question as to the substitution of other crops must be separate for each of these classes of land and classes of cultivators. Then I may state another fact, that the manure, both

solid and liquid, required for opium is not of the same class entirely as the manure required for potatoes and sugarcane. For opium it is necessary to have, either in a solid or liquid form, manure containing various ingredients which I class under the name of nitrates, although some of them are nitrites. I have an analysis here of water which I had taken from a well which was considered valuable for opium. It contains a large quantity of soda and lime as well as nitric acid and chlorine. Water of this class is practically wasted on sugarcane. Sugarcane can be successfully cultivated with a coarse farmyard manure and canal water. The canal water is absolutely free from those chemicals which are required and are useful for opium, tobacco and aromatic herbs. Therefore sugarcane can be and is grown under conditions generally under which opium is not grown.

5253. In the case of second class opium land it has not yet been discovered whether there is any proper substitute in case the cultivation of opium is abolished?—In the second class opium lands I suppose there are no other crops which could be substituted with equal profit to the ryots. My own belief is that other crops, as paying as opium, could not be grown, because they require a much larger amount of heavy, coarse manure and deeper ploughing.

5254. Consequently you think the ryots would be entitled to some sort of compensation, not legal, but according to equity?—Yes. I think that the loss of 50 lakhs of rupees advanced every year in those populous tracts to which I have drawn attention would be a very serious blow to the agricultural population. They receive this money without interest at a time they want cash, and if they were deprived of this money suddenly they would have recourse to the money-lender and obtain money at a high rate of interest. They would then be cultivating under difficult circumstances.

5255. (*Sir William Roberts*). Perak is one of the Straits Settlements I believe?—Yes.

5256. What other centres of the Chinese population are there in the Straits Settlements?—There are three or four centres, of the same kind as Taipeng, where there are tin mines, not only in the State of Perak but in the neighbouring Native States.

5257. Are there any centres of Chinese population so large as Taipeng?—Taipeng is the largest, because the tin lodes and finds are so much larger than in any other one spot.

5258. (*Mr. Fanshawe*). You have referred already to the question whether compensation would be necessary to cultivators; can you tell us whether the poppy crop is an exhausting crop for the soil?—I would make the same answer that I did to the Maharaja of Darbhanga, *viz.*, that anything I may say must be taken as a basis of inquiry rather than as positive evidence on the subject. My own impression is, that it is not an exhausting crop in the sense that sugarcane and potatoes and other rich crops are exhausting crops. It is more like a flower grown in the garden which requires careful and high cultivation, but does not take much out of the soil to any depth. But I would take the opportunity of noticing what I did not notice just now, that opium is very frequently grown in the same year as a crop of Indian corn. The Indian corn precedes opium. In comparing it with other crops that might be substituted for it that fact should not be lost sight of. I notice that it was lost sight of in the Report of the Bengal Opium Commission of 1883. I had occasion to look at that report the other day, and I noticed that in comparing the profits of an opium crop with the profits of other crops, the fact that it was grown in the same year as a crop of Indian corn was lost sight of, and that the profits on the Indian corn crop were not taken into account at all any more than (what ought to have been taken into account) the interest which the cultivator saves by being able to take these advances at the time he wants them. I understand that the Government itself does take into its account or into its estimates the loss which they suffer by foregoing interest; but in all these calculations that I have seen of the value of the opium crop to the cultivators that interest is never put in. There are thus these two things—the value of the Indian corn crop and the value of the interest that ought to be added.

5259. Would another crop also be capable of being grown with tobacco?—You must name your crop for each locality. Certain kinds of tobacco can be grown with Indian corn. In the case of tobacco grown in Bengal and Tirhoot I believe Indian corn cannot be grown. In the case of tobacco grown further up the country where it is not cut till March it can be grown. That shews how close the investigation must be before any general reply can be given to any question of that kind.

5260. You are not personally in a position to give us any statistics as to the comparative value of crops?—I consider that that question is one of the most difficult to investigate in this country, and that no answer can be given by any one person on this subject. I have any amount of statistics of different sorts given me as to the cost of producing this and that crop and the profits of this and that crop, but I consider they are only worth accepting for the particular locality for which they are given. When you take into consideration the large area over which the poppy is grown, and the differences of climate and soil and irrigation, I think it would be very dangerous for me or any one man on general information to give a reply to your question. I think it would require a very close and detailed investigation by a large number of officers to obtain any approximate information as to what the real value in cash is of any crop: and even think it would be difficult to get a satisfactory answer, because it is very difficult to value the labour of the cultivators and their families. The opium cultivator *par excellence*, a market gardener, employs on his field his wife, and all the people of the house, even down to the small children of three or four years of age; and it is very difficult to value their labour. But when you come to the cultivator of a higher caste, he will allow neither his women nor his children to go out into the fields, and he therefore has to hire labour. You will thus see the difference between the profits which that man would make and the profits which the market gardener who uses the whole of his household for working up a crop would make.

5261. With reference to tobacco, I understand that you regard it as the chief competitor, on what you call the market garden land, with the poppy?—I do.

5262. Could you tell us with your knowledge of Northern India whether any large extension of the market for Indian tobacco could be anticipated if a large area were suddenly brought under tobacco?—This is also a very difficult question to answer. The demand within India itself I cannot conceive will be likely to increase to such an extent as to admit any very large quantity of tobacco being substituted for opium. On the other hand, tobacco goes from Tirhoot, Rungpore and Purneah in the British Indian steamers to Burma and the Straits, and I cannot say how far the market ought not to extend in that direction.

5263. The question of a market is a point that would have to be considered?—Yes, it is a point that would have to be very carefully considered. It certainly could not be assumed that if you do away very suddenly with opium the whole of the first class or market garden land which is suited for tobacco as well as for opium could at once be put under tobacco.

5264. It has been stated that the acreage so much land is kept on of production of cereals, and also that this acreage could be devoted to cotton. I should like your opinion upon those general statements?—Cotton is not grown as a staple crop between Benares and Patna, and it could not be substituted therefore in that part of the opium-growing tracts. Further north-west the cotton is grown on land which would not be given up to opium or root crops; but it is grown on land of a different quality, not so heavily manured. I, therefore, do not consider that cotton would come in as a substitute for opium at all.

5265. What do you say as to the acreage now under poppy being used generally for the production of cereals? You have already said that on what you call market garden land cereals would not take the place of poppy?—No, they would not.

5266. You do not consider cereals as competitors with opium except on the second class land to some extent? You said, I think, that cereals or sugarcane might take its place on that land; is that correct?—That is right, but I do not think cereals would pay the cultivator anything like as much as opium does.

5267. Even if the same area could be brought under wheat cultivation, do you think that this wheat would be grown for export or only for consumption in the country?—I think it would be grown mainly for export. The food-grain of the country would not be grown on that land except so far as Indian corn is now grown for local consumption.

5268. You have spoken once or twice of the cultivators drawing advances without interest; you would recognize, would you not, that if these advances were not made, Government would have to make some change in the price of the opium?—I cannot conceive that it would not be so. The cultivator who willingly comes forward to grow opium, takes into account the advantage he gets by this cash

Sir E. C. Buck, C.S.I.

5 Dec. 1893.

Sir E. C. advance without interest as well as the price which he receives for his opium.
Buck, C.S.I.

5 Dec. 1893. 5269. I suppose the quantity of water used for opium containing nitrates is limited?—It is limited in a very marked way; it is only in wells, which are in very thickly populated sites, that these particular ingredients are found. There are in the opium-growing country of the North-West and Oudh districts a very large number indeed of old sites which are now barely visible, but which were inhabited, and very thickly inhabited, hundreds and, perhaps, thousands of years ago. It is in these old sites that you also find this very valuable water. Round those wells as a rule you will see nothing but tobacco and opium, and other high class market garden crops.

5270. I believe you have had some special opportunities of studying the poppy cultivation in the North-West apart from your general agricultural knowledge?—I was Settlement Officer in two opium districts—Cawnpore and Farukhabad.

5271. So that you have been brought into direct connection with opium growing apart from your general knowledge of agriculture?—In these two districts, where I was Settlement Officer, I saw every opium field grown in every village.

5272. I should like this point to be quite clear. You have warned us about the danger of generalising. Your remarks I presume apply to the Benares Agency, that is, to the poppy-growing districts in the North-West?—Except where I spoke of cotton, my remarks apply entirely to that part of the North-West in which I was Settlement Officer.

5273. From the papers before us it appears that there are 550,000 cultivators, in round numbers, in the Benares Agency employed on opium cultivation; what would your experience be as to whether the cultivation on their part is voluntary or not?—I was seven years Settlement Officer in the two districts I have named, and no case has been brought to my notice of cultivators being forced to cultivate against their will. I have known many anxious to cultivate, and I have known others who for caste reasons have objected to cultivate, but I do not remember that they were ever forced to do so. There is certainly an objection with some castes to cultivate opium on the score of religion, just as there is an objection to their cultivating indigo and root crops.

5274. That objection would hardly touch the present point, that men are actually cultivating opium more or less under compulsion, as it is suggested?—No; my point is that the only objection I have ever heard is on the score of religious, *i.e.*, caste prejudice. I have never heard any other cultivator object on any ground to growing opium; and I have never heard of any compulsion being used, even to those who object on the score of religious prejudice.

5275. (*Mr. Wilson.*) Will you tell us to whom do the tin mines at Taipeng belong?—They are let out by the State to contractors; some contractors are Chinese capitalists.

5276. In what way did your visit lead subsequently to Mr. Hall going there?—Because by geologists there was known to be tin in considerable quantities in the neighbouring districts of the Lower Burma Province.

5277. You directed attention to that?—Yes.

5278. And it has led to the opening up of tin mines in the districts of Burma since?—Yes.

5279. You say that the whole resident population is under supervision by British officials, and further on you say that the Chinese doctors have been eliminated. By whom or how have they been eliminated?—The only information I can give is from Mr. Hall's report.

5280. We shall be glad to hear it.—“The hospitals in Perak have tended to make the Chinese contented and to give the country a good name. The hospital at Taipeng was started by subscription. Later a small annual contribution was made compulsory, but that is no longer levied. When the first buildings were put up the people said they would like to have Chinese doctors. If their request had been acceded to, the hospital would probably never have become a success, whereas miners now gladly avail themselves of it. The Chinese doctors arrived and were put in charge of some wards, while one building was reserved for an English doctor. In the wards under the Chinese doctors there was not a single instance of recovery from beri-beri, while in the rooms under the care of the English doctors many recovered. The Chinese doctors were allowed to retire, and the success of the establishment was assured. Before the hospital was built the miners were not allowed to remain in their huts when they became seriously ill. It was considered a piece of ill-luck if any one died in the lines. So the sick man was taken into the jungle and there deserted. The hospitals

then have naturally helped to make Perak popular with the Chinese immigrant.”

5281. That does not quite clear it up?—The doctors were allowed to retire from the hospital.

5282. It does not say whether they desired it?—Apparently the Chinese patients preferred to be treated by the English doctors on account of their greater success, and there was no further object in keeping the Chinese doctors.

5283. You have been seven years Settlement Officer?—Yes.

5284. Where?—In the Cawnpore and Farukhabad districts in the North-West Provinces.

5285. They are opium districts?—Yes.

5286. How long ago was that?—Between 1866 and 1873.

5287. I believe it is the case that opium used to be grown in many parts where it is now prohibited?—I know there are certain districts in which opium was grown and in which the opium area was restricted. In certain areas opium is not grown now where it was grown.

5288. I am speaking of the provinces, Assam, for instance?—I have no information on that subject.

5289. Were there not certain districts or tracts in the North-West where opium was grown and where it is not now grown?—There were tracts.

5290. Can you tell us the general grounds on which the present districts were selected as opium-growing districts while it was prohibited in other places?—The districts which were selected for opium-growing were more highly supplied with the kinds of manure which are required for opium, and therefore with a class of cultivators who are better able to grow opium than others. Where you find a larger quantity of those nitrate manures either in a solid or a liquid form, and where you find thickly populated tracts, there you find the market gardening class and they are *par excellence* the opium cultivators. The districts were, I believe, selected mainly on these grounds.

5291. You have referred to the chemical constituents of water. Have you many analyses of those waters?—I sent on some as Settlement Officer to the Chemical Examiner in Calcutta, and when Dr. Voelcker was out here he had some more analyses, and they are published in his report which has recently arrived at our office.

5292. You had the analyses before those?—Yes.

5293. Will you put them in?—Yes.

5294. Do you think that water of that character is specially prevalent in the districts where opium is now grown?—It is specially prevalent in the districts in which I had my local experience.

5295. Have you any reason to suppose that it is more prevalent in the districts in which you had your local experience than in any other parts of India?—I think it is prevalent in a great deal of the tract to which I have drawn attention as highly populated.

5296. I take it that that is another way of saying that the soil is saturated with the produce of past generations?—Yes; past generations, and often long past generations, for it takes a long time for these chemical constituents to form.

5297. You have referred in your last paragraph to the statement that this opium cultivation is an advantage, and that the advances are an advantage to the cultivators; can you tell us the grounds on which they have sometimes objected to cultivate?—The only ground that has come to my notice as Settlement Officer is that of religious, *i.e.*, caste prejudice.

5398. You are aware that there has been considerable difficulty at times in connection with it?—It has never been brought to my personal notice as an official.

5399. Has it come within your knowledge whether as an official or not?—Not until the subject has been raised within the last two or three weeks. I have never heard of an objection before.

5300. I have a letter before me from the Government of India, dated Department of Finance and Commerce, December 19th, 1881, in which it is said that vigorous attempts were being made by the Benares Opium Agent to extend the cultivation of the poppy in the Allahabad and Mirzapore districts, but that the attempt had resulted in utter failure. You were not aware of that?—No.

5301. It goes on to quote a letter from Mr. Rivett-Carnac: “The cultivators said that they had been badly

treated in old days, that they did not understand the cultivation, and that they had other crops that paid them well, and they wanted no change."—That I can quite believe. I should think that is probably a very genuine and true objection.

5302. How would you reconcile that with the assertion as to the advantage that it is to them?—The country in which I had my local experience, as I said just now, is peculiarly full of land fitted for opium and of market gardening classes who are able to grow opium. Not only do they take to it readily as their natural profession, but the cultivators round them, having an example before them, find it easy to copy. In those districts where cultivation has not for a long time been practised, or has perhaps never been practised, the cultivators who are unaccustomed to the cultivation of a crop which requires a peculiar amount of special skill and knowledge, would naturally object to be troubled with growing it.

5303. The letter that I have referred to was preceded by a letter from the India Office by Lord Hartington, dated London, January 16th, in which he appeared to accept the idea that there was a great difficulty in getting cultivators in Bengal. You were not aware of that?—I was not aware of that. My observation about the objections to growing had reference to the locality in which no conditions of the kind existed and in which they were only asked to grow opium under conditions which were acceptable to them.

5304. I will read you a few lines of the letter: "the papers now under review shew that in addition to the influences which it was thought in 1868 threatened the stability of this source of revenue others have now arisen which demand the serious consideration of your Government. One of these is the competition in Bengal of other crops more profitable than poppy, in consequence of which some of the cultivators do not now exhibit the same eagerness for the Government advances as formerly." That never came to your notice?—Never.

5305. Will you explain to us whether the question of higher rents and the higher land-tax which I believe prevail in some of those lands attaches to the crop or to the particular plot of land?—The higher rents belong primarily to the particular spot of land and its accessibility to manure and irrigation, and secondly to the character of the cultivator put on the land. One of those market gardeners, for instance, would pay more than an ordinary cultivator. These are the two first considerations. The third consideration is the character of the irrigation and the character of the manures which it contain.

5306. If a cultivator who had been in the habit of growing poppy ceased to grow poppy, would there be any alteration made either in his rent or in his land-tax?—I doubt very much whether the landlord would reduce his rent, and on a great deal of the land, I do not think they would be bound to do so; but I think there must be a very material amount of land on which the poppy is now grown and in which, if cultivation was closed, the loss would be so material to the cultivator that he could not pay the same rent as before, or he would have a claim under the law to have his rent reduced.

5307. Under what law?—Under the Rent law.

5308. Can you give us a reference?—I would rather put forward my opinion as a basis for inquiry on this point. I cannot give a decisive answer whether the law Courts would or would not hold it as sufficient ground, but I have a strong idea that the cultivator would have a claim.

5309. Perhaps you can tell me whether within your knowledge there has ever been such a claim made in cases where cultivators have been refused the right to grow opium where they had previously grown it?—I have never known of such a claim; on the other hand I may say as a Settlement Officer who was required to assess fair rents for the fields, I always took the fact that opium cultivation was going on in a particular land as a ground for fixing the particular assessment of that land; it entered into the calculation.

5310. It was evidence so far of the quality of the land?—It was.

5311. You said that a crop of Indian corn could be got on the land the same year as the opium?—Yes, Indian corn or maize.

5312. Would there be any other crop that could be substituted for maize as following opium?—Maize precedes opium.

5313. Is maize the only crop or the most suitable crop that precedes opium?—Maize is the only valuable crop that could be grown in the same year with opium. I think there are crops of less value that can be grown in the same year; millets could be grown in the same year.

5314. Suppose that opium was not grown, how many crops could be cultivated on these market gardens in the year?—It depends very much on what crop is substituted. If tobacco is substituted in the districts of which I have spoken, Indian corn could be grown preceding the tobacco. That is not the case with tobacco grown in the more easterly part of the opium tracts, where tobacco is put on the ground at the same time as opium.

5315. I have heard that in certain parts, three crops can be gathered from the land in the same year?—It is only on very exceptional land that three crops can be raised.

5316. Would it be possible on opium land?—Only on a small percentage of it.

5317. With reference to the maps which you put in, would you explain again the relations that you seek to establish between the two maps in regard to the growth of opium and the density of the population?—One of the greatest difficulties in this country is to know what to do with the surplus population in these very crowded tracts. A special inquiry was made in Lord Dufferin's time as to what could be done and whether tracts could be found to which these people could emigrate, but that was found impossible. It is one of the great difficulties of the day to know how to relieve the population of the tracts which are shewn in this map as the most densely populated.

5318. How do you connect that with poppy cultivation?—The five million rupees going into their hands every year enable them to carry on their agriculture with greater ease than they would if they had to carry it on without that capital; they would then have to get some capital from the money-lenders at a much higher interest which means that their circumstances would be very much less prosperous) or they would not be able to get any capital at all, and would find it very difficult to grow paying crops.

5319. But in the cases in which it appeared that they did not want to cultivate opium, it is quite clear they did not appreciate those advantages?—I can give no answer to that, because in the districts in which all my experience was collected I have never known an instance of an objection to cultivate being overruled, or any objection being raised except on the ground of religious prejudice.

5320. Of course we might conclude that if the objections here alleged really arose, it was after you had left this district?—I have not mentioned any districts which I think are alluded to there. I have only given my evidence in respect to the two districts with which I was locally acquainted.

5321. Did I understand you to say that cotton is not grown or could not be grown between Benares and Patna?—There is a very inferior kind of cotton grown between Benares and Patna, but it is not a valuable crop, and the climate is not conducive to cotton growing.

5322. (*Mr. Haridas Veharidas.*) Do those classes who have a very religious objection to grow poppy occasionally grow it?—They have come to grow it—both Brahmans and Thakurs; they have begun to grow it, I will not say to a large extent, in that part of the country in which I have worked.

5323. Do they grow poppy every year or in rotation?—I believe in rotation, except on the best lands; there they may grow it every year.

5324. Are there not two kinds of poppy, one grown by the rains and one by irrigation?—No, not in my experience. I do not know of any poppy grown in the districts with which I am acquainted except in the season of cold weather.

5325. You do not know whether the poppy is grown in the rainy season?—Not in the districts in which I worked.

*Sir E. C.
Buck, C.S.I.*
5 Dec. 1893.

MAHARAJA GIRIJA NATH ROY of Dinajpur called in and examined.

*The
Maharaja
of Dinajpur.*
5 Dec. 1893.

5326. (*The Maharaja of Darbhanga.*) You say that there is a large population in Bengal who consume opium?—Yes, the opium-consuming portion of the population of Bengal is very large. Opium is taken here in lump, or with water, or smoked.

5327. What is the effect of opium morally on the people?—I have not seen people becoming more immoral by taking opium, nor have I seen them suffering physically by using it. Opium taken in moderate doses, particularly after 40 years of age, rather benefits than injures the constitution. Excessive indulgence in opium, like excessive indulgence in other things, is always followed by evil effects.

5328. What do you say about its use for non-medical purposes?—It is very difficult to get hold of an opium-eater who will admit that he takes opium for non-medical purposes. In fact 99 per cent. of opium-eaters whom I met complained to me of having suffered from dysentery, diarrhoea, rheumatism, etc., prior to their taking the drug.

5329. What is the opinion of the people with regard to opium-eating?—The people of this country do not, as a rule, detest the people who eat opium either for medical or non-medical purposes. Opium-smoking, however, is considered somewhat disreputable.

5330. What is the opinion of the people with regard to prohibitive measures in reference to the consumption of opium?—The people of this province are not at all willing to bear in whole or in part the cost of prohibitive measures, as consumption of opium is confined to a very small section of the community and does not constitute a widespread and serious evil for the removal of which the society is over-anxious.

The prohibition of the growth of poppy plants will bring serious losses to the landlords and tenants of the opium-producing portions of the country; and the prohibition of the sale and manufacture of opium will prove a source of greatest inconvenience to the consumers of the drug, and produce serious discontent among them. As, therefore, the number of persons interested in the manufacture and sale of opium is not very inconsiderable, discontent among them is not at all desirable. Nor is the absolute prohibition of the sale and manufacture of opium at all possible.

5331. Do you think that the present obstacles that are now put by Government in the way of selling opium are sufficient?—The Government has already thrown

serious obstacles in the way of easy procurability of the drug by restricting its sale to particular persons, places, and time. Any further improvement in the regulation of opium traffic, unattended with increased expenditure, would be welcome.

5332. (*Mr. Wilson.*) Will you tell us how the prohibition of the growth of opium would bring serious loss to the landlords?—The landlords get a higher revenue for the class of land where the poppy is grown.

5333. Would they have to reduce the rent?—They will have to reduce the rents; those lands will not fetch so much.

5334. Does it sometimes happen that the ryots are not allowed to grow all the opium that they apply for, and do the landlords in these cases reduce the rents?—I do not know.

5335. Do you know of any case in which the landlord has reduced the rent to a ryot who did not get the same amount in one year that he got the previous year?—I cannot say. My experience of opium cultivation is rather limited; I have seen it only in Behar. I have not seen it in any other district.

5336. You do not know much about its cultivation?—No.

5337. Why do you say it would bring serious loss if you do not understand it?—I have heard from gentlemen residing in the opium-producing districts and friends of mine. I have received several letters from them stating that prohibition will cause serious loss to the landlords as well as to the tenants.

5338. That is what other gentlemen have told you?—Yes, the zemindars and the tenants say so.

5339. They have told you so?—Yes.

5340. You referred to the absolute prohibition of sale and manufacture: I suppose you know that no one has ever proposed that?—No, I was aware of it. I did not mean absolute prohibition, but I referred to much reduction in the area of cultivation that will follow reduction in quantity of sale and manufacture.

5341. I suppose you had Mr. Lyall's circular of invitation to prepare your statement?—I received a letter from him.

5342. (*Mr. Fanshawe.*) I think you have no opium cultivation on your own estates?—No.

5343. You have no personal acquaintance with that part of the subject?—No.

The witness withdrew.

Adjourned till to-morrow at 10-30.

At the Council Chamber, Writers' Buildings, Calcutta.

NINETEENTH DAY.

Tuesday, 6th December 1893.

PRESENT :

THE RIGHT HONOURABLE LORD BRASSEY, K.C.B. (CHAIRMAN, PRESIDING).

MR. A. U. FANSHAWE.
,, HARIDAS VE HARIDAS DESAI.

MR. H. J. WILSON, M.P.

MR. J. PRESCOTT HEWETT, C.I.E., *Secretary.*

MR. H. S. HOWARD called in and examined.

*Mr. H. S.
Howard.*
6 Dec. 1893.

5344. (*Chairman.*) The Commission is prepared to receive the evidence which is tendered to us on the opium question in connection with China, and we have arranged to give you an opportunity of making a brief statement in behalf of the important firm which you represent. In our

view, however, the inquiry in relation to China can scarcely be dealt with satisfactorily here in Calcutta. The information which the Commission must possess before it can come to any conclusions with reference to China must be obtained either by communications with China, with the Consular body

and other independent authorities, or else by a personal visit on the part of certain members of the Commission to Singapore, and possibly some of the Treaty Ports in China. I believe you are a member of the firm of Messrs. David Sassoon & Co. ?—Yes.

5345. You desire to give us information with reference to the trade in opium with the Straits Settlements ?—Yes, as far as I possess it.

5346. Will you kindly give us any particulars which you consider it is important for us to have ?—Singapore and Penang take about 14,000 chests of opium annually. For local consumption the authorities there grant a license to the farmers, and about 250 chests are consumed monthly, the rest being exported to the Native States, the Malay Peninsula and China. The Dutch and French Authorities buy their opium direct from Calcutta at the Government sales. The former take 1,000 chests yearly for shipment to Batavia, and the latter about 2,500 chests for Saigon. I am not aware of the excise arrangements under which the opium traffic is controlled in the Dutch and French possessions. To Hongkong about 26,000 chests are exported annually from Calcutta. The farming system under which opium is retailed in Singapore prevails in Hongkong, where the local consumption of the drug is not very large. The bulk of this opium is bought by the Chinese and sent by them into the interior of China. The importers also ship to the Treaty Ports of China by paying a duty of 30 taels per picul to the Chinese customs. When taken into the interior by the Chinese there is a further tax of 110 taels per picul imposed by the Chinese Government. During my stay of 13 years in China I came in contact with several Chinese belonging to the better classes who smoke opium, viz., merchants, Mandarins, etc., and I have never found them to be the worse for indulging in the drug. On the contrary, they always shewed great aptitude for work after a smoke, and completed intricate calculations while yet under influence of the drug. The labourers, too, are more inclined for hard work after their opium pipe. I cannot, however, say that I have not seen specimens of emaciated Chinese humanity, but these invariably have belonged to the poorer classes, who, while in want of nourishing food, are still addicted to the deleterious, wild, indigenous drug. I have also seen many Indians eat opium, and when they are well nourished they always have a robust and healthy appearance.

5347. Have you any information to give us as to the proportion of the opium consumed in China which is produced locally, as compared with the amount imported from India ?—The country-grown opium of China is about four times the amount shipped from India, and every Chinese opium-dealer with whom I have had an opportunity of conversing has told me that Indian opium is universally regarded as superior to Chinese opium in respect of flavour and body. The Chinese opium, moreover, could not be used to advantage without a small admixture of the Indian drug, and the wealthier classes alone are able to indulge in this.

5348. Can you give us any information as to the opinion which would be entertained in China if a policy of prohibition of the trade were to be adopted ?—Were the importation of Indian opium into China to be interdicted by either

the British or the Chinese Government, it would be regarded by the Chinese nation as a very severe hardship, and might indeed produce disastrous results. The Anti-Opium Society would be doing more harm than good. By being deprived of opium of good quality, the Chinese who are in the habit of smoking will have to fall back upon their own drug. The consumption would, in that case, by no means decrease even by a single grain. On the contrary, it is very probable that they will use almost double the quantity, as their opium contains neither the flavour nor the strength of the Indian drug. The ultimate effects would be most injurious to their general health and constitution. They would suffer in much the same manner as those who are addicted to drink superior brands would, were they obliged to consume inferior liquors. To prohibit good opium would be as sensible as to interdict wholesome liquor. I have never heard of riots in China on account of opium. I was in Tientsin during the massacre in 1870. Opium was not the cause, but something else in which the foreigners were concerned.

5349. (*Mr. Wilson.*) Is your firm connected with the opium trade ?—Yes.

5350. Is it one of the principal shippers ?—Yes.

5351. Were you in China for thirteen years ?—Yes.

5352. Where ?—At Shanghai, Tientsin, Ningpo, Foochow, Amoy, Satow and Hongkong.

5353. You did not reside in all those places ?—No, I resided in Shanghai, Tientsin, Ningpo, and I visited the other places for a month or, perhaps, fifteen days.

5354. Did you come in contact with any persons in China who objected to the opium trade ?—No.

5355. You never heard of any objection to it ?—No.

5356. When did you first become aware that there was any kind of opposition in China ?—I never heard of any opposition to opium.

5357. Never till this moment ?—Never.

5358. (*Mr. Fanshawe.*) When you speak of opium being exported from the Straits to the Native States, I presume you refer to the Native States under British protection in the Malay Peninsula ?—I suppose so, and others perhaps, under the Dutch Government.

5359. Can you give any information as to the number of the Chinese population in the Malay Peninsula and these Native States ?—No, I cannot.

5360. You say that you have been brought into personal contact with Chinese of the better classes ?—Yes.

5361. In what light is opium-smoking regarded by them ?—It is regarded by them only as pleasure: they smoke it for pleasure.

5362. From a moral point of view how do they regard it ?—They do not think that they are doing anything wrong in smoking opium.

5363. Messrs. David Sassoon & Co. I suppose, have other business than shipping opium ?—Yes.

5364. What is their general class of business ?—They do business in opium, twist, piece-goods and metals.

The witness withdrew.

Mr. SHRAGER called in and examined.

5365. (*Chairman.*) To what firm do you belong ?—Messrs. Grünberg Brothers.

5366. Have you had any personal experience enabling you to form a judgment with reference to the effects of the opium habit upon the Chinese population ?—During the past five years I have frequently visited the Straits, Cochin-China, Siam, and once Hongkong and Batavia. On some visits I have mixed very freely amongst the Chinese, but I cannot recall a single instance of having come across a Chinaman that was incapacitated through smoking opium. On these visits to and from the Straits, the steamers I travelled by never carried less than 300—400 Chinese deck passengers between Penang and Singapore, sometimes as many as 500—600, mostly coolies. I observed opium-smoking to be almost universal amongst them, and have often watched them smoking, but never noticed it to produce any bad effects on them. In our Singapore office we employ Chinese clerks and a Chinese cashier. Our cashier, who is an old man, told me that he smokes opium regularly. I have never noticed him to be indolent; he is a very shrewd man, and has been in our employ over four years. Like all other of the better class Chinese that I have met, this

man is intelligent, cheerful and bright witted. I have frequently visited the Chinese merchants with whom we do business in Singapore and all the other ports I have been to. Some of them are fine muscular men, although known to me to be habitual opium-smokers. I have sometimes been called into their private rooms, where I have seen them smoking opium, reclining on an easy chair. I never noticed them unable to discuss freely on the subject of my visit and express their views in a clear and business-like way. All the Chinese merchants I have met are good business men with sharp faculties. In our godowns we employ a number of Chinese coolies; these are very illiterate men, but I have never known them to make an error in delivering the wrong goods out of any warehouse. These men are known to me to be regular opium-smokers. I have never found them indolent; in fact, they much prefer to do their work by contract, which through their industry gives them a far better return. Physically, these men are not as a rule well developed, but I have often been surprised at their carrying power. I have noticed two such men carry a bale of goods weighing from 1,000 to 1,200 lb. All Chinese handicraftsmen are said to smoke opium

Mr. H. S.
Howard.

6 Dec. 1893.

Mr. Shrager.

Mr. Shrager. regularly after their day's work; of such men I have seen a good deal, and have no hesitation in saying of them, that they are by far more practical and better men at their work than any others that I have met outside of Europe.

6 Dec. 1893.

5367. Do you know anything as to the length of life among the Chinese with whom you have been in contact?—I do not know of any reliable statistics on that point, but I have met very old men and very hardy men amongst those that I have come in contact with.

5368. Do you know anything of Java?—Yes.

5369. What are the regulations which apply to opium in Java?—Opium is contraband into Java; the countries requirements, about 700 chests a year, are imported by the Government direct from Calcutta and supplied to any opium farmer who pays the Government a royalty for the right to manufacture and retail it.

5370. Can you give us any particulars of regulations affecting the trade of opium with Siam?—The excise arrangements since the beginning of this year are similar to those at Singapore. The opium farmer pays a royalty for the right to manufacture and retail of opium. Nobody but the opium farmer has a right to import opium into Siam.

5371. What is your estimate of the consumption of opium in Siam?—The consumption of opium in Siam is between 1,000 and 1,200 chests a year.

5372. Do you know anything of the regulations in force at Cochin-China and Tonquin?—The consumption is 2,300 to 2,500 chests a year, which is imported direct from Calcutta. The Government manufacture it themselves and pack it in small quantities ready for use, which they sell at a fixed price to consumers.

5373. Would you compare the arrangement which obtained in Java and Cochin-China on a small scale) with the working of the opium trade in this country under the system known as the Bengal monopoly?—I have not studied the question of the trade in this country at all.

5374. (*Mr. Wilson.*) I have been informed that it is not unusual with Chinese merchants in making business arrangements to have a smoke so as to make them a little more prepared for doing their business; have you noticed that?—I cannot say that I have noticed it.

5375. Will you tell me exactly what you mean by saying that opium is contraband into Java and into Cochin-China?—The importation is prohibited except by the Government. Only the Government have a right to import opium.

5376. What do you mean by the phrase "the right to manufacture"—what is the manufacture?—The opium, as it is exported from here, is not in the state or condition in which it is consumed in the places that I have visited. It goes through the process of manufacture to make it ready for smoking. I do not know the name they give it, but it is certainly made more in a liquid state than the state in which it leaves Calcutta.

5377. Then I may take it that, speaking generally, your evidence here relates to smoking as distinguished

from eating?—I have very little knowledge of the effects of opium-eating amongst the men I have come in contact with. I have heard that when the Chinese eat it, they take it medicinally.

5378. Your evidence relates chiefly to smoking?—Certainly.

5379. (*Mr. Fanshawe.*) You have spoken of employing Chinese coolies in your godowns. Will you tell us in what places these godowns are?—They are at Singapore.

5380. Have you a branch of your firm at Singapore?—Yes.

5381. Have you been able to form any opinion as to the light in which opium-smoking is regarded by Chinese of the better classes?—Purely as a luxury, from what I have heard from them.

5382. Not causing any harm bodily or mentally?—Not from my observations.

5383. That is their own opinion?—They put it down as a healthy luxury.

5384. You have spoken of handicraftsmen: to what classes of handicraftsmen do you refer particularly?—Masons, carpenters, painters, and engravers.

5385. Have you any information as to opium being re-exported from the Straits Settlements to China?—It can go anywhere from Singapore without being stopped, provided a pass is obtained from the opium farmer.

5386. You are not aware whether it is sent to China, or how much goes to China, re-exported from the Straits to China?—No, I don't think any goes direct to China from Singapore.

5387. Will you explain the exact connection of your firm with the China trade, and tell us whether you carry on any other business?—We do a large business in gunny bags and in the rice trade, also a large business in precious stones, which is our principal business in the East.

5288. (*Mr. Wilson.*) In the course of your travels have you heard of any kind of antipathy or opposition to the introduction of opium or the use of opium?—Not amongst the men I have come in contact with—not amongst the Chinese.

5389. Amongst whom?—Europeans when we have talked over the subject casually.

5390. What do they say?—Some Europeans have thought that it was injurious, and others that it was not. When I mention Europeans I mean tourists that I have travelled with.

5391. I understand from what you said to Mr. Fanshawe that your firm exports opium amongst other things?—That is only a small branch of our business.

5392. (*Mr. Fanshawe.*) Are you the contractors for the French Government?—Yes.

5393. Is that the only opium business that you transact?—No, we have a very small business outside of that.

The witness withdrew.

Mr. A. E. J. Abraham.

Mr. A. E. J. ABRAHAM called in and examined.

5394. (*Chairman.*) I believe you are a member of the firm of Messrs. A. E. J. Abraham & Company?—Yes.

5395. What is the nature of your business?—We ship opium, and we do a little business in gunny bags and a little in jute. It is a new firm established within the last three years.

5396. I believe you wish to give us some information with regard to the excise arrangements in Hongkong and China?—I can only speak from hearsay with regard to the excise arrangements in Hongkong; I do not know anything from personal knowledge.

5397. Then will you tell us about any Settlements of which you have personal knowledge?—Yes, Shanghai and Hankow.

5398. Will you tell us what are the arrangements at those ports?—Before the ratification of the Cheefoo Convention, opium used to be stored in bond and had to pay a duty of 30 taels per picul on being landed, nothing more. Since the ratification of the Cheefoo Convention the sum of 80 taels has been added as *likin* dues, bringing up the whole amount to 110 taels. In this I have to correct Mr. Howard, because I think he said that *likin* dues were not paid until

it was taken into the interior. That used to be the custom before the ratification of the Cheefoo Convention, but not after. The different municipal councils, as far as I recollect, licensed the opium shops; they charged so much per shop; beyond this I do not think there is any excise duty.

5399. Have you resided long in China?—Ten years—eight years at Shanghai and nearly two years at Hankow.

5400. Did your experience enable you to form any opinion as to the effect of the opium habit on the Chinese?—Yes, I came in contact with men who smoked opium; I saw them nearly every day that I was there, but I did not see that it did them any injury, or that it shewed in any way that they were habitual smokers. I have seen rickshaw coolies, coolies that carry opium, and coolies that land goods, men of all sorts, and my own house servants, who smoked opium, but I did not see that they suffered in any way.

5401. What do you think is the general belief entertained by the Chinese themselves with regard to the action now taken by the English Government in relation to the opium traffic in China—I mean with reference to the allegation which has been made that England is forcing the Chinese against their will to accept traffic in opium?—

There is no foundation to that; they do not believe it at all. The Chinese used to smoke opium long before England introduced opium into China. They do not believe it at all; they laugh at it.

5402. Have you anything further to say with reference to the duties which are imposed upon the importation of opium into China?—Do you mean the special *likin* dues?—

5403. Yes.—I do not think that justice was done to India in ratifying that treaty. China was given a right to collect a duty which was not recognised till then as a legitimate maritime duty. The word "*likin*" means that the tax was levied for a special purpose.

5404. I believe that it was raised with the purpose of paying for the suppression of the Taipeng rebellion. I cannot vouch for it, and my memory is not very clear as to the meaning of the word "*likin*." But it was not a tax that could be levied on foreigners. It was not a tax recognized by the European powers. It was a tax levied by the Local Governments on Chinese subjects, and each province had its own *likin* dues. If the opium were shifted from one province to another it had to pay double *likin* dues; but as it is, the ratification of that treaty legalizes this duty, and the opium is handicapped in such a manner that no foreigner can land it even in godowns without paying the heavy duty of 110 taels per picul. If the opium is burnt or destroyed by sinking the boats, he is not only liable to pay the full amount of the duty and *likin*, but another duty is added as a penalty.

5405. Do you wish to be understood as coming here, among other things, to make a protest against the arrangements that were accepted under the Chefoo Convention?—Quite so.

5406. (*Mr. Wilson.*) You say in one passage of your printed statement "In conclusion I wish to state that the popular belief that England forced opium on China is not credited by the Chinese themselves?"—Yes.

5407. The popular belief—where?—I mean the popular

The witness withdrew.

Mr. R. M. COHEN called in and examined.

5419. (*Chairman.*) I believe you are a member of the firm of Messrs. David Sassoon & Co.?—Yes, and Honorary Presidency Magistrate.

5420. May I ask whether you have resided in China, and for what period?—I have been in Singapore one year on the firm's business, and I resided in Shanghai six years, and four years in Neuchang, a province in Manchuria.

5421. From your personal experience derived from that length of residence among a Chinese population, what are the conclusions you have arrived at with reference to the effect of the opium habit upon the Chinese?—After their smoke they never seem any the worse. It calms them and they transact their business cheerfully and with a clear head. I have seen many aged Chinese who have been in the habit of smoking opium, and it has done them no harm. Our own Chinese servants smoke, and I have seen it in Chinese merchants' houses. I used to see them smoking the opium, and then they would transact their business. I have no reason to think that opium produces any bad effect. With regard to laborers, I myself had some experience in Neuchang. The river gets frozen there for three or four months, so that there is no navigation. We have to send our letters by couriers on a very long journey, and it takes days to reach certain places. The only person who can take this journey is a Chinaman who smokes opium, because the weather is so very cold, sometimes 15 or 18 below zero. In my opinion it is the opium which serves him as a stimulant. It is not only the case with men, but I have seen females as well as males smoking opium, and I have not seen any ill-effect from it. I never saw a China lad smoking opium.

5422. That is the general effect of your testimony as to the effect of opium upon the Chinese?—Yes. Soldiers also used to come to the merchants' houses and smoke opium, and I never saw any vice in them during my ten years in China. I never had occasion to dismiss a servant on account of opium, nor have I heard of any Chinaman committing any offence under the influence of opium. I never dismissed any one for being unfit because he smoked opium.

5423. As to the general conditions of health among the Chinese, do you think they are satisfactory?—They take opium as a luxury. They smoke it in our office premises,

belief in England that opium was forced on the Chinese is not believed by the Chinamen.

5408. What Chinese or what class of Chinese had you any conversation with, with reference to that particular point?—Opium merchants and Chinese in general. I cannot mention the exact class of men I have come across, but I have had conversations with different classes of Chinese on the subject who pushed this idea.

5409. They were tolerably well-informed men, intelligent men?—Intelligent men.

5410. But do you think that such an impression at all prevails amongst the mass of the population of China?—The masses as distinct from the classes have no ideas about these things themselves. They take opium to protect themselves against ailments and to help them to get on in this world, and they bother themselves very little whether it was forced on them by England or whether it is the natural product of the place. They take things as they come.

5411. When persons with whom you have had conversations have been contradicting and refuting this idea, did they at all admit that it prevailed to any extent amongst their own less educated countrymen?—No.

5412. Do you consider that the Chinese Government is at the present time under any obligation to England to admit opium?—None whatever.

5413. No obligation?—No.

5414. That they could, if they chose, exclude it?—Yes.

5415. Without violating any treaty rights?—Quite so.

5416. Is that the general opinion?—I cannot say; it is my opinion.

5417. That they might, if they pleased, impose an absolutely prohibitive duty, or exclude it without any duty at all?—Not that, but by imposing a prohibitive duty.

5418. They could not say point blank that they would not have it, but they could put on a prohibitive duty?—Yes.

and at our residence. It is a fashion with them, and since they have taken to it for a long time it has become a sort of necessary of life. If we deprive them of the Indian drug I think we shall do injustice, especially to high class people; and besides that we shall be raising the prices in China, and there will be more cultivation of the poppy there. It is quite true that the Indian drug will be neglected afterwards, but owing to the adulteration of the drug in China and a higher price in the absence of Indian opium, the people will suffer a great deal, and there will be robbers and others doing mischief simply because people are deprived of their opium. As India is shipping such a large quantity to China, it is a help to them and it keeps down cultivation there to a certain extent, because they do not know what the crop will be in India.

5424. (*Mr. Wilson.*) Did I understand you to say that you were connected with the same firm as the first witness Mr. Howard?—Yes, we are both managers to the firm.

5425. (*Mr. Fanshawe.*) I understand that about 1,200 chests of Bengal opium are exported monthly to the Straits Settlements?—Yes.

5426. And that some number are re-exported to China?—Yes.

5427. Can you tell us generally how many chests are re-exported to China from the Straits or from Singapore?—I cannot say exactly. I think about 300 or 400 chests are shipped from Singapore to China, a good proportion in Chinese boats. In order to avoid the heavy duty levied in China they try to smuggle in Chinese boats risking their life and property simply to avoid the heavy duty.

5428. When you say 300 or 400 chests, do you mean in the year?—In the month. Lately in Penang there has been an increase of 40 or 50 per cent. in the consumption of opium.

5429. (*Mr. Wilson.*) Do I understand that opium is more easily smuggled out of Chinese ships than it would be out of English ships?—Yes, because English ships go direct to Hongkong, and they keep a register of all the opium landed there; while the Chinese can go here and there.

Mr. A. E. J. Abraham.

6 Dec. 1893.

Mr. R. M. Cohen.

Mr. R. M.
Cohen.
6 Dec. 1898.

5430. (*Chairman.*) Have you anything further that you wish to add from a mercantile point of view?—Judging from a mercantile point of view, I should say that, by Government keeping the monopoly as hitherto, it will decidedly support the opium trade. Besides, Government has the means of knowing the exact quantity of the out-turn of the crop, and restricting the same when needed. They could also limit local consumption and smuggling, and supply to the consumers in India and in China opium of the usual standard quality. It is a harmless drug if taken moderately, and I do not see why the Government should do away with its monopoly without a just cause; any change in the present system of manufacturing will raise suspicion in the minds of the Chinese, and they will

be unwilling to deal in Bengal opium as they do now-a-days. The effect of any change will be less consumption in China to the loss of all concerned in the opium trade in India, Government included. Morally, Government will be held responsible for the loss of this trade to its subjects. In my opinion it is the duty of the Government of India to give its support to the opium trade and sustain it in the interests of the country. I may add that by stopping the supply from India, Persia will take the lead. There have been already 10,000 chests of Persian opium freely imported into China, and if we stop shipping opium, Persia will take the lead. There will also be an increase in the cultivation of the poppy in China. So that no good will be done to the Chinese by our stopping it.

The witness withdrew.

Mr. L. S.
Khoon.
Mr. Iyak.
Mr. Eup Ate.
Mr. Pin Yen.
Mr. Assowi.

Mr. LIN SIN KHOON
Mr. IYAK
Mr. EUP ATE
Mr. PIN YEN
Mr. ASSOWI

} called in and examined (through an interpreter).

5431. (*Chairman.*) What are the occupations of these five witnesses?—(*Mr. Girard.*) One is a book-keeper with Messrs. Eng Hong & Co.; another is a Chinaman of Bentinck Street with a large firm of boot and shoe-makers; another is a Doctor of Medicine; another is a Professor of Chinese, a Schoolmaster, and another is a priest of the Chinese Church in Calcutta.

5432. (*Chairman.*) I would ask the witnesses what they know regarding the extent to which opium is consumed by the people of China as a medicine, as a stimulant, and as a febrifuge, and what, in their opinion, is the effect of such consumption on the moral and physical well-being of the people. (*The Interpreter.*) The speaker (Mr. Pin Yen) says that some use opium as medicine and some smoke it.

5433. Does it do them good in the case of certain diseases?—Not all diseases, but for some diseases it is very good.

5434. What do they say is their opinion as to the effect of opium-smoking upon the Chinese generally? Do they think that it does them harm?—Smoking does not do them harm.

5435. Do they think it does them good?—For some sick persons it is very good.

5436. What do they think about it in cases where people are in good health? Is it good for them?—It is not harmful.

5437. Are there many cases among their fellow countrymen in which people smoke to excess and do themselves harm?—If any man takes too much it does him harm.

5438. (*Mr. Wilson.*) Where does Mr. Pin Yen practise medicine?—In Canton.

5439. Why is he in Calcutta?—He came to see some relations.

5440. Does he smoke himself?—No.

5441. Why?—He says he does not require it.

5442. Would he be better in health if he smoked?—If he were sick it would be very good.

5443. (*Mr. Fanshawe.*) I should like to ask another witness (Eup Ate) whether he smokes himself, and if so, how long he has been smoking?—Seven years.

5444. What is his opinion as to the effect upon his health?—He began it because he was sick.

5445. What does he say about other Chinamen? Is smoking common amongst them or not?—He knows many who smoke opium.

5446. Why do they smoke?—Some smoke who are sick, and some who feel very well.

5447. Do they smoke opium as a stimulant?—It is not like brandy.

5448. (*Chairman.*) Is it better than brandy?—Opium does not make them drunk, brandy does.

5449. (*Mr. Fanshawe.*) Do his countrymen regard opium-smoking as a vice, as being anything wrong, or do they think it right?—Neither good nor bad.

5450. (*Mr. Wilson.*) Where does the witness teach Chinese?—In China.

5451. How long has he been in Calcutta?—Five or six years.

5452. What does he do in Calcutta?—He was with the Amban as Interpreter.

5453. What language does he know besides Chinese?—Hindustani.

5454. When did the Amban come here?—Three years ago.

5455. The witness says he has been here five or six years?—He came before that.

5456. What for?—For trade.

The witnesses withdrew.

Adjourned to to-morrow at 10-30.

At the Council Chamber, Writers' Buildings, Calcutta.

TWENTIETH DAY.

Thursday, 7th December 1893.

PRESENT:

THE RIGHT HONOURABLE LORD BRASSEY, K.C.B. (CHAIRMAN, PRESIDING).

THE HON'BLE SIR LACHHMESWAR SING BAHADUR,
MAHARAJA OF DARBHANGA, K.C.I.E.
MR. A. U. FANSHAWE.

MR. HARIDAS VEHARIDAS DESAI,
,, H. J. WILSON, M.P.

MR. J. PRESCOTT HEWETT, C.I.E., *Secretary.*

MR. JAMES MONRO, C.B., called in and examined.

5457. (*Chairman*). I believe you were formerly in the Bengal Civil Service in the important position of Inspector-General of Police in Bengal, after that Commissioner in Bengal, and finally (in the public service) Chief Commissioner of Police in London?—Yes.

5458. And you are now engaged in this country in missionary work?—Yes.

5459. You are familiar with the objects which were in view when this Commission of inquiry was appointed?—I am.

5460. We shall be glad if you will make any general statement of your views as to how far there is demoralization caused by the consumption of opium, and whether the connection of the Government of India with the cultivation of the poppy and the manufacture of opium and otherwise is causing a serious hindrance to the missionary work in India to which you are now devoting yourself?—All the remarks I should like to make refer only to Lower Bengal. I refer to that province because all my service was there, and I have special means of being acquainted with the circumstances of the people. With the other provinces I have only a second-hand acquaintance. All my time as Magistrate, Judge, Commissioner and Inspector-General was passed in the provinces under the Lieutenant-Governor. I mention that, because I do not wish to give any information with reference to other provinces of which I know less than Lower Bengal. I was asked to give evidence, and I wrote a pamphlet about the subject in answer to various questions that were put to me as to the opium trade generally being an obstacle to missionaries. It is with reference to that point alone that any facts which I have acquired in my experience are to be applied. I do not wish to give any opinion, but merely to state facts which I know to be applicable to missionary operations in Lower Bengal alone. As I have stated in my pamphlet, so far as I am aware, the cultivation of opium, and the connection of Government with opium, form no obstacle whatever to missionary operations in Lower Bengal. I base that statement upon my previous experience. With reference to the people at large, the great majority of the people know nothing whatever about the cultivation of opium, or the connection of the Government with the opium trade in China,—absolutely nothing. You may go miles and miles for days and days, and ask the people in the villages, and they know nothing whatever about opium or the Government connection with it. The reason for that is, that in Lower Bengal, except in the provinces of Behar and one part of Chota Nagpore, opium is not cultivated at all. Therefore I say that, so far as regards the amount of opium consumed, there is no possibility of the people being demoralised by it, because they do not consume it. The amount of opium consumed in Lower Bengal is a mere trifle.

5461. Your pamphlet contains some important statistics bearing on the question before us. On page 4 you give figures showing the amount of duty paid to the Government annually by the people and the amount of consumption of opium per head annually. Will you give us those figures?—“The revenue is, roughly speaking, six crores of rupees, equal to about four million pounds sterling, while the

income realized by the Government of Lower Bengal from the consumption of opium by the inhabitants of the province is about 16 lakhs of rupees (excluding license fees), or, say, roughly about £120,000—including license fees it will be about £140,000—surely no very large sum to be made from the indulgence in a particular drug by about 70 millions of the population of a province.”

“Turning now to the actual amount of opium consumed by the inhabitants of Lower Bengal, the figures are as follows:—In the whole province containing a population of above 70 millions, the total consumption of opium, according to the latest figures published, is about 1,940 maunds (of 82lb avoirdupois);—that is to say, the annual amount of opium consumed *per head* is about 16 grains. Of this somewhat more than a fifth is consumed in Calcutta alone, leaving about 1,525 maunds, or about 14 grains per annum per head, as the total quantity of the drug consumed by the remaining 69 millions of the inhabitants of Lower Bengal. There is, moreover, no reason to believe that the consumption of the drug is increasing while the facilities for indulging in opium in its pernicious forms are being steadily restricted, by reduction of the number of shops for opium-smoking. During the last ten years the amount of opium consumed has not increased beyond the rate of growth of the population of the districts in Lower Bengal in which it is chiefly used; and the number of licenses for opium-smoking shops stands as below:—

“Average number of licenses for opium-smoking			
shops from 1885 to 1890	.	.	.463
Number of such licenses in 1890-91	.	.	390
” ” ” ” 1889-90	.	.	435
” ” ” ” 1888-89	.	.	454
” ” ” ” 1887-88	.	.	454.”

I should mention that the estimate of 70 millions for the population was based on the figures I had access to at that time. According to the last census it would be considerably more.

5462. I believe you have collected some statistics shewing the consumption of opium by divisions, each division comprising several districts. We shall be glad to have those figures.—Again I must say with regard to the population that the estimates are derived from the figures I then had access to. I do not say that they are very accurate according to the last census, but they are certainly within the mark:—

Division.	Population.	Annual Consumption.
Burdwan	. 7½ millions.	326 maunds,
Presidency (including Calcutta).	9	653
Rajshahye	. 8	210
Dacca	. 9	99
Chittagong	. 4	58
Patna	. 15½	97
Bhagulpore	. 8½	151
Orissa	. 4	298
Chota Nagpore	. 4½	52

Consumption, therefore, is comparatively large in the Capital, Calcutta; in the rural Divisions it is highest in

Mr. J.
Monro, C.B.
7 Dec. 1893.

Mr. J. Orissa, least in Patna, inconsiderable in Dacca, Chota
Monro, C.B. Nagpore, Chittagong, and Bhagalpore.

7 Dec. 1893.

5463. Can you tell us whether you discovered any connection between the consumption of opium in those districts and the state of the population in reference to the maintenance of law and order?—I was Inspector-General of Police for five years, and of course the subject of the cause of crime was a matter of special attention on my part. The whole of the serious crimes of Bengal passed under my review. I also inspected districts, not from my office, but by going to them and mixing amongst the people, by inquiring at the various police stations and hearing all that had to be said upon the subject, and the conclusion which I came to from wide experience was that, so far as regards crime, opium has no perceptible influence in causing it. So far as figures go, it would appear that where most opium is consumed you have a very small amount of crime. I instance the case of Orissa, where most of the opium outside Calcutta is consumed, and there the crime is trifling; there is hardly any such thing as serious crime in Orissa. It was always the province, *quâ* police, that we thought was the least important, and there you have the most opium consumed.

5464. Have you had in your view the Patna Division where the greatest amount of opium is grown?—In the Patna Division you have a very considerable amount of crime. There is no doubt that the most important and serious crime is in the districts in Eastern Bengal, such as Jessore, Dacca, Bakarganj, Tipperah and Mymensingh.

5465. In the Patna Division they are very small consumers of opium?—They are very small consumers of opium.

5466. So that in Orissa, where there is a large consumption of opium, the people are, comparatively speaking, law-abiding; and in Patna where there is a small consumption of opium, there is more turbulence and disorder?—Yes, more than there is in Orissa; but they are not nearly so turbulent as in the Eastern part of Bengal. In the district of Gya you have a large amount of crime against property.

5467. Is there a large consumption of opium in Eastern Bengal?—Very little; the average is about 5 or 7 grains per head of the population.

5468. What do you say has been the effect of the opium habit on the village life of the part of India with which you are acquainted?—Practically, no effect whatever. The opium habit in Lower Bengal is almost unknown. The amount consumed in the villages is a mere trifle. So far as my observation goes—and I know the villages of several districts intimately—there has been practically no effect in the way of demoralisation or debauchery produced by the opium habit.

5469. What class of people in your experience are found to be frequenters of opium dens?—They are idle, useless fellows, not particularly or necessarily criminal, but people who have taken to the habit, and who consume opium no doubt in many instances to excess. These are the people upon whom it has a very bad effect; but the general frequenters of opium dens—by which I mean opium-smoking shops as distinct from selling shops, are lazy, idle, useless fellows of all classes; sometimes of the better classes, but generally of a lower class. The people who smoke opium are decidedly of a lower class than those who eat it. They go to the madak shops, or where there is any chandu, to the chandu shops; but the notion of these opium shops being places where the police can find out clues of crime, is a pure myth. You do not find clues of crime in madak shops. It has been stated that just as you would go to the pawnbroker in London to find out crime, you would go to a madak shop here to find out crime. But you do not go to the pawnbroker in London for that purpose; no professional thief ever goes near a pawnbroker. He has his own "fences" who get rid of all the property he has, and he never goes near the pawnbroker. In the same way the police here do not go to the madak shops to find out clues to crime. They may find bad characters frequenting the madak shop sometimes; but they do not go there to find out clues to crime.

5470. Among those with whom you have been brought into contact, and who are engaged like yourself in missionary work, have you heard opinions expressed to the effect that the connection between the Government of India and opium has had a prejudicial effect upon the work in which they are engaged?—I have been for many years a member of the corresponding committee of the Church Missionary Society, and I have come across a good many missionaries in that connection. I have come across many more since I have been here at work, but I do not recall any missionary, to whom I spoke about his missionary work, who ever suggested that the opium trade and the Government con-

nection with it in Lower Bengal formed any obstacle to his work. Since I came here I have made a point of asking all the missionaries whom I have come across, especially in the district of Nuddea, (a district that has been held by the Church Missionary Society upwards of 60 years), and not one of these missionaries has ever experienced any obstacles in his missionary work on account of the opium traffic and its results. I have talked with missionaries in other districts in the same way, and I have not as yet come across any missionary who has expressed an opinion that the opium trade did form an obstacle, or who could shew me any facts which warrant any such opinion, supposing he had expressed it. There was one exception. In one of the districts I met one of the zenana ladies engaged in missionary work. When I had talked to her and asked her about the difficulties she had met with, and the progress she was making, she wound up by saying, "Then, Mr. Monro, there is this dreadful opium trade." I thought I was going to hear some facts, and I said to her, "what do you mean exactly; have you many shops in this place?" She replied, "Well, I do not know, because of course we never go there." "Do you mean," I said, "that you have seen much evil resulting from the presence of those shops where you are stationed?" She then said, "Well, if you put it in that way, I have not." I asked, "do the natives talk about it and say that it is an obstacle to your mission?" "No," she replied, "I cannot say that they do." "What exactly do you mean? how is it that you find opium an obstacle to your missionary work?" "Well, Mr. Monro," she said, "the trade *must* be bad." I said, "That is not what I want. I want to know *how* the trade is bad, and how it is prejudicially affecting your mission work?" and she had nothing whatever to say. She had simply formed an opinion that the trade must be bad, and she fitted in the facts to support that theory. That is an opinion, and a way of adopting fact to theory, that I have often found in use at home in a similar way. That is my experience with reference to missionaries. As a missionary myself, in my own experience, going amongst the village districts where I am perfectly well known, and where the people would not have the slightest hesitation in talking to me, I have never heard an adverse opinion, in regard to opium, expressed. My daughter has been itinerating during the last year in the villages in the north of Krishnagar District, and in neither the zenanas nor anywhere else have the women or the men ever expressed the opinion that opium was in any way an obstacle to missionaries. I say that especially about zenanas. So far as my daughter is concerned, and other ladies that I have met with who have visited zenanas, there is not one of them who can tell me anything about the horrors of the opium trade in the zenanas. And that I believe is the experience up to date of the Secretary of the Anti-Opium Society. Mr. Alexander has so stated—that hitherto he has not been able to get any ladies to come forward and give evidence as to the evils which they saw in the zenanas. That is precisely my experience so far as I hear. Of course I have not visited a zenana, but that is undoubtedly the experience of my daughter and other ladies of the Zenana Mission with whom I have talked on the subject in more than one district.

5471. Turning to the regulation which, I believe, has been recently issued forbidding the smoking of opium in licensed places, do you consider that regulation as likely to have a beneficial result?—I think not, and I base my opinion upon what I have seen in a similar case in London with reference to the closing of public houses after half-past twelve. They used to be open all night. Then (I think in 1875) they were closed after half-past twelve, and the result of that closing has been an enormous increase in unlicensed workmen's clubs, and the evil they have done in London is incalculable. It is heart-breaking to see the evil which the establishment of those clubs, especially in the north, in Hoxton and other places, has caused in London. The increase of those clubs is distinctly attributable to the closing of public houses. I do not say it was a good thing to keep the public houses open all night, but I say that the means taken to diminish the evil have led to a far worse evil—namely, the bringing into existence of those unlicensed workmen's smoking and drinking clubs. The same thing, I anticipate, will happen when you drive out the characters who frequent the opium-smoking dens; you will find they will be smoking in clubs or unlicensed premises, or in their families, which will be far worse. As a matter of fact, I saw it stated in some of the papers that since the order for closing the shops has been carried out in Bombay, resort has been had to the establishment of clubs, and that naturally the Government has failed in prosecuting the owners of those clubs. On that account I think that driving away this evil—admitting, for the sake of argument, that the

smoking is an evil—and bringing it into unlicensed premises over which the police have no control, and especially introducing it into families, will have a disastrous effect. That is my opinion based upon a similar case in London.

5472. You have spoken of opium; have you any observations to make with reference to other forms of stimulants which you think may be more pernicious, as, for instance, ganja and alcohol? Do you consider the facilities for obtaining and consuming alcohol are excessive, and that there would be an advantage in a more restrictive system?—I do not say whether the facilities afforded for alcohol are excessive, because I have not been able to go about the districts lately, but about ten years ago I did not think the facilities afforded were excessive, but I am bound to say that there is much more evil done to India by alcohol than by the consumption of opium, and I think there is very much more evil done by the consumption of ganja, which is absolutely pernicious so far as my experience goes, than is caused by the consumption of opium. I note that specially ganja is grown in the district of Rajshahye, and I believe that the Commissioners heard evidence of the evils done in that district by the consumption of opium; but I did not hear a single complaint as to the evils that occurred from ganja in the district of Rajshahye in which ganja is grown. It is one of the districts in which it is grown, and in that district and in many other districts, and in connection with crime generally, if I were asked my opinion about the connection of ganja with crime, I should say that it had a distinct effect upon crime; and especially it leads, as is shewn by figures, to a decided increase in insanity. The proportion of lunatics admitted in the asylums suffering from ganja is very large. I can give no opinion how it can be done, but if restrictive measures could be introduced in any way, I think they would be a decided benefit to the country, and a very much greater benefit than any attempt to restrict opium, which, so far as my experience goes, in no way affects Lower Bengal prejudicially.

5473. (Mr. Wilson.) In the paper before us there is a reference to a memorial which you say was lately presented to the Secretary of State. Have you that memorial?—I have not the memorial here.

5474. Then, in the remarks you are making you are answering something we have not before us?—I did not put the memorial in: I was not asked to do so: I can send it to you of course.

5475. In page 4 of your pamphlet you have given us some figures about the income from the consumption of opium,—16 lakhs of rupees. Do you know what year's figures you had access to at that time?—I think it must have been 1890-91 or 1891-92.

*5476. It is not very important, but the figures brought before us by Mr. Gupta for 1890-91 show 21½ lakhs?—That I suppose might include license fees.

5477. That is not so.—Then I will modify it to that extent and say that the present income is 21 lakhs. It was 16 lakhs, and I think the license fees brought it up to 19 lakhs.

*5478. You referred to a sum of about £120,000 of opium revenue; are you aware that the duty and the license fees together now amount to 27½ lakhs?—No, I am not aware of it.

5479. Which at the present rate would be £180,000.—I am not aware of it, but I am prepared to accept your statement.

5480. Then the figures will want modifying since you wrote the report?—Yes. Having since seen the figures I wish to add to my answer. The figures are—

YEAR.	NUMBER OF LICENSES ISSUED.				Quantity of opium sold.	REVENUE.		
	Ordinary licenses for retail sale.	Licenses for the sale of poppy-heads.	Druggists' permits.	Total.		Mds. S. Ch.	Rs.	Duty.
1890-91	1,700	41	1,230	2,971	1,942 26 0	3,95,219	16,00,093	19,95,312
1891-92	1,698	44	1,168	2,910	2,005 31 14	4,44,167	16,74,658	21,18,825
1892-93	1,714	47	1,264	3,025	1,934 18 10	4,75,558	16,09,558	20,85,116

Add to this about one lakh for madak and chandu licenses.

* NOTE.—Questions 5472 and 5474 were as to Revenue (Table A appended to Mr. Gupta's note); Mr. Monro in his answer referred to net duty (Table C to the same note.) The answer to question 5476 was added to after the witnesses' examination.

5481. You referred just now to the idea that the madak and chandu shops corresponded with the pawnbrokers' shops in London?—I did not draw that analogy. The analogy was drawn, but I did not draw it myself.

Mr. J. Monro, C.B.
7 Dec. 1893.

5482. You do not agree with it?—Not at all.

5483. Do you know that that had been put forward in an official paper by Mr. Gupta on behalf of the Government Excise Department?—I do not know in what capacity he wrote it; it was in an official report by him.

5484. You entirely disagree with it?—Entirely; from my knowledge of the police here and the police in London.

5485. You think it is wrong in that respect?—I think so certainly, and I think if you asked him he would admit it. He served under me for some time.

5486. I asked him two or three days ago and he adhered to it.—He certainly does not know about the pawnbroker in London as I do, and I do not think he knows so much of the police in Bengal as I do. I was a Magistrate for many years, and took a special interest in the criminal classes, and I was Inspector General of Police for five years. Mr. Gupta, so far as I know, never had anything to do with the police in Bengal, except for a time when he was a Magistrate.

5487. What he said was that it was an appreciable advantage to have the criminal classes and the seam of large towns to a large extent focussed and brought under the direct notices of the police. You do not agree with that?—No, not to this extent. His idea was that just as pawnbrokers in London are sources of information to the police about crime, so the madak and chandu shops are sources of information to the police in Bengal, and that it is there that the police go for the purpose of finding out clues. With that statement I entirely disagree. I do not for a moment say you would not find disreputable people at those shops, and possibly some of the criminal classes; but, as I have said already, if I found any police officer in the habit of going to those shops to find out clues about criminals, I should have a very shrewd suspicion that he was going there not to find out clues, but to consume madak and chandu, and I should deal with him accordingly. With regard to the pawnbroker, every practical police officer knows that a professional thief in London never goes near him.

5488. You gave us a case of a zenana lady who did not know anything about it.—She thought she did.

5489. You really do not attach any importance to that incident?—None. She had no facts, and the other zenana ladies told me that they saw nothing. In fact, they have nothing to see or to tell about the evils of opium in the zenanas, and they have never found it an obstacle to their mission work in the zenanas.

5490. In reference to many strong things that have been said by missionaries in connection with the opium question, is it not a fact that they relate largely to China?—Quite so; I am only speaking of Lower Bengal.

5491. Is it not a fact that the strongest expressions used by missionaries solely in regard to opium refer to China?—Principally to China; but India is also included.

5492. I notice that in your paper eight or ten times you quote the phrase "burning moral convictions" in inverted commas. Would you like to say anything as to why you quoted that phrase, apparently in derision?—Not in derision. I saw it in an article in the *Spectator*, and it struck me as very appropriate to the way in which, in some quarters, the opium discussion was being conducted. A great many, no doubt estimable, men are firmly convinced and have burning convictions about the evil caused by opium without knowing very much about it, and they allow their burning moral convictions to overcome their discretion, their regard for facts, and their Christian charity, because they absolutely denounce everybody who, whether he has had experience or not, disagrees with them.

5493. And you thought it worth while to put it before us in inverted commas ten times?—I thought that was the root of the whole thing—burning convictions without discretion or regard for facts.

5494. (Mr. Fanshawe.) With regard to the Patna Division where the poppy is largely cultivated, you will admit that it is a common belief that a certain amount of opium is kept back by the cultivators?—No doubt.

5495. Speaking, therefore, of the effect of the opium habit on crime in that division, as judged by the statistics of the opium consumed, would you wish your view to be qualified by that consideration?—Yes. I mentioned that in the pamphlet. I have served in the Behar Division in three or four districts.

Mr. J. 5496. I understood you to express an opinion as to the danger of generalizing in India from the experience of one province or even of one district; have you any remarks to make upon that subject?—That certainly is what I have always felt, and that is one reason why I confined my remarks to a province about which I know something. The same circumstances of Lower Bengal are in no respect the same as, we will say, those of the Punjab, or Burma, or Madras. The circumstances of different districts even in Lower Bengal are all different. I can instance that very well in reference to two districts—Nuddea on the one side, and Jessore on the other. If you attempt to carry out the same policy in those two districts, you will surely fail; the circumstances of the ryots in one are quite different from the circumstances of the ryots in the other. Having been in Jessore I went to Nuddea, and if I had carried out the same policy there as I had in Jessore, for example, in times of famine, I should have failed absolutely. That shews how, even in given provinces, the circumstances of each district are often very different. The circumstances of Behar, for example,

are totally different from the circumstances of Orissa and Lower Bengal; the people are of different races. And *a fortiori* if you extend the generalization from districts to provinces the argument will have greater force.

5497. You regard it as of great importance in an inquiry of this nature that the infinite variety of circumstances in Indian life should be constantly borne in mind?—Certainly.

5498. With regard to the closing of licensed smoking shops, your view is clear, is it not, that the wiser policy would be to keep them open because the people visiting them would be subject to police control?—Yes.

5499. Though you do not say that bad characters necessarily go to them, you think that idle men do congregate there, and that the wiser policy would be to keep them open because they would be under direct police control, that is your view?—Yes, just in the same way as it is better that public houses should be under police control in London, than that gambling clubs, into which no policeman can enter, should be established.

The witness withdrew.

Mr. T. M. GIBBON, C.I.E., called in and examined.

Mr. T. M. Gibbon.

5500. (Chairman.) I believe you were formerly a Member of the Legislative Council of the Viceroy?—Yes.

5501. Will you state to us briefly the nature of your employments and your experiences in India?—I arrived in India in December 1854, or 39 years ago. Roughly speaking of that time, I spent 2 years in the Goruckpore district as assistant in a zemindari, 2 years in Calcutta in a merchant's office, 11 as an indigo-planter in Chumparun, 22 in charge of the Bettiah Estates (in Chumparun, in Tirhoot, in Sarun, and in Gorakhpur), and 2 years in England.

5502. Will you state what you know with reference to the growth of the poppy and the consumption of opium amongst all classes of the population. I believe you desire to tell us that you know that it is largely given to children?—It is given to them when they are first born.

5503. Is it largely used by people who live in malarious districts?—Yes.

5504. Is there a general consumption of it by the non-agricultural portion of the community?—Yes.

5505. Have you observed that the consumption of opium by the different classes who use it has caused them serious moral or physical injury?—None whatever.

5506. How do you compare it as a stimulant with ganja or the country toddy or alcohol?—The consumers of ganja and alcohol are nearly always very noisy and quarrelsome, and force themselves on your notice wherever you go; but the consumers of opium are neither noisy nor quarrelsome, nor have they in any manner their senses uncontrolled; they have thorough control over themselves.

5507. Would you say that opium was principally used by the people among whom you have lived as a medicine or in the nature of medicine?—Yes. Some people who have come to us from the North-West having once taken to opium cannot throw it off, and they take it as a stimulant.

5508. What do you say to a proposal to prohibit the use of opium in this country for any other than medical purposes; do you believe that such a prohibition could be worked out in practice?—I think it would be impossible.

5509. What is your view as to the willingness of the people to bear the cost of prohibition, that is, to pay other taxes and other dues in lieu of the payments which are now made for licenses and otherwise in respect of opium?—They would not be at all willing; they would not understand why you were making them do so; in fact, they would resent it.

5510. Do you think that prohibition would interfere in a manner which would be exceedingly unpopular with the personal habits of the population?—Yes, to a very great extent; but I think also that if it were prohibited they would smuggle it in from neighbouring States, especially from Nepal, where it is largely grown in the Tarai.

5511. Are you in favor of the suspension of licenses for what are called smoking dens?—Yes.

5512. In regard to the facilities which the natural configuration of the country afford for smuggling, in case a policy of prohibition were adopted, will you tell us what you know on that subject?—Our Government is a strong Government, and poppy is a crop easily seen and detected where

grown; the cultivation could of course be prohibited in British territory and stopped, but the growth could not be stopped just outside our frontiers. Poppy or opium is at present grown largely in the Nepal Tarai, running for 150 miles along our Behar frontier; a portion of the opium produced is at present used in Nepal, a portion sold to the British Government at the Government godowns within our frontier, the rest is smuggled through our province to the up-country States. If the Government prohibit the cultivation in the province, the cultivation in Nepal will be largely increased and opium smuggled into the province, instead of through it. To prevent smuggling from Almora to Jalpaigori, I look upon as an impossible feat.

5513. Do you believe that if opium is to be grown at all and if the production is to be controlled it must be grown as a Government monopoly?—Yes.

5514. Will you explain that?—If opium is to be grown at all, if its production is to be controlled, it must be grown as a Government monopoly. As it is at present, it is a profitable and, on the whole, a secure crop to the cultivator. Whether it would continue to be a profitable crop to the cultivator, or to the merchant who ventured to purchase the crop from the cultivators for exportation, would depend upon the margin of profit the Government would be willing to leave to the latter to commence operations upon. Were Government to throw the trade open to the public, it would cause an immediate and enormous increase in its production. The only change I would recommend in the public interest is the suppression of smoking dens, and in the interest of the cultivators, that the Government should be more liberal to them in bad seasons and know their own minds better regarding the area they wish to put under poppy cultivation. At present after a good season the Government try to decrease the area and strain every nerve to increase it after a bad one, whereas the cultivators' wishes run the other way; the cultivators wish to increase after a favourable season and to try other crops after an unfavourable one.

5515. Do you believe that it is for the interest of every class engaged in the agriculture of this country that the poppy cultivation should continue?—It is to every one's interest that the poppy cultivation should be retained, to the interest of the tax-payer, the merchant, the land-holder and cultivator. To the tax-payer and merchant in so much that the loss of revenue to the Government would have to be supplied by direct taxation or by duties levied on other goods. To the land-holders as it enables their tenants to meet their rents. To the cultivator it is profitable in many ways,—first, the price paid by Government is a fair one, and an average yield per acre pays a fair profit on cost of cultivation; there are often great prizes, that is to say, the profits are often extraordinarily large, the work or labour to be bestowed on it is light, all members of the family can take part in it, the cultivator is sure of his market, he is assured of being able to dispose of his produce, he receives comparatively large sums in advances without interest, the receipt of such advances enables him to pay his rents and pay for his clothing. Poppy may be sown any time between the 15th October and 10th December, according to season and heat of sun. He receives two or three advances in the season. Did he not receive such advances to meet his rents he would have to sell the produce of his summer crops just as they were reaped when prices are at their lowest. He therefore makes a treble profit on the cultivation of poppy,

the actual profit on cost of cultivation, the use of money without interest, and a saving on sale of his other crops. It is also profitable to many who have large areas to be brought under the plough, in so much that it may be sown late, and the cultivator may sow it last of all if he so wishes. Oats are the only crop I know of that may be sown with a chance of success after poppy. Wheat, barley, peas, gram, oil-seeds, etc., etc., must all be sown quickly, or the season is lost. Larger profits may be made from other crops than is received from poppy, but I know of no other crop that can take its place. Ginger will yield larger returns, but ginger can only be grown in shade. Turmeric also, but all lands will not yield turmeric, and only special castes grow it. Sugarcane also, but sugarcane requires heavy labour; uses the land for the whole year, and I have known gur or crude sugar to be drug on the market, unsaleable in some seasons. Tobacco in some few cases gives enormous profit and is increasing enormously in cultivation, especially in Tirhoot, but tobacco-growing requires special knowledge, great care and hard labour, monopolizes the soil in most cases for a twelve month, and cannot be grown on all lands. The produce of Behar is considered good enough by native smokers who hide the taste of the tobacco with other articles, such as gur and pineapple, but Behar will never produce tobacco good enough for the European market from the amount of salt in the soil and the dust the leaf absorbs in the west winds; these give a biting taste to the tobacco that Europeans cannot endure. Poppy, on the contrary, is a cold season crop; the cultivator first gets his Indian-corn, his early rice or some other rainy season crop off his land and then his poppy; he is paid for his opium and sells the poppy-seed, and if the season is an early one, he may probably get a crop of cheena off it also. If the cultivator deems it necessary to take an advance on his other crops from a trader, he must pay heavy interest on the advance and also dispose of his crop at less than the market value and at a time when the produce is at its cheapest. I do not think the prohibition of poppy cultivation will affect the rate of rent.

5516. Have you communicated with other people and ascertained their views as to the policy of prohibition?—I have asked as many natives as I could get to talk upon it, and they were all against it.

5517. (*Mr. Wilson.*) Have you known persons who have been stupid and nervous before taking the morning dose of opium, and bright and clear-beaded afterwards?—Yes.

5518. In reference to the character of the poppy crop you consider that it is a profitable crop?—Decidedly.

5519. You are aware that in some places and at certain times there has been great difficulty in getting people to cultivate it?—That has not been my experience. I know that sometimes after they have taken advances from Government they have failed to cultivate and some pressure has been brought to bear on them to make them fulfil their contracts. No pressure is needed to make them take advances, but when they have taken advances, pressure may be needed to make them fulfil their contract. In fact, many people take the advance for the sake of the advance.

5520. Are you aware that in some Government papers it appears that there has been considerable difficulty in getting people to cultivate the poppy?—No; but I know that there is sometimes a difficulty in getting them to fulfil their contract.

5521. (*Chairman.*) They are ready to take the advance, but not always willing to cultivate the poppy?—Yes. After they have sown the poppy they collect the dust in ridges in order that the seed may not be affected by the heat of the sun. People take an advance, and they make these ridges simply to hide their failure to sow it.

5522. What happens in the case of a person who takes an advance and does not grow poppy?—He has to return the advance when the time comes; but if it can be shewn that he has absolutely failed to sow he is punished and fined. The man who takes an advance and does not sow seed will be fined, but if he sows the seed and it happens not to germinate he cannot be fined. To make believe that he has sown the seed he will take the dust and put it aside in ridges.

5523. (*Mr. Wilson.*) These people are excessively poor, are they not?—That is not my opinion of them.

5524. Can they pay their fines with facility?—Not always.

5525. What happens if a man cannot pay his fine?—He generally pays the fine, but he does not always return his advance until he is forced to do it.

5526. We have understood that some of them are very poor. In the event of a man not paying the fine or not repaying the advance is he imprisoned, or what happens?—I have never known a man imprisoned. When a man has made up his mind not to fulfil his contract he is generally in a position to pay his fine when the time comes. Others who have failed to fulfil their contract, but are not fined, have to return the advance on failure of the contract; those men raise every difficulty in the way of returning the advance.

5527. What is the security that the Government gets for the advance?—None. They have power to force these people under the law to return the money, just the same as any other contractor.

5528. Are there any sureties or bailmen?—None whatever; there is the bundaswar who often takes the advance for the whole village and divides it, and he is expected to pay it back; but when the advance is given to a ryot into his own hands he alone is responsible for the advance.

5529. You said just now that under certain circumstances some pressure had to be used—what kind of pressure?—That is very difficult to explain. The whole district is divided into zillas, and the zilladars, or the people who expect to superintend the cultivation, bring moral pressure to bear. I do not know any other way. You have to be constantly nagging at a man to do a certain thing; you cannot strike him or punish him or fine him. It is a moral influence—the influence of the name of the Government. I do not know of any other pressure.

5530. Is the zilladar an officer of the Opium Department?—Yes, with a salary of six or seven rupees a month.

5531. Who is the next superior officer?—There is the gomashtha and then the Sub-Deputy Opium Agent.

5532. Do they exercise a little persuasion too?—I do not know how to explain it. A man is under the contract, and he knows exactly what the penalty is. You cannot beat him or strike him, but you can persuade him. If he is dilatory you can bring moral pressure to bear upon him.

5533. I mean before he has entered into the contract?—There is no pressure whatever. The only man that can possibly influence him to enter into the contract is the bundaswar.

5534. What has he to say?—He often receives the whole of the advances from the Sub-Deputy Agent to distribute among the ryots. He is the head villager. First, there is the Sub-Deputy Opium Agent, he possibly has two or three gomashthas in the district; under them are the zilladars, and to assist them there is the bundaswar.

5535. You have referred to the area to be brought under the plough; is the opium land ploughed?—Decidedly.

5536. Some one spoke of it as being a market garden and gave the impression that it was spade land?—They must first use the hoe to take the stalks out of any heavy crop, such as Indian-corn. After that it is entirely under the plough and hand-weeding.

5537. Is gur another name for crude sugar?—It is taken out from the sugarcane, pressed out and then taken to the refiners and boiled down.

5538. What is cheena?—A very small millet that is grown.

5539. You have referred to alcohol and ganja; are you a teetotaler?—I am not.

5540. If you had sons or nephews you would not object to see them taking a little alcohol in some form daily?—No.

5541. Would you have an equal complacency in their taking a little opium daily?—It is contrary to our customs to take it; I do not exactly know whether I would or not.

5542. That is all you wish to say on that point?—I really have not thought it out; I do not know whether I would or not.

5543. (*Mr. Fanshawe.*) With regard to the question put to you by Mr. Wilson about men appearing stupid and nervous, are you referring to men who take large quantities of opium or small quantities?—Large quantities.

5544. Is it a prevalent belief among the people with whom you have been thrown for so many years that opium is a preventive against chills or malarial influences?—It is.

5545. Can you speak from experience that this has been known to you for many years?—Many years.

5546. In the Bettiah Estates have you any actual poppy cultivation?—A large area.

5547. We have it before us that 630,000 cultivators, in round numbers, cultivate the poppy in the Behar Agency

Mr. T. M. Gibbon, C.I.E.
7 Dec. 1893.

Mr. T. M. Gibbon, C.I.E. and 550,000 in the Benares Agency. Will you tell us with your knowledge of the country and of actual poppy cultivation whether it is possible that those men can generally cultivate under compulsion?—Certainly not.

7 Dec. 1893.

5548. You have spoken of the use of opium as a stimulant, and also of its use as a medicine for one or two complaints. In your experience how far has it been taken in connection with complaints, and how far, as we might take alcohol, as a mere stimulant?—The people that take it as a stimulant are habitual takers; they are people living in towns, not so much among the cultivating classes as among merchants, sepoys, the men in our service; they take it as a stimulant and have become habituated to it. The cultivators take it medicinally to ease pain.

5549. Do I understand you to mean that the beginning of the habit is in connection with some definite disease?—These habitual takers have taken opium for many years long before I had the pleasure of their acquaintance. I do not know how they took to it or where they began.

5550. You have touched on an interesting point which has also been referred to in the statements of other witnesses—that the medical and non-medical uses of opium merge very much into each other; is that your experience?—Decidedly.

5551. One cannot well distinguish between the two?—No.

5552. The man who takes it habitually has often begun to eat opium in connection with some disease, and then he retains the habit of using opium as a stimulant?—Yes.

5553. Your view with regard to sugarcane appears to be that the substitution of this crop for the poppy would be limited by the conditions of labour and also by the demand in the market?—By both.

5554. Would you not also say that the supply of the requisite manure for sugarcane would have to be taken into consideration?—Manure would be very difficult to procure for the sugarcane, decidedly.

5555. If there is to be a large area brought under sugarcane you must have a sufficient supply of the requisite manure; would it be available generally or not?—Not if it were largely increased. But I may also say that there are many soils in which neither the sugarcane nor other crops can grow unless they are irrigated. Sugarcane is a crop that you must begin to grow at the beginning of March or the end of February. From February to the end of June is one long drought, and unless they are able to irrigate their sugarcane it would be a failure to a certain extent unless the soil is a moist one. In other places, as in Shahabad, the irrigation placed at their disposal has largely increased the cultivation of the sugarcane.

5556. You can irrigate the sugarcane from canals?—Yes, but if you irrigate from canals you will raise the whole of the zemindari influence against you, because they are thoroughly impressed with the opinion that drainage from the canals brings out the salts in the soil, making it useless and barren, and that any irrigation to be beneficial on any land, whether for poppy or sugarcane or tobacco or any other crop, must be well water, and only well water irrigation, not drenching.

5557. May I put it in this way, that in dealing with the question of substituting sugarcane for opium we must take into consideration the extent of the market, the extent of the supply of the manure, the character of the soil, and the predilection or acquired knowledge of the cultivators?—Yes.

5558. That is correct?—Yes.

5559. I understand you to regard tobacco as the crop which could be best substituted for opium if a market were available?—There is one other crop that may run opium close—oilseeds; but they depend so entirely on the state of the market that you cannot take that crop into account. Oilseeds have risen about 40 per cent. in value within the last fifteen years, since the year of the famine, 1875. Were the market to run the other way and go down, oilseeds would not be in the race with opium.

5560. Can they be grown on the same class of soil and under the same conditions as opium?—Yes, that is the only crop that can be grown under the same conditions.

5561. As things stand, tobacco is the crop which you regard as the main substitute for opium?—Provided there is a market and that people can acquire a knowledge of the special conditions.

5562. Have you any reasons for thinking that a large extension of the market for Indian tobacco is likely?—No; certainly not. I believe that all home-grown tobacco must be consumed in the country.

5563. It is exported to Burma and elsewhere from

Behar?—I know they take it away to adulterate other tobacco.

5564. But even that you do not regard as a prolific source for a new market?—No.

5565. Mr. Wilson asked you a question about the unwillingness of the cultivators to cultivate opium being known to the Government officers in the past; are you aware that some years ago there was a belief in some quarters that other crops were tending to compete successfully with opium?—I am aware that in Sarun a few years ago they thought that potatoes would compete with opium, and many thought of abandoning the cultivation of opium and substituting potatoes. They tried it one year, but they did not try it another.

5566. As matters stand you do not think there is any crop which can successfully compete in that way?—None. The only crop likely to compete is oilseeds, but they depend so entirely upon the market that nobody dare risk it; there is no permanency about them.

5567. If your view is correct that the prohibition of poppy cultivation will not affect the rate of rent, then I take it that the landlord will not suffer directly?—There is nothing in the law which compels a landlord to reduce his rent simply because the ryots desist from growing a special crop. There is nothing that would force us to reduce our rent. The only alternative that the ryot would have on our refusal would be to give up his lands.

5568. If that view is correct, the landlord would not suffer directly?—He would find a little difficulty in recovering his rents.

5569. He would suffer indirectly, would he not?—Simply in the difficulty in collecting his rents, but he would eventually get them, and he would get the same high rent for his lands were the poppy swept off the ground to-morrow.

5570. Then your view is that the poppy cultivator is looked upon as a good solvent tenant?—Yes, a good rent-payer.

5571. (*Mr. Wilson.*) You have told us that after a good season Government tries to decrease the area; I suppose as a matter of fact it is decreased?—Yes, it is; it is decreased in cast-off bad lands.

5572. One sees by the tables that it is sometimes largely decreased?—There are good lands and bad lands under poppy. Every Sub-Deputy Opium Agent will do his best to keep up the outturn, but when the order comes from head-quarters to decrease, he has to decrease, and he does decrease. He knows who his good ryots and contractors are, and he will give up their lands in preference to others. It therefore often happens that the cultivation is decreased without decreasing the outturn.

5573. According to your view as to the profitable crop those people lose a profit?—They lose a profit by giving it up.

5574. In any case, had they any compensation for being deprived of the license?—No. It is a mutual contract. The Government are at liberty to throw it up this year, and the ryot has nothing to complain of. On the other hand, the ryot may refuse, and the Government cannot complain.

5575. You also say that after a bad year Government strains every nerve to increase it?—Yes.

5576. That is, by this process of persuasion through the zilladars?—No, they simply say that they will give advances to anybody who will come and take them. My contention is that the ryot should get more notice of the intentions of the Government. It is not enough immediately after a bad season to say "we want so much extra land." It is not enough to tell them after a good season "we will not take this land for the next year."

5577. (*Mr. Fanshawe.*) You expressed an opinion with regard to the closing of licensed smoking shops. Would you go further and prevent smoking at clubs, or would you make the possession of madak and chandu a criminal offence; do you think that this would be possible?—I do not know of the existence of any native club; I never heard of it.

5578. It is not within your range of experience?—No.

5579. But how far would you go? Would you stop smoking in private houses?—Not at all.

5580. You would allow it in private houses or amongst people who met together for purpose of smoking opium?—Yes.

5581. You do not think that this could be interfered with in the conditions with which we have to deal?—No. Until this Commission was appointed I did not know that there was a smoking place in my town, but since it has been appointed I have made a few inquiries; beyond that I have no personal knowledge with regard to smoking.

The witness withdrew.

Mr. S. E. PEAL, F.R.G.S., called in and examined.

5582. (*Mr. Fanshawe.*) How long have you resided in Assam, and what opportunity have you had of learning the habits of the people?—I have had considerable experience of the use and effects of opium, extending over 30 years in Sibsagar; having employed Assamese, Kachari and Bengali labour for clearings and cultivation, issuing the drug myself; the monthly supply for some 10 or 12 years amounted to about 40 pounds.

5583. In what capacity have you been living in Assam?—As a tea planter.

5584. During the whole of this time?—Yes.

5585. Sibsagar, I believe, is one of the chief tea-growing districts in Assam?—Yes.

5586. In what part of the district do you grow tea?—On the rolling lands that are above the level of the water, and not on the swamps on which they grow rice; we grow tea on the small hills around the valley.

5587. On the small hills?—Yes. It is grown largely in the plains as well as round the valley. It is grown all over the valley up to the foot of the hills.

5588. Are those tracts where tea cultivation is carried on considered malarious?—Yes. The whole of Upper Assam is a very level country, and perhaps 50 per cent. of the area is completely flooded in the height of the rains. In the dry weather the water is carried off by the rivers.

5589. And the conditions are regarded as malarious?—Quite so.

5590. Will you tell us more fully of what classes of the population you have had practical experience during your management of a tea plantation?—When I went there in 1863 I opened the tea estates entirely by Assamese labour. There were no Bengalis at that time. The villagers were induced to come in and work for the planters by the issuing of opium as a means of currency. They came in large numbers for the purpose of the clearance and cultivation of our tea gardens.

5591. You are speaking of the pure Assamese?—Yes, of the Assamese. In the early days there were no Bengalis.

5592. What classes of labour do you use now?—Bengali labour almost exclusively.

5593. Imported labour?—Yes. Imported from Bengal.

5594. And Kacharis?—Kacharis we receive to a small extent from Western Assam.

5595. Are they residents of the Sibsagar district?—They are residents in Western Assam and travel over the country to the east, and during the rains they remain there as labourers and then go back again.

5596. What has been your experience in regard to the use of opium among the people of this district?—As far as my experience and inquiries went, I never knew boys to indulge in it, and young men very rarely—unless as a medicine; its use was confined to middle-aged and elderly people—as a stimulant and sedative, never producing injurious results at all comparable to the use of spirits among the European working classes, of whom I had an extensive experience for seven years in London, ere coming to India. I could seldom detect an opium-eater by his personal appearance and general habit, and when exploring across the frontiers, east and south-east of Assam, for six weeks at a time, often under very trying circumstances, have been surprised to hear the men of my party of ten or twelve call for the "*kania*" (local name for opium-eater) when anything extra difficult or hazardous had to be done. On several occasions I have found out, by this means, that some of the best and most powerful and vigorous of my party were the opium-eaters or smokers—a fact which I was not prepared for from imported prejudices. The staying power and recuperative effect of the drug I have often had opportunities of observing on these expeditions, as also at other times when prolonged physical exertion was necessary, similar, apparently, to the effect produced by cocoa. Its effect on old people seems to be notoriously beneficial. I have known of but one death due to it, and that was a case of determined suicide by a Bengali coolie.

5597. You have spoken of the use of opium as a stimulant among middle-aged people and of its staying and recuperative property when prolonged physical exercise is required. It is a common belief, I think, that the use of opium is also a preventive against chills and malaria. Is that within your knowledge?—Precisely. It was

generally supposed to be begun in that way as a preventive and also as means of curing attacks of fever and malaria.

5598. Is that a prevalent belief amongst the people of the district?—It is the universal belief.

5599. Do you consider from your own observation that there is any justification for that belief?—I do.

5600. Why?—People have come to me for opium in order to cure them.

5601. That has been within your own experience?—Yes.

5602. It has been stated on the other hand that persons who eat opium are specially liable to be carried off by sickness and dysentery. What has been your experience on that point?—I have not known that; I have not noticed it.

5603. Are you in a position to give us any general idea as to the proportion of people in Assam who eat opium?—No. I can hardly say that.

5604. Is it a large proportion of the people amongst whom you have been thrown?—I should say a large proportion in Assam.

5605. Can you tell us anything about the average quantity eaten, and how many times a day it is taken?—No, I could not say that. I had simply the issuing of it. I never observed the quantities taken.

5606. Will you explain rather more fully what this issue of opium to which you refer was?—It refers to our working under trying circumstances. The climate is very much against the people,—very wet.

5607. You say that for 10 or 12 years you issued opium to your workmen?—Yes.

5608. What were the actual circumstances in which you issued it?—It was issued to my people.

5609. And largely used as a circulating medium?—Very largely as a circulating medium. It passed all over the country. I was very isolated,—a long way off from the station.

5610. How long ago was this?—In the early days, 30 years ago.

5611. In your experience have you come across any cases of excess in opium-eating?—I have known one case of suicide. I have not known any cases of habitual excess in eating.

5612. Will you tell us on the broad results of your long experience in Assam, whether you really think that the effects of opium-eating on the people are prejudicial or not?—I think as it is consumed it is not generally prejudicial, but it is possible that occasionally it may be carried to such an excess as to be very injurious. But I have no cases of that kind before me. My own opinion is that the consumption is not prejudicial.

5613. Can you tell us how the opium-eating habit is looked upon by the people of Assam. Do they regard it as a vice, or in what light do they regard it?—I am not aware that they look upon it as a vice.

5614. How do they regard it?—They regard it as we regard the smoking of cigars or tobacco. I think much in the same way.

5615. Have you had any experience of opium-smoking amongst the natives?—I have seen opium smoked. It is also taken mixed with water and drunk. I have seen it taken both ways.

5616. With regard to smoking, have you seen much of it in Assam?—Yes, a good deal.

5617. Have you seen any ill-effects from it?—No.

5618. How do the people of Assam regard smoking opium as compared with the practice of eating it?—I am not aware of any difference.

5619. Do you think it would be practicable to prohibit the use of opium in Assam?—Any prohibition of the drug generally would be, I think, most disastrous in Assam, and would result in its being at once extensively cultivated in all the hills around among the many savage hill tribes, over whom we hold no jurisdiction. It would be extensively smuggled in as it was in the past. I have seen large quantities in former years taken by Nagas, to sell in the bazaars, and used to have samples of it done up in rolls like tobacco. This illicit growth and sale of the drug by these hill savages has ceased entirely through the Government opium being of such superior quality.

Mr. S. E.
Peal,
F.R.G.S.

7 Dec. 1893.

Mr. S. E.
Peal,
F.R.G.S.
7 Dec. 1893.

5620. Have you had any special opportunities of making journeys among the Naga Hills?—Yes. I have frequently gone on expeditions across the frontier towards China and Upper Burma in old days when it was desirable to ascertain where the passes were. I used to take ten or twelve men with me. Under these circumstances it used to be exceedingly trying, and travelling was in some cases very dangerous. Great physical exertion was frequently necessary among the people, and my experience is that in cases of that kind opium is frequently beneficial. I saw the beneficial effects of it.

5621. That is what you have already referred to?—Yes. On these expeditions I have also seen opium cultivated by these villagers on large patches that were beyond our boundary. We have no control over the country.

5622. Can you tell me whether ganja (the hemp plant) is largely grown in Assam?—I think not.

5623. Is it grown among the Naga Hills?—Possibly.

5624. Not within your own knowledge?—I know it is grown in the hills, but I have not seen it. I have seen opium which has been carried into the provinces to be sold in the bazaars done up with tobacco. I have frequently come across it. I think it would be utterly impossible to expect to suppress the cultivation of opium among the hills around us, when we cannot put a stop to the head-hunting and other customs of the people.

5625. So you think it would be hopeless to prevent opium cultivation among these hills?—Yes.

5626. And that it would be also a matter of difficulty to prevent smuggling?—It is utterly impossible.

5627. (Mr. Haridas Vēharidas.) Do you take opium?—No. I do not.

5628. Were you in the habit of giving opium to your servants and distributing it?—I have distributed it.

5629. You afterwards discontinued it: did you feel any uneasiness on that account?—No.

5630. (Mr. Wilson.) You have said that you used to employ Assamese labour, and that is now superseded by Indian; could you tell us why?—Formerly there were no Bengalis in Assam. When I came out there were no Bengalis in the country; there were Assamese labourers, and the cultivation of tea was on a small scale. Local labour was sufficient for the purpose of cultivating the small areas then opened out, but later on, as cultivation was increased, there was a great demand for labourers; the Assamese labour was not sufficient, and we imported from Bengal. This has gone on to such an extent that the labour is now almost entirely Bengal labour. The Assamese instead of labouring at our factories grow rice and vegetables which they sell to our Bengali coolies. They make their money in that way. At present our labour force is almost entirely Bengali; in former days it was almost entirely Assamese.

5631. Your answer is that the increased tea cultivation made it necessary to obtain large supplies of outside labourers, and the Assamese fell back to cultivating their own land and supplying food to this imported labour?—Yes. The increase is enormous.

5632. The supply of opium that you mention, was it for the Assamese, or for the Bengalis, or both?—The Assamese. I supplied it to a very large tract of country, probably an area of 200 square miles. These villagers used to send their boys or their younger brothers to me to labour; and they took back opium for their parents in the villages. It was over a very large area. I was not near a station.

5633. That does not continue now that you have Indian labourers?—No. No planter now distributes opium, I think. It is distributed at centres,—opium shops. Unless a man takes a license from the Government he cannot supply the opium to his coolies. That was given up 20 years ago.

5634. What you speak of as the monthly supply was not a supply for the consumption of persons working for you, but was the payment of wages?—I did not employ probably 1 per cent. of those who really consumed the opium; it was a very small percentage.

5635. Practically you paid it in wages and they took it back to the districts they came from?—They took their wages back in the shape of opium.

5636. Do I understand that they were so fond of opium that they would come and work for it more readily than they would work for money?—The opium habit seemed to have been a very old one; it may have been several hundred

years old. When we came into the country the Government opium was found to be so superior to the native that they invariably came to me for it in preference to their own opium. I went into the country about the time when the prohibition against growing it was promulgated; and the habit having been handed down from generation to generation the people came to me for pure Government opium and took it away for their parents and others in the villages.

5637. My question was, were they so fond of opium that they would rather work for it, and that money was not so much an inducement?—If they took opium from me they got it in a few minutes, but if they had taken money, they would have had to travel five days' journey to get the same amount of opium. Therefore, they naturally preferred taking the opium from me.

5638. Do I understand that this 400b a month was some considerable proportion of the remuneration which you paid for labour?—Yes, over 50 per cent. probably.

5639. You say that you have not seen boys take it, and young men rarely; did they not suffer from malaria equally with other people?—They may have done so, but I have never known cases of boys taking opium as a habit.

5640. If the district were malarious, and if opium were a valuable prophylactic, you would expect that the boys and young men would be advised to take it equally with their elders?—It may have been given to them by their parents medicinally, but I have not known it as a habit among boys.

5641. Had you either for yourself or for the people working for you any available medical assistance?—For a portion of the time I had; in the earlier days I had not. For the first two or three years I had not any medical assistance. Subsequently we had native doctors.

5642. Practising according to the European system?—Yes,

5643. Did they recommend the habitual use of opium as a prophylactic against malaria?—No, I cannot say that. The Assamese will not take medicine from a practitioner as a rule.

5644. I did not perfectly understand what you said about the *kania* when you were exploring. Were you exploring on your own account or on behalf of the Government?—On my own account. I sent reports to the Government. It was with regard to the height of the passes and the possibility of passing outside to Burma.

5645. In a party of ten or twelve there will be one or two opium-eaters of the kind you mention, *kantias*?—Yes, probably two or three.

5646. And they would call upon a man of this sort to do a special job?—Yes. The man who takes opium is called a *kania*. If the others are not *kantias* they always call them *kantias* to distinguish them.

5647. They put on him a tough job if they do not want to do it themselves?—Yes, I have seen it several times.

5648. What is the price of opium in Assam?—In the earlier days it was Rs. 20 a seer. I think it is Rs. 40 now. With opium at that price a facility is given for growing it in the hills inhabited by these uncivilized people.

5649. I suppose it is still very easy to smuggle?—I do not think there is any grown now. I have no evidence this side of 20 years of anything being grown in the hills—I mean on the borders of Assam. Towards China a long way off you may see it.

5650. Rs. 40 is so high a price as to encourage smuggling across those hills?—No. I think the crop is so far precarious and the danger in smuggling so great that the quality of the Government opium would outweigh the inducement on the other side.

5651. Are you a teetotaler?—Practically so.

5652. Do you dissuade young men from alcohol in any form?—As a rule I think I do.

5653. From that point of view do you regard opium and alcohol as on the same level?—I think alcohol infinitely worse than opium for the native.

5654. For Europeans?—I do not know any Europeans who take opium.

5655. Would it make any difference in your estimate of a man if you knew that he was habitually consuming opium?—I should say that for the native the man who takes liquor is infinitely worse than the man who takes opium, even if he takes it in moderation; but he is much more liable to take liquor in excess than opium in excess.

5656. My question was whether it would alter your opinion of a man if you knew that he was a habitual consumer of small quantities of opium?—I could hardly answer that question.

5657. (*Mr. Fanshawe.*) You have been thirty years in Assam?—Yes.

5658. Can you tell me whether opium-eating is more common or less common now than it was when you went there thirty years ago?—I should think it was less common,

The witness withdrew.

Mr. JAMES WILSON called in and examined.

5661. (*Chairman.*) I believe you are the proprietor and were lately the editor of the *Indian Daily News*. As many of the witnesses who have been called before us are directly connected with the service of the Government of India we recognise that in your position you have had exceptional means of gauging the state of public feeling in this country with reference to the question that has been placed in the hands of the Commission for inquiry. You have means of judging the opinion not only of what may be called the official classes, but the population at large?—Yes.

5662. We shall be glad to have a general explanation or statement from you of your conviction as to the opinions which are entertained by the people of this country with reference to the policy which ought to be adopted in relation to opium.—I believe I have enjoyed a considerable share of the confidence of the people of this country. In my capacity of journalist during the last quarter of a century, I have necessarily become acquainted with their opinions on this subject through the native press which I have had to read, and also very largely through the personal communications I have had with gentlemen, and likewise in the way of correspondence from all parts of the country. I find the general feeling to be adverse to the abolition of the traffic in opium. The grounds of that feeling are fiscal and moral. On moral considerations the people say that if opium were suppressed, greater evils would arise from the consumption of inferior drugs—drugs of a more obnoxious character, and that there would also be a very large increase in the consumption of alcohol. I came across the other day an expression of this view in *Reis and Rayyet*, a native paper, as its name (“Prince and Peasant”) implies. It is in an account of some proceedings at a fair at Sonapore. The writer says “That there was much alarm in the opium camp, and the proceedings of the Royal Opium Commission were hotly discussed by the opium-eaters as well as by the cultivators who come in large numbers to Sonapore. We hear a private meeting of the Behar Opium-Eaters’ Association was held on the 24th November at midnight to curse the Commission and the Anti-Opium party in England. Their idea is that the people of England want to abolish opium and force alcohol down their throat, instead. They cannot understand the philanthropic, although impracticable, motive of the anti-opiumists. They decided to emigrate to Native States if opium were abolished. They say that they have been so much disturbed in their minds on account of the Royal Commission, that their ordinary dose of opium cannot give them rest and sleep, and so they are obliged to take double doses in order to pacify their mental torture. It would have been better if the Commission had held a sitting at Sonapore, where it could record the evidence of many notable and confirmed opium-eaters. The popular notion seems to be that in order to spread the liquor traffic in an extensive manner, all this fuss is being made. The people of this country are very credulous and believe anything without properly considering it. We hope they will understand and appreciate the high philanthropic motives of the Englishmen which have brought them here to see and to examine for themselves what is the real state of affairs.”

Personally I have had very little experience of opium. I have had a number of men in my employ during the last quarter of a century, and some of them have been opium-eaters, but I cannot say I ever observed any particular effects from the use of the drug. The men who are naturally stupid remain stupid whether they take opium or not. The other day one of my assistants occupying a very responsible position told me a fact that I never knew before, that for the last ten years he was an opium-eater. He said he began ten years ago and found great relief from small doses of opium. He assured me that for ten years he had taken every day the same amount, namely, one pice worth, which he divided into two pills, one for the morning and the other for the evening. I asked him whether he felt any need or desire to increase the quantity, and he said, “not in

but I have very little means of judging, for I have not given out opium for twenty years perhaps. I should think it was less now than it was in the old days.

5659. Are you aware that the price of opium has been greatly increased and that the number of shops has been reduced?—The price is about double.

5660. And are you aware that the shops have been very much decreased?—I think so.

the least;” he found the quantity was sufficient for him; it answered his purpose, and it gave him ease and comfort. He said he believed that a similar feeling pervaded the whole community, and expressed his belief that as people advanced in life they really needed some such stimulant. The general opinion is that if opium is superseded by alcohol the moral effects will be far more deleterious to this country than are the effects of opium at the present time. With regard to the fiscal considerations, there is undoubtedly great reluctance on the part of the native population to lessen the revenue at present derived from opium. The reasons are two-fold. They fear that some attempt might be made to supply its place by alcoholic beverages and duties, and also (that is the great fear) by direct taxation. They have no hope whatever that England will compensate India for the loss of the opium revenue, and they form that conclusion from the fact that in every case, apparently, whatever expense can be put upon India is put upon India, whether it was to be for wars or frontier expeditions with which India has no special connection. With regard to certain sources suggested as substitutes for the opium revenue, there does not appear to me to be anything hopeful in them. A tax on tobacco has been suggested, but I think that any tax upon tobacco would be extremely objectionable, as stated in an extract from the *Hindu Patriot* which I should like to read:—“The so-called evidence of the “missionary witnesses who have appeared before the “Opium Commissioners is characterised by an absence of “common sense, which is no doubt highly complimentary “to their moral fervour. They propose the sacrifice of the “opium revenue, and suggested that the loss should be re- “couped by the imposition of a duty on tobacco. Now, we “venture to say that a tobacco tax is about the very last “thing which could be recommended for a country like “India. Tobacco is the one luxury within reach of the “poorest, and to deprive them of their solace in an ordinary “cheerless existence would be the very height of cruelty “which a Christian missionary ought to be ashamed to “propose.”

There is no doubt that there would be great difficulty in levying a tobacco tax, for the reason there stated. Tobacco of a quality that would satisfy the ordinary people of this country could be grown anywhere, and the cultivation could not be suppressed, except by an army of excisemen far exceeding the number employed upon 1,500 miles of the old line, to prevent smuggled salt from the Native States before Lord Mayo agreed with the Native Governments for the British Government to take over the manufacture.

5663. As to the income-tax?—I think that would be even more obnoxious still. When Mr. Massey imposed the income-tax, Mr. David Cowie was a representative of the mercantile community in the Governor General’s Council. I was present in my editorial capacity. Mr. Cowie appealed to Mr. Massey to raise the initial amount subject to income-tax from Rs. 200 to Rs. 500, stating that an income of Rs. 200 per annum was too little to be taxed, in fact not enough on which a man could ordinarily support himself and his family. Mr. Massey at once in a very imperious manner said, “I am not prepared to sacrifice the property of the rich in the interests of the poor.” Mr. David Cowie’s contention during the collection of the income-tax proved to be correct. There was an army of tax-gatherers and assessors sent out, and they assessed everybody by street row, and many cases of oppression were brought to my notice. They were very largely given to me by missionaries. The Rev. George Kerry brought to my notice very many cases of oppression and desired me to expose them, and I did so. A number of those cases were investigated and proved and embodied in a pamphlet which I sent to every member of Parliament. I do not know whether it was ever read; I much doubt it. It was found that the oppression was so great under Mr. Massey’s tax, that when Sir Richard Temple became Finance Minister, Mr. Cowie’s idea of making

Mr. S. E.

Mr. J.
Wilson.

Mr. J.
Wilson.
Dec. 1893.

the initial incidence Rs. 500 was carried out. Sir Richard Temple said that that met the objection that the tax was oppressive to the poor, and he affirmed that the tax would not affect more than half a million people. Some said that to tax half a million for the benefit of 300 millions was unjust; nevertheless it was done. There is no doubt that the tax did affect many more than the half a million people that Sir Richard Temple mentioned. There is a village of Singerati, a few miles south of Government House. I went there with Mr. Kerry who agreed to meet the Commissioner of the Presidency Division to investigate a number of cases. I do not know whether it is necessary to go into them in detail. There were not two persons in a whole village liable to be taxed, but at least twenty had been assessed. It was done in this way. A man goes with his paper and says, "You are assessed to the tax so much;" the man says to him "I am a poor man, I cannot pay, why am I assessed?" "It is the Government order; you must pay five rupees." "I cannot." "Then give me one rupee and I will strike your name off," and he does it. The assessor gets a rupee out of the man who is not liable to pay anything; and these cases may be numbered by the thousand. He goes to another man and says "You are assessed at Rs. 100; you are a rich man." "I cannot pay," says the man; "then give me twenty rupees and I will write your name off."

5664. You give us generally this conclusion that the income-tax could not be substituted for the revenue from opium?—That is the general bearing of it. As it is objectionable to have an excise duty on tobacco, direct taxation in any form would be objectionable on the ground that I have mentioned, that taxation of that kind will not pay for honest assessment. I may observe also that the same idea has also been put forward that there should be an addition to the salt-tax. I think that is quite as objectionable.

5665. Summing up the conclusion you have arrived at from your wide general knowledge of Indian opinion, what do you say is the result?—I think the course to be adopted would be to re-impose the cotton duties.

5666. If the opium revenue were withdrawn?—Whether it is or not, I say the cotton duties should be re-imposed.

5667. We must not go further into that; but we understand you state to the Commission that from your opportunities of judging native opinion you believe it to be opposed to a change of policy and action on the part of Government in relation to opium?—Yes

5668. (Mr. Wilson.) You have quoted an article from *Reis and Ruyet*. Do you attach the slightest importance to it?—I do attach importance to it.

5669. Is not this article from which you have quoted rather a sketchy and satirical account of this fair?—Not that paragraph. I attach importance to it from my knowledge of the editor of the paper.

5670. Do you consider that the article was written by himself?—That I cannot say; I do not suppose that he would have published it if it had not received his approval.

5671. Are we to understand from this paragraph that there exists a Behar Opium-Eaters' Association?—There may be; I do not know it.

5672. Are we to understand from the paragraph that such an Association exists?—The paragraph mentions it, but whether it exists or not I cannot tell.

5673. Do you think that the paper seriously puts it before us that there is at Behar an Opium-Eaters' Association?—He may call it an "association" though there may not be one. It is not printed in capital letters like the Anti-Opium Association.

5674. You believe yourself that a serious Association sat at midnight for the purpose of cursing this Commission?—I believe that something of the kind might have been done, I do not say it was, I have no evidence beyond that.

5675. Can you tell us what phases of opinion the *Hindu Patriot*, which you have quoted, represents?—I should say public opinion generally, on this question.

5676. Generally what phases of opinion does the *Hindu Patriot* represent in the city?—The native communities generally.

5677. As a whole?—As a whole, certainly.

5678. Have you the least idea of the circulation of the paper?—No.

5679. Should I be wrong in suggesting that it is very small?—I have not the slightest idea.

The Witness withdrew.

Mr. W. H.
Ryland.

Mr. W. H. RYLAND called in and examined.

5680. (Chairman.) I believe you are President of the Eurasian and Anglo-Indian Association?—Yes.

5681. And you desire to place the views of the Association before the Commission?—Yes.

5682. You have had extended personal experience of this country?—I have been 40 years in the service of Government.

5683. In what capacity have you served the Government?—During the first portion of my service I was in charge of the Excise Department in two or three districts of Eastern Bengal. I was also in charge of the Excise Department in Calcutta for some time.

5684. Will you make a short general statement to us of the views of the Association with which you are connected and which you have come here to present for our consideration?—The general opinion of the Association is—(1) That the present inquiry has not been called for by any recent development of the circumstances connected with the produce and use of opium. (2) That opium is comparatively innocuous as compared with alcohol and other intoxicating stimulants. (3) That as a narcotic and prophylactic opium has been largely and beneficially used for generations in a variety of disorders and by great numbers of the people all over India without immoderate indulgence or exhibition of evil effects to an extent which needs national interference. (4) That the system of cultivation adopted by the Government under State control is in itself a check upon excessive production and a restriction upon inordinate consumption. (5) That the stoppage of the system would inevitably extend the area within which the plant is capable of growth and cause very much distress among the present cultivators; while absolute prohibition of the use of opium could no more be enforced than the use of other stimulants in every country (Great Britain included) and without the introduction of greater evils. (6) That as regards China and other foreign countries dependent upon India chiefly for the supply of the article, to prohibit its export would only remove the bar to production in other countries where the

plant can almost equally well be cultivated (not excepting China itself) and where benevolent sentiments do not prevail. (7) That it is not less within the power of China, if so disposed, to prevent the traffic if it be in reality regarded with disfavour, though such from most accounts would not appear to be the case. (8) That if the revenue from opium be discarded, there is no other substitute that can be devised without introducing further taxation which would press heavily not only upon those who contribute to the revenue by the consumption of the drug, but upon those also who are innocent of its use. The Association, therefore, so far as India is concerned, considers inquiry to be unnecessary, and would offer a respectful but strong protest against the imposition of any portion of the cost or of any fresh taxation, as its result, upon India.

5685. Do you desire to supplement the general representation of the opinion of your Association by any personal observations from your own experience?—With regard to my first paragraph, I may observe that the tendency for many years past has been to limit the consumption, to reduce the number of licenses, and to increase the rate of taxation. I know also from my own experience that the orders and policy of Government have been to raise the revenue by preventing illicit smoking and manufacture without stimulating consumption. And those officials have been considered the most successful who have best carried out these objects. From some figures I have collected, I have found that the number of licenses for opium has been reduced within the last 20 years.

5686. We have had those figures before us very fully from official sources.—The consumption of opium has increased 80 per cent., while there has been very much more largely an increase in spirits.—115 per cent. within the last 20 years. That shows, at any rate, that opium is the least objectionable of articles of excise in that way so far as the increase of consumption is concerned. With regard to the second point, that it is comparatively innocuous as compared with alcohol and other intoxicating stimulants, I think we

are bound to regard this question relatively and comparatively. The experience of those who have had anything to do with the Excise Department has shewn that if an interference is exercised, and the consumption of any one article is checked, it leads to the consumption of some other stimulant. For instance, I believe that one result of raising the tax on spirits has been that the consumption of tari, which is a much cheaper article, has considerably increased. Opium is also less opposed to religious prohibition and prejudice. To the Mahomedan, spirits are forbidden and he never takes them, but he takes opium and other drugs. The Sikhs are forbidden strictly to use tobacco, and they largely take to opium. The use of opium, I may say, so far as I have known, is considered less disgraceful generally. In fact, I have heard opium-smoking called a princely form of intoxication.

5687. That is hardly a recommendation, is it?—I do not say that it is. The natives consider it in a less degree harmful and disgraceful than spirits.

5688. Still you are speaking of it as a harmful thing?—Yes, I consider that it is like excess in the use of any other stimulant. Comparing it with other drugs, we find no such excess amongst the consumers of opium as amongst those who take alcohol. You do not find that people who take opium are drunk and incapable and disorderly.

5689. As a narcotic and prophylactic it is said that opium has been largely beneficial?—I was in the districts of Dinajpore and Kungpore, two notoriously unhealthy districts where malaria fever was very prevalent. Opium in its raw state is very commonly used there, and it is believed by the people to be very serviceable to them. I think that the circumstances of the people have in this matter also to be considered. They have not the means to resort to medical advice. The Kabirajis commonly recommend the use of opium for dysentery and fever, aches and pains. When a ryot or poor labourer is suffering, he goes to his friend and asks what he would recommend, and his friend advises him to take a little opium. In this way I believe the habit is increased. As a common practice, I think very few people would know of the use of opium without very minute inquiry. People do not exhibit it in a way that attracts observation. With regard to other forms of opium, madat and chandu-smoking: madat, I believe, was introduced by the Mahomedans, and chandu is a form of smoking which has been introduced by the Chinese. It is not we that have taught it to them, but they have brought it to us. These are probably the most enticing and most alluring forms of the use of opium, and if it were possible in any way further to exercise a supervision over it, I think it would be desirable.

5690. Have you any recommendations of a specific character to make as to the action which Government might take?—I have noticed that this prohibition of allowing madat and chandu to be consumed in the shops has led to the establishment of dens. Where there was one smoking place there are probably now ten or twelve. These places are less subject to supervision.

5691. You mean clubs?—Sometimes they call them clubs. People hire places and get together, each man, as I have been told, contributing so much towards the use of the place. The custom of coming together in this way and smoking in company is liable, I think, to encourage the habit.

5692. Do you think the Government should interfere with the formation of these small clubs?—If they are not allowed to smoke in shops I think these dens or places should be open to some sort of supervision.

5693. Do you think that those domiciliary visits could be paid by a Government officer without exciting public discontent?—I think there would be discontent. But I think the people themselves look upon these places as nuisances. That is the only way in which I have known the use of opium to be objectionable. With regard to Chioa, from inquiries that I have made the question seems to be whether they should grow it themselves or purchase opium from us. I have been inquiring of the Chinese and of others whom I have met, and I understand that some years ago the Government there attempted to prevent, not the use of opium, but the use of imported opium.

5694. We have had a great deal of evidence on that point.—As regards the abolition of the revenue from opium I really do not see what substitute could be found for it. I think that to abolish it would very much cripple the Government. I have heard of retrenchment being suggested as a means of meeting the deficiency; but I think that Government are in such circumstances that their resources are needed for other calls upon them, and any retrenchment that might be made could not be diverted to this object.

As regards the Commission, we are very thankful that there is this interest excited and that this public spirit has been shewn in the matter, but we think that it should not be forced upon the people by any legislative measures or any attempt to prohibit the practice. I think it would be attended with some danger. The soldiery are known to be addicted to the use of opium, and any interference with their habits might lead to very serious disorder. A very much smaller thing raised the mutiny in this country.

5695. (*The Maharaja of Darbhanga.*) I think you stated that opium is the only intoxicant allowed to Mahomedans; will you kindly state on what authority you make that statement?—I did not intend to convey that impression. It is not the only intoxicant; but many strict Mahomedans, those who profess to be orthodox, do not use spirits.

5696. (*Mr. Wilson.*) Will you tell us what are the objects of the Eurasian and Anglo-Indian Association of which you are President?—The objects are to advance the political, moral, social and intellectual improvement of the community in this country; and of course we are in a large manner interested in anything that concerns the revenues or taxation or anything that might follow upon any general measure of the Government.

5697. When was it established?—I think within the last ten or twelve years.

5698. Can you give us any idea as to the number of its subscribers?—I think about 400 or 500.

5699. Chiefly in what part of the country?—In Calcutta and out of Calcutta, at various places; there are branches at Madras, Allahabad, and Bombay.

5700. You have given us what you call the general opinion of the Association; may I ask in what way that has been expressed?—Through the representatives of the Association, who were assembled in committee, and considered this matter.

5701. Have they seen this statement that you have read to us?—They have.

5702. It was submitted to them?—Yes.

5703. And approved by them?—Approved by them generally.

5704. By resolution?—By resolution.

5705. Will you give us the date?—I have not got it.

5706. You state that the present inquiry has not been called for. Are you aware that the Anti-Opium party did not call for this inquiry?—I believe they did; it did not originate in this country as far as I am aware.

5707. My question is, are you aware that the Anti-Opium party in England did not ask for the present inquiry?—I was not aware of that.

5708. You say in No. 5 that the stoppage of the system would inevitably extend the area within which the plant is capable of growth. I imagine the area within which opium is capable of growth depends on the climate and the soil?—It does, but the poppy will grow anywhere, in anyone's garden.

5709. I do not understand how any legislation can extend the area which will be capable of growing the poppy?—I believe it is not intended to prohibit the cultivation altogether; it is intended to confine it to medicinal purposes. It would be very difficult, indeed, to prevent a man from obtaining a license for medicinal purposes and applying it to other purposes.

5710. You do not understand me. I imagine that the area within which a plant is capable of growth does not depend on legislation of any kind. If the plant will grow in one case and if it cannot grow in another, no legislation can alter it?—No.

5711. What do you mean by saying that it would cause distress among the present cultivators?—I think the advances they get from Government are a very great assistance to them.

5712. Do you think that other people would cultivate it?—Yes.

5713. Then the benefit would be transferred to other persons?—It would undoubtedly.

5714. Then it would be as broad as it is long?—No; others will take it because it will be more profitable; they can sell it at their own prices; at present they are bound to deliver it at a certain price.

5715. Where does the distress come in?—The distress among the present cultivators; they would lose the advantage of these advances which they now derive, and which

Mr. W. H. Ryland.
7 Dec. 1893. are a very great help to them. If the restrictions were removed they could sell at their own price instead of accepting Government price. Not these ryots alone, but others would step in and begin to cultivate. At present Government circumscribes the area.

5716. If a certain class of cultivators lost the benefit, do you mean that another set of cultivators would share the benefit?—No; they would get no advances, that is, supposing the Government stopped their system.

5717. You say you know from your own experience what is the policy of the Government in this matter: how does your own experience enable you to judge of the policy of the Indian Government or the Home Government?—I judge from the orders that were issued to me when I was in the service that that was the policy of the Government as far as we could make it out.

5718. You drew your own inferences from what you heard?—And we acted according to the instructions we received. I may say that public opinion of course has had a very great effect.

5719. You state that the number of dens has increased, and that there are twelve now where there was one before?—When I say twelve I mean that they are much more numerous.

5720. How do you know?—I have been round and have seen them.

5721. Do you think there were many before the prohibition of smoking on the premises?—Each shop was itself a den.

5722. At that time?—At that time—that is, only within the last year.

5723. Do you not know that there were then a great many illicit dens?—They were punishable.

5724. Do you know that there were a great number of illicit dens then?—I am not aware of it. If they were illicit, of course they were established secretly and they were liable to be stopped.

5725. You are not aware that Mr. Gupta told us that there were before the prohibition of smoking on the premises scores of illicit opium dens in Calcutta?—I was Collector in Calcutta, and such a fact never came to my notice; if it was known we should have immediately pounced upon it and stopped it.

5726. Do you think that Mr. Gupta knew something that you did not?—I do not pretend to contradict him. In my experience I was not aware that there were any openly permitted.

5727. Do you not know that there are a great many now?—Yes.

5728. Could you find them?—Yes.

5729. Could you take me to a dozen now?—Yes.

5730. (*Mr. Fanshawe.*) Your Association represents Anglo-Indians and others who have thrown in their lot with this country and are mainly resident here?—Yes, and therefore they are interested in anything that concerns India.

The witness withdrew.

Mr. D. ZEMIN called in and examined.

Mr. D. Zemin.

5731. (*Chairman.*) I believe you represent the Calcutta Trades Association, of which you are past-master?—Yes.

5732. And you are Honorary Presidency Magistrate?—Yes.

5733. We shall be glad to hear from you in general terms your view as to the effects of the opium habit upon people with whom you have been brought in personal contact?—I have had considerable experience amongst native workmen during a long course of years, and I have noticed numbers of opium-eaters among them from time to time. Among the men attending daily a large establishment I should say that there were about ten per cent. who took opium; they were all men of good physique, and, except very occasionally,

when they were drowsy or a little heavy, they always did their work efficiently.

5734. Coming to the point on which you consider your testimony would be more particularly important, we shall be glad to hear your opinion with reference to any prohibitive measures in the direction of preventing the free purchase and use of opium for non-medical purposes?—My belief is that it would be exceedingly distasteful to the people generally, and will cause a great deal of discontent. It will also probably lead to considerable misapprehension of the intentions of the Government.

5735. You therefore consider that such prohibition is not desirable?—I do not think it is.

The witness withdrew.

Mr. T. N. MUKHARJI called in and examined.

Mr. T. N. Mukharji.

5736. (*Chairman.*) Will you explain to the Commission the position which you occupy in the Public Service?—I was first of all Personal Assistant to the Director of Agriculture and Commerce in the North-Western Provinces; then I was Officer in charge of the Exhibition Branch of the Government of India, and in connection with that office I was sent to England during the Colonial and Indian Exhibition; I also went to make arrangements for the Glasgow Exhibition. I now hold the post of Assistant Curator in the Economic and Art Section of the Indian Museum.

5737. Having had the opportunities you have explained to us of visiting England and observing the moral and social condition of the people there, and comparing their condition with that of the inhabitants of this country, you can tell us in a general way what is your view as to the relative effects of the use of opium and the use of alcohol?—Alcohol is many times worse than opium: that is my opinion. I may mention how I came to study the subject of opium. It was 27 years ago when I was engaged in a very arduous work. It was the hot season, and I felt very drowsy. A friend gave me a little pill, and it had a marvellous effect upon me. It removed all drowsiness, and I felt capable of doing a giant's work. Since that time I have been studying this subject. I have been to a good many parts of India, and wherever I went I asked the people about opium, the extent of its use, the manner of using it, and its effects upon the human constitution. I have been paying attention to this subject since 1866.

5738. You are not a professional man, and we have heard very fully from the medical profession a statement of

what they think are the effects of opium. Will you give us your impression in general terms?—My impression is that Europeans entertain a very unreasonable prejudice against opium, especially missionaries. We cannot understand how people who have lived so many years in this country and have freely mixed amongst the people can shut their eyes to the harmlessness of opium, at least in comparison with alcohol. I live in a malarious village, and I have been in various parts of India, and my impression is that opium prolongs life by arresting decay after a certain age. It is no doubt a poison, but people think it necessary to use a certain kind of poison to counteract other poisons. Our people have to work from morning till evening under a tropical sun; they have to stand knee-deep in mud to transplant rice, heedless of torrents of rain from the monsoon sky; they have to stand waist-deep in putrid water to extract jute during some of the most unhealthy months of the year; they breathe air full of miasmatic effluvia and drink impure water. With all these conditions of disease and death surrounding them, I think it would be most cruel and mischievous to forbid them the use of a stimulant or narcotic or sedative, though it be a poison, which their instinct tells them is good for them. That is my opinion with regard to the use of opium in this country. I have known many old people among my relatives and friends who after a certain period of life felt the discomforts of age and then began to take opium; they found it beneficial, and they continued it. Others find that it produces constiveness, and they give it up after a short trial. I have also known younger people suffering from chronic diarrhoea, rheumatism and other diseases, whose life has been a burden not

only to themselves but to others, who, when all other treatment failed, took to opium and got well. I know hundreds of suffering people, now enjoying health by the use of opium. I have known many families ruined by alcohol; I do not know a single family that has been ruined by the use of opium.

5739. What do you think would be the feeling of this country if Government were to attempt to promulgate an edict for the total prohibition of the use of opium?—There would be universal dissatisfaction and disaffection all over the country, because things like opium, when not abused, are the poor man's solace. Besides, it is not necessary thus arbitrarily to interfere with the liberty of the people. When opium was sold at Rs. 2 a seer, the good sense of the people prevented them from using it to excess, because they did not like to contract a habit of that kind, however harmless. Now it is Rs. 32 a seer. I think you may depend upon the good sense of the people that they will not abuse it. The people think that all this agitation has for its ultimate object the introduction of more whisky and rum into this country. Our people have read what the European races have done to non-European races in other parts and the world. They have read how Europeans poisoned with strychnine the wells of the aborigines of America, and how they scattered among these people clothes infected with small-pox virus, and how during a famine in Australia, European settlers distributed flour mixed with arsenic to the famishing aborigines, and how finally they are now plying them with fusil-oil whisky and poisonous rum. We cannot understand why agitation should not in the first instance be directed against all those cruel things and why it should be directed against a harmless habit of the people here.

5740. You think they are not prepared to give credit to the Anti-Opium Association as being actuated by the purest motives?—We cannot get the uneducated people to understand this. Personally, I understand the sincerity of the movement, but most of our people cannot understand it. The other day I was sitting in a meeting of the Landholders' Association where a Pleader, a very intelligent man, remarked: "Their vices may remain, but whatever little vice we have must go." In 1890 I recommended the English people to take opium instead of alcohol. These are the words I used:—"Cannot we induce the people of England to eat opium instead of annually spending more than two hundred crores of rupees in the consumption of alcoholic liquors? Opium is amazingly cheap, duty included; it prolongs life after a certain age, and it can be asserted with all the force of truth and seriousness that its substitution in place of alcohol, if that is possible, will bring back happiness to thousands of families in Great Britain and Ireland where there is no happiness now. It is a pity that European Doctors in India have no spare time in their hands, otherwise we would have long heard a strong protest against the attitude of philanthropists, who, leaving their own country steeped in alcoholic drinks, should go so far as China to prevent people there taking a substance which is a thousand times less harmful than alcohol, if not actually beneficial after a certain age and in a certain climate. It will greatly benefit England if her people take to opium, and it will enable us to pay off the "Home charges" by means of this drug with the fictitious value put upon it by the monopoly. It will be an evil day for India if these philanthropists

succeed in abolishing our opium trade with China, and it is time for rival faddists to spring up with the object of extending the consumption of the Indian opium in England, Europe, and America."

Mr. T. N.
Mukharji.
7 Dec. 1893.

5741. And you adhere to those views now?—I know that it is impossible for the English people to take opium instead of alcohol, but my firm belief is that it would do immense good to England if the Anti-Opium Association would direct their attention to that point, *i.e.*, to persuading the people of Great Britain to take to opium.

5742. (*Mr. Wilson.*) You have stated that the habit of taking opium arrests natural decay after the age of fifty. I can understand that that is an impression on your mind, but I want to know if you have any absolute facts or statistics of any kind in support of your statement?—It is an old saying in the country.

5743. I want to know if you have any statistics or any other way of establishing the fact besides old proverbs?—Such things cannot be proved by statistics. When I see a man of 60 or 65 years of age sleek and young-looking, I look at him and I say at once: "Here is a man of 65, but he looks 50," and then I ask him "Do you take opium?" and he replies "Yes." The other day I met a friend. He does not take opium, but he lives where opium is prepared. He is 40, but he looks 30 or 35. I have known many cases in which old people have looked sleek and young, and almost by looking at their faces I could say "This man takes opium."

5744. You say that the habit of taking opium in excess among those who cannot afford it leads to petty theft? Have you any actual evidence of that?—Yes. When the poor who smoke opium cannot afford to buy it, they generally in the evening go about people's houses and steal a little brass cup or something worth a rupee or so. I was once a police officer and I came across many cases of this kind.

5745. Do you know that of your own personal knowledge?—Yes.

5746. Have you any statistics on the subject?—No statistics are kept. These people are stealers of trifles.

5747. Do some people abstain from opium because they are afraid of contracting the habit?—Many.

5748. Is it a fact that after a man has passed 50, feeling the discomforts of age, a friend will advise him to take opium; that he thinks many times before he takes it, and says "If I can help it I will not be a slave to a drug, however beneficial it may be"?—I have known many such cases.

5749. (*Mr. Fanshawe.*) Do I understand that you eat opium yourself or not?—No. I only tried it five or six times. I took it for a short time because I was threatened with a serious chest complaint. I did not want to contract the habit, and I gave it up and took a few drops of homoeopathic *Nux Vomica*.

5750. You have taken opium personally, but you are not a habitual consumer?—No, I am not a habitual consumer.

5751. As the result of your inquiries you state that the habit of eating opium frequently grows out of some disease; is that the general result of the attention you have given to the subject?—That is so as a rule.

The witness withdrew.

Adjourned to to-morrow at 10-30.

At the Council Chamber, Writers' Buildings, Calcutta.

TWENTY-FIRST DAY.

Friday, 8th December 1893.

PRESENT :

THE RIGHT HONOURABLE LORD BRASSEY, K.C.B. (CHAIRMAN, PRESIDING).

THE HON'BLE SIR LACHHMESWAR SING BAHADUR,
MAHARAJA OF DARBHANGA, K.C.I.E.
MR. A. U. FANSHAWE.

MR. HARIDAS VEHARIDAS DESAI.
„ H. J. WILSON, M.P.

MR. J. PRESCOTT HEWETT, C.I.E., *Secretary*.*Mr. R. Steel.*

Mr. ROBERT STEEL called in and examined.

8 Dec. 1893.

5752. (*Chairman.*) Will you state to the Commission what have been the positions you have filled in India, and how long you have been here?—I have been 22 years in India as a merchant, and during that time I was 4 years a Member of the Viceroy's Council. I have been 16 years Port Commissioner, and have been generally occupied with the affairs of the place.

5753. Have you been concerned as a merchant to any extent in the opium trade with China?—Not in any way.

5754. You are here to speak to the Commission, and no one can be more competent to do so with reference to the trade between India and China in opium regarded in its commercial aspect.—My object in coming here was to represent public opinion as to the financial aspect of the question. Like every one else, I have formed my own opinions, but they have been formed on evidence which has been brought before the Commission, and it is therefore unnecessary for me to repeat them.

5755. The Commission would be exceedingly glad to hear from you, on behalf of the commercial community, their general view of the question.—The commercial community are satisfied that no evils result in India from the consumption of opium. Rather they consider the reverse. On the financial question they consider that it is impossible for us to do without the opium revenue; that no substitute can be found for it. They consider that it would be bitterly resented by all classes throughout India if an attempt were made to take away the opium revenue.

5756. Would you develop more in detail the reasons why, in the opinion of the commercial community here, the revenue derived by Government from opium is indispensable?—The Government of India is in severe financial straits already. If the opium revenue be taken off, it would be necessary to find some substitute, and I am not aware of any substitute. The only possible thing that might be done, would be to put on an import duty on piece-goods which would not produce more than a third or a fourth of the present revenue from opium, or to double the salt-tax, to which, as you know, there are many objections.

5757. Will you explain as fully as you can to the Commission in what way the loss of the trade with China in opium would prejudicially affect India's position in regard to the general balance of trade?—On the assumption that the exportation of opium was prohibited?

5758. You can discuss it upon that assumption.—Assuming that the other produce were grain instead of opium, and that the whole of that produce were exported, the value of that produce would not be more than a quarter of the value of the opium which is exported, and the balance of trade would be affected, according to my estimate, to the extent of six millions sterling.

5759. How would that affect the ability of the Government to sell its bills in London?—The power of the Government to maintain the value of the rupee at a higher point than its silver equivalent depends upon the balance of trade. They cannot permanently maintain the rupee above the value of uncoined silver, except by maintaining a balance of trade sufficient to defray the obligations of the Government of India in London. They may do it temporarily, as they

are doing it now, by borrowing gold in London and locking up silver in India; but that must come to an end; it is only a question of time how long they can go on.

5760. We have been told that the Chinese indebtedness to India in respect to its importations of opium is partly adjusted by the exportation of silver into India; do you know anything of that?—Occasionally small quantities of silver come from China to India, but the trade is comparatively unimportant. China pays for her imports from India of opium and yarns; she pays in London by the produce of the silk and tea that she sells in London. Through the exchange banks the matter is adjusted in London. Occasionally some adjustment is required by sending bullion one way or the other, but that is comparatively unimportant.

5761. I take it from you that the adjustment of China's liabilities to India by the exportation of silver bullion to this country is not sufficiently considerable to exercise a prejudicial effect on the value of the rupee in this country?—No.

5762. Looking at the question from your independent stand-point, may I take it that you would view with regret any substantial change in the policy of the Government in relation to the opium revenue?—I should view it with great regret. In my opinion any proposal to do away with the opium revenue would be met by such a tremendous agitation throughout India, that no responsible Government could possibly venture to go on with it.

5763. Assuming that the growth and exportation of opium were not prohibited, but permitted as at present, have you any suggestion to offer with regard to the regulation under which the trade is now permitted to be conducted? Do you know from any knowledge of your own that there is occasion for a greater strictness in the regulation of the licenses for the retail sale of chandu or madak, or otherwise?—I have no knowledge of my own which would lead me to that conclusion. During my 22 years in India I have never known a case of anybody being injured by eating or smoking opium.

5764. Looking at the question from a moral stand-point, do you consider that the position of the Government of Bengal, where it has a monopoly of the trade, is less satisfactory than its position in Bombay, where it only appears as the collector of an export duty, and in fact it may be regarded generally as exercising a restraining influence upon the trade?—I see no moral distinction between the two courses; it is a question of expediency.

5765. Are there any other points upon which you would like to speak to us?—We lay the greatest stress on the objection to the finding of any other revenue in place of this.

5766. You declare it to be impossible?—Utterly impossible. I believe the agitation would be so tremendous that nothing could stand before it; it would be a very serious political danger.

5767. As to whether it would be reasonable to claim from the Home Government that it should take a larger share in the loss and relieve the Government of India of some portion of their charges, you do not feel perhaps that

you are particularly called upon to offer an opinion?—According to my calculation it would cost 200 millions sterling; the Commission are the best judges as to whether the House of Commons is likely to sanction such an expenditure.

5768. (*Mr. Wilson.*) Is the Chamber of Commerce chiefly composed of natives of Europe?—Entirely of natives of Europe.

5769. It represents what may be called the European commercial community?—Yes.

5770. Is it the Chamber of Commerce of Calcutta?—Of Bengal.

5771. You referred to the amount of bullion that is sent from China occasionally; can you give us any figures upon that point?—I have not the figures with me, but they will be at the command of the Commission from some one who has them accurately.

5772. The amount you mention sounds very large; can you say what proportion it constitutes of the total trade?—It varies extremely, in some years perhaps none; in other years a crore and a half. I think that is the greatest amount I remember. I would rather not speak definitely as to the figures.

5773. Would your Chamber be able to furnish the figures?—I have no doubt they would.

5774. You just now spoke of 200 millions; what claims do you include in that?—The capitalization first of the revenue, and I include a sum which will be required to compensate the Native States for their loss of revenue; then there would be possible claims made by cultivators for the diminished value of their land, but I will not speak of that, because there are others who can give better information on that point. Altogether not less than 6 millions sterling per annum would have to be found, which we may take to represent a capital sum of 200 millions.

5775. You have referred to the possibility of compensating cultivators; did you ever hear of any cultivator being compensated?—No, I have not heard of any.

5776. (*Mr. Fanshawe.*) May I ask if you have not had in many ways an intimate knowledge of the tax-payers of the country, so that you may claim to represent their views with some authority?—I have.

5777. Your remarks would apply largely to the tax-payers of the country?—Entirely so.

5778. I understand that you speak more directly as to the interests of the trade of India?—I wish to speak in the interest of the tax-payers of India.

5779. How would you regard the abolition of the opium revenue as between the interests of Indian trade and the interests of English trade?—It appears to me that it would be to the interests of neither.

5780. Has it occurred to you that it would affect the interests of England perhaps more directly in increasing

The witness withdrew.

Mr. W. H. CHEETHAM called in and examined.

5788. (*Chairman.*) I understand that you have been intimately connected with the industry of this country, employing over 6,000 natives?—Yes.

5789. How long have you been in India?—Twenty-eight years.

5790. What has been the nature of your engagement here?—For the first 17 years I was engaged in the piece-goods trade; since that time I have been connected with a firm which has very large industries in cotton spinning, indigo factories, tea factories, steamers, collieries, and shellac works.

5791. Are these industries exclusively connected with Bengal?—Yes, including Assam of course.

5792. Does your experience give you confidence in expressing an opinion as to the disposition which the people of India may manifest towards any proposal for substituting other forms of revenue for the revenue derived from opium?—As far as the industries situated in Calcutta are concerned it does.

5793. What in your opinion would be the feeling that natives would entertain towards any change of taxation arising out of the loss of the opium revenue—what would they say to increased direct taxation?—They would object to it very strongly.

the trade from England to China?—I think not. I think the Chinese will have their opium, and if we do not give it, they will grow it for themselves.

Mr. R. Steel.
8 Dec. 1893.

5781. You would not distinguish between the effect of the abolition of the opium revenue on the trade of India and on the trade of England with China?—I do not wish to distinguish in that way.

5782. With regard to the effect of exchange, it has been stated in a memorial before us that the stoppage of the trade in opium would in all probability have a very beneficial effect on silver exchanges "by putting an end to the drain of silver from China to India in favour of opium, thereby enabling the Chinese to substitute the use of silver for their present encumbering copper coin, thus tending to check depreciation of silver, which is at present so serious an embarrassment in the finance of India." Can you express an opinion as to whether the stoppage of the trade would tend to check the depreciation of silver?—It would have a directly contrary effect.

5783. Will you explain your reasons for holding that view?—The only way in which the value of the rupee can be maintained at a higher level than its metallic equivalent is by maintaining the balance of trade in favour of India to a sufficient extent to pay her indebtedness in England, and also to pay for any bullion which is required to be imported. The financial measures of the Government of India taken last June have already greatly interfered in my opinion with the balance of trade, and have brought upon them serious difficulties; but if by the prohibition of the exportation of opium you take another sum of 5 or 6 millions from the balance of trade, the situation is hopeless, and the rupee must fall to its metallic equivalent.

5784. I do not know whether you have read the opinion of Sir David Barbour given before the Commission on that point; practically you seem to take the same view as he did?—Sir David Barbour, I think, ridiculed the suggestion, and I would take the same line. I do not know that he answered in detail so much as I do. Supposing other produce to be grain in place of opium, and supposing that produce to be exported, its value would be so much less than the value of the opium which we now export, that the balance of trade would be affected to the amount of 6 millions.

5785. (*Mr. Wilson.*) You said in reply to Mr. Fanshawe that you spoke rather from the point of view of the Indian tax-payer?—I did.

5786. I thought when you were speaking to him you were speaking from the stand-point of the Bengal Chamber of Commerce?—I am able fortunately to speak for both.

5787. Will you tell me what opportunities you have of knowing exactly the views of the Indian tax-payer?—I have had great opportunities during my time of constant communication with natives as well as Europeans, and I claim to speak with a certain confidence of the opinion of India.

The witness withdrew.

Mr. W. H. CHEETHAM called in and examined.

5794. Is there any form of indirect taxation that you think would be accepted?—Absolutely none.

5795. You cannot suggest any?—I cannot suggest any tax. I think that every tax which could possibly be levied has been considered by the financial advisers of the Government and has been criticised in every possible way, only to be condemned.

5796. May I take it that people would not like an increased tax on clothing imported from Lancashire and elsewhere?—That would probably be the least objectionable tax which could be imposed.

5797. Would such a tax be likely to be productive?—I think it would produce at the rate at which it was last levied about a crore and a half. The rate formerly was 5 per cent. on piece-goods, and $3\frac{1}{2}$ per cent. on yarns; at this time it would be found to produce about a crore and a half irrespective of any excise on Indian mills which, I presume, we should have to submit to.

5798. Such a tax would be least objectionable to the people of India and most objectionable to the people of Lancashire?—Just so.

5799. You have discussed salt and tobacco. What do you say to that?—I do not think that the people of Bengal get enough salt. The tax on salt is five times its value,

Mr. W. H. Cheetham. and I should object strongly to an increase of the salt-tax, except under the direst necessities of the Government.

8 Dec. 1893. 5800. Among the large number of working people with whom you are connected as an employer, is the use of opium widely prevalent?—Our resident native doctors inform me that about 5 per cent. of the working people eat opium. They draw a wide distinction between eating and smoking opium.

5801. Do the majority of those who use opium take it in a solid form, or do they smoke it?—In what you call a crude or solid form.

5802. What is the opinion of your native doctors with reference to the effects of opium upon your working people who use it in a solid form?—Their opinion is, that as long as the people are well nourished, the use of opium has no bad effect whatever upon them.

5803. Do they think that sometimes it has a good effect?—Yes.

5804. As to smoking?—Smoking is only indulged in by about six people out of a population of 3,000 in the village close to the mills, and those people are regarded as outcasts by the rest of the community.

5805. So that to the consumption of opium in the form of smoking the natives entertain a general objection, and you believe that the practice is harmful?—Yes.

5806. Can you suggest any means by which the Government could restrain more efficiently and directly than

it now does the practice of smoking opium in this country?—I cannot.

5807. You think that native opinion is the best force to employ to keep that practice in check?—If there is any harm arising from the use of opium, it can only be removed by the growth of education.

5808. (*Mr. Wilson.*) I may take it that on most of the points to which Mr. Steel has referred you substantially agree with him?—I do.

5809. You say in your printed statement “I understand my evidence is required chiefly upon the willingness or otherwise of the people of India to accept additional taxation to make up for a substantial loss of the opium revenue”?—Yes.

5810. I suppose you are aware that the agitators in England have maintained that that ought to be borne by England?—I am.

5811. With regard to salt, do I understand you to mean that a large portion of the population of Bengal is unable to obtain sufficient for domestic use, or for manufacturing purposes?—I mean for domestic use.

5812. You are not referring to any large consumption for special purposes?—No. May I state that the native doctor of our mills told me that one-third of the population of Bengal is unable to get salt, and that the people burn the stems of plantain trees to get a little salive matter to mix with their food?

The witness withdrew.

Mr. FERDINAND SCHILLER called in and examined.

Mr. F. Schiller.

5813. (*Chairman.*) I understand that you have been delegated to appear before us as a representative of the Bengal Chamber of Commerce?—Yes.

5814. You are here, are you not, to give evidence as to the possibility of substituting other taxation for the opium revenue?—Yes.

5815. You have heard already Mr. Steel and Mr. Cheetham; may I ask you on this subject whether you concur in their views?—I entirely concur in their views. I absolutely know no taxation that could be substituted for the opium revenue. You might double the salt-tax and double the petroleum duties, and introduce a tobacco-tax, but you would still have an enormous deficiency. You might of course introduce the Manchester duties again, which would be very much resented at home, but they would be the least onerous upon the population, because the people who clothe themselves and can pay such a tax would be chiefly the wealthier classes: the poorer classes chiefly use country cloths.

5816. What do you think of the tobacco-tax?—That, I am afraid, would be very difficult to collect. Every native

would grow tobacco, so to speak, in his ring fence in his homestead; it would be extremely difficult to tax it.

5817. Do you think that interference on the part of the Government with the growth of opium would be resented by the great mass of the people?—I do think so. I think the people would see in it the first step towards interfering with their religion and their habits.

5818. Is there any other essential point upon which you wish to speak to us?—No, except the impossibility of substituting other taxes.

(*Chairman.*) It is important that the Commission should have before it the opinion upon that question of the important body which you represent. You have declared your views or the views of the Bengal Chamber of Commerce upon the subject, and I do not know that it would make them more emphatic if I call upon you to repeat the same statement over and over again.

5819. (*Mr. Wilson.*) I understand that you agree substantially with what the two gentlemen who preceded you said?—Yes, with Mr. Steel and Mr. Cheetham.

The witness withdrew.

Mr. NIL RATAN SIRCAR, M. A., M. D., called in and examined.

Mr. Nil Ratan Sircar, M.A., M.D.

5820. (*Mr. Wilson.*) You are a Master of Arts?—Yes.

5821. And Doctor of Medicine?—Yes. I am also a Fellow of the Calcutta University in the Faculties of Arts and Medicine, and I am Lecturer of Forensic Medicine in the Calcutta Medical School.

5822. What classes, races or castes have you had experience amongst?—Amongst Hindus and Mahomedans of different classes.

5823. For how many years?—I have been in practice as a medical man for the last six years, but I was qualified about twelve years ago.

5824. What special opportunities have you had for observing?—I was for two years House Surgeon of the Mayo and Chandney Hospitals, where the daily average of outdoor attendance exceeds 300. I have also to deal with opium-eaters professionally every now and then.

5825. How far is opium-eating or drinking prevalent amongst these classes more than opium-smoking?—In my opinion, 10 per cent. in the upper and middle classes, and barely 1 per cent. amongst the lower classes take opium. This, of course, includes cases of opium-smoking. Opium-eating is prevalent more among the upper and middle classes

than among the lower classes; whereas opium-smoking is almost confined to a section of the lower stratum of the middle classes. People belonging to the masses rarely take opium. The cultivator, for instance, the palki-bearer, the fisherman, the day-labourer, etc., who have to lead a life of active muscular work, rarely take opium, though many of them have to pass the greater part of the time in the malarious swamps of Bengal; nor do their means allow them to pay for their luxury of opium and its accessories. A few members belonging to the lower classes, however, for example, tailors, carpenters, etc., who have more time and little work, join the middle classes in indulging in the luxury of opium-smoking.

5826. When is the habit generally acquired?—The habit is generally acquired between the 30th and the 40th year, though cases of opium-smoking have been known to commence earlier.

5827. What are the motives which induce people to take opium?—In most cases indulgence and luxury. Some take it as an aphrodisiac. I may add that when taken as an aphrodisiac, I have also seen it administered to their wives in many cases.

5828. Is it easy to abandon the habit when once formed?—It can be relinquished but with difficulty. In some

cases most dangerous and evil consequences have taken place after relinquishing opium. I know cases of that sort. But ordinarily the habit can be relinquished with some difficulty.

5829. Is there a marked difference between moderate and excessive consumers?—That is a question which I could not thoroughly understand; it was rather vague, and I could not answer the question definitely.

5830. The question is whether you draw any particular and marked distinction between those who are in the habit of taking opium in small quantities or in moderation and those who take large or excessive quantities?—In the case of alcohol it is easy to make a distinction, but in the case of opium, it is not easy. Under one ounce of alcohol, corresponding to two ounces of brandy, it would be almost harmless; but in the case of opium it is different.

5831. What proportion of income does each habitual smoker spend on opium?—The proportion varies in different classes. It is very trifling with the members of the upper class. It is a pretty good drain upon the income of the members of the middle class; and it is not less than one-fourth of what a member of the lower class earns as his day's wages.

5832. Is there any general tendency to increase the dose?—Yes, at first a small dose is sufficient to fulfil the desired object, but as the victim becomes more and more habituated to the drug, he generally not only requires a larger dose, but also at a shorter interval.

5833. What do you say as to the results of the habit, physically, mentally, and morally?—When habitually taken opium acts as primarily a stimulant chiefly of the brain, but also to some extent of the circulatory system. When taken in small doses (less than 1 grain for the first few weeks), this stage of excitement lasts for 5 or 6 hours and is followed by sound sleep. The after-effects when the primary sleep and excitement have passed away, are nausea, headache, depression, and listlessness. As the habit becomes confirmed the excitement diminishes and the miserable after-effects become more marked and more prolonged. To combat this depression of spirits, a larger dose is often had recourse to. When the victim sticks to a very small dose and when he can manage to live upon milk and other similar nourishing articles of diet, the evil effects of the habit are not so well marked for a fairly long time, but the process of digestion being slowly impaired, mal-nutrition is sure to supervene in the long run. As a rule, however, the dose is indefinitely increased in most cases; the process of general nutrition suffers materially within a short time; the power of resistance to disease generally becomes diminished, and the opium-eater becomes pre-disposed to some diseases, for example, cold, bronchitis, diarrhoea, dysentery and dyspepsia. The power of repair becomes also slow; and hence the confirmed habit of opium-eating is looked upon by surgeons as a disadvantage in operation cases. In confirmed opium-eaters comparatively trivial attacks of ordinary diseases, such as fever, diarrhoea, bronchitis, cold, and specially dysentery, have generally a grave prognosis: almost every medicine fails to produce its re-action on the system. As a rule opium-eaters die of very trivial complaints; opium has no dietetic value. The exhilaration of mind produced in the first stage of opium intoxication, together with the sense of freedom from anxieties and sufferings of all sorts, is the great temptation of opium. In a beginner this effect is extremely deluding, and if he sticks to a small dose it may last with him for a fairly long period. But with a confirmed opium-eater who often takes to an increased dose gradually, this effect vanishes soon. Sooner or later torpor of the mind supervenes and the victim becomes dull, apathetic, enfeebled in intellect and, in fact, almost demented. The moral nature of the victim is also slowly but steadily affected. He becomes gradually more and more idle, sluggish, shy and cowardly; he has no scruples to give false evidence in Court; he has no scruples to steal other people's property. In many cases the moral sense becomes almost perverted. All these effects are much more pronounced in the opium-smoker than in the opium-eater.

5834. Have you any knowledge as to the experience of Life Insurance Companies on this subject?—Yes, I am connected with a Life Insurance Company in this city. Ordinarily we do not pass opium-eaters, but if any candidate takes small quantities we pass him at a higher premium.

5835. Can you give any opinion as to the proportion of injurious results that follow from opium-eating?—In three-fourths of the cases in some shape or other.

5836. What do you say in regard to any popular opinion as to opium being a protection against fever?—I do not

think that the public have the idea that opium is a protection against fever.

5837. Do you think that it is?—No, I do not. There is no evidence to prove the supposed prophylactic action of opium against fever.

5838. Is the use of opium specially useful in malarious districts?—I do not think it has ever been used as a useful medicine in malarious districts, either as a prophylactic against fever, or as an antiperiodic in the course of the fever. It has, however, been tentatively used by Dr. O'Slaughnessy in malarious fever in the intermission stage as an antiperiodic, but as regards this action he himself says: "The antiperiodic virtues of the drug are scarcely procurable from any safe doses." I have been to several of the malarious districts of Central and East Bengal, and nowhere have I noticed opium appreciated by the people as a preventive against malarious fever; on the other hand, I have noticed opium-eaters equally affected with malaria with abstainers.

5839. Do you consider that opium is needful, or that the people believe it to be needful to enable working people to get through their work?—Certainly not. In Bengal the working people are much better without opium. The use of opium would make them much more idle, dull and torpid than they actually are. On the other hand, I have been credibly informed that the lower class people of Assam and certain hill people who take opium are extremely idle and leave the greater part of their manual work to their wives and daughters who take less opium and are much more active. Compared with the opium-smoking chair-coolies of China, who on the authority of Mr. Cooper could work well as long as they got their daily supply of opium, but "became wretchedly weak and miserable after a single day's absence, and who would be down with water streaming from their eyes, listless, disinclined to eat and unable to sleep" without opium, our working people, malaria-stricken and ill-fed as they are, are much more advantageously situated, being much more regular, steady and hardy in their work. I have a very poor idea of the working capacity of the opium-smokers. I speak of Bengal only.

5840. Do you think that the taking of opium is regarded as disgraceful or discreditable?—Yes. The words *afm-khor* (opium-eater) and *gooli-khor* (opium-smoker) are terms of reproach.

5841. In reference to the licensing system, do you think that the existing method of granting licenses for the sale of opium tends to the spread of the habit, or to its restriction?—To the spread of the habit.

5842. Has the closing of the shops for consumption on the premises been fully carried out in your opinion?—Not in Calcutta so far as I know.

5843. Can you tell us whether you think that the results of prohibiting consumption on the premises have been so far beneficial?—I have not formed any opinion on that point.

5844. Do you think it would be desirable to prohibit the sale of opium except for medical purposes?—Yes.

5845. Do you think that the public opinion of India would justify anything of that kind?—So far as I can gauge public opinion, they will support it.

5846. Have you formed any opinion as to the mode of dealing with the loss of revenue?—I think myself not competent to speak on that subject.

5847. If there were any further restriction or prohibition, would it be desirable to make special provision for the wants of those who are already accustomed to the use of opium?—Yes, at least for some time.

5848. Do you suggest what means could be adopted for doing that?—It may be a doctor's prescription, as other medicines are sold.

5849. Is it not the case that there are large parts of Bengal in which there are no medical men available?—Yes, there are some places, and in those places I think it may be sold through Post Offices, as quinine is now sold to malaria-stricken people by the Government.

5850. Are you acquainted with Sanskrit books of medicine?—Some of them.

5851. Do you wish to say anything in reference to the introduction or the use of opium as mentioned in Sanskrit books?—All I know is that the word "opium" does not occur in early Sanskrit works. The date of Vāya Prakash, the earliest work in which opium is mentioned, has been fixed by Dr. Wise as three hundred years ago. There is a particular disease mentioned in that book which prevailed first amongst the Portuguese and is called Firingi

Mr.
Nil Ratan
Sircar,
M.A., M.D.
8 Dec. 1893.

Mr.
Nil Ratan
Sircar,
M.A., M.D.

8 Dec. 1893

Rog. That is the name under which syphilis is described in Vaba Prakas. That shewed that the book must have been compiled after the Portuguese had been in India. Besides that a remedy for the disease is also mentioned.

5852. I dare say you are aware that we have had some native practitioners here according to the Ayurvedic system who have told us that opium was recommended in some of their books eight hundred years old?—Yes, but I do not think Vaba Prakas, the earliest work in which opium is mentioned, is eight hundred years old.

5853. You are aware that we have had a good deal of medical evidence here of a very different nature from your own: are you able to tell us anything of what you believe to be the general opinion of your profession in Calcutta practising according to European methods, whether European gentlemen or Indian? Can you tell us whether the views you have expressed or the views expressed by Dr. Crombie and Dr. Harvey are the more generally held by members of your profession?—That is a question I am not competent to answer.

5854. (Mr. Fanshawe.) You say that your professional experience extends over six years?—Yes.

5855. Has it been limited to Calcutta?—Not entirely limited to Calcutta. I have made frequent tours in Eastern Bengal and Central Bengal and other places. Calcutta is the principal field of my practice.

5856. Have you made the opium habit among the people a subject of any special inquiry or study?—Not of special inquiry, but I have frequently come in contact with opium-eaters and I have noticed them and formed my opinion about them.

5857. In the medical profession I think the opinion of a medical man carries weight in so far as it represents a wide experience, or the results of what might be called adequate statistical inquiry; would that be so?—Of course.

5858. In one of your answers you have stated that the cultivators and the fishermen who pass the greater part of their time in the marshy parts of Bengal are not in the habit of taking opium?—Yes.

5859. Where have you acquired your experience of these classes of people?—In several districts. I belong to the 24 Parganas, and am a native of where cultivators and fishermen never take opium. I have several times been to Eastern Bengal where I have met many of the lower class people and fishermen living on the banks of the river. I have inquired of them, and they never take opium. The only thing that many of them take is ganja.

5860. On what occasions have you been to the districts of Eastern Bengal, and what opportunities have you had of studying the habits of the people there?—I have been there frequently on professional and friendly visits in Mymensingh and Dacca.

5861. Lasting for any length of time?—Lasting for one week, sometimes two weeks, sometimes ten days—different lengths of time.

5862. On these occasions were you brought into contact with the fishermen and the labouring classes?—On several occasions I have come in contact with them.

5863. It is only on these occasional visits to these districts that you gained your knowledge of these people; is that correct?—I have been to Eastern Bengal several times. I am a native of this district, 24-Parganas, but I have relatives and friends in different districts of Eastern Bengal. Noakhally and Chittagong are the only districts I have not visited.

5864. You have further stated that the lower class people spend on an average one-fourth of their day's wages on opium?—Yes. Those who take it.

5865. What do you regard as an average dose? How much opium do these people take in the day?—Four grains in the morning and four in the evening.

5866. What would the price of that be in Calcutta?—About two pice, or half an anna.

5867. It has been stated that five grains in Calcutta could be obtained for one pice.—About four grains for one pice, or eight grains for two pice.

5868. Then do you mean that two pice represent one-fourth of the average daily wages of the work people?—I have explained that.

5869. You mean two pice plus additional expenses on account of extra diet?—That is what I mean.

5870. You speak of sweetmeats not ordinarily forming part of the family diet; does that apply to persons of the

middle class?—Ordinarily that applies to middle class people; they do not take sweetmeats every day.

5871. In 1887 I was a president of a small committee to enquire into the comparative cost of living in Calcutta and Simla. We took the evidence of a number of Bengali clerks who gave the details of their articles of daily food, and in every case, according to my recollection, they stated that they ate sweetmeats as a matter of ordinary diet: is that correct or not?—In my opinion that is not correct so far as the average middle class people are concerned.

5872. Sweetmeats do not form part of the ordinary diet during the day?—Some of them take it at tiffin.

5873. Then they do form part of their ordinary diet during the day?—Not to all, and the opium-eater requires more.

5874. You have stated that the confirmed habit of opium-eating is a great disadvantage in operation cases: have you performed operations in the case of opium-eaters?—I have not, but I know Surgeons who have avoided it, unless it was an operation of emergency.

5875. What was their reason for this?—My own professor, Dr. McCleod, used to say that it was a disadvantage, and in his own book he mentions it as a disadvantage.

5876. You are aware that other medical witnesses have expressed a different opinion?—Yes.

5877. You are therefore not speaking of your own knowledge?—Yes, of my own knowledge. I would avoid operations on opium-eaters.

5878. You have also said that as a rule opium-eaters die of very trivial complaints: do you mean eaters in excess or eaters in moderation?—With but few exceptions confirmed opium-eaters run to excess.

5879. "Confirmed" is a general word; I understand it to mean habitual; do you mean habitual eaters in excess?—I cannot draw a sharp line of demarcation between one eating it in excess and one in moderation. If it is taken a long time it generally runs to excess.

5880. You think that the habitual use generally leads to excess?—Yes.

5881. Then what do you mean by saying that opium-eaters die of trivial complaints?—Complaints that would be extremely trivial in other cases—ordinary slight fever which may run to 102, with slight bronchitis, diarrhoea, ordinary attacks of dysentery: extremely trivial complaints in other people, but dangerous in the case of opium-eaters.

5882. Have you had experience yourself of such cases?—Yes, several.

5883. Do you mean five or six?—More than that.

5884. You have also said that the opium-eater has no scruples about giving false evidence in Court; is that within your own experience?—I passed my younger days with opium-eating young men in my village, and I knew opium-eaters who gave false evidence in Court. I do not mean all opium-eaters.

5885. Then you would like to qualify that statement?—Yes.

5886. Will you tell us what you really mean?—I mean many confirmed opium-eaters and opium-smokers.

5887. And your knowledge on the subject is what you gained as a boy and a youth in your own village?—Yes.

5888. You further say that the opium-eater is unscrupulous about stealing other people's property?—That has special reference to opium-smokers in our village. If any petty theft occurred, say, losing an ordinary household utensil, or having any orchard robbed, people would go to the opium-smokers at once, and in nine cases out of ten the article would be recovered.

5889. You qualify your former statement, therefore, by saying that these remarks apply to opium-smokers?—Yes; to confirmed opium-eaters in excess and to smokers. That is the rule, but I do not mean it to be taken as a universal proposition.

5890. You said you have never heard anything of the use of opium in malaria; are you aware that the people of the country have a belief that it does prevent chills or malarial influences?—I am not aware of it.

5891. You have never come across that belief in any district?—I have frequently come in contact with the masses, but they never told me that they had that belief. I have inquired whether they had that belief, and they said they had not.

5892. You have said that you have been credibly informed that the lower class people of Assam, and certain

hill people who take opium, are extremely idle, and so on : to what classes do you refer ?— I refer to the labouring classes.

5893. The cultivating classes ?—Yes, it includes the cultivating classes.

5894. Have you made any inquiries on that point ?—Yes, I have made inquiries of my friends, and I have been informed that the class of people who do not take opium are much more active and laborious than ordinary opium-eaters.

5895. (Chairman.) You have no personal knowledge ?— I have not.

5896. (Mr. Fanshawe.) You have used the word *goli-khor* ; I believe that means a smoker of *madak* ?—Yes.

5897. And that would be employed as a term of reproach ?— Yes.

5898. Does *afim-khor* represent as regards opium what the term "drunkard" would represent as regards alcohol— does it mean an opium sot or an eater in excess ?— It means the opium-eater.

5899. An opium-eater generally, or one who eats opium in excess ?— It means the confirmed opium-eater.

5900. (Chairman.) You have expressed the opinion that opium is of no dietetic value whatever ?— Yes.

The witness withdrew.

Mr. HERAMBA CHANDRA MAITRA, M.A., called in and examined.

5905. (Mr. Wilson.) I believe you are Professor of English in the City College ?—Yes, I am also an Examiner of the Calcutta University.

5906. In what ?—In English.

5907. What is the City College, and how far does it carry its students ?—It is one of the great private institutions of the city, and it has about 1,500 students in all departments.

5908. Young men or boys ?—There are college classes for young men and school classes for boys.

5909. Where do you belong ?—To the Nuddea district.

5910. Is that a malarious district ?—Yes.

5911. Amongst your acquaintances and friends and neighbours, do you think that opium is used as a preventive or prophylactic against malaria ?—No, I have never seen it so used, nor have I heard of its being so used.

5912. Is it ordinarily used as a domestic medicine ?— Ordinarily it is not used ; it is only used in some few cases.

5913. What do you wish to say about its physical and moral effects ?—As far as I have been able to observe, its physical effects are injurious in the extreme. Want of energy and vigor manifests itself almost in every way. The people are generally able to distinguish opium-eaters or opium-smokers from those who do not use the drug, by their emaciated features, sunken eyes, and their lethargy and idleness. In the case of a very well-to-do man who can afford to take plenty of milk and other nourishing food, the injurious physical effects of the drug are to a great extent counteracted ; and I remember one case in which the physical effects of opium-smoking were not perceptible. I cannot account for this exceptional case otherwise than by supposing that the physical constitution of this man was sufficiently strong to resist the effect of the drug. But in the vast majority of cases opium-smoking is disastrous in its results. Opium-eating is less injurious than opium-smoking, but, except when used for medical purposes, it is seriously harmful. Very often opium-eaters and opium-smokers die a premature death from dysentery or other diseases. I have known some most painful cases of premature death from the effects of opium. As to the moral results of the consumption of opium, in most cases all manhood is crushed out of a person addicted to it. The habit is so terrible in its power over its victim, that he is driven to the sacrifice of all considerations of health, respectability, and usefulness for its sake.

5914. What do you say in reference to public opinion in connection with opium-eating ?—That the habit of taking opium is looked upon as disgraceful, is easily proved by certain well-known facts. In the first place, the extreme secrecy with which the habit is indulged in indicates the strong reluctance of opium-eaters or smokers to allow their habit to be known. Secondly, the terms *goli-khor* (opium-smoker) and *afim-khor* (opium-eater) are regarded as most abusive, being taken to cover the meaning of the words

5901. Do you entertain a similiar opinion with regard to alcohol ?—No : alcohol has a dietetic value of its own. It contributes energy to the body when taken in small quantities, and it acts as an article of food in small doses.

5902. Do you recommend that persons in ordinary bodily health should in any way, however small, be regular consumers of alcohol ?—No, certainly not.

5903. Would you only recommend alcohol to be used for medical purposes ?—For medical purposes, and when it is so used it has one advantage, *viz.*, that it has a dietetic value of its own.

5904. (Mr. Wilson.) With reference to those special articles of diet—milk, ghee, sugar, sweetmeats, etc.—that do not ordinarily form part of the family diet, are you referring to the poor people or the middle class people ?—I am referring to the poorer classes and the middle classes, at the same time—the lower stratum of the middle class—considered from a pecuniary point of view, and also lower class people. In our country we cannot make any class distinction exactly on a pecuniary basis. There are middle class people who are on the brink of starvation, but still called middle class, and among them there are many who do not take these things.

"insane," "dishonest," "indolent." They would be resented by any one to whom they might be applied. Thirdly, if any one looks very lean and emaciated, people say of him "he looks like an opium-smoker or opium-eater." I may mention two more facts to shew how extremely disgraceful and degrading the habit is considered to be. An aunt of mine was advised to take opium as a medicine in consequence of certain disorders from which she suffered ; she said with a very sad look : "If I must take opium, I shall submit to it as an inevitable affliction." My father suffered from chronic diarrhœa for nearly twenty years before his death. He once said in my presence that he had been advised by many to take opium, but he would never do it even for the sake of his life.

5915. Have you any suggestion to make as to how the loss of revenue might be met provided there was a loss and England did not make it up ?—The point from which I look at the matter is this. If the traffic can be shewn to be injurious and degrading, we must submit to the inevitable loss and must make it up as the Government of India is now bound to make up the loss it has inflicted upon itself by granting an exchange compensation allowance to its European servants. I am not a financial expert, and can only speak of the question from a moral aspect. I would further suggest that a curtailment of expenditure might be profitably tried in certain departments of administration in order partially to meet the loss.

5916. Have you anything to say as to any further steps that ought to be taken for restraining consumption short of prohibition ?—In my opinion the sale of opium ought to be permitted only at dispensaries and on the prescriptions of medical men.

5917. Is it not the case that there are many parts of Bengal in which there are no medical men to give prescriptions ?—Certainly such is the case, but I would rather have people go without opium than have it placed within their reach, as is the case with other poisons that are not vended except in dispensaries.

5918. In the cases in which there are no medical men who could give these prescriptions, is there any class of persons in the Bengal villages who you think might be entrusted with a discretionary power to supply it for medical purposes and to refuse it where it was not so required ?— I am certainly aware of various classes of men who practise though they are not qualified. There are some whom I would not entrust with the sale of opium ; on the other hand, there are others who have had some training : they have not passed the examinations of the Medical College of any Indian University or of the medical schools, but they have studied at these places or seats of learning for several years and, therefore, have some little knowledge of medical subjects. Such men I would entrust, and also those who have had some little training in the old Hindu method of treating cases, the *Kabirajis*.

5919. Do I understand that you have been invited to give evidence here by the Indian Association ?—Yes.

Mr.
Nil Ratan
Sircar,
M.A., M.D.

8 Dec. 1893.

Mr. Heramba
Chandra
Maitra,
M.A.

Mr. Heramba Chandra Maitra, M.A.
8 Dec. 1893.

5920. The Indian Association consists of natives of India?—Certainly.

5921. No Europeans?—No Europeans, I believe.

5922. You have also been invited to give evidences by the Brahma Samaj?—Yes.

5923. (Mr. Haridas Voharidas.) Would you compare the effects of opium with those of alcohol taken in excess?—I would rather avoid making any comparison, because I regard both as extremely injurious.

5924. Can you not compare one with the other?—I would not prefer one to the other.

5925. Both are equally bad?—Yes, in different ways. It may be that alcohol stimulates, and opium enfeebles and overtaxes—that is the only difference. Nature in both cases is ruined, disordered; in the one case by being pushed beyond its normal limits, and in the other by being enervated, and enfeebled.

5926. If you were asked which you would prefer?—I do not know that it is quite fair to ask me to answer that question after what I have said.

5927. You say that the opium habit and the alcohol habit are two evils; if you were asked which you would prefer?—It would be like asking me whether I would prefer to die of cholera or paralysis.

5928. (Chairman.) You regard the indulgence in alcohol or in opium as a vice?—Yes.

5929. Mr. Haridas Voharidas.) Which would you deal with first?—From a financial point of view, I do not know that I can make any suggestion of any value; but I might suggest that a further restriction of consumption might be practised in both fields.

5930. (Mr. Fanshawe.) From your own knowledge of the country do you think that the alcohol habit is doing more harm than opium, or less harm?—I confess it is rather difficult to make any comparison. I have known people who have been ruined by indulgence in alcohol, and I have known people who have been ruined by indulgence in opium.

5931. You are not prepared to express any opinion as to the comparative harm which from your point of view they are doing?—It would be difficult for this reason, that the proportion of those who indulge in alcohol or opium varies considerably at various places. If I saw in certain villages that opium was doing a great deal of harm I should be inclined to do away with it, and if in another place I saw alcohol was doing harm I should be inclined to do away with that.

5932. You have spoken of the opinion of the classes which you know as regards opium; what is their opinion as regards the drinking of alcohol?—They regard it as disgraceful.

5933. Do your remarks as to the physical and moral effects apply more particularly to the eating of opium in excess or also to the eating in moderation?—I confess I find it very difficult to make a distinction between eating in excess and moderate eating, though I can make a distinction between those who eat opium for medicinal purposes and those who use it merely for the pleasure they derive from the narcotic effects of the drug.

5934. We have been told by various witnesses that many people who eat opium habitually begin the habit on account of having to take opium for some disease and afterwards

retain the habit, while in other cases opium is taken as a stimulant: are such cases within your knowledge?—I have known cases where the opium habit has been begun not from any intention to improve or restore health, but merely for the pleasure of smoking or eating; but certainly there are cases where the use of it has begun only from the motive of preserving health.

5935. How is that regarded?—That is not regarded as equally disgraceful with those cases in which it is used merely for its narcotic effects; but even in these cases people regard it as a necessity to which they must submit with reluctance. They would rather not indulge in opium in any form, even for medical purposes, if they could avoid it. There is one distinction between the habitual use of opium for medicinal purposes and the occasional use. A sufferer from certain complaints might be advised by his doctor to take opium for a day or two, and that would not be regarded as disgraceful, but if, even from motives of health, he took to the use of opium daily his feeling would be that he would not be quite understood, that his conduct might be misinterpreted.

5936. If he takes opium habitually in moderate doses, having started with the medical use, how is that regarded by the people?—That is regarded not as being quite so disgraceful as those cases in which it is used merely for its narcotic effects.

5937. Or merely as a stimulant?—Yes, that word may be used.

5938. Does the word "*afim-khor*" mean an opium-eater in excess or in moderation?—I have not known people make a distinction between the moderate and the excessive use of opium when they saw that the habit was confirmed.

5939. I want to know whether this term of reproach is applied to those who eat opium in moderation or only to those who eat it in excess?—I do not know what is the quantity of opium which must be taken daily to justify the word "*afim-khor*." It would not be used as a term of reproach to those who took opium only for medical purposes.

5940. Do you mean to those who use it habitually for medical purposes?—If habitually used, all I can say is that it would be unjust to them, but people would apply it even to them.

5941. I did not quite understand what you said about the opium habit in the Nuddea district; is it fairly common there?—In one sense it is not common; only a small proportion of the population take it.

5942. Is it used among some number of the inhabitants of this district?—The proportion of opium-eaters or smokers varies considerably in different localities. In some places 60 per cent. of the people take it. In a place near my own native village 50 per cent. of the people at least are consumers of opium, but in my own native village I have not seen a single person using opium.

5943. Can you give any reason for that?—The only reason I can think of is that the habit is contagious, and that it spreads in those places where there have been opium-smokers for a long time.

5944. Do the people of this village eat or smoke opium?—Both.

5945. Is opium-smoking at all common in Nuddea?—No, neither is opium-eating. I do not know whether there is much more opium-smoking than eating. I have known both opium-smokers and eaters in my own district.

The witness withdrew.

Mr. H. M. RUSTOMJEE called in and examined.

Mr. H. M. Rustomjee.

5946. (Chairman.) I believe you are here to represent the Bengal National Chamber of Commerce?—Yes; I am one of the Vice-Presidents.

5947. The questions I should address to you naturally relate chiefly to the commercial aspect of the subject before us. I observe that you have been an Honorary Presidency Magistrate for more than 16 years; will you state to us generally your opinion as to the effect of the opium habit upon the people of this country?—I do not ever remember having a very serious case of a criminal addicted to opium-eating.

5948. Is it your impression that those who make use of opium in a solid form are a small proportion of the whole population?—I could not exactly state in what proportion, but I think that opium-eaters in the solid form preponderate over opium-smokers.

5949. But the opium-eaters are relatively few as compared with the general mass of the population?—That may be so.

5950. Of those who consume opium in the solid form, do you consider that the majority are consumers in moderate amounts?—Yes, to my knowledge.

5951. In their case do you think that the use of opium is beneficial, or is it an indulgence, but not a harmful indulgence?—It is beneficial and harmless.

5952. What have you to say to us with regard to allegations which have been made that the present easy means of procuring opium increase a number of suicides?—I do not think that the number of suicides can be judged by the means of obtaining opium: that would depend on the state of society. If there were further restrictions, suicides should still take place, I may say that suicides attempted

by opium are often frustrated under medical treatment, while other poisons might have a more fatal effect.

5953. Referring to the aspect of the question before us which is more strictly connected with the National Chamber of Commerce, do you consider that taxation as at present levied in India falls very heavily on the people of this country?—Very heavily indeed.

5954. Do you desire to say that if fresh taxation were imposed in consequence of the adoption of a policy which will put an end to the opium revenue, it would be resented by the people of the country?—Very strongly; they will not be able to bear any fresh taxation, and it would create great discontent and dissatisfaction.

5955. Do you think if the use of opium were prohibited, it will lead to increased consumption of wines or alcohol?—I should think so decidedly.

5956. Do you think that that change would be disadvantageous from a moral point of view?—Certainly, it would demoralise the people.

5957. Do you desire to appear here as an advocate for leaving things as they are?—Yes.

5958. Do you think that the loss of revenue which would arise from the prohibition of the growth and consumption of alcohol could be met by economies in various departments of the Government, by a reduction in the Civil expenditure or in the Military expenditures?—I would hardly think so. There could be no possible reduction in salaries; I do not think it would be advisable, because if you have a certain standard of ability it must be paid for accordingly. I do not think that any reduction in that way would be advantageous to the country.

5959. You believe that if you reduce salaries you would impair the efficiency of the Government?—Yes, you would get an inferior class of men in the Government service.

5960. Are you of opinion that a material reduction in the number of English officials would be at the present time disadvantageous?—I should think so.

5961. (*Mr. Wilson.*) What is the exact position of an Honorary Presidency Magistrate; do you take part in trying cases?—An Honorary Magistrate in a Presidency town enjoys the same privileges as a Stipendiary Magistrate, and he is occasionally asked to preside in the Police Courts and to try such cases as are placed before him by the Chief Magistrate.

5962. Do you take part in that?—Yes, we possess all the powers which a Stipendiary Magistrate possesses, with

The witness withdrew.

Mr. NIL COMUL MOOKERJEE called in and examined.

5978. (*Chairman.*) I believe you are a Port Commissioner and a Member of the Bengal National Chamber of Commerce?—Yes.

5979. Do you come here to represent the views of that Chamber?—Yes.

5980. We have had evidence from several representatives, may I ask whether you concur in the views put before us by the other members of that body?—I do.

5981. Speaking generally with regard to the use of opium that in a great majority of cases it does no harm?—As far as my experience goes in the society in which I move, many of my friends use it and are doing very well.

5982. Do you believe that the use of opium in moderate quantities is in numerous instances attended with dangerous results?—I do not believe that the use of opium in moderate quantities is in numerous instances attended with dangerous results.

5983. What you say as to the use of opium in the form of *madak* or *chandu*; do you recognise that the use of opium-smoking in those forms is injurious?—They are mostly used by a very low class of people. I do not know of any gentleman that uses them.

5984. Are you brought at all in contact with people who use *madak* or *chandu*?—Yes.

5985. Do you see that in their case the practice does harm?—I do not see that it does much harm; they are regular working people, and they do their work well.

this difference that we have sittings of two or three Magistrates; some try cases singly.

5963. You take part in that occasionally?—I have done so for the last 17 years.

5964. You say that it has not come under your observation that any brutal act or heinous crime has been committed under the influence of opium?—No, it has not.

5965. Would you say that it leads to petty offences?—It might lead to petty offence, but I do not remember having any cases connected with petty offences.

5966. Or any offences where people were addicted to opium-smoking?—Not to my knowledge.

5967. In reference to what you said in reply to Lord Brassey about any retrenchment, I understand that you would not be prepared to advocate any retrenchment or economy either in the Civil or Military service?—I would, so far as it would not impair efficiency.

5968. Do I understand you to mean that you think any retrenchment would impair efficiency?—I cannot be a judge of that.

5969. I think it is your opinion that it is not desirable in the interests of the Government that there should be any retrenchment or reduction of salaries in the Civil or Military service?—That is my opinion so far as you do not impair efficiency.

5970. You do not desire to see the natives of India more largely employed than at present to the displacement of Europeans?—Of course they should certainly be employed where they are found fit.

5971. Do I understand you to think that they are not fit for any position that they do not now occupy?—I do not say so.

5972. Do you wish to say that they are chiefly employed?—Certainly, where they are found efficient and able.

5973. I think you are a member of the Parsee community?—I am.

5974. Is there much opium-eating in your community?—I do not think there is any in Calcutta; my experience has been in Calcutta.

5975. If it is so beneficial, why do not your friends take it?—I cannot say; I can only speak for myself.

5976. If you had a son grown up to be a young man, would you like him to take opium habitually?—I should not.

5977. (*Mr. Fanshawe.*) When speaking of opium as a cause of suicide, you refer to your experience in Calcutta?—Yes.

5986. Turning to the outlying districts, are you from your own knowledge able to say that among the ryots opium is extensively used for medical purposes?—I had the management of the Tagors Estates in Rajshahye, Mymensingh, Pubna and Krishnagarh, and I often came into contact with the poorer classes, specially in the Pubna district, where I found many official men using opium.

5987. What has been the result of your observation the opium habit with reference to the poor ryots in out-lying districts?—The poor ryots in the out-lying districts who may never have seen a doctor take to it from tradition, and I believe in the great bulk of cases, if not entirely, from necessity alone, the cost being too great to allow of its being otherwise than as a special luxury or a medicine. To these men it often means life, and I cannot but think, looking to the life of privation they lead, that, if deprived of opium, they would simply be driven to use spirits, *ganja* and other much more deleterious drugs. Nor can I think that this side of the question has had the necessary attention from the people who are raising it, or they would have hesitated before creating an opening for the extension of the use of wines and spirits which, I understand, have proved such a curse in every country, and which, I think they will readily admit, is infinitely more in need of repressive measures.

5988. A question has been frequently put this morning as to willingness of the people of this country to bear in whole or in part the cost of prohibitive measures. Do you agree that they would have a general objection to bear any increased taxation which might fall on the country if the opium revenue were no longer at the hands of the Government?—Yes.

Mr. H. M.
Rustomjee
8 Dec. 1893.

Mr.
Nil Comul
Mookerjee.

Mr.
Nil Comul
Mookerjee.
8 Dec. 1898.

5989. Do you say that the growth of the poppy and the manufacture and sale of opium in British India ought not to be prohibited?—Yes.

5990. Have you any suggestions to offer for the restriction of the sale of opium by retailers?—Since the Commission has been sitting I have been talking with some of the best men of the country on the subject, but up to the present moment I have not been able to find a scheme. Looking at the cases reported in the newspapers lately, cases of suicide appear to be increasing, and I think it would be very desirable if some sort of prohibition were adopted, but I have no definite scheme to put before the Commission. I think there should be some sort of restriction now that the vendors are all licensed.

5991. How many years have you resided in various parts of Bengal and Orissa?—Bengal is my home. I am still one of the trustees of the Dwarkanath Tagore's Estates.

5992. And you are in one of the largest mercantile firms, Messrs. Graham & Co.?—Yes.

5993. The occupations that you fill necessarily give you the opportunity of knowing both the condition of the agricultural people and the community which is engaged in the work of this port?—Yes.

5994. Your views are those of one who has had wide experience?—I should think so.

5995. (Mr. Wilson.) Would you like your son or your nephew, or any young man in whom you were interested, to take opium regularly?—If under medical advice, I would.

5996. But without medical advice?—Without medical advice I would not allow them to take any intoxicants.

5997. You have stated that the use of opium in India does not deteriorate the people in the least morally or physically?—That is my opinion.

5998. If it does not deteriorate them in the least morally or physically, why would your son not do well to take it?—What is the good of contracting a habit?

5999. Have you any statistics of the number of persons who do use it?—No.

6000. Would there be any difficulty in getting statistics?—Certainly, because unless asked, people will not say that they take opium, and it cannot be known whether people take it or not.

6001. They are reluctant; they would rather not say it?—People are not generally asked whether they take it or not.

6002. Would you say that there was reluctance on the part of many to admit the habit?—Yes.

6003. Why?—I should say it is one of the habits that people do not like to speak of.

6004. If you would not advise your son to take it, would you like to take it yourself?—I take it.

6005. Medically?—Yes.

6006. Have you taken it for a long time?—I have taken it for the last sixteen years.

6007. Is it found that persons who take it find it difficult to discontinue it?—In my own case I have tried four or five times, but I fell ill and was advised not to give it up.

6008. When people begin to take it under medical advice, you think it becomes difficult to discontinue it?—In my case it is. When I discontinued it I became ill again.

6009. What do you consider would be the loss if the opium revenue were abandoned?—I believe about seven or eight crores.

6010. Do you get that from the figures of the Government or from any calculations of your own?—I merely give it from papers I have read.

6011. If I told you that Sir David Barbour put it at five million pounds and afterwards reduced it to four million six hundred thousand, you would not dispute that?—Certainly not. Every year is not the same.

6012. Are you prepared to suggest some rules in regard to the retail sale; how would you propose to proceed?—I think there should be a registration of buyers, or some such method, but I am not prepared to lay any scheme before the Commission.

6013. You have no definite scheme, but you think something ought to be done?—Something ought to be done.

6014. With what object in view?—Looking at the suicides reported every day in the papers.

6015. You have been connected with large zemindaris?—Yes.

6016. Is opium grown in them?—No.

6017. Not in any of them?—No.

6018. I think you have said you were connected with a large business firm in this city?—Yes, for the last eighteen years.

6019. Has that firm any transactions in this matter?—Not in opium.

6020. (Mr. Fanshawe.) Are the views which you have expressed with regard to suicide mainly applicable to Calcutta, or do they apply to the outlying districts as well?—My experience is more in Calcutta.

6021. You have had large experience of native life; can you tell me generally at what age people who take to the opium habit begin?—Generally, I think, about 30 or 40 years of age.

6022. How many years have you had the actual management of the zemindari of the Tagore family?—Nearly twenty-five years.

6023. Where have you lived during that time?—For some time I was managing the estates in the mofussil; for the last twenty years I have been living in Calcutta.

6024. Before that for how many years were you actually living in the mofussil?—For eight or ten years I was managing in the mofussil.

6025. The opinion you expressed with regard to the ryots was founded on actual experience during those years?—Yes.

6026. In the districts you have mentioned?—I have also been to Orissa and had some estates there.

6027. Did you remain any length of time in Orissa?—I have been there twice, and once I remained there eight or nine months.

6028. Had you an opportunity of forming an opinion as to the opium habit in Orissa?—Yes, I often inquired of the persons I came in contact with.

6029. Did you understand that it was common there?—Yes.

6030. What was the effect on the people generally judging from your own experience; did the habit affect the well-being of the people at all?—Yes, I think they were doing well, keeping in better health and doing their ordinary work.

6031. You have spoken of the people admitting the habit of eating opium somewhat unwillingly; would that also be true of drinking alcohol?—Amongst my own class of people if I were to ask them they would not hide it altogether, but that is no reason why they should tell everybody that they took it.

6032. Would that apply equally to the habit of drinking alcohol?—Yes.

6033. They would not willingly admit the habit?—Certainly not.

6034. (Mr. Wilson.) You are a Member of the Bengal National Chamber of Commerce?—Yes.

6035. Of whom does it chiefly consist?—It chiefly consists of native merchants.

6036. Does it relate to all Bengal?—Mostly to Calcutta.

The witness withdrew.

RAI SHEO BUX BOGLA BAHADUR called in and examined.

Rai Sheo Bux
Bogla
Bahadur.

6037. (Chairman.) You come here, I understand, representing the National Chamber of Commerce?—Yes.

6038. Will you describe to us your position and occupation?—Merchant and Banker.

6039. I believe your family came originally from Rajputana?—Yes.

6040. Have you anything you wish to say to us with reference to the use of opium by Rajputs and Sikhs or any other races of Upper India?—Yes, they take it from 40 to 45 years of age, and some Rajputs take it from birth.

6041. With these races you say that the use of opium does not bring physical injury or demoralization?—No.

6042. Many of the witnesses who have appeared before us have recommended that prohibitive measures should be adopted with a view to prevent entirely, except for medical purposes, the use of opium: supposing such prohibitive measures were adopted, what do you think would be the possible consequences? Would you anticipate any evil consequences from such a change?—The danger of prohibitive measures would be immense; people would have recourse to other intoxicants, and alcohol, which is one of the principal causes of poverty in this country, would be largely consumed, and the lower classes would take to ganja-smoking.

6043. If a policy of prohibition were attempted, do you believe it would lead to an increase in smuggling?—Yes.

6044. In your experience can you say of your own knowledge that there are districts in which the people use opium too freely?—Yes, several districts.

6045. Could you name those districts?—Patna and Gujarat and in our country, Rajputana.

6046. In those districts where opium is used, according to your own knowledge, to excess, do you see any measures that you could recommend to be taken on the part of the Government with a view of diminishing the consumption?—I can suggest nothing.

6047. (*Mr. Wilson.*) Can you give us any idea of the proportion of the Rajputs and Sikhs who take opium as a

daily ration?—About 70 or 80 per cent. of both Rajputs and Sikhs. *Rai Sheo Bux*

6048. (*Mr. Fanshawe.*) You represent the Marwari community, do you not?—Yes. *Boyla Bahadur.*

8 Dec. 1893.

6049. Is that a large community in this city?—Yes.

6050. Chiefly employed in business?—Yes.

6051. Is the habit of eating opium fairly common among the Marwaris?—Yes.

6052. You say that the habit is generally begun about the age of 40; is that the case among the Marwaris?—Yes.

6053. Are you in the habit of visiting your own country occasionally, or do you reside chiefly in Calcutta?—I have been four or five times in my country among the Rajputs.

6054. You reside in Calcutta as a rule?—Yes.

6055. Is your own country Bikanir?—Yes, the State of Bikanir.

6056. Among the Bikanir people is the habit of opium-eating common?—Yes.

6057. When you said that 70 or 80 per cent. of the Rajputs eat opium, were you referring to Bikanir?—Yes, to the Rajputs, not our caste; the Rajputs and Sikhs.

6058. Have you any personal knowledge of the Sikhs?—Only what I have heard.

The witness withdrew.

Adjourned to to-morrow morning at 10-30.

At the Council Chamber, Writers' Buildings, Calcutta.

TWENTY-SECOND DAY.

Saturday, 9th December 1893.

PRESENT:

THE RIGHT HONOURABLE LORD BRASSEY, K.C.B. (CHAIRMAN, PRESIDING G.)

THE HON'BLE SIR LACHHESWAR SING BAHADUR,
MAHARAJA OF DARBHANGA, K.C.I.E.
MR. A. U. FANSHAWE.

MR. HARIDAS VECHARIDAS DESAI.
„ H. J. WILSON, M. P.

MR. J. PRESCOTT HEWETT, C.I.E., *Secretary.*

MAHARAJA BAHADUR SIR NARENDRA KRISHNA, K.C.I.E., called in and examined.

6059. (*Chairman.*) Maharaja, the Commission would be glad to hear from you, what in your view are the effects of taking opium among the people of Bengal?—Generally the people of Bengal, especially in malarial, low and swampy districts, take a small quantity of opium as a tonic to preserve their health; the dose daily used is not exceeded by them, and it has no deleterious effect either on their moral or physical condition. People begin to take it for medical purposes, though after the disease is cured they continue it to prevent a relapse.

6060. It has been urged upon us that it would be desirable in the interest of morality that the growth of the poppy and the manufacture of opium should be prohibited. It is obvious that if such a prohibition were to be enforced the Government would lose a considerable amount of revenue, and that other taxation would be necessary to compensate the deficiency. Would you state to the Commission whether in your opinion such a change, as has been recommended, would be popular with the people of Bengal?—The prohibition of the cultivation of poppy lands would deprive the Government of a large amount of revenue derived from the manufacture and sale of opium, and I do not know that the Government can devise any other easy mode of raising this large income. Besides, the moderate use of opium does not lead to the commission of heinous offences. It is beneficial to health; it is better than brandy or whisky.

6061. Do you think that if regulations were promulgated with a view to enforcing a policy of prohibition there would be any risk of an illicit trade and of smuggling?—Certainly.

In foreign States people cultivate the poppy plant, and prepare opium, which they smuggle into the places where people are addicted to opium.

6062. Supposing that the Government of India were to continue to adhere to their present general policy in dealing with the opium revenue, do you consider that the existing arrangements in connection with the Bengal monopoly, and the rules which are enforced and observed in relation to licensing persons who may carry on a retail trade are practically satisfactory?—In the first place, in my opinion the Government monopoly should not be abolished; in the second place, the licensing of opium shops brings some amount of revenue to the Government, and I do not see why that source of revenue should not be collected.

6063. If there were no licensed shops, do you think that there would be an equal amount of opium consumed in places not under the observation of the police?—The abolition of licensed shops would increase the consumption of opium among the people, because the vendors at licensed shops are not allowed to sell more than a certain quantity of opium to any person.

6064. Have you zemindaris in the poppy-growing districts?—I have not.

6065. You have no special personal interest in this question?—I have no personal interest in it, but I do not like the Government to be deprived of the large amount of revenue obtained from the manufacture and sale of opium.

6066. You came here, as I understand, to tell us that in your belief the consumption of opium in moderate quantities

Maharaja Bahadur Sir Narendra Krishna, K.C.I.E.

Maharaja Bahadur Sir Narendra Krishna, K.C.I.E. is not prejudicial to the people of this country?—Certainly. The consumption of a moderate quantity of opium is not harmful to the persons who take it. It does not affect the brain, and it has no depressing effects afterwards like the drinking of alcohol.

9 Dec. 1893.

6067. Do you consider that indulgence in alcohol in this country is far more pernicious than the consumption of opium?—Indulgence in alcohol brings on delirium tremens. People cannot take excessive quantities of opium without their stomachs swelling up; they are unable to take excessive quantities.

6068. (*Mr. Wilson.*) If you had sons or young men in whom you were interested, would you like them to begin taking opium regularly?—Not in their younger days. I would not allow them to touch opium, but when they have arrived at a ripe age, say 50, if their bowels get into disorder, I would have no objection to their taking a grain or two of opium. In their younger days I would object to their touching opium or any intoxicating drink.

6069. I think it is your opinion that the people of Bengal, especially in malarial, low, swampy districts, take opium to preserve their health?—I think so.

6070. To what districts do you particularly refer?—Districts which have low lands, where the water is clogged.

6071. Which districts have you special knowledge of?—In the 24-Parganas ryots take little opium. In Murshidabad and in the eastern districts they generally use opium to ward off the effects of malaria.

6072. Is that what you have heard from other people, or what you know of your own knowledge and your intercourse with those persons?—It is difficult to speak on the subject, but I am stating generally what I have heard from others about the effects of opium.

6073. If there are any districts that are malarial and low and swampy with which you are personally acquainted, will you tell me what they are?—Generally the eastern districts of Bengal.

6074. Will you mention one or two towns or villages if you know them personally?—Furriddpore, Dacca, Murshidabad.

6075. Do you know those districts personally?—I have not visited them all.

6076. (*Chairman.*) You have visited some of them?—Yes, when I was Deputy Magistrate in the service of the Government, I visited some of the eastern districts—Dacca, Furriddpore, Mymensingh, and the people in those places take opium, not all but a portion of them take opium in moderate quantities.

6077. (*Mr. Wilson.*) How long is it ago that you were personally acquainted with those districts?—More than 40 years—about 45 years.

6078. Have you any connection with the Government?—No connection whatever.

6079. Are any of your family connected with the Government?—My present eldest son is Officiating Magistrate and Collector of Pubna; he belongs to the Statutory Civil Service.

6080. Any others?—No.

6081. He is your eldest son?—My present eldest son.

6082. Did he pass through the usual course of examination?—Certainly. I think so, or how could he have got promotion? He is an M. A. of the Calcutta University.

6083. May I ask how long you have lived in Calcutta?—I was born in Calcutta, and I have lived in Calcutta all the time except 8 or 10 years when I lived in the mofussil.

6084. Where are your estates?—In Tipperah and in the 24-Parganas and other places and districts.

6085. Have you resided many years on those estates?—No. In Calcutta we zemindars do not generally reside on our estates.

6086. Do you visit them regularly?—I have visited my zemindari in the 24-Parganas.

6087. How often have you visited them?—Once, I believe.

6088. When?—About 16 years ago.

6089. You referred just now to the restriction of the sale of opium in shops?—Yes. That is the Government rule.

6090. Of what use is that?—Probably Government does not like people to have an unusual quantity of opium in their possession.

6091. A man can buy 5 tolas?—Yes.

6092. And then he can go again and buy more?—Not in that shop; probably in another.

6093. There is nothing to prevent his going ten times a day; is there?—I do not know.

6094. I think you signed a joint letter from the British Indian Association?—Yes, in my capacity as senior Vice-President.

6095. It is stated in the letter that prohibition would reduce rents; will you explain in what way it will reduce rents?—The opium cultivators pay more rents to the zemindars than the cultivators of other food crop or grains.

(*Chairman.*) I apprehend if the cultivator is prohibited from growing a profitable crop, he necessarily pays a less amount of rent.

(*Mr. Wilson.*) That is my point.

6096. Is the rent fixed according to the crop that the cultivator grows, or according to the piece of ground that he has in his possession?—According to the piece of ground that he has in his possession.

6097. If he were to grow sugarcane or anything else upon it, the cultivator could not claim a reduction of rent?—I think not—not if the ryot cultivates sugarcane and other plants of his own inclination in the poppy-growing lands.

6098. If the cultivator has not got his license to grow poppy, does the zemindar reduce the rent?—How can the zemindar ask his ryots to pay the rent which is derived from the cultivation of the poppy?

6099. I want to know as a matter of fact whether zemindars do reduce their rents?—I do not think they would demand the same rent as is allowed for the poppy-cultivating land.

6100. Can you give me a case in which the zemindar has reduced the rent because the Government has withheld the license to grow poppy?—I have no lands in the poppy-growing districts; how can I cite a case?

6101. Then you do not know?—No.

6102. So far as this part of the letter of the British Indian Association is concerned, you do not know about that?—The other members of the Association who have lands in the poppy-growing districts and who have signed the letter can tell you.

6103. (*Mr. Haridas Voharidas.*) If your son contracted the opium habit, would you be as much displeased with him as you would be if he took to drinking liquor?—I should not like my son in his early youth to take to opium. Of course I detest the drinking of brandy or whisky for young men.

6104. If he took it by chance, would you be as much displeased with him if he took to drinking alcohol?—I think the habit of opium is not so bad as that of drinking.

6105. You would not be so much displeased with it, as you would be, if he took to drinking?—I should certainly be displeased if my son took opium unnecessarily, or if he got addicted to the drinking of wine.

6106. You would get very much more displeased if he drunk liquor than if he took opium?—I would certainly be greatly displeased if he took brandy or whisky in place of opium.

6107. (*Mr. Fanshawe.*) Is it your opinion from the knowledge of the country that the habit of eating opium is generally begun by middle-aged people?—I think so. People after arriving at the age of 50, when they find that their digestive power is weakened, take small quantities of opium.

6108. As far as your knowledge goes, that would be a general reason for taking to the opium habit?—I think so.

6109. (*The Maharaja of Darbhanga.*) I suppose the chief objection of the East Indian Association to the abolition of the opium monopoly is that, in case the opium revenue were done away with altogether, Government would very likely have recourse to direct taxation, and I suppose the people of the country prefer the opium monopoly to any direct taxation; is that the view of your Association?—They think that the opium monopoly should not be abolished.

6110. (*Mr. Wilson.*) With reference to these malarious districts, are there any statistics to shew that Dacca and Mymensingh are more malarious than Nuddea and Jessore?—I ought to have mentioned Jessore and Nuddea as being malarious; I think they are more marshy than Mymensingh and Furriddpore and Dacca.

6111. Is there any reason to suppose that an interference with poppy cultivation might tend to disturb the permanent settlements in Bengal?—I do not know whether there is any intention at present on the part of the Government to break off with the permanent settlement.

The witness withdrew.

MAHARAJA DURGA CHURN LAW, C.I.E., called in and examined.

Maharaja
Durga
Churn Law,
C.I.E.

9 Dec. 1893.

6112. (*Chairman.*) Are you at the head of a large commercial concern?—Yes.

6113. Do you come here as a representative of the British Indian Association?—Not as a representative of the Association.

6114. But to represent your own individual views?—Yes.

6115. So far as people who consume opium have come under your own personal observation, do you say that they have taken it as a remedy against what are called miasmatic influences?—Not only miasmatic influences, several other diseases, such as diabetes, complaints arising from cold, bronchitis and others.

6116. In the districts with which you are acquainted where opium is most largely consumed, do you see any signs of physical deterioration among the people?—My experience does not extend beyond Calcutta and Chinsura. Of the places where opium is largely consumed I have no experience.

6117. Looking at the subject generally, do you observe any indication that led you to the belief that indulgence in the use of opium is a cause of moral depravity?—I have not heard of a single case of moral depravity among people who are accustomed to take opium in moderation. On the contrary, I have always heard of the good effects of opium among people after they have reached about 50. It prolongs life: that is the general impression, and I believe it is a fact. It gives tone and spirit to the man who takes it.

6118. Will you in a summary way give your general conclusions with reference to the opium habit?—Practically opium is not used for purely pleasurable or vicious purposes. It is, so to speak, an instinctively adopted indigenous remedy or preventive against what are known to be the effects of the unhealthy surroundings of the people. A man taking opium for the sake of pleasure would find the effect very disagreeable on the following morning.

6119. Will you tell us how you think the people of this country would view any new taxation which they were called upon to bear in consequence of the loss to the Government of its present revenue from opium?—They would not like it; there would be a general discontent among the people if a new tax had to be imposed upon them in lieu of the revenue derived from opium which they all consider, at least the people of Bengal, perfectly harmless.

6120. Do you think that such a prohibition would tend to make the English rule in India unpopular?—It would.

6121. Would an edict of prohibition be regarded as an unjustifiable interference with the rights of property?—I think it would.

6122. Can you suggest any better arrangements than those which at present exist for regulating the Bengal monopoly?—In the first place I have never thought of it, and in the next place I do not think I could suggest any better arrangement.

6123. We understand that the interests in the opium districts which are bound up with the cultivation of the poppy are very considerable?—So they are.

6124. Would the zemindars suffer in the opium districts if the cultivation of the poppy were prohibited?—Not only the zemindars would suffer, but the ryots would suffer.

6125. The zemindars would lose their rents?—Yes, they could not get the same rents for their lands that they are now getting from the opium cultivators.

6126. The zemindars would not get so much rent because the ryot who cultivates the land would earn less?—Yes.

6127. And therefore it is obvious that the landowners and cultivators in the opium districts would be opposed to any change?—Yes.

6128. (*Mr. Wilson.*) Is there not in Bengal a permanent settlement with fixed rent?—Not the rent of the ryot; it is the rent to be had from the zemindars. The zemindars rent which the Government receives has been fixed.

6129. Under the Tenancy Laws can the ryot claim a reduction of his rent if he ceases to grow poppy?—I think he can.

6130. Do you know of any case in which he has got a reduction?—I am not aware of any case.

6131. I think you are a zemindar as well as a merchant?—Yes.

6132. Do you take any personal part in the management of your estates?—I do not take a large interest in the management of my estates now-a-days. The active management is left with my son.

6133. Do you receive the rents direct from the ryots?—In some cases we receive them direct from the ryots; in other cases we let out a portion of the zemindari and we receive the rent from the lessees.

6134. Do you receive the largest portion of your rent direct from the ryots or from the middleman?—From the ryots.

6135. May I ask how often you have visited your estates?—I do not think I have ever visited any of my estates.

6136. You have signed a letter of the British Indian Association?—It is not a letter of the British Indian Association; we have signed it on our individual account; we have merely signed it altogether, that is all. It is not from the British Indian Association that the letter has been sent.

6137. It is dated from 18 British Indian Street; is that the office?—That is the office of the Association.

6138. And I think the last signature is the signature of your Secretary?—Yes, but he does not sign as Secretary.

6139. The first signature is the signature of one of your Vice-Presidents?—Yes.

6140. This was given to me as a letter from the British Indian Association, is that wrong?—It was a mistake.

6141. Still you signed it and it expressed your opinion?—Yes.

6142. Now will you explain it a little? In paragraph 3 you state that "where a monopoly is so strict as that of opium is in India, it becomes practically prohibitive to the general body of the people"; that is your opinion?—Yes, it is as far as possible.

6143. Then you say that "prohibition of the growth of the poppy and manufacture and sale of opium would practically mean unjustifiable interference"?—So it will be.

6144. But then it is already interfered with as regards the general body of the people?—Yes, so long as the poppy is allowed to be grown it is not a prohibition.

6145. But so far as the general body of the people is concerned it is prohibited?—In cases where it is already allowed, if prohibition is to take effect, it will interfere with the rights of the people. It is already allowed by the Government to be grown in certain districts; on what ground is the Government to take away that right from the owner of the place?

6146. I must not answer questions, but ask them. I want to know why you say that prohibition is unjustifiable interference when in the greater part of India it is absolutely prohibited?—It is absolutely prohibited in other parts of India, but where prohibition does not exist, if Government tried to withdraw or to prohibit in those parts, it would be an interference with the rights of property there.

6147. In the case of Assam prohibition of the poppy was enforced twenty years ago; do you consider that was unjustifiable interference with the rights of private property?—I have no knowledge of that interference, and therefore cannot answer that question. If the Government were bent upon poisoning the whole or the greater part of its subjects, I would certainly prohibit opium everywhere, but such not being the case, I do not see why there should be any attempt made to urge the Government to prevent the cultivation of opium.

6148. If it is an interference with the rights of property and the liberty of the subject, is not that liberty already interfered with as regards the larger part of India?—We see that it is good for the country that that prohibition is made, because if the whole of India was allowed to grow opium, there would be a famine every year.

6149. Then if it is good for the country that the prohibition is made, to prohibit it entirely would be justifiable?—I do not think so.

6150. (*Chairman.*) If you thought that opium was necessarily a poison you would consider that the policy of the Government should be changed?—Yes, I would.

Maharaja
Durga
Churn Law,
C I E.

9 Dec. 1893.

6151. Your opinion of the policy depends upon your opinion of the effects of the opium?—Yes.

6152. (*Mr. Wilson.*) Can you explain whether the prohibition of poppy would reduce rents, and if so, how?—It would certainly reduce rents, because any other crops would not yield the same profits to the cultivator as opium does.

6153. You told me a little while ago that you did not know any case in which rent has been reduced on that ground?—No; I do not.

6154. In the last paragraph of the letter you say that so far as you know, the cultivators would be opposed to the change?—So they would.

6155. How do you know the opinions of the cultivators?—It is fair to conclude that when their interests suffer they would be opposed to the change; it is not that I have consulted them.

The witness withdrew.

6156. Then you speak not from what you know but what you conjecture?—I have not consulted them.

6157. (*Mr. Fanshawe.*) Have you any poppy cultivation in your own zemindari?—No.

6158. You have no practical knowledge of it?—No.

6159. I believe the cultivation of the poppy has been carried on for a long time in Echar?—For a long time.

6160. Your opinion as to interference has reference to Behar as matters now stand, I suppose?—Yes.

6161. You have had very long experience of your own countrymen, can you tell us generally how they regard the habit of eating opium in moderation?—They regard it very favourably after a certain age when taken in moderation as it generally is.

MAHARAJA SIR JOTENDRO MOHUN TAGORE, K.C.S.I., called in and examined.

Maharaja
Sir Jotendro
Mohun
Tagore,
K.C.S.I.

6162. (*Chairman.*) We know that you occupy a position of great personal influence in Calcutta, and that you are a Knight Commander of the Star of India. I understand that you are an extensive landowner, and that your property does not lie in the poppy-growing district?—It does not.

6163. I should be sorry to trouble you unnecessarily by repeating questions which you have heard addressed to others. I would simply point out that the main, essential and primary point upon which this Commission has to form a judgment relates to the effect of the use of opium among the people of India. May I ask what is your view as to the effect generally of the use of opium among your people? Do you think the effect is good or bad?—Generally speaking its moderate use is beneficial to the people, but if there be cases of abuse it may bring on injury. Generally where it is used moderately my opinion is that it is perfectly harmless. In many cases it is of great benefit to the people who use it.

6164. Do you think that the cases of abuse and excess are relatively few?—Very few.

6165. As far as you are competent to judge, do you think that the opium used medicinally is of great value to the people of India?—Very great value.

6166. What is your opinion as to the proposals which have been put before us for our consideration for the prohibition of the growth of the poppy and the sale of opium for other than medical purposes?—I think it would create a great deal of dissatisfaction among the people and do more harm than the good that is expected to arise from a prohibition of this nature. It will make people perfectly dissatisfied with a policy of this kind.

6167. Do you think it would drive them to an increased use of alcohol?—Certainly it would in many cases.

6168. (*Mr. Wilson.*) I think you have signed a letter with five other gentlemen and have also put in a paper of your own?—Yes.

6169. Have you heard the questions which I have put to the two gentlemen who preceded you?—Only one.

6170. I do not know whether you can throw any further light on the question which I put to him about reducing rents. In what way would it reduce rents? Under what law could the cultivator claim a reduction?—The question stands in this way. When the ryots grow a crop which is less profitable than another, the zemindar is bound to reduce the rent by no legal act, but it is for his own interest as well as the interest of the estate that he should not claim the same amount of money or rent from him which the ryot used to pay when cultivating a crop which paid him better.

6171. As a matter of fact when the Government withholds the license to cultivate the poppy from any ryot, does

The witness withdrew.

the zemindar reduce the rent?—Most likely he will have to do it. It was never tried.

6172. I want to know if he does, and where and when?—It was never in my estate. As far as I know there has not been a case of this kind, so that I cannot speak from personal experience as to the reduction. I may say, however, that when a cultivator has been cultivating betel-leaf or sugarcane, and when by rotation or by some accident he cannot get an equally paying crop, the zemindar is obliged to make a reduction in the rent; and it necessarily follows that the same thing will occur in a case of this kind.

6173. Can you give any cases in which it has been done?—In my own estate several cases of the kind have occurred.

6174. Can you give me a particular case?—The case of my own ryots, but that will not be quite plain to gentlemen here.

6175. Are your estates under your own management?—Yes, mostly.

6176. In that case, there is no middleman to whom you sublet?—There are certain estates let to sub-tenants; others are entirely under my immediate management.

6177. Do you frequently visit them?—Not frequently; at times, but rarely.

6178. Have you lived in Calcutta for a long time?—Yes.

6179. How many times have you visited your estates for a sufficient length of time to become personally acquainted with the circumstances?—I visited my Midnapore estate twice; I lived there for three or four months at a time.

6180. When was that?—Some years ago.

6181. How long?—Twenty years back or so.

6182. I think you state in your letter that your experience and knowledge are limited?—As regards this poppy question.

6183. (*Mr. Fanshawe.*) It has been stated to us that cultivators who grow poppy are as a class solvent and good tenants; would that be your own view?—I have no personal experience of it, but from what I have gathered from other landlords who own poppy estates I come to know that

6184. That they are good tenants?—Good tenants and in a thriving condition.

6185. So that if poppy cultivation were prohibited the landlords would have more difficulty in getting the rents from their tenants?—Certainly.

6186. Do you regard the poppy cultivation, speaking generally, as a valuable crop to tenants?—Very valuable.

6187. And do you consider that the system of advance under which it is grown in connection with Government gives special advantages to the tenant?—It does.

RAJA PEARY MOHUN MOOKERJEE, C.S.I., called in and examined.

Raja Peary
Mohun
Mookerjee
C.S.I.

6188. (*Chairman.*) You are a landlord and hold estates in five districts in the Bengal Presidency?—Yes.

6189. Are any of your estates in the poppy-growing districts?—No.

6190. It does not add to the weight of evidence on either side to go over the same ground in detail again and again.

You have heard the witnesses who have immediately preceded you when expressing their views and the results of their experience in regard to the use of opium in moderate quantities by the people of India: do you agree with those views?—I entirely agree with them.

6191. Do you consider that the cases of excessive use are numerous or relatively few, or how do you estimate them?—

The cases of excessive use are very rare. I know of four or five cases in my own town, but in none of those cases has even the excessive use done them any harm. I do not wish to volunteer any medical opinion.

6192. Assuming that the general policy of the Government remained as at present, and that it was not thought necessary to adopt a policy of prohibition, are there any modifications in the regulations affecting licenses and in the management of the Bengal monopoly which you would consider desirable?—I think the monopoly is beneficial in every respect in which I can look upon it or consider it.

6193. With regard to the regulations affecting licenses, do you think they are sufficiently stringent at present?—I think they are very beneficial to the people.

6194. Do you think that the licenses granted for smoking chandu are granted too freely? Do you think it possible to prohibit smoking chandu?—I think that greater restrictions might be introduced as to smoking chandu, but my experience and information is that smoking chandu is confined to a very small number of persons, and that amongst the very lowest classes.

6195. (*Mr. Wilson.*) I think you are a zemindar?—Yes.

6196. Do you visit your estates?—I have visited my estates the last thirty or thirty-five years.

6197. Regularly?—Regularly.

6198. Have you known opium given as a preventive against fever?—I have seen opium taken habitually as a preventive against fever, and with good results.

6199. Pretty generally?—In some cases they take it for failing health, for failing powers of assimilation, for the gradual decay of bodily power, and a variety of causes.

6200. Take the case of persons who are very much exposed to malarious influences—fishermen, palki-bearers and night watchmen,—do you know of cases of their taking it, and do you think that they take it generally as a preventive against fever?—Yes.

6201. Can you tell me any particular places where they take it in your estates with which you are cognisant?—In my native town, Uttarpara, I estimate the number of persons who take opium to be 821 out of a population of over 6,000.

6202. I suppose that is rather a calculation than a fact?—I know so many hundreds of persons in my town who take opium that I do not think the estimate is at all incorrect.

6203. That is a larger proportion than we are usually informed are in the habit of taking opium, but you think that applies to your town?—Yes, perhaps owing to their being a large floating population; it is a large trading place.

6204. You have not quite answered my question about fishermen and palki-bearers?—I know that palki-bearers and fishermen take opium.

6205. In your own town?—Yes, and in other places.

6206. Do you know of any other statistics besides those of your own town as to the actual facts in this matter?—No.

6207. You have heard the questions that I have put to the other gentlemen who came?—Yes.

6208. Do you wish to add anything? Do you agree with them generally?—I agree with them generally. I may add that the Government monopoly is far from being injurious. Government assumed the monopoly in 1773. In 1776 the Court of Directors authorised the Governor General to abolish the monopoly if he "should be of opinion that abolishing the monopoly of opium will contribute in any great degree to the relief of the natives." The Government said in reply that the monopoly was expedient and beneficial. "It only takes for the benefit of the State what otherwise would afford gain to a few intermediate traders. * * * The facility of adulterating opium and the consequent necessity of precautions against such frauds are considerations which would justify monopoly." I further think that the abolition of the monopoly would result in a much greater use of opium in this country. The monopoly at present operates to limit the supply, and to prevent the extension of the use of opium.

6209. May I ask where is Uttarpara?—Seven miles from here.

6210. Is it your native place?—Yes.

6211. Is that your zemindari?—Yes, a good share of it.

6212. Is it where your estates are?—They are in five different districts.

6213. Not your native town?—In Uttarpara I have a share only.

6214. I am not sure that you understood my question about malaria. I wanted to know if you could tell us of any place in the malarial districts where opium is regularly taken by the classes of persons to whom I specially referred?—Opium is regularly taken in the Hooghly district, in the Burdwan district, in the 24-Parganas. In all the places where I have zemindari—in all the places of which I have any knowledge.

6215. Are they very malarious?—All the districts comprised in the delta are more or less malarious.

6216. Are the places you have mentioned specially malarious?—I do not quite understand what is meant by malarious. All these places are damp.

6217. Are they very much given to fever?—Yes, given to fever.

6218. Specially given to fever?—Yes.

6219. (*Mr. Fanshawe.*) You spoke of a few cases of excess within your personal knowledge. I should like you to tell us whether you know any number of cases of opium-eating in moderation?—I know hundreds who eat it in moderation.

6220. I think you have said among your friends and acquaintances?—That is quite correct.

6221. What is your opinion as to the general effect of the eating of opium on the people of the country?—After a certain age it is found very beneficial.

6222. How does it affect their moral or physical character?—It does not affect their healths or their morals injuriously; on the contrary, it renovates the health in the case of persons whose powers of assimilation have been failing, whose health has lost all elasticity, whose powers of nutrition have been diminished; in all these cases opium does immense good, even in the case of young men of 35. One of my nephews takes opium.

6223. How old is he?—He began when he was 30; he is now 37.

6224. Among your friends and acquaintances who eat opium in moderation, how is the habit regarded?—It is not regarded as shewing any want of respectability.

6225. Is it regarded as a vice?—It is not regarded as a vice.

6226. How is the drinking of alcohol generally regarded among the classes of society which you know?—People look down upon the men who drink.

6227. Would you make any distinction from your knowledge of Indian life, in the opinion which is held of people who drink alcohol and of people who eat opium in moderation?—The man who eats opium is quite a respectable man; there is no difference between him and any other respectable member of society. The man who drinks alcohol labours under a social ostracism.

6228. Then you think that there is a strong distinction between the two?—Yes.

6229. As regards malarial damp climate and the prevalence of fever, I suppose in all districts there is a good deal of difference; malaria or fever may be more in one part of the district than in another; is that the case?—The incidence of fever, I should think, is very capricious. No rational data have yet been found to account for the prevalence of fever in one part of a district.

6230. When you say capricious, you mean that fever will be found in one part of the district and not in another, or more in one part and less in another?—Yes.

6231. Speaking generally, the low-lying districts in the Gangetic delta are looked upon as damp and liable to fever?—Yes.

6232. (*Mr. Wilson.*) In reference to the letter which you have signed together with several other gentlemen, are we to understand it as an official letter from the British Indian Association or from the gentlemen who have signed alone?—The matter stands thus: that unless a question has been discussed formally at a meeting and a decision has been come to, it cannot be said that the Association is represented; but I do not think I commit any breach of confidence when I say that although the letter has been signed by only a few members of the British Indian Association, it represents the views of the Association. I mean of all the members of the Association whom I have had occasion to consult on the subject.

6233. I think in August last your Association did send a formal letter to the Viceroy upon the subject?—Yes.

*Raja Peary
Mohun
Mookerjee,
C.S.I.*

9 Dec. 1893.

Raja Peary
Mohun
Mookerjee,
C.S.I.
9 Dec. 1893.

6234. You consider that this is not official?—Not an official letter. The other letter was adopted at a meeting of the Association after discussion, whereas this was signed individually by some of the leading members of the Association, but the matter was not discussed at a meeting, and no resolution was passed.

6235. You state in the 14th paragraph of the official letter, sent in August, that "no proposal is made by the advocates of these measures for recouping the loss of revenue that this country would suffer at this critical time." How did they know that no proposal had been made? Why did they say that?—Because we have not heard that any

proposal has been seriously made for recouping the revenue if the opium revenue is lost to the country.

6236. Then you do not know anything of the publications of the society to which you are referring?—We refer simply to the resolution of Parliament.

6237. I am referring to the Anti-Opium Society. Let me ask you, is Sir Romesh Chandra Mitra, the late Judge of the High Court, a member of your Committee?—Yes.

6238. Was he invited to sign this letter?—I believe he was not at the time in Calcutta.

6239. Are you sure that he was not asked to sign this letter?—I am perfectly ignorant about it.

The witness withdrew.

RAJ RAJKUMAR SARVADHIKARI called in and examined.

Rai
Rajkumar
Sarvadhikari.

6240. (Chairman.) You are one of the gentlemen who signed the letter addressed to this Commission?—Yes.

6241. I believe you are Secretary to the British Indian Association?—Yes.

6242. In that capacity you signed the letter which has been addressed to our Secretary?—No; not in that capacity.

6243. In your individual capacity?—Yes.

6244. You have heard the testimony of the several native gentlemen of influence and position who have preceded you?—Yes.

6245. Do you concur in the views they have expressed?—Yes; I concur in them.

6246. (Mr. Wilson.) Do I understand that your Committee has not considered this question since the memorial in August?—No.

6247. Perhaps you can tell me whether Sir Romesh Chandra Mitra was asked to sign this letter?—No; he was not asked.

6248. You are quite sure?—Yes.

6249. May I take it that you are the Editor of the *Hindu Patriot*?—Yes.

6250. That is the organ of the Association?—No; it is not the organ of the Association.

6251. To whom does it belong?—It does not belong to any one; there are four trustees of the paper.

6252. Can you tell me how many copies of it the Government takes?—I cannot tell exactly, because there are different departments of Government which take the paper. Government does not take so many copies.

6253. You do not know?—There are several departments; I cannot tell how many copies are taken now; about 50, I think; it would not be more than that.

6254. Are there not more than 100?—I do not think so; it could not be as many as 100.

6255. May I ask whether you have personal knowledge of the facts stated in this memorial?—I have come across people who take opium. In my capacity as Secretary I have come across many people who use opium for themselves.

6256. I do not wish to ask you the same question as I have asked the other gentlemen; I only want to know if you have had any personal knowledge of the facts stated here?—Will you kindly tell me which of them you refer to?

6257. I will begin at the end. How do you know that the cultivators would be opposed to the change?—Because their rents would be reduced.

6258. What part of the opium-growing districts are you personally familiar with?—I am not familiar with any opium-growing districts myself.

6259. (Mr. Hanshawe.) You say that Government takes copies of the *Hindu Patriot*; does it stand on any different footing from other papers in that respect?—No.

The witness withdrew.

BABU SALIGRAM SINGH called in and examined.

Babu
Saligram
Singh.

6260. (Chairman.) In what part of the country do you reside?—I come from a village in the district of Shahabad in Behar.

6261. Is opium largely consumed in your district?—No.

6262. To what class do those who make use of opium belong?—Those who take it as a habit and for the sake of pleasure are generally Mahomedans.

6263. Is opium much used in your district as a medicine?—Not much.

6264. Do the people among whom you live regard the practice of using opium as a disgrace?—If a man takes opium except for medical purposes it is looked upon as improper.

6265. You say that in your district the use of opium for other than medical purposes is regarded as more or less disgraceful; that being the general opinion with regard to the use of opium, would your people be favourably disposed to a policy of prohibition on the part of Government? Do you think that they would approve of Government prohibiting the use of opium for any other than medical purposes?—If opium be supplied freely to the people for medical purposes, if the effect of prohibition be not to interfere with that free supply, and if it does not lead to the imposition of any tax, the people would like to have some further restriction.

6266. If the change of policy involved the imposition of a tax you would not recommend it, but if it were possible to make the change without the imposition of a tax you would recommend it; is that what you wish to say?—There are already existing restrictions; but in spite of those restrictions we find chandu and madat being smoked by

the people, and we also find in some cases that opium is taken as a pernicious habit, which leads to the ruination of people. If some restrictive measures could be adopted to stop the prevalence of those evils, it would be very desirable.

6267. Have you any proposals to make with a view to increasing the restrictions upon the sale of opium?—I have not thought of any scheme, and I am not prepared to suggest any further restrictions.

6268. You merely say in a general way that it would be exceedingly desirable?—Yes.

6269. Do you think it possible absolutely to prohibit the growth, manufacture and sale of opium in British India for any other than medical purposes?—I do not think at present that it is possible unless Government were to prohibit private persons from growing opium. If the Government were to withdraw the monopoly and leave it open, like indigo and other things, to private individuals, the evils might be much worse.

6270. You would either have monopoly or total prohibition?—Yes; but, as I have said before, I would allow it for medical purposes.

6271. It has been said that the prohibition of poppy cultivation would reduce rents?—Certainly as regards money rents according to law they could not be reduced, but I suppose you are aware that in Behar and in parts of Shahabad and Gaya rent is paid in kind.

6272. How would it affect landlords in those districts?—I possess zemindaris myself in the district of Shahabad. All my people in Patna and Gaya districts invariably pay rent of poppy lands in money. There is not the system by which the produce is divided equally between the landlord

and tenant; with respect to poppy land, therefore, it is a matter wholly of unconcern with the landlord if the cultivation of the poppy be stopped because the money rent established by law cannot be reduced. When the tenant agrees to pay a money rent it is his look-out what he cultivates, not the look-out of the landlords. If he does not wish to cultivate upon those terms, he can abandon the tenure.

6273. (*Mr. Wilson.*) You are a Pleader in the High Court, I believe?—I am.

6274. And in reference to the point you have been speaking of, you know the law?—I know the law, as well as being a zemindar, I know that in no case can a tenant go to the landlord and ask for reduction of his rent because he has ceased to grow opium.

6275. It is stated on the top of the printed paper that I hold in my hand that you are nominated by the British Indian Association?—When I sent in my manuscript statement those words were not there.

6276. You say in paragraphs 5 and 6 that the growing of opium is not viewed as profitable now-a-days. I suppose that is so?—That is so. My special reason for making that statement is that, during September or October last, I happened to be in my village, and some common officer connected with the Opium Department came and reported to me that the lumbaradar was not agreeable to cultivate opium in that village, and suggested that I should ask him or persuade him to enter into an arrangement with the Opium Department to cultivate some lands. I sent for the lumbaradar, and told him that it was desirable that he should cultivate opium unless it was a losing business for him. I could not compel him to do so, but if he chose he could do so; he had a free option in the matter, but at the same time I told him it would be desirable if he could see his way to cultivate. The lumbaradar is a man who enters into the contract on behalf of the other tenants. He agrees to take up 100 bighas or 50 bighas, and he brings in other tenants and distributes it between them. He brings the advances from the Opium Department and distributes them; and finally, when the opium is sent in, he brings its price and distributes among the cultivators. There is only one man to whom they look up in the village, and he is the lumbaradar. As I have said, I sent for him and asked him whether he was willing to cultivate, but he was not willing because the tenants generally were averse to doing what was not a very profitable business.

6277. What village was that?—Kulharia, Pargana Barahganw, zillah Shahabad, under the Commissioner of Patna.

6278. What is the nearest large town?—It is near the town of Arrah. Later on I had a letter addressed to me or to my brother—I am not sure which it was—a letter from Mr. Sen (the son of Keshub Chunder Sen), an officer connected with the Opium Department, saying that he would like to know why the tenants were averse to growing opium, and that he would like to have a conference with me on the subject. If I remember rightly, we said in answer that the reason was that it was not a very profitable business, and therefore they did not like to cultivate it.

6279. Have you heard of anything of that kind before, or was that the first and only instance?—Before that I had also heard from those tenants that they were not very keen about cultivating opium; I heard from people also then in Patna district.

6280. May I ask why you suggested to the lumbaradar that you would rather like him to do it if he could?—The man who had come from the Opium Department was a very common officer, something like an ordinary clerk; I do not know what his title was, and he told me that it would be much better if opium was cultivated. It was at his request that I said so, at the same time I did not agree, and I could not make up my mind to press my tenants to cultivate opium. All I suggested was that if he could see his way to do it, well and good; if not, I could not compel him.

6281. (*Mr. Fanshawe.*) You have spoken of this single instance in which, within your own knowledge, cultivators were not willing to grow the poppy?—Yes.

6282. What conclusion would you found on that as regards the large number of cultivators who cultivate the poppy in Behar, some 630,000?—The man who came asked me to persuade the tenants of that particular tenant to do it, and he said, "There are other villages where the tenants are also unwilling to cultivate."

6283. That is one instance; with your knowledge of the country, would you place any reliance upon this as proving general unwillingness to cultivate poppy, when you have 630,000 cultivators to deal with?—Where the growth of sugarcane is fast increasing, as in Shahabad and also in

Patna, and in some parts of Gaya, there it would be a matter of indifference to the tenants and landlords whether opium or sugarcane is grown. So far as the tenants are concerned, they will prefer sugarcane which is more profitable.

6284. Does not the cultivation of sugarcane depend upon various conditions—whether there is a market, whether there is certain manure to be had, and various conditions of that kind?—No; it does not depend upon that.

6285. Not at all or not altogether?—Not altogether. It requires three or four times watering; it takes a little more trouble to water.

6286. The question of a market will come in to some extent?—If there is a good crop, there is no such fluctuation in the price with regard to the produce. When there is a heavy downpour of rain and there is a bad crop, then it is that they lose.

6287. Dealing with the matter on broad lines, would you argue from what you have told us that the cultivators could necessarily substitute sugarcane for the poppy over a very large area?—I must make one more statement before I answer that question. Generally it is only land of a superior class that produces poppy as well as sugarcane, and if the land is capable of producing sugarcane, my conclusion is that in these two or three districts (to which my experience is restricted) the tenant is better off with it.

6288. Is it not the case that the cultivator who grows poppy is regarded as a good tenant?—He is the holder of good land.

6289. Beyond that, from the fact that he is cultivating the poppy, is he not regarded as a good solvent tenant and likely to pay his rent punctually?—I may answer that in this way. There is some advantage in growing poppy, *viz.*, that when the advances are made they facilitate the payment of rent at that time of the year.

6290. I am asking you to speak from the landlord's point of view. Do you not regard the poppy cultivator as a good tenant because he is likely to pay his rent punctually?—Not as a solvent or good tenant, but there is this advantage, that when the advances are made the man is able to pay his rent more readily from the money that he gets, and he is not put to the inconvenience of selling his grain to pay the landlord. It is some advantage to the tenant as well as to the landlord. But where the tenant is solvent the raising of the ordinary instalments of rent is not a matter of difficulty. A good solvent tenant never feels any difficulty in paying rent. It is not a matter of very great difficulty in the case of poppy-growing tenants, if they are solvent, to pay the rent irrespective of the advances.

6291. But is it the case that the poppy cultivators are solvent because they have the advances? They are small holders, are they not as a rule?—Generally. Supposing a tenant has 10 or 15 bighas, he grows poppy on a bigha at the outside.

6292. Are they regarded as good solvent tenants as being poppy cultivators?—Not necessarily on that ground.

6293. You think that the prohibition to cultivate poppy would not affect the landlord indirectly?—Indirectly in regard to the payment of rent. In some cases there may be a delay on account of the man not growing poppy.

6294. So far the landlord would lose?—So far the landlord would lose, or rather there would be a delay.

6295. He would have that indirect disadvantage?—He would have that slight disadvantage in some cases.

6296. You expressed an opinion as to the injurious effects caused by opium. Do you mean by opium-eating in excess? If so, what would be the number of opium-eating cases in excess which have come within your own experience. Would they be few or many, speaking generally?—They are few, and that in towns, not in the villages.

6297. Would the majority of people who eat opium be those who eat it in moderation?—There are a good number, regard being had to the population, but I could not give you the percentage; the majority of people take it in small quantities.

6298. You have spoken of medical purposes. Do you include in that the cases of such persons as take opium at a later age in life?—Yes, to prevent the effects of cold and chills.

6299. You admit that it is taken generally as a preventive against chills and colds?—In some cases.

6300. In a general way it is taken by people to prevent colds and chills?—Yes.

6301. Would you include that in your medical purposes?—Yes.

Babu Saligram Singh.
9 Dec. 1893.

*Baboo
Saligraam
Singh.*
9 Dec. 1893.

6302. With your knowledge of the country, do you think it is practicable to provide that people who want to obtain opium for this purpose should be able to do so, while others should be prevented from obtaining opium for purposes not included under the head of medical?—I have not considered over any scheme, and I should not like to adopt any scheme the effect of which may be to deprive those who want opium for the purposes of medicine of the opportunity of getting it.

6303. The medicinal purposes being what you have already described?—Yes.

6304. (*Mr. Wilson.*) You have referred to the lumbaradar; how or by whom is the lumbaradar appointed?—The lumbaradar is the principal tenant of the village; he gets his name registered in the Opium Department and enters into a sort of agreement with that Department to get certain quantities of land within his village cultivated either by himself or by others. For these lands he gets advances from the Opium Department.

6305. Is he appointed by the Government or elected by the villagers?—I should say both. The villagers choose and recognise him as their lumbaradar, and the Government

looks upon him also as a man through whom the advances can be distributed.

6306. He is not a servant?—There is no appointment.

6307. Suppose the villagers do not like him, can they get rid of him?—They will not cultivate the land at his instance if they dislike him. That is the most effective way of prohibiting him. He is something like a go-between between the Government and the tenants.

6308. Does he get any profit out of it?—Very little. Perhaps two pice in a rupee for the trouble of going and coming.

6309. (*Mr. Fanshawe.*) He belongs to the village and he is a representative of the villagers?—Yes.

6310. But so far as any appointment goes?—The Government does not appoint him.

6311. In no way?—No. But he is recognised by the Government Department as a go-between so far as opium is concerned.

6312. He is put forward by the villagers as their representative?—Yes.

6313. There is no appointment?—No, he is not a servant.

The witness withdrew.

*Dr.
Mahendra
Lal Sircar,
C. I. E.*

Dr. MAHENDRA LAL SIRCAR, C. I. E., called in and examined.

6314. (*Chairman.*) Are you a member of the British Indian Association?—Yes.

6315. Did you receive a circular asking you to attend to give evidence?—Not from the British Indian Association.

6316. From whom did you receive it?—From Mr. Inglis.

6317. Mr. Lyall's Secretary?—Yes.

6318. Then you are here at the suggestion practically of Mr. Lyall?—Yes. Some time ago a member of the British Indian Association asked if I would like to give evidence before the Commission, and I said I would have no objection if required—that was all. It was two or three months ago.

6319. As a medical practitioner your experience has been limited chiefly to Calcutta?—Yes.

6320. As a medical man do you regard opium as having special value in affording relief from pain?—I do, but not much.

6321. Do you think it has a permanent value as affording relief from pain?—No, not a permanent value.

6322. Then you do not hold opium in very high estimation for any purpose from a medical point of view?—I think I have clearly stated in my note what my view is.

6323. Do you believe that a considerable percentage of opium-eating originates in the desire of the sufferer to obtain relief from pain?—I do not say a considerable, but a pretty large percentage.

6324. Are you of opinion that opium is recommended by persons who claim to be competent as medical men, but are really not properly qualified?—It is recommended, but not in the way that has been described.

6325. Do you think that opium is often used at the recommendation of persons who give advice, not as doctors, but as having themselves suffered and experienced some temporary relief from the use of opium?—Opium-eaters generally give that advice.

6326. You think it is very bad advice?—I do not like that advice myself.

6327. What are the other inducements which in your opinion frequently lead people to use opium?—I think by far the largest class of opium eaters consists of persons who have taken to the habit for the sake of the pleasures which its intoxication brings on. So far as I have been able to ascertain, the chief of these pleasures which allures men to the use of the drug is what I may call sexual endurance.

6328. Is it your experience that there is great difficulty in giving up the use of opium when once it is adopted?—That I think is invariably found; it is almost impossible to give it up.

6329. What do you say as to the moderate habitual use of opium? Do you think that such a use is productive of any serious mischief?—So far as my observation goes, I have not observed any serious organic mischief or moral depravity.

6330. Looking at the use of opium when taken in immoderate quantities or inhaled in the form of vapour, what are

the results which you have observed?—I have found it when taken in immoderate quantities to produce great mischief. It acts as a poison. Taken in immoderate doses opium often gives rise to fatal obstruction of the bowels and retention of urine from paralysis of the muscular fibre of the viscera; or it may lead to the opposite conditions of diarrhoea, dysentery, and enuresis. It often leads to a condition of the brain which makes the victim lead a most wretched and miserable existence of dullness and stupidity, the very picture of living death. If the dose is suddenly increased, as it sometimes is, then there may be actual apoplexy.

6331. Have you any practical personal knowledge of the effects of chandu-smoking?—I have just been to two chandu-smoking dens and one madak-smoking den.

6332. Was that the first occasion?—That was the first occasion.

6333. Can you tell us anything of the effects of chandu-smoking and the circumstances which led to the practice from any wide sphere of observation?—Not from any wide sphere, but from what I heard from these smokers themselves.

6334. What did they tell you?—They were very familiar with me and confessed many things which I put down. In the first chandu shop that I visited all the smokers were males, and did not appear to be such as may be called poor. Indeed, one of them was a zemindar from the North-West. All of them seemed to be well nourished, and some of them even appeared to be robust. I entered into a pretty long and familiar conversation with them. They one and all confessed that they had begun to take to the smoking from the assurance they had received from smokers of its strengthening effects on the sexual powers, and they told me that this invariably was the origin of what they all most emphatically called the pernicious habit.

6335. Speaking from personal knowledge can you tell us what class of persons frequent the madak shop?—They belong generally to the poorer classes.

6336. What do you say as to their physical condition?—They were more ill-nourished than the chandu-smokers, simply from their poverty. In fact, they said that if they could take enough nourishment, they would not dwindle so much as I found them doing.

6337. Then I understand you to say that both chandu- and madak-smoking are bad practices?—Yes.

6338. Would you desire that the Government should abolish shops of that kind at which chandu or madak can be smoked or purchased?—Yes, and the chandu-smokers themselves would be glad if Government would abolish these shops.

6339. They feel that they have not sufficient moral strength to leave off the habit themselves?—That is so.

6340. With regard to opium-eating, do you distinguish between its effects and the effects of opium-smoking?—I do.

6341. Do you consider that opium-eating is less pernicious?—Less than opium-smoking.

6342. Do I understand you to object to opium-eating?—
I object to opium-eating certainly.

6343. You are opposed to the use of all intoxicating drugs?—Yes, and I look upon tea, coffee, cocoa, and articles of that class as absolutely unnecessary for men. I am opposed to the use of even such substances as tea and coffee and cocoa *et hoc genus omne*, which are used under the plea that they exhilarate but do not inebriate, that they remove fatigue, stand between food and medicine, etc. In my humble opinion, rest, healthy recreation and adequate nourishment are all that man requires for the due performance of the functions of life, physical and psychical.

6344. Therefore you are quite sure he does not require opium?—Certainly not.

6345. You acknowledge that your views are not as widely entertained as you would wish?—No, not even my medical views.

6346. As a practical man, recognizing that public opinion has not advanced in your direction as far as you would wish, what do you say should be the practical policy of the Government? Do you consider it possible by legislation to prohibit the use of opium?—I think it is impossible.

6347. If it is not possible, do you think it is best that the Government should recognize that there is a demand for opium and should simply strive to regulate consumption as far as it can?—Yes.

6348. As regards the system under which opium is at present produced under the Bengal monopoly, do you consider that there is very little to be proposed in the way of alteration in the present regulations?—I am not competent to deal with that question.

6349. As regards the sale of opium by private dealers?—There should be more stringent measures to prevent its abuse.

6350. Are you prepared with any specific suggestion?—No.

6351. (*Mr. Wilson.*) On the paper which has been furnished to us as your statement you are said to have been nominated by the British Indian Association?—I explained that the simple fact which could make me a nominee of the British Indian Association was that I was asked by a leading member of the Association about two and a half months ago whether I would like to give my evidence as a medical man before the Commission, and I said "If my evidence is required I am quite prepared." But I have come here as a medical man myself, not as a nominee of the British Indian Association.

6352. I want to know whether you supplied that heading yourself?—No. What I said at the heading of my paper was "Notes on opium-eating and smoking for the Royal Commission."

6353. Do you know who printed that heading?—No, when the print came into my hands I found it altered.

6354. Have you received the distinction of Companion of the Indian Empire?—Yes.

6355. Am I right in believing that there is only one other medical gentleman in India who has received that distinction?—I think so.

6356. I understand you to state that you find "opium to act chiefly as a palliative and seldom as a curative agent"?—Yes.

6357. That it affords relief from pain, "and seems to arrest the progress of disease, but that this is seeming only in the majority of cases"?—Yes.

6358. That the diseases which appear to yield "often return with greater violence"?—Yes.

6359. And that, partly owing to the recklessness of practitioners "many a patient has been driven into the habit of taking the drug from which neither could he free himself nor could he be freed without causing a return of the suffering which had necessitated the use of the drug"?—Yes.

6360. "Or without fresh and peculiar sufferings due to the cessation of the drug's primary action"?—That is the worst of the drug—it cannot be left off.

6361. You have said that "by far the largest class of opium-eaters consists of persons who have taken to the habit for the sake of the pleasures which its intoxication brings on"?—That is my own experience.

6362. And that, so far as you "have been able to ascertain, the chief of these pleasures which allures men to the use of the drug is what may be called sexual endurance or prolongation of the sexual act"?—Yes.

6363. And you believe that that is afterwards followed by impotence?—Yes.

6364. Is it your opinion that the habitual user of opium, even if "convinced of the evil consequences, he wishes to give the habit up, finds it impossible to do so"?—Yes.

6365. You do not go so far as to say that the habit cannot be broken?—No, I do not.

6366. But the cases are very few and far between?—Very few and far between.

6367. And the only depravity which you have observed is "the unconquerable hankering after the drug"?—Yes.

6368. When you visited the chandu shop, the persons who were there told "you that they had begun to take to smoking from the assurance which they had received from smokers of its strengthening effects on the sexual powers"?—Yes.

6369. They told you that this was invariably the origin of what they "emphatically called the pernicious habit"?—Yes.

6370. And when you visited the second chandu shop they said the same?—Yes.

6371. Then you visited a madak shop?—Yes.

6372. And there they told you the same tale, "that the habit was contracted from its reputed effects on the virile powers"?—Yes.

6373. They also said that the habit was a pernicious one, and that it devoured their small earnings in most cases?—Yes.

6374. "And yet the hankering after the drug was so powerful as to render them callous to the sufferings of their wives and children from the dire effects of poverty, whom they would rather see starving than deprive themselves of their ruinous indulgence"?—One and all admitted that in this one particular shop.

6375. In both of these shops the smokers of chandu and madak both said they "would be glad if Government would abolish the shops." They knew they would suffer individually, but they would rather do so "than that future generations should be entangled in a habit which entails such a perversion of the will, and in the end deprives them of the very power for the strengthening of which they prized it so much in the beginning"; and the owners of the shops who were themselves smokers did not dispute what their customers said?—No.

6376. Do you put beer, tea, and opium on a level as things that you would like to see equally abolished?—Not quite on a level. Tea, cocoa and coffee are much more innocent than opium, but I regard them as absolutely unnecessary.

6377. (*Chairman.*) What do you say about alcohol?—Alcohol is a deadly poison, one of the worst poisons in existence for a man to take.

6378. Worse than opium?—Infinitely worse.

6379. (*Mr. Wilson.*) Is beer worse than opium?—Yes. Whatever contains alcohol is worse than opium as regards its effects on the physical as well as on the mental constitution.

6380. Is that in your experience as regards Europeans as well as the natives of India?—I have had very little experience of Europeans who are opium-eaters as to whether the effect of beer and spirits is equal to, or worse than, the effects of opium. If the people take beer in moderate quantities, they may not have body or mind diseased in any way, but generally these things are never taken in moderate quantities. Europeans in India fare worse for their drinking habits in this climate.

6381. May I ask whether your practice is in Calcutta?—And the suburbs. Of course my practice extends all over Bengal, and patients come to consult me from all parts of the country.

6382. You do not know much about the habits of the poorer classes in the remote districts of Bengal?—I cannot say that I know much.

6383. (*Mr. Fanshawe.*) With regard to your statement that the largest class of opium-eaters consists of persons who take to the habit for the sake of its pleasures, such as you describe: does that apply to Calcutta?—Yes.

6384. Mainly?—Mainly to Calcutta.

6385. To what classes of society do you wish that remark to apply?—To all classes. I have chiefly found opium-eaters among Mahomedans—more among Mahomedans than Hindus, but it belongs to all classes.

Dr. Mahendra Lal Sircar, C.I.E.
9 Dec. 1893.

6386. Are you referring to the people of the lower or to those of the middle and upper classes?—All classes. Generally I may say people of the middle and upper classes take to opium rather than the poorer people.

6387. Then the remark you make is applicable more to the middle and upper classes than to the lower in Calcutta?—Yes.

6388. With regard to the difficulty which you find as to giving up the habit, does that apply equally to the moderate use of opium?—To all cases, even to those who only take a grain a day.

6389. There is some difficulty, but is there the same difficulty?—The difficulty of course becomes greater with an increase of the doses.

6390. As regards moderate eaters, the difficulty is not so great?—It is less.

6391. You are aware that we have had a good deal of medical evidence to the effect that in jails and elsewhere it is found that the habit can be given up without much difficulty?—That is what they say.

6392. Does your experience agree with that?—No.

6393. With regard to the men whom you saw in the madak and chandu shops, how many were there altogether?—In the first chandu shop that I visited there were about 10, and in the next about 8.

6394. You will not misunderstand me when I say that you put some rather tall language into their mouths about future generations being entangled by perversion of will, and so on?—That is exactly what they told me.

6395. Was it put quite in that way?—They said "It is better that we should suffer individually than our children"—they even say future generations.

6396. Did they all make the same statement, and was this in reply to a direct question from yourself?—They volunteered it. I simply asked them why they had taken to this habit, and they made that confession.

6397. Have you made any chemical or medical analysis enabling you to ascertain the difference in the effects of smoking and eating opium?—No.

6398. Then your opinion is not founded on any such analysis?—No. I speak from simple experience.

6399. I am not quite sure what you recommend with regard to madak and chandu shops? You know that smoking on licensed premises is now stopped, but that the sale of chandu and madak in certain limited quantities is still allowed; do you think that this ought to be prohibited?—I would abolish these shops.

The witness withdrew.

The Hon'ble GONESH CHUNDER CHUNDER called in and examined.

Hon'ble Gonesh Chunder Chunder.

6415. (*Chairman.*) You are a member of the Bengal Legislative Council?—I am.

6416. And a member of the British Indian Association?—I am.

6417. You have been present this morning?—The greater part of the time.

6418. You have heard the views expressed by the numerous witnesses who have been called?—I have.

6419. Do you concur with them generally?—In most of what they have said.

6420. Will you give us a short general statement of your opinion as to the effect of opium consumption amongst the people of India? Do I understand you to say that the persons addicted to the smoking of such preparations as madak and chandu are often persons of low moral character?—Some of them commit petty thefts and other minor offences.

6421. But the eating of opium in moderate doses has not in your experience been the cause of moral depravity of any kind among any classes of person?—That is so.

6422. Do you believe that the people of Bengal would be willing to bear the cost of prohibitive measures if they were adopted by the Government?—I do not think they would.

6423. Do you recommend any alteration in the existing arrangements for the growth of the poppy and the manufacture and sale of opium?—None.

6424. Do you consider that the prohibition of the growth of the poppy in British India would be prejudicial to an important agricultural interest?—It would be prejudicial.

6425. Do you think that a policy of prohibition would be difficult to maintain in view of the risks from smuggling

6400. Would you prevent the sale of chandu and madak altogether?—I would prevent the sale altogether.

6401. What would you say as regards a man who smokes in his own house?—People can do it themselves at home—the preparation is so easy.

6402. Do you wish to interfere with the man who habitually smokes in his own house?—We cannot interfere with that.

6403. What do you say as to private gatherings or clubs for smoking: should they be prohibited?—Yes.

6404. Do you think Government can do that?—I think so.

6405. Could we go into private men's houses?—No, but these are licensed shops.

6406. There are no licensed shops now for the purpose of smoking.—I understood they were all licensed shops. We cannot interfere with the liberty of the subject.

6407. There has been a certain amount of smoking going on in private places called smoking clubs. Would you propose to interfere with them?—It would be impossible to interfere with them.

6408. You have said that rest, recreation and adequate nourishment are all that a man requires. In adequate nourishment you do not include tea, coffee, or cocoa, or any of these things?—No. They are not nourishment at all. If it were not for the little milk and sugar with which they are mixed, there would be no nourishment in them.

6409. (*hai man.*) Are you a graduate of medicine in the Calcutta University?—Yes.

6410. You say that you regard tea as quite unnecessary?—Yes.

6411. Do you believe that drinking tea tends to shorten life?—I do not say that; I have not said that.

6412. But you think it a pernicious habit?—I do not say it is a pernicious habit, but an unnecessary habit. The time devoted to tea-drinking and coffee-drinking might be better occupied.

6413. (*Mr. Fanshawe.*) Are you aware that the British Indian Association sent in your name as a representative?—No. I was simply asked by a leading member of the Association whether I should like to give my evidence as a medical man before the Commission.

6414. Is it or is it not the case that the Association sent in your name with those of other gentlemen as the names of those who were ready to give evidence?—I did not know that before this was sent to me. I did not know that I was to come here as a nominee of the Association.

and the general difficulty of enforcing prohibition?—I do think so.

6426. Do you consider that if the trade were thrown open and the limitation of the privilege of sale to licensed vendors were no longer enforced, the tendency of such changes would be to increase the sale of opium?—It would increase.

6427. (*Mr. Wilson.*) Am I right in believing that you are a member of the legal profession?—I am.

6428. You are busily occupied in that way?—I am.

6429. You have not much time to visit the outlying districts of Bengal?—I go once a year during the vacation.

6430. Have you there made special inquiries about this matter?—I did not make any special inquiry, but generally I came in contact with the people about whom I have given this opinion.

6431. Did you hear the evidence of Babu Saligram Singh in reference to poppy cultivation?—The last part of his evidence.

6432. To the effect that it was not so profitable, and that people did not care for it?—I heard that.

6433. Does that at all affect your opinion as to its being one of the most valuable agricultural resources?—It does not.

6434. You think he is wrong?—So far as my information goes I do not think he is right.

6435. Are you able to suggest what further restriction you would put on the sale of opium by retail vendors?—I would put the sale of opium under police regulations.

6436. Do I understand that part of your suggestion to refer specially to the city of Calcutta?—That is part of my suggestion.

6437. In the country at large do you think that the present arrangement is perfect?—I do not know what arrangements there are in the districts, and therefore I cannot express any opinion on that point.

6438. You think the arrangements are perfect at present?—The arrangements as to growth and cultivation and as to the preparation and sale of opium are perfect; it is only the retail sale which ought to be put under further restriction.

6439. (*Mr. Fanshawe.*) I understand your general view to be that eating opium in moderation has no injurious effects on the physical condition of the people or on their moral character?—Certainly.

6440. I also understand your general view to be that eating opium in moderation is fairly common?—That is what I mean.

6441. Have you thought out what you mean by the police regulating the sale of opium?—Yes.

6442. What would you propose?—That all retail vendors of opium should be placed under the supervision of the thanas in which their shops are.

6443. You are speaking of Calcutta?—Yes. I would put every retail vendor in the city of Calcutta under the supervision of the police of the thana within whose jurisdiction his shop is situated.

6444. What do you mean by that—that he would be liable to have his shop visited at all times, or that the police should check his issues, or what?—There should be some guarantee that purchasers do not use opium for other than lawful purposes.

6445. How are the police to maintain that?—In the same way as arms and ammunition are under the police supervision.

6446. A nominal register being kept of all purchases?—Some such thing ought to be done.

6447. You have not thought it out in detail?—Not in detail, that is my general idea.

The witness withdrew.

Mr. J. PRESCOTT HEWETT, Secretary of the Commission, called in and examined.

6448. (*Mr. Wilson.*) I have a paper before me which you furnished to me as an abstract of evidence to be given by Babu Sahgram Singh, a witness nominated by the British Indian Association. Will you tell me whether you had that printed?—I had not to the best of my recollection.

6449. It was upon the paper when you received it?—I believe so.

6450. Can you tell me from whom you received it?—Either from Mr. Dane or Mr. Inglis.

6451. I ask the same question in reference to the ab-

stract of evidence to be given by Dr. Mahendra Lal Sircar—My answer is the same in respect to that.

6452. With reference to a letter signed by six gentlemen, some of whom have been before us this morning, which is dated from No. 18, British Indian Street, and on which is written "Letter from the British Indian Association," is that written in manuscript?—Yes; I think that those words were written by my clerk.

6453. Do you know from whom you received it?—I cannot remember exactly. I think I must have received it from Mr. Dane or Mr. Inglis.

The witness withdrew.

Adjourned to Wednesday, the 20th December, at 1 o'clock.

At the Great Eastern Hotel, Rangoon.

TWENTY-SECOND DAY.

Saturday, 9th December 1893.

PRESENT :

SIR JAMES LYALL, G.C.I.E., K.C.S.I., (IN THE CHAIR).

SIR WILLIAM ROBERTS, M.D.
MR. R. G. C. MOWBRAY, M.P.

MR. ARTHUR PEASE.

MR. C. C. LEWIS (*Provisional Secretary*).

Chairman.—We consulted together on our way here, and before beginning our proceedings, I think it will be convenient to put upon record what our intentions, as at present advised, are as to the scope of the enquiry we are about to conduct in Burma. We do not intend to go into the arguments for or against the total prohibition of the use or possession of opium by Burmans in Upper Burma, or for and against the same prohibition in Lower Burma, modified by the exceptions in the case of habitual consumers holding certificates. We accept the fact that that policy has been adopted and will have to be tested by experience. We do intend to go into the arguments for and against the exclusion of non-Burmans from the prohibition, and to take what evidence is available as to the effect on them of the moderate and immoderate habits of opium-smoking and opium-eating, and as to how far continued moderation in either habit is usual or the reverse. We want this evidence more particularly in the

case of the Chinese. We also want to inquire into the prospects of opium being successfully smuggled into Burma, Upper and Lower, from China or India, and as to the existing or proposed arrangements to prevent it; also as to the degree to which prosecutions for illicit possession or other breaches of the Opium Act have been lately necessary and are likely to be necessary in future under the new system. Our work to-day will consist of asking an officer of the Government of Burma to put in a full description of the new system in Lower and Upper Burma which has been sanctioned and which is about to come into force; and putting such questions to him upon that system as we may be able to put at such a short notice.

Mr. C. G. BAYNE called in and examined.

Mr. C. G.

Bayne.

9 Dec. 1893.

6454. (*Chairman.*) You are, I think, Revenue Secretary to the Chief Commissioner of Burma?—Yes.

6455. And you put in a Note on the new system of opium administration in Burma which will be introduced from 1st January 1894?—Yes, I do.

6456. I suppose the reason why the cultivation of opium is permitted in Kachin villages is partly political?—Yes, partly political. We have very little control there. We could not stop it if we tried without sending a small army into the localities.

6457. Has the Government actually levied that duty of 8 annas yet?—Yes, it is occasionally levied. These tracts are generally visited by the officer who goes round. He collects a nominal sort of tribute, which is generally about 8 annas a household. If he sees opium cultivation and if he can get the *pè* duty, he collects it. It has been collected however to a very small extent. It is not shown at all in the statement, but in the reports of political officers I have occasionally seen it. He says he has a few rupees on account of *pè* duty; but that would go down as tribute, and would not go into the excise report at all. That is the only way I can explain the fact that it does not appear in the excise report.

6458. What is supposed to be the rule about the purchase of that opium? Can it only be purchased by a licensee-vendor, wholesale or retail, or is there any such rule as that?—There is a rule to say that it can be purchased by a non-Burman residing in the tract. I think it can also be purchased by a licensee vendor. In local areas in Upper Burma, in which the cultivation of the poppy plant is permitted, a cultivator may sell to any non-Burman any quantity of opium or poppy-heads, the produce of his cultivation. Any non-Burman going into these tracts could buy the poppy.

6459. What is the definition of "non-Burman"?—"Non-Burman" means any person who is not a Burman.

6460. What is a "Burman"?—Burman means any person born of parents both of whom belong to races indigenous to Burma, except a Kachin, or a Shan, or a Palaung.

6461. Are Malays regarded as indigenous to Burma?—I do not know that that question has ever arisen. The only part of Burma in which Malays are born and bred is the very bottom of Burma, in the Mergui District; and even there there are only a few hundreds of them. I doubt if they would call themselves indigenous.

6462. I suppose Chinese, Siamese, Indians and Malays would all be non-Burmans?—Yes.

6463. Down in Tenasserim I believe there are certain races of fishermen and people who are employed as foresters who are said to be very much addicted to opium?—I do not know about foresters; but there is a curious indigenous tribe called Salones, who live in the islands of the Mergui Archipelago. They are practically beyond administrative control. These people go about these islands in little boats and occasionally come to the main land. It is said they are addicted to opium. They are employed by the Chinese to dive for pearl shells.

6464. Are the Mergui islands recognised as British territory?—Yes.

6465. But are they really under British Administration?—They are absolutely part of Burma, but they are a long way off and extend over a large area, so that it is difficult to visit them. The Deputy Commissioner goes round occasionally in his launch. No taxes are levied on them: they are savages. Various efforts have been made from time to

time to make them settle down on the main land, but they have always declined to do so.

6466. What is meant by the manufacture of opium?—Opium is manufactured in order to prepare it for smoking. I understand that all opium is clarified, and by that means becomes what we call *beinchi*. That is what is smoked.

6467. (*Sir William Roberts.*) Is that the same as *chandu*?—*Chandu* is clarified opium with opium ash mixed. *Beinchi* is understood to be a mixture of pure opium and refuse opium collected from pipes which have been smoked. *Beinchi* is what the poor people smoke.

6468. (*Mr. Mowbray.*) Is there any consumption of crude opium in Burma?—I believe Burmans eat it, and also that Coringhi coolies eat it. That is the way they generally consume it.

6469. (*Chairman.*) "Professional persons" includes what?—Doctors who practise under the English Medical Act and persons holding Diplomas of Indian Universities.

6470. Clause 3A relates to manufacture?—"Practitioners" is a general term to include various classes of medical practitioners, pharmacists, doctors, and tattooers.

6471. Do tattooers administer opium in the shape of opium-smoking, or do they administer opium in the crude form?—I do not know how they would administer it. It is practically a medicine. In their case they use it purely as a medicine.

6472. (*Sir William Roberts.*) I fancy the use of it in tattooing is to relieve the people of pain?—Yes, I presume so.

6473. (*Chairman.*) What is the exact meaning of "pharmacist" in Rule 4?—A person who deals in European medicines and drugs as a means of livelihood.

6474. (*Sir William Roberts.*) It corresponds to our "druggists"?—Yes.

6475. (*Chairman.*) Are they Europeans or natives?—Sometimes they are Europeans and sometimes they are natives. They are only to be found in large towns. There are not very many of them—30 or 40 in the whole of Burma.

6476. Can you give me any idea of how many medical practitioners there are in Burma?—There would be the Government Surgeons, and then there are the Army Doctors. All those together, I suppose, would come to 50 or 60. Then there are private practitioners, of whom there are hardly any outside Rangoon. In Rangoon there are perhaps half a dozen, or perhaps a dozen. There would be one or two in Akyab, and also in Moulmein. Altogether, I should not think there would be more than 100 in Burma.

6477. Are the Burmese population chiefly doctored by the class who are called "Doctors"?—Yes.

6478. It runs in families?—I think so.

6479. I see that the amount of opium which a doctor may have is very limited,—10 seers of poppy-heads, 10 tolas of opium, and 10 tolas of medical preparations from opium?—Yes.

6480. Do you think that sufficient provision is made by these rules for the supply of opium for medical uses to Burmans?—That 10 tolas was fixed on the advice of the District Officers. It is a matter really for experience. No special provision has been made hitherto for licenses to native doctors.

6481. It was not necessary, I suppose, as long as they could get it? When they could get it without offence it was not necessary.

6482. According to the native system of medicine which prevails, do you know whether opium is much used as a medicine?—I cannot say.

6483. It is said in paragraph 10:—“Licenses for retail sale to ordinary consumers are sold by auction in Upper and Lower Burma, and the auction-purchasers are permitted to open shops in selected places.” The shops are settled before the license is sold, I suppose?—Yes. You will find it under Rule 60.

6484. Can you say what the reason is for the system of selling the license for retail sale by auction?—It is the simplest method of selection. It is the only way of fixing the value. It would be very difficult to determine a fixed fee, and decide what should be the fee in the case of a fixed-fee system being adopted.

6485. The amount of opium which a licensed vendor would be able to obtain from Government would be fixed, would it not?—Yes, it is fixed.

6486. So that the value might be approximately known from that?—Yes.

6487. You say in paragraph 9 that opium is sold retail by direct Government agency at four places?—It has not actually been sold yet, but it is to be sold from the 1st January next. It is stated in the beginning of the note that the new system has not yet been introduced.

6488. Will any rate be prescribed at which the Government agent is to sell?—Yes.

6489. (*Sir William Roberts.*) Why is there any restriction on the sale of poppy-heads?—I presume poppy-heads are capable of being used for objectionable purposes. I have never heard of poppy-heads in Burma myself; I believe they are unknown among the people.

6490. Are they used for making a drink?—I have never heard of their being used for making a drink. I imagine poppy-heads are put into these rules because they are Indian rules, and are therefore put in only as a precaution.

6491. (*Chairman.*) I believe you said that there was a price fixed?—A price will be fixed. The Chief Commissioner has not yet decided how it shall be fixed; probably it will be fixed by taking the price of the nearest licensed shop.

6492. Who will be these Government agents?—The Treasury Officer.

6493. Is he a European or a Native?—He is generally an Extra Assistant Commissioner.

6494. Either European or Native?—Yes. Either European or Native; often he is an Assistant Commissioner.

6495. You say that the number of Burmans who have registered themselves up to date is 7,515?—Yes.

6496. When did the registry begin?—About the beginning of April.

6497. When does the time expire?—On the 30th June next.

6498. Has there been any reluctance shown in coming forward to register?—I cannot answer that question right off. I have had nothing to do with the actual registration. I can however state that it was originally proposed to require people to register themselves within a fixed date, —about a month and-a-half. Then certain officers asked that the period should be extended because they thought that people who perhaps might wish to register had not had sufficient opportunity of registering themselves.

6499. (*Mr. Pease.*) Have you heard of any cases of hardship in Upper Burma from the people not being able to register themselves as opium-smokers?—No, not in Upper Burma. Opium has always been prohibited to Burmans.

6500. (*Sir William Roberts.*) Before the British occupation?—Yes.

6501. (*Mr. Moubray.*) And since?—And since.

6502. (*Mr. Pease.*) There seems to be a provision made, where only a limited number of persons are consumers, for the Government retailing the opium itself: do you know whether that system has been found to work satisfactorily?—It has not been tried yet.

6503. It would seem as though the Government if it could see its way in non-populous places to be itself the distributor, might easily have arranged to have been the distributor in more populous places; in that case they

might have exercised a more decided check on the sale of opium, and could see that the sales were in accordance with the law?—It is considered inadvisable to embark on too many novelties at once. It is considered that the system by licensed vendors is suitable.

6504. But is there not a great temptation to a man who has purchased the right to sell by auction, to sell beyond the limits prescribed by the law?—There is a temptation; but when he cannot get more opium than he supplies his legal customers, he is not in a position to do so; he must then procure smuggled opium if he can get it. Of course efforts are made to prevent smuggling.

6505. I observe that there are a certain number of maunds set aside for every district which it is said is calculated upon the number of Burmans, and the number of opium-consuming non-Burmans: what means have you of obtaining the number of the opium-consuming non-Burmans?—That figure 6,819 was ascertained by taking the census early this year.

6506. A census of opium consumers?—A census was made of non-Burman opium-consumers as well as Burman opium-consumers.

6507. Is that census given to us anywhere in these papers?—It is not, but I can put in a statement giving any details from which these figures are prepared.

6508. (*Chairman.*) Is there any report of it submitted to the Government?—A report has not been submitted to the Government of India.

6509. Has a report been submitted to the Chief Commissioner?—A report has been submitted to the Financial Commissioner. The District Officers all report the numbers.

6510. (*Mr. Pease.*) According to this calculation if 80lbs. makes a maund, we have an allotment of 12,204lbs. for 17,000 people, which makes an allowance of two-thirds of a pound each per annum?—The total quantity of opium now required to supply the local demand of ordinary consumers in Lower Burma is in round numbers 19,500 seers, viz., $\frac{1}{4}$ of a tola $\times 365 \times 17,000$.

6511. (*Mr. Moubray.*) A tola is about 180 grains?—Yes.

6512. So that $\frac{1}{4}$ of a tola is about 45 grains?—Yes.

6513. Is not that a very large daily allowance?—It is calculated on the actual facts; it is what habitual consumers do take. There are men who will smoke 2 annas or 4 annas or 8 annas worth a day. They always calculate in annas. Some of them go up to Rs. 2 worth a day. The figure $\frac{1}{4}$ of a tola was taken from the report of District Officers.

6514. (*Sir William Roberts.*) Are there any similar restrictive regulations with regard to spirits?—No.

6515. A Burman may get what spirits he likes?—Yes; but there is a maximum amount of spirits which a man may possess under the Excise Act. A man may not possess an unlimited quantity of spirits.

6516. Do you mean a dealer?—No, a private individual.

6517. (*Chairman.*) He cannot get more than a certain amount at one visit?—It is under the Excise Act of 1881.

6518. (*Sir William Roberts.*) Practically there is no restriction?—No.

6519. No restriction as there is supposed to be for opium?—No.

6520. (*Mr. Moubray.*) I noticed that you speak of opium imported being allowed in Upper Burma, both Government opium and opium imported from the Shan States, is that anything more than what you referred to as the amount allowed to travellers and horse-dealers entering Burma by land from the Shan States?—Yes.

6521. There is actual importation from the Shan States over and above that?—Yes.

6522. What is the duty?—Rs. 15 a viss, which is 3-65lbs.

6523. Do you have to keep up a regular preventive system beyond Upper Burma and the Shan States in order to enforce that?—There is a preventive establishment, but it is not a very large one.

6524. Is there the same duty on opium imported from China?—Yes.

6525. Have you also got a preventive system upon the frontier between China and Upper Burma?—The police are the preventive officers. There is not a special preventive establishment on the Chinese frontier.

Mr. C. G. Bayne.
9 Dec. 1893.

Mr. C. G. Bayne.
9 Dec. 1893.

6526. Do you imagine that there is much smuggling either from the Shan States or from China?—It is reported that there is a good deal.

6527. Then with regard to poppy grown in Upper Burma, does that apply only to what you call the Kachin villages?—Yes.

6528. When that is taken out beyond the areas to another part of Upper Burma, does that pay the same duty of Rs. 15 a viss?—Yes, it is the same duty. You will find it at the end of Rule 38.

6529. Do you know, as a matter of fact, whether much opium has been imported in that way, or whether much duty has been received?—I have not heard.

6530. You cannot give me any idea as to the proportion of opium brought into Burma which is consumed in the rough form, and manufactured?—No.

6531. Is there any regular list or register of pharmacists and doctors?—Such would be kept.

6532. Who actually issues the licenses to these pharmacists and doctors?—The Deputy Commissioner or the Collector.

6533. Each person who comes to the Collector or Deputy Commissioner to ask for a license has to prove to the satisfaction of the Deputy Commissioner or of the Collector that he is a pharmacist or doctor?—Yes.

6534. In Upper Burma I understand that there is no register either of non-Burmans or of smoking Burmans?—No.

6535. It was suggested in the first instance that there should be a register of non-Burmans as well as of smoking Burmans?—Yes.

6536. Do you know why that was abandoned?—The reason is because there is a legal objection. I understand that the Government of India considered that it was permissible under the opium law to maintain a register as a step towards total prohibition; but it was not admissible to maintain a register merely as a method of making and taking a census. The Opium Act prohibits possession of opium, and it is legal to maintain a register as a step towards total prohibition, but it is not legal to maintain a register merely in order to ascertain the number of people to whom you are going to supply opium.

6537. What is the reason why the price in Arakan is less than the price in Upper Burma?—The prices were fixed a great many years ago. I could not say for certain, but I imagine the reason is because Arakan borders on Bengal and there is greater temptation to smuggle into Arakan. They therefore had to put the price lower. Those prices were fixed in 1881.

6538. (*Chairman.*) That is the price to the vendor?—Yes, the price to the vendor.

6539. (*Mr. Mowbray.*) In the statement of opium licenses and opium revenue which you have put in, what is actually represented by the import duty?—Foreign opium imported from the Shan States and Yunnan pays a duty of Rs. 15 a viss.

6540. What is the excise duty?—Rs. 25 a seer; Rs. 7-4 is the cost of production.

6541. The cost paid by the Local Government of Burma?—I do not know how it is adjusted, but Rs. 7-4 is the actual cost of the drug.

6542. When you say that the figures in column 9 are exclusive of cost price, does that mean to say that that is the net revenue raised after the Rs. 7-4 has been paid; or does it mean that that has to be deducted?—It means that the Rs. 7-4 has been deducted.

6543. And that that is net revenue?—Yes.

6544. (*Chairman.*) I believe that the consumption on the premises of licensed shops is prohibited?—Yes, except in the Ruby Mines and Bhamo, as will be seen at the end of Form No. 9. When notices were issued that consumption on the premises was to be prohibited the local officers represented that it would be very difficult to enforce it in these districts; and it was retained as a temporary measure.

6545. You say it is prohibited in licensed shops; is there any law as to smoking in other premises?—No.

6546. Has any legislation been proposed to prevent the establishment of smoking clubs or saloons?—No.

6547. How is the import duty on Chinese Shan States opium to be levied?—Opium is imported past the stations. The rules are under the head of "Import," Nos. 39 to 47. An opium vendor wishing to import opium gets a permit to import it. He imports it, brings it to the treasury

or opium ware-house where it is weighed and examined, and then the duty is paid. He is then allowed to remove it.

6548. Nobody but a licensed vendor can import?—No, except travellers and horse-dealers for their private purposes.

6549. I think that it appears evident that there will be considerable difficulty, to say the least, in preventing illicit import of opium along the coast?—It is feared that there will be.

6550. And along the land frontier of China and the Shan States and Siam?—Yes.

6551. I should like to know whether you can give us any particulars regarding the preventive establishments now existing; are there any?—There are.

6552. Can you let us have the particulars?—There are existing establishments both for excise and opium. They are not specially directed to excise. I could produce particulars though I cannot give them now. The police have excise duties, but there is a special excise establishment.

6553. Has that been augmented lately? It is proposed to augment it.

6554. Can you give us particulars?—It is proposed to augment it by preventive establishments in the Akyab, Sandoway and Kyaukpyu Districts, to prevent smuggling by sea and from Chittagong. The idea is to have boats going on beats to intercept smugglers. It is proposed also to have an establishment in the Amherst District and in Tavoy, which is in the Tenasserim Division, for the same purpose, to prevent smuggling by sea.

6555. You will be able to put in a statement showing the present preventive establishments and also the proposed additions?—Yes.

6556. (*Mr. Pease.*) In a statement we have here it is said:—"The Government of India informed the Home Government that any one found selling opium to others than Chinese, or keeping a saloon for consuming opium, will be liable to conviction." Is that carried out in these rules?—If he lets people smoke in his house and sells opium to them, certainly he is punished for selling opium; but if a man lets his friends come into his house, and they are each entitled by law to smoke opium and have each in their possession only the quantity of opium they are entitled by law to possess and they merely smoke it, nobody is punished.

6557. I want to know whether it has been found that the fact that the Government have prohibited the consumption of opium has led to people giving up the practice or has affected public opinion with regard to the practice?—I have no direct district experience. I have heard that in one district a number of people said they were going to give up the practice when they heard that opium was going to be prohibited. Of course, the law has not been changed yet, so one can only speak of intention.

6558. Was that because of the change of public opinion or dislike to be registered?—I do not think there has been any change in public opinion. The Burman public opinion has always been adverse to opium.

6559. Do you think that it arises from a desire to avoid being registered?—I could not say.

6560. (*Mr. Mowbray.*) I suppose you cannot yet form any estimate as to the loss of revenue from the change: nothing at least beyond the estimate Sir David Barbour gave?—Fourteen lakhs is what they estimate.

6561. (*Mr. Pease.*) What was intended with regard to registration of non-Burmans? It was merely to register those who were opium-smokers. Was it not?—The object was to get data for fixing the maximum issues. When you know what the total of your consumers is you calculate how much opium they want and how much opium you must issue to the licensed vendor. That was the object of registering non-Burmans.

6562. (*Chairman.*) It is not strictly registering but taking a census?—Yes, that is so.

6563. I believe it was at one time the intention of the authorities of the province of Burma that registration should be a condition of using and possessing opium by non-Burmans as well as by Burmans. Was it not?—Yes, that was part of the registration of non-Burmans.

6564. It was at that time intended, was it not?—I think the non-Burman was not to be permitted to possess opium unless he registered himself.

6565. That has been changed?—Yes.

6566. There was some correspondence which has not yet been before the Commission and which some of the

Commissioners wish to see, namely, Sir Alexander Mackenzie's letter and enclosures to the Government of India, and the Government of India's letter to the Secretary of State. Can you put in a copy of that correspondence?—I will endeavour to do so.

6567. (*Sir William Roberts.*) I presume there is no difficulty with regard to the supply of opium in Upper Burma for medicinal purposes?—I have not heard of any difficulty, and I have heard no complaints.

6568. (*Mr. Pease.*) On the whole you are satisfied that the prohibitory legislation with regard to Upper Burma is satisfactory and effectual?—That is the general tenor of the reports.

6569. (*Sir William Roberts.*) Is there a very large number of non-Burmans in Upper Burma who smoke or eat opium?—I could not say that; no census has been taken. It is said that nearly all the non-Burmans in the Ruby Mines smoke; and there are a good many thousands of them who are called the Maingthas.

6570. (*Mr. Mowbray.*) I believe *ganja* has been prohibited in Upper Burma?—It is prohibited all over Burma.

6571. Can you form any opinion as to whether the prohibition has worked practicably?—Burmans do not smoke it. The natives of India smuggle it considerably. It is impossible to prevent them.

6572. (*Chairman.*) You say you think the prohibition has worked effectually in Upper Burma. Is that from a personal experience?—No, it is not. It is the inference I draw from the statements that people of experience make as to the Upper Burma consumers. It was effectual in this way, that people did not take to opium because they were afraid of punishment.

6573. Opium-eating or opium-smoking?—Opium-smoking and opium-eating. My remarks always apply to Burmans.

6574. Opium-smoking is comparatively easy to put down; but opium-eating is a sort of thing a man may do at the corner of the street and is therefore difficult to put down. Is that so?—Opium-eating is a much more difficult thing to put down than opium-smoking.

6575. (*Mr. Pease.*) In the Reports of 1891 there appears to be a considerable illicit consumption: has there been increased vigilance since that time in Upper Burma?—District officers are told to use every effort to prevent smuggling.

6576. In Mr. Noyce's paper he says:—"There is a considerable difference of opinion among officers as to whether the taste for opium and liquor is spreading amongst the Burmans or not. The licenses for the sale of opium and liquor are intended for the convenience of the non-Burman population of Upper Burma, and sale of either liquor (except tari) or opium to Burmans is prohibited by law. But there can be no doubt that the prohibition is, in practice, inoperative"; and he also says:—"The fact that the falling off in imports of opium was not counter-balanced by the increase in the issues of Government opium points to the conclusion that much foreign opium was smuggled into Upper Burma. This opium is brought down the Irrawaddy from Bhamo, and is also smuggled across the frontier between the Shan States and Upper Burma Proper. The difficulties of checking smuggling in Upper Burma are very great, and it is clear that effectual means of dealing with the evil have not yet been devised. The question has recently received special attention from the local authorities of the Northern and Eastern Divisions, who have prepared a scheme for supervising imports on the main trade-routes between China, the Shan States and Upper Burma Proper. It is hoped that the measures sanctioned for this purpose will check the evil to, at any rate, a considerable extent." I was asking you whether there had been increased vigilance which enabled you to make a so much more favourable report?—My information is based on the statement of officers that the percentage of consumers is so very small. It is also borne out by jail statistics.

*Mr. C. G.
Byne.*
9 Dec. 1893.

Adjourned to Monday next at 11 o'clock.

At the New Government Buildings, Rangoon.

TWENTY-THIRD DAY.

Monday, 11th December 1893.

PRESENT :

SIR JAMES LYALL, G.C.I.E., K.C.S.I. (IN THE CHAIR).

SIR WILLIAM ROBERTS, M.D.
MR. R. G. C. MOWBRAY, M.P.

MR. ARTHUR PEASE.

MR. C. C. LEWIS, (*Provisional Secretary.*)

Mr. A. M. B. IRWIN, Deputy Commissioner, called in and examined.

*Mr. A. M. B.
Irwin.*
11 Dec. 1893.

6577. (*Chairman.*) How long have you been in the service in Burma?—I have been in the service since 1876, and in Burma since 1877.

6578. Has your service been chiefly District service?—Yes, entirely.

6579. In what parts of Burma have you served?—In Shwegyin, Toungoo, Bassein, Rangoon, Pegu, Henzada, Sandoway and Akyab Districts.

6580. Had you served mostly in Akyab?—No, I was about two years in Akyab; I have just come from there—two months ago.

6581. Have you served in Tenasserim?—I have served in the Tenasserim Division and in the Shwegyin Districts for three years at the commencement of my service. I have also served in Pegu and in Irrawaddy.

6582. I believe the shops were reduced in number some two years ago: were not they?—Yes, in 1880 or 1881.

6583. Had that the effect of making it difficult or impossible for the Burmese people to get opium?—I do not think so. The only effect it had was to encourage smoking, and perhaps to raise the price of opium a little.

6584. What have you to say about the consumption of opium amongst the races in Lower Burma?—I have not taken any particular pains to find out that point. I was on furlough at the time when particular inquiries were made two years ago. The Arakanese, I think, consume more than the Burmese do per head of the population; and the Chinese, I think, consume more than any one. I think most of the Chinese consume opium.

6585. Do the people from India consume opium?—As far as I can make out, the natives from Upper India use

Mr. A. M. B. Irwin.
11 Dec. 1893.

a great deal. Bengalis use more *ganja*, at least in the Arakan District. They smuggle the opium excessively on the frontier of Chittagong. There are a great number of Bengalis in the Akyab District and on the frontier. I do not think they consume it themselves as much as the Arakanese.

6586. Has any special arrangement been made to stop smuggling?—There is a small Excise establishment, but it can do very little. The frontier is very easy to smuggle across. There is a large estuary—the Naaf estuary—which is about 2 miles wide and perhaps 40 or 50 miles long, and they smuggle it across there. On the Chittagong side I believe there are a great number of opium shops. It is constantly smuggled across there, and smuggled through the hills by foot. There is extensive smuggling carried on by steamer and by boat. The British India steamers generally bring down some smuggled opium.

6587. What arrangements are there to prevent smuggling by steamer or by boat?—The Custom Officers and the Excise Officers at times board the steamers when they come in, and they keep as sharp a watch as they can. They examine the goods and frequently find some opium concealed; but a great deal passes without being detected. Whilst I was at Akyab, a servant of one of the officers on the steamer one day brought two trunks up to the pilot's house in Akyab and asked if he might leave them there. I think he said that he had mistaken the house he had gone to, and he left the trunks there, saying that he would come back. The pilot suspected him, and after a time the son snelt the opium and they opened the boxes and found that there were 170 seers of opium. There was also a British India steamer's table-cloth in the box. The man was never caught, for he never came back.

6588. I suppose the steamers only stop at certain particular ports?—Akyab, Kyaukpyu and Sandoway.

6589. And the boats stop where they like along the coast?—Yes. They come into the Mayu River, where there is no port. They can come into that river and round by the creeks into Akyab and into all parts of the district.

6590. Are the Customs Officers on the look-out to see whether there is any smuggling?—They only watch the landing-places in Akyab town. It is impossible for them to watch anything more.

6591. What are the other articles which the Customs House Preventive Service men are on the look-out for?—For *ganja* which is very largely smuggled. I do not know particularly what other things they look out for. The Customs House Officers are not under my control.

6592. Do you know anything of smuggling opium in the Tenasserim Division?—I suppose it is principally derived from the licensed shops. My experience has been most in the Shwegyin District, where there never has been a licensed shop. It was about 13 years ago that I was there. Opium was very commonly consumed at that time.

6593. Were there licensed shops there then?—No, I do not think there ever has been a licensed shop in the Shwegyin District.

6594. Shwegyin is in the extreme south, is it not?—No, it is rather to the north-east of Pegu. It lies about the mouths of the Sittang River.

6595. There have been no facilities for inland smuggling from Siam, have there?—I do not think so. I think it was Government opium which came from Pegu and Moulmein.

6596. The total prohibition of *ganja* has been in force about 20 years, has it not?—Since 1874 or thereabouts.

6597. How far do you think that that has reduced the consumption of *ganja*?—The prohibition was made before I came to Burma; but I know that *ganja* is extensively used up to the present by native of India.

6598. Was it ever used by Burmans?—I do not think Burmans ever took to it at all.

6599. What have you to tell us with reference to the effect of the consumption of opium?—I have seen very little effects, either physical or moral. A tendency to self-indulgence is a potent factor in leading men into crime, and the Burman possesses this tendency rather largely. The same tendency leads of course to the consumption of opium, which is a form of self-indulgence. Burmans of the poorest class are extremely improvident in marked contrast to the poorest class of natives of India. Poor Burmans treat themselves to the luxury of opium with a light heart, and as they cannot afford it they are driven to petty theft. So far as my experience goes, this is the only kind of crime that is produced by indulgence in opium. I have no reason

to believe that it produces either crimes of violence or serious crimes against property. A poor Burman cannot get opium regularly, and in consequence he takes too much when he does get it. This, I believe, injures his health. The typical opium-eater about whom we hear so much is the man who indulges in the luxury though he cannot afford it. I believe there are plenty of opium-eaters who can afford it, and we hear little about them. They live respectable lives, and are respected, and there is nothing in their outward appearance to denote that their health has suffered. I cannot recall a single instance of any person whom I know to have been physically or morally ruined by indulgence in opium.

6600. As Deputy Commissioner I suppose it was part of your duty to inspect the jails?—Yes.

6601. Did not the medical officers in charge draw your attention to cases of men physically broken down by the use of opium?—I do not recollect their ever doing so. I have not been in charge of a district where there has been a jail for a great many years, except for the last two years in Akyab. No such instance was ever brought to my notice in Akyab, as far as I can recollect.

6602. As District Magistrate you had to supervise the whole criminal administration of the district: you say that indulgence in opium tends to drive the people to petty thefts?—Yes, I think it does.

6603. Did many of these opium thieves ever come before you?—No, not lately. They are generally brought up for petty offences, and I seldom try petty cases unless there have been three or four previous convictions.

6604. You do not remember seeing any men who were apparently physically wrecked?—I do not recollect any instance at the present moment.

6605. (Sir William Roberts.) You say "the percentage of the population who consume opium is probably not large." Do you mean the percentage of the total population?—Yes.

6606. (Mr. Pease.) Can you tell us whether these twenty houses for the retail sale mentioned in the tables which have been put before us apply to the whole of Burma?—I think they apply to the whole of Lower Burma.

6607. Is twenty the total number of shops for the license sale for the whole of Burma?—That must be for the whole of Burma, I think.

6608. You say that the percentage of population who consume opium is probably not large; can you give us any idea of the proportion in Lower Burma?—I do not think it would be possible to give it.

6609. The Chinese and Arakanese are larger consumers than the Burmans, are they not?—Yes.

6610. Are there any other races?—There are a large number of indigenous races in Burma.

6611. Do they consume opium?—I do not know much about the consumption of opium.

6612. In what way is it consumed principally?—I think eating it.

6613. Smoking is an exception?—There are Chinamen who sell it to the people. They usually have apparatus for smoking: a Burman usually eats opium.

6614. Do you think there are many cases of poor Burmans who take too much when they get it?—"Many" is a relative term. I think it is a very small part of the population.

6615. Why has Government been making all the efforts it has to prevent the purchase of opium?—Because Government believe it to be deleterious as far as I can understand.

6616. As I understand, you do not agree yourself personally with the action of the Government?—I do not think that it is so serious as the Government has held it to be.

6617. Are there many regular smokers among Burmans or is that principally confined to the Chinese population?—I think there are but few regular smokers among Burmans.

6618. (Mr. Mowbray.) You have had special knowledge of Arakan, have you not?—I was nearly two years in Arakan.

6619. How many shops are there in Arakan?—One licensed shop.

6620. What is Arakan?—Arakan is a division consisting of four districts called Akyab, Kyaukpyu and Sandoway, and the Arakan Hill Tracts. It reaches from the Naaf River, which is the boundary of Bengal, down to the latitude of the northern part of the Bassein District. The southern part

of the division of the Sandoway District is a narrow strip between high hills and the sea.

6621. Is it the case that there are any special restrictions with regard to the districts of Kyaukpyu and Sandoway?—I do not know of any.

6622. Can you give me any rough idea of the size of the Arakan division?—The Akyab District (is something over 4,000 square miles. I should think the other three districts taken together would be probably about 8,000 or 9,000 square miles.

6623. What is the population?—The population of Arakan is about 200,000, but I am not sure.

6624. You cannot give me the population of the other districts?—No.

6625. This one shop is in Akyab, is it not?—Yes.

6626. (*Mr. Pease.*) Is it not a fact that people purchase opium from the opium dens and do not go individually to the shop for what they want?—One man probably in a thousand purchases his opium at the licensed shop. If the consumers at Akyab were all to go to the Akyab shop to purchase opium they would not be able to get in; they would through the street.

6627. (*Mr. Mowbray.*) Where do they obtain opium from?—They obtain it from illicit vendors in almost every village—probably emissaries of the licensed vendors.

6628. Are there any prosecutions?—Yes. Frequent prosecutions.

6629. What penalties are enforced?—They are often sent to jail for two months or three months or perhaps six months, but seldom for more than that. I think they are usually fined, perhaps from Rs. 20 to Rs. 200 or Rs. 300.

6630. I was under the impression that some special efforts had been made to deal with opium in the Arakan division?—An excise establishment, I think, was sanctioned principally for the purpose of dealing with opium; but it would require even an establishment ten times the size, and then it would have very little effect on them.

6631. You did not know the division of Arakan before the number of houses was reduced?—No.

6632. Can you give the Commission any information as to whether the consumption of opium in Arakan has been diminished since the number of shops in Arakan has been diminished?—I can only speak from the printed papers in which I see the District Officers in Kyaukpyu and Sandoway have from time to time reported that within the last ten years they consider it has been checked a good deal in these two districts. In Akyab, the people generally tell a different story. They will generally tell you that it is increasing.

6633. The Arakan Division is the one which immediately adjoins the land frontier of Bengal?—Yes.

6634. You have told us that probably a considerable amount of opium is smuggled from the frontier—from Bengal?—Yes. It is constantly smuggled. It can be bought in Bengal for Rs. 24 a seer, and in Akyab it costs Rs. 28.

6635. (*Chairman.*) It is smuggled by land and by sea?—Yes.

6636. Do you think that the illicit vendors in every village whom you talk about are almost all secret agents of licensed vendors, or, do you think many of them get opium smuggled from outside the district?—I think it is quite possible that a good many get it from outside the district, but at the same time when the fee for a licensed shop is forced up by auction to a great height, I think the vendor is bound to put his own energies into it, and he would probably drive the other people out of the field throughout the whole division. When his license is extremely high it is almost invariably observed that the issues of opium from the Government Treasury fall off. He simply cannot afford it, and he is unable to push his sales of Government opium sold to the Akyab Treasury to the extent which would recoup him for the license fee. He is bound to go to Chittagong where he can get it cheaper, and smuggle it from there and sell it throughout the whole division. That is the conclusion I have come to from the figures of ten years.

6637. When the license fee is very high the issues from the Treasury fall off?—Yes, and when the license fee goes down the issue from the Treasury increases.

6638. Supposing that instead of auctioning the license you did what is the only other alternative, that is, raised the price of your opium to the opium vendor to a higher figure, he would have still greater temptation to smuggle?—Yes; but I do not think that is the only alternative.

6639. What do you think is the other alternative?—To forbid the possession of opium without a license and charge a small fee for every license possessed. *Mr. A. M. B. Irwin.*

6640. How do you mean forbidding the possession?—I would not allow any person to possess opium without a license. *11 Dec. 1893.*

6641. Do you mean any consumer?—Yes.

6642. Do you think you would get more revenue in that way?—No; I mean it would prevent smuggling, and it would also tend to check youngsters from taking to opium.

6643. How would it prevent smuggling, because if any man is now found in possession of opium in excess of three tolas without a license he is liable to punishment and imprisonment, and the opium is liable to confiscation?—Yes; it should be accompanied by an extension of the number of shops, so that when there is a demand (and people will have it legally or illegally), let them get the chance of having it legally.

6644. (*Mr. Pease.*) Are there not also two other alternatives; one is that you should fix the license fee, and the other is that opium should be sold by a person who is in Government appointment, and who has no direct interest in the sale?—I think those alternatives are certainly possible, but it would be extremely difficult to fix the license fee at the proper figure. If it is fixed high enough to raise the price of opium as we desire, there remains the same incentive to smuggle as if it were bought at auction. One of the greatest difficulties we have to contend against in Burma is the fact that opium is sold cheaper from the Government Treasury in Bengal than it is from the Government Treasury in Burma.

6645. If a man has paid an excessive sum for his license he has a stronger inducement to push the sale?—Quite so. As for selling by Government officials, I think it is the worst possible method. I think it would merely demoralize all the officials that have anything to do with it. The temptation would be tremendous.

6646. (*Mr. Mowbray.*) I suppose if the sale was conducted by Government officials the price would have to be fixed very high in order to check consumption?—Yes.

6647. And if the price was fixed very high, I suppose the natural tendency of people would be to try and get it from smugglers, and not from the Government office?—Precisely.

6648. It would put a great temptation also in the way of Government officials to supply opium at prices lower than the fixed Government price?—I do not think they could well supply it at a lower figure; but it would be a great temptation for them to sell it wholesale in order to smuggle it into the villages.

6649. (*Chairman.*) Does not the system of licensed retail vendors give the Government great assistance in the way of prohibiting smuggling?—No, quite the contrary. The licensed vendor is bound to smuggle if he can possibly do so in order to recoup his license fee.

6650. But still it is to his interest to prevent anybody smuggling but himself?—Yes.

6651. Is there anybody else who would make any effort in that direction to prevent smuggling in the districts outside Government officials?—Not a single soul. There are plenty of men who are loud enough in denouncing the consumption of opium, but they will not lift a finger to help the Government.

6652. In your report that you wrote in December 1891 after recording briefly the opinions of the Burmese officials you conclude with the following remark:—"In conclusion I beg to state that it is the opinion of all the officers whom I have directed to report on this matter, after personal investigation, that the ill-effects of opium on the Arakanese are apparent on all those whom they have examined, but that with perhaps a few exceptions the use of the drug has not either physically or morally affected the non-Burmans." Do you think the reports of these Burmese officials are deserving of confidence?—I think they are greatly exaggerated. I did not at that time venture any opinion of my own as I was quite new to Arakan. The Burmese and Arakanese have got into the habit of considering it quite a foregone conclusion that opium is ruination to a man, body and soul. I think that that is principally derived from their religious opinions.

6653. Where are the Chinese mostly to be found in Burma?—In Rangoon and the adjacent parts. There are very few Chinese in Arakan.

6654. Have you any experience of them,—have you seen much of them?—Not very much.

Mr. A. M. B. 6655. Are there many who are poor working men,—men who are poorly off?—Yes, there are some, but it is a small percentage. I think they are pretty well-to-do generally. Irwin.
11 Dec. 1893. They keep shops and that sort of thing in the villages.

6656. Do the poor men do coolie labour?—No, they do not work as coolies as a rule, except to a slight extent for their own countrymen.

6657. You have not noticed any cases of men being physically injured among the Chinese from the use of opium?—I have not. If I saw a man in a bad state of health and using opium, and knew he was an opium-eater, I think it would be rather rash to jump to the conclusion that his bad state of health would be caused by the use of opium.

6658. (Mr. Moubray.) You have told us you would recommend absolute prohibition of possession?—Yes, I should.

6659. Would that be applied to non-Burmans as well as to Burmans?—Yes, I think the great defect in the rules which have just been passed is not registering the non-Burmans. That will be the greatest difficulty in administering those rules.

6660. As far as I understand, you say that it is impossible to deal with possession in the case of Burmans, unless you dealt also with possession in the case of non-Burmans?—That is so.

6661. But if you have a register both of smoking Burmans, as is laid down in the new rules, and also a register of non-Burmans, do you think that that method would work?—I think it would give the new rules a much better chance of succeeding. That is all I can say.

6662. You have told us that you think if possession were prohibited, it would be necessary to increase the number of shops?—Possession without a license,—I think in any case it is necessary.

6663. Would you also recommend that consumption should be permitted on the premises of shops which are licensed to possess?—I think it would be better not to permit consumption on the premises, because that leads to

more smuggling than would otherwise take place. I am led to that belief by what I have read that opium-smoking is more injurious than opium-eating. Personally, however, I know nothing whatever about the relative effects of the two.

6664. How would you practically deal with possession by unlicensed persons?—The matter is chiefly in the hands of the Police; there are no other preventive establishments. The village headmen are also excise officers, and they occasionally give us a little help. The way it is done is frequently by searching people on the road who are suspected of having opium in their possession and occasionally searching the houses, which is only permitted during the day without a warrant.

6665. The only illegality which can be brought home to them at present is the possession of a quantity of opium beyond a certain amount?—No, any amount so long as they cannot prove that it was bought at a licensed shop.

6666. Is the person compelled to prove that he has bought the opium from a licensed shop if he has only a small quantity?—It is rather difficult to say exactly where the burden of proof lies, but I think if you take the law very literally, every man might be compelled to produce proof that he had bought the opium from a licensed shop. Practically, I think, he is very seldom driven to that. I think the burden of proof is generally put on the prosecutor.

6667. Practically, requiring him to have a license to justify possession is really only simplifying the question of proof?—It is a little more than that. I suggested that it is a great deal, as it means raising the price without putting up the license to auction,—it you could raise part of the price direct to the consumer.

6668. (Chairman.) By making everybody consuming opium pay a license fee?—Yes.

6669. Burman or non-Burman?—Certainly.

6670. He would have to register himself and apply for a license?—Yes; registration in that case would be that the license would be registered.

The witness withdrew.

SURGEON-MAJOR P. W. DALZELL, Civil Surgeon of Bassein, called in and examined.

Surgeon-Major P. W. Dalzell.

6671. (Chairman.) How long have you been in Burma?—Nearly 14 years.

6672. You have served in many districts?—In all the districts of Lower Burma.

6673. Will you give us the conclusions you have come to with regard to the opium habit?—As regards the prevalence of the opium habit, I can only quote actual figures with respect to the jail population; any other evidence must be more or less from general impressions gathered from a variety of sources, and must be taken for what it is worth. The criminal population of the Bassein jail numbers 979, of which three are females and the rest males. The total number of opium consumers among these is 111, which gives a ratio of 11.33 per cent. None of the females are addicted to the opium habit. Out of 886 Lower Burmans, a hundred and seven are opium-eaters or smokers. Out of 53 Upper Burmans only one is addicted to the habit. Of 3 Chinamen in jail only one smokes opium. Of 33 natives of India only two smoke opium. The largest consumer is a Chinaman who smokes Rs. 1-8-0 worth of the drug per day. He has been an opium-smoker for ten years; his age is 24; he must, therefore, have begun at the age of 14 years. His health on admission was recorded as indifferent; weight 106lb. He gets no opium now and is quite well. He says he intends to resume the habit on release. Two days after another Chinaman was admitted, age 32 years; he had eaten opium for 19 years. He began with four annas worth, and has eaten one rupee's worth for 8 years. He was a trader and weighed 127lb, and was in perfect health. Three of the prisoners consumed Re. 1 worth of the drug daily; they practised the habit for 12, 7, and 10 years, respectively: all were in good health. Two weighed more and one less than on admission; three Burmans consumed 12 annas for 10, 7 and 5 years, respectively: they are all in good health and are robust, active men. Nineteen persons consumed 8 annas worth of opium. Of these nine were in good health on admission, eight indifferent, and two bad. They are all in good health now. Four prisoners who consumed 6 annas worth, were all in indifferent health on admission: one in good health now. One of these had practised the habit for 26 years; another 10 years. Of fifty prisoners who consumed 4 annas' worth, seventeen were admitted in good health, twen-

ty-five in indifferent health, and eight in bad health. All are in good health now. Of the rest one consumed 3 annas' worth, twenty-five 2 annas' worth, four 1 anna worth, and one 6 pies worth daily. Of the total 111 consumers only four are in indifferent or bad health now. Of the total number fifty-eight smoked and fifty-three ate it. These figures show that in this jail at present about 11.35 per cent. of the population consume opium. The greatest consumers are the Chinese, the jail ratio being 33 per cent. Next come Lower Burmans of whom 12 per cent. are opium-consumers; then follow natives of India, 6 per cent., and lastly Upper Burmans 2 per cent. These figures bear out the general impression I have formed regarding the opium habit among the various races here. By far the largest consumers are the Chinese. I am inclined to think that at least 75 per cent. use opium, then come in order, however, Lower Burmans, natives of India, and lastly, Upper Burmans. Of course the ratios among the criminal population vary from time to time, 12 per cent. is a low figure for Bassein; it is sometimes as high as 30 per cent. I should put the ratio among the free population at 5 per cent.

6674. (Sir William Roberts.) What do you understand by "free population"?—Population outside the jail.

6675. (Chairman.) Is that free population generally?—Free population amongst the Burmans.

6676. (Sir William Roberts.) Do you mean 5 per cent. of the adults, or 5 per cent. of the total population?—5 per cent. of the adults.

6677. (Chairman.) Adult male population?—Yes; it is almost entirely confined to the males, amongst natives of India the habit varies with the race; those who find their way to jail are of all races, and it is difficult to judge of Indians collectively from the small number under observation. There are very few natives of India in the jails of Burma. I believe the habit to be prevalent among coolies from Madras chiefly, but by them the drug is used only in small quantities. Confirmed opium-eaters are rarely found among them here.

6678. By "confirmed opium-eaters," do you mean opium sots?—I mean men who are physically wrecked, who cannot do their work, who are physically in a bad state of

health. It is chiefly amongst Burmans that any evil effects on their moral and physical condition are observable. Owing to their natural habits of indolence and their proverbial want of self-restraint, the Burman is more apt to run to excess than any other race.

6679. (*Sir William Roberts.*) That remark applies to native of Lower Burma as well as to natives of Upper Burma?—Yes, to the whole of Burma, more especially to Lower Burma, because Lower Burma is more prosperous and more healthy than Upper Burma. I do not know much of Upper Burma.

6680. (*Chairman.*) What is the popular opinion with regard to the habit?—The habit is regarded by the generality of the people as disgraceful, and to call a Burman an opium-eater is equivalent to applying the term drunkard to a European.

6681. Does that apply chiefly to eating or smoking?—It applies to both; but it is only when a man begins to leave off his work and becomes incapacitated that it is observable.

6682. (*Sir William Roberts.*) Is there a religious sentiment connected with this?—I believe that it is prohibited by the laws of Buddha; but I do not know much about Buddhism.

6683. You have not formed any opinion whether that is the reason why it is regarded as disgraceful?—No, it is only when the habit is carried to excess. It is generally associated with vicious life and past crime.

6684. (*Chairman.*) How do you think the habit begins?—The habit is often begun by the victims taking opium to allay some pain or physical distress and is then continued: in other cases it is the result of bad example. There can be no doubt that the opium habit has a degrading effect on the moral and physical nature of the Burman and often leads to the commission of petty crime; but it is a question whether those who indulge in opium would not take to ardent spirits or other drugs if opium were not procurable. I cannot, however, say that the evil effects of opium on the people as a whole are observable. It is indeed a rare sight to see a completely shattered wreck of humanity resulting from the opium habit. If such were common the medical officers would certainly meet with these, for they would lose all their friends and die in the jail or the hospital. As for other races, I cannot say that I have seen any ill-effects resulting from the use of opium in moderate quantities. The drug is taken by them just as alcohol is taken by Europeans, and has much the same effect on the system, as far as the senses are concerned; but it is much less injurious in every sense. I have no experience of the prophylactic virtues of opium against malaria, but I can understand that the inhabitants of malarious tracts find great relief from the many painful complications of that disease by the moderate use of opium. My experience, however, is chiefly confined to Lower Burma, a flourishing and fairly healthy country, and there at all events I do not consider opium necessary to the health or happiness of the people (Arakan perhaps excepted); and I would therefore advocate the restriction of the sale of opium as much as possible; but, unless the same measure be taken with regard to alcohol, I do not think much benefit will accrue from the total prohibition of opium.

6685. You said just now that of 33 natives of India, only two smoked opium?—Yes.

6686. Did none of them eat opium as far as you know,—or do you use the phrase generally?—I think the two natives of India ate opium. The natives of India generally consume it by eating it.

6687. In speaking of the prisoners who consumed 8 annas worth and 6 annas worth and 4 annas worth daily, you mentioned that a great many were in indifferent health when they entered the jail, and that they were in good health when they left?—Yes.

6688. Did you trace their bad health to opium in those cases or not?—It is very difficult to say in the case of a man who comes in in indifferent health that he is an opium-eater or an opium-smoker; it is difficult to say whether the ill-health results from the opium habit, or whether the habit begins owing to his being in ill-health and taking opium to relieve his suffering. I have not the exact figures; but nearly half of the prisoners admitted that they took opium to relieve certain physical symptoms. The commonest is pain in the chest and abdomen, and pain in the stomach, diarrhoea, dysentery, and rheumatic pains. These are the chief causes for which they said they took opium.

6689. Have you treated Chinese out of jail?—Very few. They do not seek European treatment very much.

6690. Have you any knowledge as to what extent opium is used as a medicine by Chinese doctors or by Burmese doctors on the native system?—No; I have not much knowledge of that. I know opium is used both by the Chinese and by the Burmese largely, because it is about the only real sedative they know. It is very largely used by them, especially of course by the Chinese; but I could give no approximate figures.

6691. You say that you would restrict the sale of opium as much as possible: do you think there is any danger of depriving the people from taking it as a domestic medicine if you make it too difficult for them to get?—There would be a loss in one direction and there would be a gain in another. No doubt a large number of people would suffer from the want of it even as a medicine; at the same time if it were entirely prohibited and if smuggling could be put a stop to, then a fairly large number of people would be saved from ruin. I am firmly convinced that if it were prohibited altogether and alcohol obtainable, opium-eaters would take to drinking alcohol; they do it now. A great many opium-eaters consume alcohol.

6692. (*Mr. Mowbray.*) In your opinion is that worse?—I think it is infinitely worse for Burmans. A Burman who takes to alcohol comes to grief very early in his career, and commits violent crime. Opium is responsible for little or no violent crime; but it is responsible for petty crime and theft to a certain extent, because if a man runs out of the means of procuring opium he craves for it and he must commit theft to obtain a means of purchasing it. But when a Burman particularly takes to alcohol, he runs a very short career. He is of a very excitable nature and exhibits great want of self-control. From his cradle upwards a Burman is never taught to control himself: the result is that he runs to excess in a very short time.

6693. (*Sir William Roberts.*) How do you class ganja in this comparison which you are making between opium and alcohol?—The effects of ganja are infinitely worse than those of opium.

6694. You say, "it is indeed a rare sight to see a completely shattered wreck of humanity resulting from the opium habit": have you been able in your experience in jails and hospitals to trace the direct effect of the opium habit as the cause of serious disease and death apart from poverty and other diseases?—No, I cannot say that I can recollect any special morbid conditions due to the opium habit.

6695. What you say seems to infer that the completely shattered wreck of humanity resulted from the opium habit alone?—There are the concomitants. The opium consumer loses his appetite if he takes opium in large quantities; consequently he becomes emaciated and very often diarrhoea is really what does terminate life. It seems to bring on an intractable form of diarrhoea which is generally the ultimate cause of death.

6696. You have the impression that the opium habit alone carried to excess will in that way at length kill?—Yes, provided the opium-eater does not take sufficient nourishing food.

6697. Do you mean from poverty?—From poverty: or he may increase the dose so rapidly as to deprive himself of the power of digesting food. I believe that that is why the Burmans suffer more than any other race. The Burman, as I said before, from his cradle upwards, is not taught to control himself in any way. It is a rich country; the parents do not educate their children; they allow them to do as they please; they grow up in that way and they exhibit very little self-control. A Burman who once takes opium is more prone to run to excess than any other race. He may run on to take Rs. 2 or Rs. 3 worth a day and so quickly that his system will not get accustomed to it. He will not have any appetite, and diarrhoea will set in and a fatal result will ensue. There is really no morbid condition observable on *post-mortem* examination, beyond the attenuated condition of all tissues, loss of fat and all the functions are in abeyance.

6698. You think that the opium habit alone carried to excess may produce at length fatal atrophy?—Yes, fatal atrophy.

6699. That is your impression?—Yes.

6700. (*Mr. Pease.*) What was the social position of this Chinaman you speak of? I see he consumed £54 worth of opium in the year: it was a very expensive habit to him?—I spoke of two Chinamen; one was a trader.

6701. Was his crime in any way connected with his habit of taking opium?—No, not with the habit of taking opium. He was a well-to-do man—in fact both of them were well-to-do men. The one man had eaten opium for 19 years. He

Surgeon-Major P. W. Datzell.

Surgeon-Major P. W. Dalzell.
11 Dec. 1893.

had eaten one rupee's worth for eight years; he weighed 127lb, and was in perfect health as far as I could make out.

6702. What proportion of the prisoners who come into the jail do you put down as in indifferent or bad health. In those you have given us, I see you have put down 32 as being in good health as against 48 bad and indifferent amongst the opium consumers?—When a prisoner is admitted he is carefully examined and he is put down "good," "bad," or "indifferent," as the case may be. It is generally customary to put down an opium-eater as being in indifferent health.

6703. I was asking what proportion are put down as "indifferent" or "bad" health of the total number of prisoners who entered the jail?—I am afraid I have not got that figure here.

6704. Would it be about the same proportion as the opium-eaters?—No, much larger; the proportion of opium-eaters who are recorded as being in indifferent health would be much larger than the proportion of ordinary prisoners. I am speaking of Burmans now.

6705. You say the habit is generally regarded as disgraceful, does that apply to the Chinese as well as to the Burmese?—No, it does not, because Chinamen show no ill effects from it.

6706. I was only asking what the feeling was?—It is not considered disgraceful.

6707. Do you anticipate that the checking of the supply of opium would lead to the consumption of ardent spirits?—Yes.

6708. Have you any evidence on that point: is there any consumption of ardent spirits in Upper Burma where opium has always been prohibited?—I have no experience of Upper Burma; I have only been stationed there a few months. But I know in Lower Burma a considerable amount of alcohol is at present consumed by the Burmans; and I know that if a Burman were deprived of opium he would certainly want some sort of stimulant; he would take alcohol if he could get it.

6709. I gather it is your view that there is need for legislation for the reduction and prevention of the consumption of alcohol?—I think it would be necessary if we prohibit opium to prohibit alcohol also.

6710. Do you not think it is necessary at the present time?—I think it would be a great benefit to prohibit alcohol.

6711. You do not think the provisions under the new rules, which were sent out on the 23rd November, meet the requirements of the people for obtaining opium for medicinal purposes: any person may possess for medical purposes limited quantities of opium, poppy heads, and medical preparations of opium, which he has bought from medical practitioners, pharmacists, and doctors: do you not think that even if the licensed houses were closed, as proposed, there would be plenty of opportunities for obtaining what was required for medical purposes with so wide a range of persons who are allowed to supply it?—Yes; if smoking could be prohibited, I think those rules would meet the case.

6712. That hardly comes in appropriately there, because the suggestion was that they might not be able to obtain opium for medical purposes; but here provision is made and the doctors would be at liberty to supply them: do you think that would meet the case for medical purposes?—Yes, for medical purposes I think it would.

The witness withdrew.

Mr. G. L. WEIDEMANN called in and examined.

Mr. G. L. Weidemann.

6721. (Chairman.) I believe you are Officiating Commissioner, Irrawaddy Division?—Yes.

6722. How long have you been in the service in Burma?—23 years.

6723. I suppose you have served in all parts of Burma?—Very nearly all parts.

6724. Principally in what division?—I think on the whole, principally in the Irrawaddy Division, but I have also spent about 6 years in the Tenasserim Division.

6725. I believe your work has been chiefly district work?—Yes, entirely district work.

6726. Who was Chief Commissioner when you first arrived?—General Fytche; he succeeded Sir Arthur Playre direct.

6713. (Mr. Mowbray.) Do not you think it might meet the requirements of something more than medical purposes? Do not you think that there is some risk of some of these native practitioners becoming in fact vendors of opium for all purposes, if all other legitimate sources were stopped?—Not if proper safeguards were maintained.

6714. Do you think it would be possible to take sufficient safeguards to prevent native practitioners from dealing in opium?—Although the number of opium shops has been greatly reduced, the consumption of opium is not much reduced. Opium could be had in any village in Burma in spite of all legislation. I know that for a fact. The matter comes before me daily in my business. All prohibited and smuggled opium is sent to me for examination; and I do not exaggerate when I say that three days in the week I get parcels of opium varying from several pounds down to a few ounces to report upon. Of course other officers would be able to give evidence on that point.

6715. You say you do not consider opium necessary to the health or happiness of the people. I understand you to be speaking of the Burman people?—Yes, the people of the country.

6716. (Chairman.) As a stimulant?—As a stimulant. The people of Burma are well-to-do; the country is fairly healthy, and they do not require any stimulant of that kind.

6717. (Mr. Mowbray.) You were not referring to non-Burmans?—No; I was talking of the people in the country, the people who inhabit Lower Burma only; not natives of India, or the Chinese.

6718. (Sir William Roberts.) Do you adhere to this statement which you have made, "I cannot, however, say that the evil effects of opium on the people as a whole are observable."?—I have lived in this country for nearly 14 years; I have travelled all over it from north to south three times; I have been in every town in Burma and lived amongst the people and have been in the villages, and I say that one might go through the country from end to end and not observe any evil effects from opium; it does not force itself upon your attention as the consumption of alcohol does in England. You could not go about day and night throughout the cities of England for 14 years without having it forcibly brought to your notice by seeing drunken men and women. In a village here and there you may see a man rather emaciated-looking, with his hair cut short and dirty; you may be sure that he is an opium-eater. That is one of the wrecks you rarely see, but you see him now and then. He is pointed out and you are told that he is a *beinsa*, an opium-eater; he is called the village scamp.

6719. (Chairman.) Is he a village scamp from the fact of eating opium alone, or is he a village scamp anyhow?—Some begin by taking opium on account of ill-health and others cause ill-health by taking opium. If you were to ask a Burman, "why do you take to opium?" He would say, "I was foolish. I met some fellows at the *puè* and they said 'Let us smoke opium'; I did so and I began in that way." About one-half I should say will admit that they began the habit through foolishness.

6720. (Mr. Pease.) And then found it difficult to break off?—They found it pleasing, as boys smoke tobacco at home. Those are the cases that turn out worst. Those who take opium in more advanced life on account of some sickness or pain are not so prone to carry the habit to excess. I think the most confirmed opium-eaters probably die before they are forty, those who do really become opium wrecks just the same as alcohol drunkards. The men become addicted to the use of opium and they do not work; they simply loaf about and get opium in any way they can.

6727. Who succeeded General Fytche?—Sir Ashley Eden.

6728. I should like to know what your opinion is as to the opium habit being prevalent among the Chinese?—I think there is a considerable amount of consumption of opium among them. It is difficult to get the precise amount, because the Chinese themselves are very largely interested in the opium business and in the opium traffic. I am not personally acquainted with their language and it is very difficult to get from them any reliable evidence upon the subject. They are of a very secretive disposition. I find it very difficult to procure accurate information on the point. Those who are in the best position to know are the most reluctant to speak,—I mean those who are intimately connected with the opium traffic. The majority state that about one-third or even less of the whole Chinese population consume opium. On the other hand, one highly intelligent

person states that two-thirds consume and that one-half consume regularly. According to the last census the total Chinese population of Passein town, where opium is readily procurable, is 667.

6729. (*Sir William Roberts.*) Do you mean the male population?—Yes, there are very few females.

6730. (*Chairman.*) Does that convey your general opinion about the Chinese population in other towns?—Yes; I think what applies to Bassein would apply to most large towns in this Province. It is a sea-port, and it is a place where there are a considerable number of wealthy Chinese merchants.

6731. Are there any poor Chinese?—There are some poor Chinese; I think it is the poorer classes that consume most, or possibly it may be that the habit of consuming opium has tended to make them poor. I find that even the Chinese connected with the opium farm are not smokers. The headmen do not smoke themselves. My opinion is that the habit of smoking opium, as far as the Chinese are concerned, is confined to the middle and lower classes.

6732. You think the best men avoid it?—I think the best men avoid it.

6733. Generally speaking the Chinese are an active and hard-working people, I believe?—Yes; very.

6734. Will you tell us what you think is the effect on the physical condition of the Chinese as far as you have seen?—The effect on the physical condition depends a great deal upon the amount consumed, and the regularity of the supply. A certain person who is probably the greatest consumer in Bassein is over sixty years of age, and he is able to go about his business. He told me himself that he consumed two tolas of opium every day.

6735. (*Sir William Roberts.*) By smoking?—Yes. But if he were deprived wholly of opium for a single day, the effects would be undoubtedly very serious, and he confesses that a continuous deprivation of the drug would put a speedy end to his life. I am scarcely prepared to state the exact point of consumption which must be reached before total deprivation becomes dangerous. The conclusion, however, to which I have come is that whether the consumption of opium shortens life or not (a medical question into which I am not prepared to enter) the effect of sudden deprivation after a certain point of consumption is reached is certainly dangerous.

6736. (*Chairman.*) What observations have you to make as to the effect of the habit on the moral condition of the Chinese?—Moderate consumption appears to have no bad effect on the moral or physical condition of the Chinese. Immoderate consumption undoubtedly unfits a man for steady application and leads to habits of gambling, that is, to the ownership and keeping of gambling dens, and also in this country to the seeking of illicit profits by retailing opium. It is my experience that even immoderate consumption among Chinese rarely, if ever, leads to the breach of any law comprised within the covers of the Indian Penal Code. I am not sufficiently intimate with Chinese habits of life to state whether it has a prejudicial effect on their domestic virtues.

6737. You say that immoderate consumption leads to habits of gambling and the ownership of gambling dens: how do you think it leads to that?—The keeping of gambling dens is a source of profit; and if a man is very much demoralized by smoking opium and very much weakened, the habit will take up a great deal of his time. He would have to smoke regularly at certain times of the day. His general condition would become deteriorated, and he would then take to easy forms of getting money. I do not think there can be any doubt about that. Some of the opium-smokers are also largely employed by the Opium Farmers for retailing opium.

6738. For retailing opium in the country?—Yes.

6739. At a distance from the opium shops?—Yes.

6740. With regard to the natives of India who are to be found in Burma, what do you think the proportion of consumers amongst them is?—Whatever may be the case with regard to ganja and spirituous liquors, the consumption of opium is so rare as to be of light import both among Mahomedans and Hindus from all provinces of India except the coolies (chiefly mill-hands) known as Coringhis. Of these about half consume opium, but by swallowing in small quantities, not by smoking which they cannot afford.

6741. I suppose the Coringhis are the most numerous section of the Indian population here?—They are migratory. They come over for the working season to the mills and then go away to their homes.

6742. (*Mr. Mowbray.*) What part of India do they come from?—From the Madras coast.

6743. (*Chairman.*) What is the effect of the habit upon the physical condition of these opium-eating Madrasis?—Excessive consumption is almost unknown; and so long as supplies of opium are kept up there appears to be little difference between consumers and non-consumers. I am speaking chiefly of the Coringhis who are regular eaters. It is, however, the case that some consume more than others, and on these a sudden deprivation of the drug from stoppage of wages or other causes works prejudicially. It brings on dysentery, and unless aid and nourishing food are at hand, the victim becomes emaciated, and among such persons deaths are not infrequent. As to the precise effect, however, of opium-smoking in undermining the constitution in such cases, it is difficult to speak. Ill-health and loss of wages among the labouring classes would naturally lead to fatal results in many cases without bringing in opium as a predisposing cause.

6744. What have you to say as to the effect on the moral condition of these Indian opium-eaters?—The comparatively moderate use of opium among natives of India is not known to me to have any had results on their moral character.

6745. You say that as a man having experience of the district?—Yes, having the experience of a District Magistrate.

6746. You have had a long experience of service in Burma: is it not true that up to Sir Arthur Phayre's time, the policy of the Burmese Government was very strongly to suppress the extension of opium among the people in Burma; was it not the policy to prohibit the establishment of opium shops and liquor shops everywhere?—I think it was. I cannot of course speak from my own personal knowledge, but from what I have always heard. I think it was the tradition to prohibit opium as much as possible.

6747. In whose time did any change occur in the policy?—I imagine it came in with our occupation more or less. I think it has been gradual. I do not know that there was any marked change in our policy with regard to opium. As far as I know it has been continuous; it has been the same all through.

6748. (*Mr. Mowbray.*) How would you describe that continuous policy?—I think the object of the British Government was to substitute duty-paid opium for opium that had not paid duty, and which came from Yunnan. I think there is no doubt that in Burmese times Yunnan opium did filter through the country. It was the part of the Burmese Kings to suppress opium as much as possible; but it did filter through the country, and I think there can be no doubt that there were opium-smokers in Burma when we took the country. I think the policy of the British Government was, finding opium and finding opium consumers, to substitute opium that had paid duty and which they could regulate, for opium that had paid no duty, and the consumption and importation of which they could not regulate.

6749. (*Chairman.*) You think the policy has been continuous all along: you are not aware of any change?—As far as I know there has been no change of policy. I think that was the root idea all through,—to get the maximum of revenue with the minimum of consumption.

6750. (*Mr. Mowbray.*) I do not know how far you would like to express an opinion on the restrictions and the general prohibition of the possession of opium under the new rules?—I think it is a step in the right direction, and for this reason, I think, as I was saying, the policy of the Government has been the same as long as I have been aware of it, but that gradually they did more than replace Yunnan opium by duty-paid opium. I think statistics show that the amount of opium consumed in the country has increased faster than the population. It is impossible for me to say the exact point at which duty-paid opium drove out Yunnan opium. I think Yunnan opium is not seen in the country now to any extent. When I first came into the country, Yunnan opium was more or less common.

6751. You are speaking of Lower Burma?—Yes, of Lower Burma.

6752. What is your opinion with regard to the exception of the non-Burman population?—My opinion is that the policy of the Government is the right one in making exceptions, provided the amount of opium which is allowed to the non-Burmans is restricted. If it is not restricted I think then that there will be a temptation for the non-Burmans to sell illicitly what they did not require for their own use.

6753. I see in a Despatch in 1886, when you were Deputy Commissioner of Shwegyin, you were then in favour

Mr. G. L. Weideman.

11 Dec. 1893.

Mr. G. L. Weidemann. of exception being made in the case of foreign residents who had become habituated to the drug?—Yes.

11 Dec. 1893. 6754. Are you of the same opinion still?—I am.

6755. I notice at that time you suggested the establishment of a special Government agency in order to conduct sales in the case of foreign residents?—Yes.

6756. Are you still in favour of a system of that kind?—I think it ought to be tried. It may be more or less difficult to work it satisfactorily; but I am of opinion that the present method of putting up opium farms for sale really is a temptation to smuggling. It is impossible for the Government to look after the shops and to supervise them in such a way that the opium does not filter out from the shops in the surrounding population. I will not say that it is impossible, because several schemes have been tried, or rather have been suggested, but apparently they have all been abandoned. None of them have come to anything. I think therefore the only way for the Government to keep a watch on the opium is to distribute it itself.

6757. Would you make that recommendation universal in substitution of the present system?—I think I would with regard to opium. My reason for saying that is because I think the present system is radically wrong.

6758. (*Chairman.*) Which system do you mean,—the new system that is going to be introduced?—If the Government take the sale and distribution of opium into its own hands, it will be an entirely new system.

6759. When you say you think the new system is entirely wrong, are you alluding to the new system which will come into force in January?—I am alluding to our present system of sales.

6760. (*Mr. Mowbray.*) I rather understood from you that you are speaking of the licensing system,—not of the system as to who should obtain the opium but the system of distribution,—how it should be distributed?—Just so, I think the present system of putting up licenses to auction and then selling the opium to the licensees and allowing them to distribute it is radically wrong.

6761. Why?—Because I think there is an immense temptation for these Chinese to make money by selling as much opium as they possibly can: they have agencies everywhere for distributing the opium.

6762. (*Mr. Pease.*) You also infer that they purchase illicit opium for sale?—I do not think they purchase illicit opium in this sense; the word "contraband" can be used in two senses,—I am speaking with regard to Yunnan opium. It is contraband opium in the sense that it has never paid any duty; but British opium is not contraband in the sense that it has not paid duty; it is only contraband when a man is found in possession of more than three tolas. I think that makes a great difference. The tendency has been to increase the number of shops, because if a shop was instituted at the head-quarters of a district like Bassein, under the system which has all along been pursued, it would be for the lessee's interest to distribute opium over as wide an area as possible. If a large amount of English opium was found at the head-quarters of a sub-division, the Government would then see that opium is clearly very largely consumed,—contraband opium; not contraband in the sense of its being Yunnan opium, but simply because it is over three tolas; therefore it would be a good thing to set up another shop, because evidently the consumption of opium wants regulating.

6763. (*Chairman.*) That is all old history, because during the last 10 or 12 years the tendency has been the other way,—to restrict?—Yes.

6764. (*Mr. Mowbray.*) There has been no increase in the number of shops since the last five years?—Restriction in the number of shops has not gone hand in hand with the restriction of the opium which is sold to the lessees.

6765. If opium is sold by Government, it would have to be sold at a very high price?—I think the higher the price is, the less the consumption.

6766. Would it not follow that if the Government sold the opium itself, it would be bound to sell it at a high price?—I do not think it necessarily follows that it would, for this reason, that at present the person who buys a shop has to pay a high price for the license itself. Then he buys the opium at a certain price from the Government; he then has to retail it in such a way as to get a profit to cover, not only the price he has paid for the opium, but the price he has paid for the shop; and also, as matters go now, he has to pay for an agency for distributing it illicitly. There is no doubt that opium is largely distributed. He has to pay all these persons, and then if these persons are caught (they are very often wretched Chinese with no money of their own), he has to pay their fines; he has to make a profit besides.

6767. All which goes to prove that Government could afford to sell the opium a great deal cheaper than the licensed shops could sell it?—Yes. I do not know of any counterbalancing argument the other way.

6768. But do you think Government, if it sold opium directly could sell it at a lower price? Would it not be at once accused of stimulating the consumption of opium?—I think that might be so. I meant more about the necessity for selling it at a high price to make a profit.

6769. I am not considering the question of profit; I am looking at it as a practical question. Would it not be necessary that Government should sell it at a high price?—I think it would.

6770. Would not that lead to as great an opening in the illicit trade for opium as you have at present?—If the Government strictly confined the importation of opium to a certain amount and then sold through a trustworthy agency and at a high price, I think it ought to go a long way towards restricting the consumption. It would be more difficult to get opium illicitly in that way.

6771. Have you ever considered another suggestion, which I see has been made by some people, *viz.*, that you might have the facilities for consumption by non-Burmans limited to certain places?—I have never considered that, but I think they ought to be limited to certain places.

6772. Is it the case that the Chinese population is concentrated in a comparatively small number of places?—Yes. I think there are large rural tracts where there are no Chinese; they wander about as hawkers and traders in boats; there are several fairly large villages without any Chinese population at all; but directly a village gets beyond a certain size it has a certain number of Chinese residents.

6773. You have not thought out the question of the possibility of limiting the supply to non-Burmans in places where there is a large Chinese population?—I certainly think that it ought to be limited to what a man may be expected to consume,—the average consumption of that population. What I mean is this: we found that some Chinese came to register themselves as opium-smokers who were not, or at least strongly suspected to be, opium-consumers at all. They put down their names as being consumers of really a large quantity of opium; and that gave rise to the suspicion that they desired to register themselves as opium consumers, in order that they might get the opium to retail.

6774. Is there any necessity at all for a Chinaman to register himself now?—There is not any necessity now. This was when the first orders were issued.

6775. Was it partly in consequence of that that the rules were changed?—I am not prepared to say. I cannot remember that that point was brought into prominence in my reports from my division.

6776. (*Sir William Roberts.*) I see you mention your experience with regard to both the Chinese and the natives of India, but you do not say anything about the Burman population?—I was not asked to give evidence about Burmans.

6777. Have you anything you would like to say with regard to the effect of the opium habit on the Burman population?—I agree with the majority of officials in this country. I think that it has a bad effect upon the Burmans.

6778. Both physically and morally?—Yes, both physically and morally; but I think, perhaps, morally more than physically.

6779. (*Chairman.*) Do you not think that the jealousy of smugglers or illicit consumers felt by the licensed vendors who have paid a high price for the monopoly of retail sales in certain districts, is a very valuable assistance to the District officer in checking smuggling?—No, I cannot say that it is. I think that it would, if there were a strong party among the Chinese who wished to sell Yunnan opium that had paid no duty and, therefore, could afford to sell it cheaper; but I think we have driven Yunnan opium out of Lower Burma, and now the different license-holders at different places unite to push their opium.

6780. But is it we or those men who hold the licenses, these monopolists, who have driven out Yunnan opium?—Both. We have done it through them.

6781. If you get rid of those licensed vendors, and rely only on sales by direct official agency, you lose their assistance against smuggling, do you not?—Yes, we certainly do.

6782. Do not you think that under those circumstances Yunnan opium and other opium will come in?—That is a very difficult question to answer. I think there would be a decided tendency for it to come in, if it were not watched.

6783. With nothing but our establishment to rely upon [I do not suppose we should get much help from the

people of the country] do you think we should be able to keep Yunnan and Straits Settlements opium out?—There would be that difficulty.

6784. There being no inducement to the vendors to stop illicit trade, do you think the disadvantages to the population would be greater than those which the population suffers from the temptation to the present vendors to push their trade in their own pecuniary interest?—The new experiment is so entirely novel that I think it is difficult to state what its exact effects will be; but I think the present system of having licensed firms has tended to put money not only into the pockets of the licensees, but it has also assisted the Government revenue. It has always been a very easy system to work. The substitution of Government agency, and the restriction of the amount of opium sold, I think, will be a very difficult matter to work satisfactorily. The policy is so new and so untried that I am quite unable to say what its ultimate effects will be. Whether it would be possible to keep out Yunnan opium, and at the same time to restrict the sale of Government opium, and prevent it spreading, is a very difficult question to answer.

6785. In the new system, which is the system we want to criticise, we have a few retail vendors who will obtain their licenses, but the amount of opium they will get and

The witness withdrew.

SURGEON-CAPTAIN DAVIS called in and examined.

6789. (*Chairman.*) I believe you are the Superintendent of the Rangoon Jail?—Yes.

6790. How many years have you served?—Eleven years.

6791. How long have you served in Burma?—A little over eight years since 1885.

6792. In what districts?—Up to 1888 in Upper Burma; after that in Rangoon itself.

6793. In Upper Burma you were only about a year or so?—From 1885 to 1888, three years.

6794. Were you in civil employ in Upper Burma?—Partly civil and partly military employ.

6795. What experience have you as to the effect of opium upon Burmans?—My experience is entirely limited to the criminal population which I have seen admitted to the jail.

6796. What is your opinion about them?—Comparing Burmans with Chinamen they bear the influence of the opium habit much worse. The Burman who consumes four annas worth of opium daily as a rule shows it more than a Chinaman who smokes the same amount. I am only speaking of a comparison of the two classes I have seen.

6797. How do you discover when a man has smoked opium?—I ask him before the window.

6798. As a rule do you think they always confess it?—Yes, I think so.

6799. What is the system; is the opium stopped?—Yes, it is stopped. My orders are that men are not to have opium; but a certain illicit traffic takes place, though but it can only be to a very limited extent.

6800. In cases where the opium habit is thoroughly established to an immoderate extent, do you stop it at once?—A man is watched for a little bit, and if he seems out of sorts and if the diarrhoea gets excessive he is sent into hospital and kept under observation; but, unless a man really shows symptoms of serious illness, the opium is withheld from him. About a month or six weeks after his admission he appears to turn the corner, I do not say in every case, but in a great number of cases, and he begins to gain weight.

6801. Do you think they go through very great suffering?—I think so, when they first come in. Some do and some do not. It is only those who suffer much that come up and complain and go to the hospital.

6802. Have you in your experiences known a man to die where you thought the cause of death was the opium habit?—I never saw any of them die directly from the opium habit.

6803. What did they die from?—From inter-current diseases. A man addicted to the opium habit would become below par and is liable to attacks of inter-current diseases. If he is liable to attacks of malaria or dysentery, he would very probably get an attack of it in jail, and he might die of it. I have never seen a man die absolutely from opium alone.

be able to obtain from Government will be a certain small limited amount calculated and based upon an estimate of the requirements of certain certificated Burmans, and a certain number of reputed Chinese and Madras opium-eaters and smokers so that they will not be able to push their sale in the way they formerly did—not, at any rate, with Government opium?—No. I was not aware that Government had made up its mind how it would sell.

6786. It has made up its mind as a rule to sell the licenses by auction. In certain places where the demand is very small it will dispense opium through the treasury, and in places where the demand is comparatively large, the sale will be by licensed vendors who have bought their licenses at auction sales. Do your objections to auction sales apply equally to a system like that where the amount of opium which the vendor can get from Government is a small and limited amount?—I have no objection in that case to the system of auction sales. I do not think there would be very much inducement to these persons to buy.

6787. There will not be much competition?—I should say not.

6788. Unless they think that they can use a large amount of illicit opium?—Unless they saw their way to it, I do not quite know whether they would or whether they would not.

6804. (*Sir William Roberts.*) Of course you exclude suicides?—I have never had any suicides.

6805. (*Chairman.*) I believe there are very few Chinese in the jails?—Very few, comparatively speaking.

6806. Do the Chinese and the Burmese smoke the same drug?—From inquiries I have made it appears that Chinamen smoke a purer drug.

6807. Have you any experience of the effect of opium upon the Natives of India?—No. My experience is very limited. I cannot say much about them.

6808. Have you, of your own experience, ever seen people who could be described as physically wrecked by the use of opium?—I think I have.

6809. In what places?—I have seen one or two men brought into jail. In many of these cases I think probably there was a combination of opium and other diseases as well. It is not an uncommon thing for Burmans and sometimes for Chinamen also to take opium to allay pains of some constitutional disease, such as syphilis. Of course the two combined make a man a perfect wreck.

6810. In India, and in most Oriental countries, doctors are very liable to be asked by Natives for medicine for aphrodisiac purposes: have you ever heard of that?—I have never experienced that.

6811. Have you ever heard that opium is used as an aphrodisiac in this country of Burma?—I cannot say. My knowledge is only hearsay evidence. I have heard that impotence sometimes occurs in the case of opium-eaters and opium-smokers who are given to sexual excess. That, however, is only hearsay.

6812. (*Sir William Roberts.*) As I understand your experience is almost entirely confined to the jail?—Yes, to criminals.

6813. To the jail; and, I suppose, to the hospital in the jail?—Yes.

6814. You said just now that you thought that the opium habit rendered people more liable to inter-current disorders?—I think that is, perhaps, more than I intended to say. If I did say so, I only referred to it with reference to people dying in jail who are opium-eaters, and who eat opium to excess; but taking those who consume smaller doses of opium, say two annas or four annas worth, I do not think there is a very large proportion of them who come into hospital.

6815. Then you scarcely adhere to the statement that opium predisposes to disease?—I think it does.

6816. Have you anything besides an impression with regard to that point?—All I know is from the patients I have seen in the jail itself.

6817. Do you mean that opium-eaters in excess coming into jail are more liable than the rest to take some disease that might happen to be prevalent in the jail?—I think they would be. I think opium-eaters in excess, as a rule, are admitted into the hospital very soon after admission into

Mr. G. L. Weidemann.
11 Dec. 1893.

Surgeon-Captain Davis.

*Surgeon-
Captain
Davis.*

11 Dec. 1893.

jail; that is, during the probationary period while they are recovering from the stoppage of the drug. When they are in that weakened condition before they have quite turned the corner, they are far more liable to inter-current diseases than the ordinary prisoner; but when they have turned that corner and begin to gain weight, I think they take their position among the ordinary healthy class of prisoners.

6818. I have no doubt you have seen some very extraordinary cases of the opium habit amongst the prisoners?—I came across one extreme case. I took his own statement. The man I refer to was a Chinaman, who said that he smoked $3\frac{1}{2}$ tolas of opium a day. He was a very fat man. On the other hand, I have seen Chinamen who have smoked only a rupee's worth of opium a day, and who showed effects very badly.

6819. Have you seen those cases recover after three or four weeks?—Yes.

6820. I presume you regard that as a sign that they could not be suffering from organic disease? I cannot say that I have ever met with any organic disease which I could put down to opium alone.

6821. I suppose you have seen the effects of alcohol likewise in the jail?—We do not see the effect of alcohol amongst Burmans here; we very seldom come across it. It is nothing like what it is at home.

6822. I think it might be interesting if this table were supplemented by some additional information? The second table means, I presume, the percentage of each class of

population who are opium-eaters?—The percentages given from 1889 down to 1893 are percentages of opium-eaters admitted into jail taken on the total admissions of that race into the jail for that year.

6823. One would like to know, seeing that Chinamen are by far the most common consumers of opium amongst the people that you have had in jail, whether they also enter the jail in larger proportion than other nationalities?—If we had the Census return for Rangoon, we could make that out at once.

6824. As I understand a large number of the prisoners among the Chinese are in jail for offences against the Opium Act?—Out of 32 in jail at present 13 are in under the Opium Act. I have not made it out for the last four or five years, but if you wish it I could do so.

6825. What year are you referring to now?—I am referring to the Chinese opium-eaters who were in jail during the present year. There are 32 of them, and 13 of them are in jail under the Opium Act.

6826. (*Mr. Mowbray.*) I understand the figures here give the total number of Chinese in jail?—The total number of admissions into jail for that year. The admissions into jail would have some proportion to the population.

6827. But the number of Chinese admitted is very small is it not smaller than the proportion of Burmans?—I have never worked the proportion out. I do not know what the proportions are in Rangoon of the Chinese to the Burmans. We could get it from the Census if we had the Census Returns.

The witness withdrew.

CAPTAIN G. R. MACMULLEN called in and examined.

*Captain
G. R.
MacMullen*

6828. (*Chairman.*) I believe you are Deputy Inspector General of Military Police?—Yes.

6829. How long have you served in Burma?—I have been in Burma about 4 years.

6830. Where did you serve before that?—Mostly in the Punjab.

6831. With a Punjab Regiment?—With a Frontier Force Regiment.

6832. Give us your general opinion which you have formed about the opium habit, particularly with reference to the Police under you in Burma, and give us also your experience in your own regiment.—I have served with races of India (the same as are enlisted for the Burma Military Police) for over 13 years. Opium is most freely used, eaten more or less by all such races, and also smoked in addition by those races whose caste allows of such. I use the word "freely" in the sense that a large proportion—and I am informed, and from personal knowledge can confirm it—one-third of all the men now serving in the Burma Military Police use the drug, but it is used in moderation and the abuse is *very much* the exception. In addition to the opium that is consumed by men in perfect health, a very large quantity is used as medicine, and, I believe, with excellent effect, and saves numbers of lives. Say a member of a family has looseness of the bowels; they may not be near a dispensary, or the patient may be a female and the family does not wish her to see a doctor; an opium pill is at once given, and very likely an attack of cholera, or some other disease, is avoided. I am assured this is the common everyday custom in every village, and that the people thoroughly and rightly believe in the virtue of opium as a medicine. Of all the races I have served with, the "Sikhs" are by far the largest consumers. I think it is generally admitted that the Sikhs are still, perhaps, one of the finest physically, if not the finest, of all the races of India; and if the race has deteriorated at all, it is the advance of civilization and patent leather shoes that has done it, not opium. I have served 10 years with the 6th Punjab Infantry, Punjab Frontier Force. In that regiment there are two companies of Sikhs, who I believe to be a man consume opium, and they are perhaps the two finest companies in the regiment. I have, on the different occasions my regiment has been warned for service, attended the Medical Officer's inspection, and there were fewer men cast in these two companies than in any other. A few, but a very few indeed, were not allowed to go on service because they had injured their constitution by the *abuse* of the drug (*i. e.*, excessive use of it). I have also been informed by Medical Officers of the regiment that although it was likely these two companies might break down on service if their opium was stopped, yet if they got it in moderation, they would stand more hardship, and

go through more than non-consumers; and I will further say this, in the hard work done by the military police in Upper Burma in the early days, Sikhs stood the hardships and malaria perhaps the best of all the races, and I know most of the Sikhs in my Military Police Battalion did take opium in moderation because at one time, at the request of the men, I got it and issued it myself.

6833. Have you seen any cases in hospital from the excessive use of opium?—Yes; I have seen some cases; at least the medical officer has told me that it was from excessive use. There were, however, very few cases.

6834. Among the Sikhs who were opium consumers in your own regiment and in the Burma Police, have you seen any appearance of detrimental effects upon the morals of the men?—No; I do not think so,—not in the least.

6835. Do you not think they might be led to steal?—Yes, they might do that, if they had to get it and could not get it otherwise.

6836. What do you think about the effect in some way or other of prohibiting and stopping the use of opium?—I believe men would go in for it. If they did not get opium they would go in for ganja or some extract of hemp or perhaps cheap liquor, which can be got anywhere in India now. The effects would be much worse.

6837. Is not the term 'affimi' used as a term of disgrace and abuse?—It comes from the word 'affim,' which means opium.

6838. What does that convey?—I do not know that. I have not heard the term generally used.

6839. Have you had sufficient experience to give an opinion upon the effect of opium upon Burmans?—No.

6840. You have not been long enough in the service?—No; I have only had four years' service in Burma.

6841. (*Sir William Roberts.*) Is the Burma Military Police recruited entirely from the natives of India?—Yes, except the Karen Battalion. They are now enlisting Karens, but that is a very small proportion.

6842. There are no Native Burmans in the Military Police?—There are a few Karens, but no Burmans.

6843. (*Mr. Pease.*) Do you think that the fine physical condition of the Sikhs is in any way attributable to their consumption of opium?—No, I do not think so.

6844. Do you think that the Sikhs who do not consume opium are in any way inferior to those who do?—I do not think opium has affected the race at all.

6845. Do you not think that there is a serious danger from a military point of view in having your men dependent upon having a drug always present in the Commissariat?—

I am not a medical man, and I cannot say if they can stop it or not. I am not in a position to say that.

6846. But, as a military man, do you not think that it is a bad thing to have a body of men entirely dependent upon having a drug?—I do not think I have said that they were entirely dependent upon it.

6847. You say, "I have also been informed by medical officers of the regiment that it was likely these two companies might break down on service if their opium was stopped?"—These men were used to it. That is what the medical officer told me—that he considered the men who were used to it if it were stopped might break down.

6848. Do not you think that it is a great disadvantage to have a body of soldiers who are dependent upon their opium in order to be able to go through the work they have to do?—I have been told by doctors, and it is my own opinion, that men, if accustomed to it, if it was stopped, might break down.

6849. You see the disadvantage of such a position?—If they get it they are nothing the worse for it, and most probably they might be the better for it.

6850. You compare two companies with their fellows, do you suppose that these two companies were greater consumers of opium than the other companies of the Punjab Infantry?—I know these two companies did consume more opium.

6851. (*Chairman.*) The other companies were men of other races I presume?—Men of other races in the regiment. We had Indians, Punjabis, Mahomedans, Dogras, and Sikhs. That is what we were composed of.

The witness withdrew.

Mr. F. BRADLEY called in and examined.

6858. (*Chairman.*) I believe you are an Apothecary and late Civil Surgeon, Northern Shan States. Will you tell us what opportunities you have had of seeing the extent of opium consumption in the Northern Shan States?—My opportunities of seeing the extent of opium consumption among the Shans of the Northern Shan States have been great. I was four years in the Northern Shan States and accompanied Messrs. Scott and Saunders in their tours through the Shan States. I was also out with Captain Daly, and have visited a very large number of the villages of the Northern Shan States. I have been to Kokang, the principal centre of the opium production of the Northern Shan States where opium is largely grown and can be purchased at prices ranging from Rs. 6 to Rs. 10 a viss (3·65 lb). So far as I know all the men in Kokang and the adjoining Shan States after reaching 15 or 16 years of age consume opium. This is more especially the case in Kokang. They both smoke and eat it, as a rule, a little in the morning and a little in the evening. So far as I could see the opium appeared to have no evil effect upon them. They struck me as being a particularly strong and healthy class of men. Mr. Scott and I both used to remark on this. Their children are certainly very fine specimens. All the men in the State, who have to do hard work, such as pedlars and others who carry about heavy loads, consume opium habitually. They cannot get through their work without it.

6859. Are these people you are talking about Shans?—Shans and Chinamen.

6860. I believe the Chinese come in from Yunnan?—Yes.

6861. I suppose they are emigrants from Yunnan?—They have been settled in these States for centuries past. I was in charge of the Lashio hospital for four years. During those four years I cannot remember a single case in which I could trace the cause of the patient's complaint to the evil effects of opium. The only people who ever carried the consumption of opium to excess were the immediate followers of the Sawhwas who led an idle life. The ordinary people never consumed it to excess. I think the people in that part of the country could not do without opium. I have occasionally taken opium myself when I have come in tired from a long day's march. I felt all the better for it, a few whiffs gave me immediate relief. In half an hour my appetite returned and the sense of fatigue appeared to have wholly disappeared. Next morning one is perfectly well and there is no sense of craving subsequently. Mr. Scott and I frequently discussed the matter of opium consumption. It was the time when the question was being largely discussed at home in England, and living as I did in the centre of the opium country I took a good deal of interest in the matter generally. I have never heard of any case in the Northern Shan States where opium has had a marked effect on the morals of a consumer and

6852. (*Mr. Pease.*) Is it your experience that these men could go on from year to year without increasing the quantity, or that there was a tendency to increase the quantity to produce the desired effect?—As far as I know I do not know that there is a tendency to increase the quantity. That would be more a thing for the medical officer to answer.

6853. You say, "A few were not allowed to go on service because they had injured their constitution by the abuse of the drug:"—those were men who had increased the quantity?—I do not think, taken in moderation, it does injure the constitution.

6854. But there were men in the regiment who were unable to go on service?—Yes, when the men were inspected for service I have seen the medical officer casting one or two men. When I asked why these men were cast, the medical officer on one or two occasions said that the men were excessive opium-eaters.

6855. (*Mr. Mowbray.*) I suppose a medical officer might cast other men in other companies for other faults?—Yes, for other reasons. I learnt this from speaking generally to the medical officer, and asking why the men were being cast. He said the men were excessive opium-eaters.

6856. Are you quite satisfied with the physique of your Military Police in Burma? Yes, perfectly satisfied.

6857. Supposing it were decided to prohibit opium generally in Burma, are you of opinion that it would be necessary to make an exception and to allow your military police to consume it?—Most decidedly.

have led him to do wrong. Opium is the only luxury and comfort the Shans in the Northern Shan States have. I consider it a necessity.

6862. Do you know the Southern Shan States?—I have not been in the Southern Shan States. I have gone round the borders of them. I have been with Mr. Scott who came from the Southern Shan States.

6863. There is not much opium grown in those States, is there?—I cannot say as to that.

6864. Are the men of the Southern Shan States easily distinguishable from the men of the Northern Shan States?—They are just the same.

6865. They both appear to take opium, so far as your experience goes?—Yes. I have heard Mr. Scott say the same thing—that they all take it.

6866. Those Burma ponies come from that country. Do they not?—A great many ponies are brought down from there: they are reared there.

6867. The people, like the ponies, are a very strong and energetic sort of race?—I do not think that the Shans are very energetic. The Kokang people who are half Chinese are very energetic. I could not say very much about the Shans being energetic. They are men who like to knock about a bit.

6868. Where does this opium go to?—A great deal is sent to China, and used amongst the people in the states round. Some is brought down into Mandalay and in this direction. The duty is very heavy. The Chinamen and the Shans coming down from the States through Mandalay are allowed to bring a certain amount. When they have over a certain amount they have to pay very heavily for it.

6869. Do you know what they do with the poppy seed?—The Kachins carry it about and eat it. I have often carried about a box with me.

6870. Is it eaten raw?—It is very refreshing, and they are very fond of it. They eat it with their food. You buy a little bag of seeds and carry it about with you. It is eaten uncooked and mixed with the rice they eat.

6871. Is it ever beaten up into a pulp?—No. The head is opened and the seeds are taken out. They often carry a number of poppy heads about with them, and use the seeds as they are required.

6872. Do the Shans give any excuse or reason for taking opium?—No. They take it out of sheer laziness. They have nothing else to do but smoke. In the case of people who have to work hard it is used because they say that they could not go through the fatigue without it. Some people have to carry very heavy loads about. The people who have to live in the low-lands—on the paddy fields, have to work

Captain
G. R.
MacMullen.

Mr. F.
Bradley.

Mr. F.
Bradley.

11 Dec. 1893.

very hard ; and they say that it keeps fever of : and I believe it does.

6873. You say they take it in order to enable them to do hard work. You regard it as a stimulant?—Yes.

6874. Is there any re-action?—They do not seem to complain of any re-action. They seem to be all right after it. It seems to do them no harm as far as I have seen.

6875. You say you occasionally take it yourself?—Yes.

6876. Have you any other sensation except the feeling of relief from fatigue, and all that sort of thing?—No. I have felt rather a happy sensation. The fatigue seemed to drop off me as if I had dropped a cloak suddenly. I got my appetite all right, slept well after it, and got up next day feeling perfectly fresh.

6877. Supposing the supply of opium to the Burmans is cut off, as it is proposed, do you think that the smuggling of opium from Shan States could be prevented?—I do not think you could prevent smuggling. I think opium could always be got in.

6878. Owing to the nature of the country, or the people?—It could be brought in by anybody coming down. It is hardly expected that a man is bringing opium ; and he will march through Maymyo, where there is a guard to collect the revenue.

6879. Is the border of the Shan States and the British Burman districts of Burma a mountainous country?—Yes.

6880. Are there many practicable passes?—You can cross the hills at any part.

6881. Are those hills covered with forests?—A good many of them are thick jungle ; but there are pathways leading all through. You can come in from any part almost. Nearly all the Sikhs of the regiment I had medical charge of took opium. They thrived on it, and they certainly suffered less from fever and bowel complaints than other Sepoys. The Sikhs are a very fine body of men. We had about a hundred Sikhs up there.

6882. That is, in the Shan country?—Yes. They belong to the Mandalay Battalion.

6883. Would it be possible to prohibit the cultivation of the poppy in the Shan States?—I do not think they could prevent it. According to our present system of government, it could not be prevented. We simply have a political officer who looks after the place.

6884. What does the officer do ; how far does he interfere?—I can hardly answer that question.

6885. The country is governed by their own chiefs?—Yes.

6886. (*Sir William Roberts.*) I think you said that the people of Kokang are partly Chinese and partly Shans?

—Yes. A good many of them. Some of them are pure Chinese. Others are half-breeds and Shans.

6887. The two races consume opium equally?—They all seem to take it about the same. They all take it in Kokang.

6888. You say that they take a little in the morning and a little in the evening?—That is the general rule among the hard-working people.

6889. You cannot give us an idea, I suppose, of the quantity they usually would take morning and evening?—Every man takes what satisfies him. Various men I have spoken to have told me that they take it at different times.

6890. What are the Sawbwas you spoke of?—They are the Chiefs.

6891. You say opium is the only luxury which the Shan States have. Do not the people smoke tobacco?—Yes.

6892. Do they smoke it?—Yes.

6893. So that, it is not correct to say that opium is "the only luxury?"—They do not look upon tobacco like opium. They think opium is far preferable.

6894. There is no spirit drunk among them?—No, the Shans do not drink.

6895. Is it a malarial country?—Very. Some parts are very malarious and other parts are healthy. It is a very undulating country. Some parts are very low and other parts are very high.

6896. Is there a popular belief that opium is good for the various troubles of malarial districts?—Yes, people have great faith in it and have found it do good.

6897. They have faith in it as a preventative in the case of low fever and malaria?—They say that those people who take opium do not suffer from fever. They take it as a prophylactic.

6898. What is your impression as a medical man. Is it your impression that opium does act as a prophylactic?—Yes. I have given it myself in cases ; and I have found it act when nothing else would.

6899. You have seen a great many cases of malarial diseases I suppose?—Yes, hundreds of cases.

6900. (*Mr. Pease.*) Is there anything special in the race of the country to make opium a necessity?—It is a very cold climate. It is very hilly and people have to carry loads about ; and they have lots of hard work in climbing.

6901. I gather that it is your opinion that if they give up the habit it would be to their disadvantage?—I have seen men try to give it up.

6902. I am not speaking with regard to individuals?—I fancy they could not live there without opium now with the kind of food they get, and the way they have to live, and are clothed and everything else.

6903. (*Mr. Mowbray.*) Are there many Shans in British Burma?—I could not say. I do not know much about Burma down here.

The witness withdrew.

Mr. C.
Findlay.

Mr. C. FINDLAY called in and examined.

6904. (*Chairman.*) How long have you been in Rangoon?—Eleven years.

6905. What opportunities have you had of judging the effect of the consumption of opium by Indian coolies?—I have been during the past eight years managing one or other of Messrs. Bulloch Brothers' mills in Rangoon. In that time I may say I have come into daily contact with the Indian coolies who consume opium. These men are employed carrying rice-bags for the most part, and of all mill labour this requires the most physical strength coupled with endurance. In physique they are as good as any, and better than most, of the coolies we employ. They take opium regularly every day, and the practice is not confined to one or two men in a gang, but is almost universal, it being exceptional to find a man who does not take it. I have questioned them regarding the quantities they take at a time and the number of times a day they take it. So far as I am aware they only take a small dose once a day when the day's work is over. They say it acts as a tonic or stimulant and enables them to eat as well as to sleep. They themselves say, without it they could not possibly bear the strain of work put on them, and invariably if a man stops it he turns sick and unfit for work. I do not know what the effects of not taking it may be, but I can testify to the fact that those men who do take it seem to be none the worse for doing so, and are, as I have said before, the best coolies we have. The work done by opium-eating Coringhi coolies is as follows : In a mill producing, say, 8,000 bags

of rice (800 tons) in 24 hours, 100 coolies are usually employed for handling the bags after they are sewn up. These coolies work in shifts arranged by themselves, there being always sufficient men in the mill to keep the work going. The work to be done is to carry the bags from the godown in which they are bagged to the one in which they are stored. The distance varies according to circumstances from 10 to 100 yards, and the bags are stored in stacks up to about 20 tiers of bags from the floor. In addition to the above those 100 coolies will carry 5,000 to 6,000 bags (500 to 600 tons) daily from the godowns to lighters or cargo-boats. In the busy season our mills work from 6 a.m. on Monday mornings till noon on Saturdays without a stoppage.

6906. Do you know if these men take alcohol as well in any shape?—So far as I am aware they do not.

6907. Has it the same effect upon them as alcohol has upon a European, or is there some different effect?—I fancy it is very much the same ; it is a stimulant. Taken to excess, I suppose it would stupify them, but moderately as they take it, it acts as a sort of stimulant.

6908. What is their character morally ; are they an honest sort of people or the reverse?—They are quite as honest as any natives going. They are not blackguards. I suppose they would steal if they had the opportunity ; but they are not professional thieves, and they work hard.

6909. Have you had any experience of Chinese labour?—No, none.

6910. Chinamen do not work as coolies, do they?—They are employed round Rangoon in cultivating gardens; and they are also employed on the Chinese farms in Rangoon as coolies. I suppose they find that a lot of their own countrymen are cheaper than labour they can get here; otherwise, they are not employed. They do not work for Europeans.

6911. You do not know anything about their habits with respect to opium?—No, I do not.

6912. (*Mr. Mowbray.*) These people eat opium, I suppose?—Yes, they eat it. The opium I have seen is prepared; it is a glutinous substance; and the people roll it out in the palms of their hands into a small pill.

6913. They come from the Madras Coast?—Yes.

6914. Do they go back again?—Yes.

6915. Do you know whether they bring the habit with them from Madras, or do they get it after they come here?—I think they bring it with them.

6916. Do you consider that it would create dissatisfaction among them if they were prevented from getting their opium?—I am quite sure they would.

6917. (*Mr. Pease.*) What steps did you take to find out how many took opium?—I questioned the headman of the gang with regard to the number of men in his gang who took opium.

6918. Do you think that those who do not take opium are any the worse men for it?—Personally I cannot say, because I never saw one who did not take it. But I have been told there are some who do not take opium, and that those men cannot work well.

6919. Have you watched its effect on these men for any considerable number of years—on individual men?—No, not individual men. They change nearly every year. They come over here for a season and then go back to their country. The same men if they come back to this county do not often return to the same mill.

6920. As a stimulant gradually sapping their powers, you would not have the opportunity of observing it?—No.

The witness withdrew.

Adjourned till to-morrow at 11 o'clock.

At the New Government Buildings, Rangoon.

TWENTY-FOURTH DAY.

Tuesday, 12th December, 1893.

PRESENT:

SIR JAMES LYALL, G.C.I.E., K.C.S.I., (IN THE CHAIR).

SIR WILLIAM ROBERTS, M.D.

MR. R. G. C. MOWBRAY, M.P.

MR. ARTHUR PEASE.

MR. C. C. LOWIS (*Provisional Secretary*).

The Rev. Dr. CUSHING called in and examined.

6921. (*Chairman.*) How long have you been in Burma?—I was here in March 1867.

6922. What parts of Burma have you seen most of?—I have lived in Toungoo, Bhamo and Rangoon. The first ten years I spent almost the whole of the season in travelling in different parts of the Shan States. I have visited almost all the Shan States, both east and west of the Salween. Kengtung is the furthest point I have reached. Kengtung is on the east of the Salween, considerably to the north. It is near the border of Yunnan. It is three or four days' ordinary travel beyond there.

6923. Please tell us what you know about the consumption of opium among the Shans?—In regard to the districts adjoining the Kachin country, of course since the English annexation, I have not been in that region; but before that I was in a great number of small villages. There were small villages skirting those mountains which I visited, and I found that the consumption of opium was very extensive in those villages. It seemed to be very much on account of their proximity to the Kachin country. I found that opium was raised in many of the villages in the Kachin country, and it was a matter of common daily marketing between the Shans and the Kachins. I know nothing about the condition of things now since the annexation. About forty per cent. of the men amongst the Shans are consumers of opium. Perhaps the percentage may be larger.

6924. Are you referring to smoking or eating?—I am referring to both. I think in that district smoking was rather more extensive than the use otherwise. They followed the Kachin custom very largely of smoking a small quantity occasionally in the day.

6925. The Kachin country borders on the Burman country—Does it not?—That is nominally Shan country, although parts of it are very much Burmanized.

6926. Did the habit extend at all among the Burmese in a secret way?—I do not know, except in the town of Bhamo. There was quite a large number of opium-eaters amongst

the Burman population, but I could not dare to give you any percentage, because I do not know what it would be.

6927. Do you refer to the opium-eaters?—I should say opium-chewers.

6928. In the Shan country, inside, at a distance from the Kachin country, how do matters stand there?—I think that the opium, as you come from the Kachin country southwards, is a great deal used. But it becomes less and less the further you go away from it towards Momeik.

6929. (*Mr. Mowbray.*) Are those districts you are now speaking of under British rule at present?—Yes; they are under British rule.

6930. Direct British rule?—The upper part of the district is under the Deputy Commissioner. His jurisdiction has been removed as you go further south towards Momeik. I do not know what English relations there are. I do not know whether it is a Tributary State or whether it is under direct British rule.

6931. Speaking generally, it is now under British rule?—Yes.

6932. (*Chairman.*) How do matters stand in Kengtung?—Kengtung is very much under Chinese influence, owing to its close proximity to China. I found the use of opium there very extensive. Great numbers of men there were accustomed to use opium. It was a very common thing in the market when I was there; but that was a good while ago. I doubt, however, if there has been very much change. Mr. Scott has visited the place since I was there.

6933. That was all independent country?—It was semi-independent country. I think of all the Shan States it was the most independent of the Burman king. It had a Burman military officer when I was there.

6934. Prohibition of the Burmese kings against opium did not extend to that Shan country?—The further you got from Mandalay the influence was less felt.

*Mr. C.
Findlay.*

11 Dec. 1883.

*Rev. Dr.
Cushing.*

12 Dec. 1893.

Rev. Dr.
Cushing.

12 Dec. 1898.

6935. (*Mr. Mowbray.*) What is the condition of this Kengtung country now; is it under British rule?—There is a Sawbwa there. It is tributary, like the other Shan States.

6936. (*Chairman.*) This proposed prohibition of the use of opium would not apply in any way to the Shan country I suppose?—I should think it would be very difficult to enforce it in that direction. It is to the east of the Salween. I think it has been only visited once or twice by English officers; indeed the Sawbwa did not present himself until two years ago.

6937. You say that a great many of the Shans also live in British Burma?—Yes, a great many live in British Burma. In the lower country there is a large Shan population.

6938. And in Upper Burma?—I do not think there is so much in Upper Burma if you except the districts to the north of Mandalay.

6939. Among the Shans in British Burma is opium consumed extensively?—Yes. I should like to explain about the use of that word 'extensive.' The headmen of the villages and the better class of people will not acknowledge that it is extensive, and I think for this reason, because it is very disgraceful in their opinion. They are strict Buddhists, and they do not wish that the idea should be entertained that the custom is rather widespread amongst their young people. The basis of my opinion has been formed largely from my personal intercourse with the people in their villages. I have had the heads of villages say to me: "In 100 men, there are three or four who use opium." Of course there are persons who use it secretly. But many of the priests have acknowledged to me that they are convinced that at least thirty per cent. of the men are more or less addicted to the use of opium. I think myself that that is probably very much the case. In the long journeys which I have taken, I have generally journeyed by means of coolies. These men go with me from these districts and return, and I have found that in starting at least twenty-five per cent. of these men have been addicted more or less to the use of opium. I am now speaking only of the Shans. I have had no idea that many of these men were opium users until they came into the mountains, when, being without their opium, their strength gave way and they were unable to go on unless they could have a fresh supply of the drug.

6940. Do these men eat it or smoke it?—Some smoke it, and some eat it.

6941. In the Burman's opinion or in the Shan's opinion, is there any distinction as to the degree of disgrace between eating and smoking opium?—I never heard of any, so far as the Shan is concerned. The term for calling a man accustomed to the use of opium is disgraceful. I do not think there is any difference in the opinion whether he uses it secretly or openly, or whether he eats it or smokes it. I never heard any difference.

6942. Would the term be generally used in talking of men who eat it moderately?—If a man uses it moderately it is not generally known, but the very fact that he uses opium is as much to his discredit in that way as if he uses it more openly. Of course when a man uses it to a great excess the term might have stronger force. But I do not know of any special distinction amongst the Shans. I never heard of it.

6943. In India I fancy, and in most Oriental countries, opium is used greatly as a domestic medicine?—Yes.

6944. I believe the idea prevails that it is a good thing to relieve pains of malarious fever and it is thought to be a prophylactic against fever?—Yes.

6945. Is it hard to distinguish between the medical use and the dietetic use?—In the Shan States they sometimes acknowledge that it is a preventive in the case of fever, but I do not think that if it is used directly for medicinal purposes there is any disgrace about it. Disgrace comes when the man is known to use it for his own pleasure.

6946. As regards the opium habit, it must be rather hard to distinguish between the case of a man affected with malaria, who uses it in small doses daily to keep off the malaria and the case of a man who consumes it for pleasure?—Unfortunately I have never met a man who used it extensively for malaria daily. I have known a case where a man has used it, as I should myself if it were prescribed. The idea of taking it as a custom makes it more or less a disgrace.

6947. Tell us what your opinion is as to the effect of the use of opium?—The use of opium saps the physical strength of men. In the earlier stages of its use it produces a fulness of flesh tending to plumpness. This has

been the result of my experience with my coolies more than any other class of men. Some of the finest men, apparently athletic in their build, have been men of this kind, who, as I said before, when they get beyond a place where opium can be obtained, fail altogether; but they looked like fine well-built men at first. But it is not good flesh and strong muscle. Without this stimulant they do not seem to do their work. I have had many cases among my Shan coolies during my Shan journeys. These journeys have extended over fifteen years. These men, when hired, seemed to promise excellent service, for they looked like strong and athletic men. They never mentioned their habit beforehand, but as soon as the supply of opium failed after entering the mountains they became utterly unable to carry any burdens, and if not discharged at once, ran away at the first opportunity in order to return where their imperative need could be satisfied. In no case have I ever seen such men abandon the habit. In all cases under my observation they went on from bad to worse.

6948. Your opinion has been formed chiefly from the observation of the Shan coolies?—Yes.

6949. From your observation and experience with these men is it your opinion that they never voluntarily abandon the habit?—That is my opinion. When I travelled from Toungoo these men were residents of the Shan villages amongst which it was my custom frequently to visit, and I therefore knew their subsequent life. It is not like the hiring of coolies and then ceasing to have any knowledge of them after they have been in one's employ. Only two years ago in my last trip to the Shan States some of the men whom I took out turned out to be opium-smokers. I know that within the last two years here, from my observation, they have gone from bad to worse. In the old days, when I was accustomed to travelling, it was not safe to take coolies when I could get them along the route. According to the Shan custom I could get carried from one town to another by local coolies; but, in order to facilitate my journey in the matter of speed, I employed coolies from Toungoo who had families there and who wished to return to their homes. In a large number of cases I had kept track of these families.

6950. You say they go from bad to worse; what do you mean by that?—I consider it bad any way to use opium.

6951. What is the stage which you call a worse stage?—There is a case of a man who was living two years ago in Toungoo who perhaps 20 years ago went with me for the first time to the Shan country. I was not aware that he was an opium-eater. This man turned out to be an opium-eater; but apparently, under the influence of our religious efforts, he gave up the habit, and he subsequently professed himself to be a Christian. A year or so after that it became evident that he had resumed the habit. The man went on from that until he became a physical wreck, unable to do work and unwilling to do it. He became very thin. He had been a man of good build and of fulness of flesh, but he became very thin and emaciated. Indeed, he seemed to be physically wrecked. That was my idea of going from bad to worse.

6952. You say that about 30 per cent. in the Shan States adopt the opium habit?—Not openly.

6953. You say there are thirty men in a hundred who adopt it; how many would arrive at that stage of physical wreck you speak of?—I should not dare to give any percentage, but I think a great many of them finally came to that; indeed, I have known a great many instances, but what the proportion would be I could not tell. I think a good many of these 30 per cent. had never come to that condition. They continued to be moderate users. The tendency however has been shown to increase more and more, and in the cases I have known in Toungoo, where I have had longer experience, I should say that at least five or six men out of the thirty would finally become utterly incapacitated, unwilling to do anything, and physically unable to do anything except at the moment they were under the influence of the drug.

6954. Do you think that that is the effect of opium only, or is it on account of their not devoting enough of their money to proper food?—Of course in the case of some of these men they do not properly supply themselves with food. They cannot afford food and opium. I think the lack of food would be attributed to the opium habit.

6955. It is much the same case as gin drinkers in London and in the other big towns?—Very likely.

6956. Can you describe the condition of these excessive opium-eaters?—As a rule the body becomes emaciated, and there is a shrinking from work and from exertion in any form except as necessity compels, and a constant supply

opium gives help. The normal condition of this class seems to be the least amount of physical effort and the desire to spend the time in indolent repose or in sleep.

6957. What have you to say as to the moral effect?—It often shows loss of respect for one's word. I found that to be the case particularly with those men who engaged themselves. When the opium failed there was a distinct break. They were not only perfectly willing but determined to break their contract. Before doing that, however, the pilfering of food and little things was prominent and common during the journey.

6958. More prominent than in non-smokers?—Yes, decidedly.

6959. You are now speaking of immoderate consumers?—Yes, those who require more or less of the stimulant. In that way they saved their money for the purchase of what opium they had. Of course their supply of money on the journey was very scanty. It was according to special arrangement that they were able to retain their money for the purchase of what they wished. I had a great deal of trouble in that direction.

6960. What is your opinion of the moral effect in the case of excessive consumers?—I found that the opium-smoker or opium-eater who used the drug excessively would resort to almost anything to obtain the means of getting the drug if he had not any. I personally know of good many thefts, and in one case I know of the sale of a young daughter in a way that ought not to have been, simply because the father wished to obtain money for the purpose of obtaining opium. Men who take it excessively do not, and, as a rule, cannot, work very well. They must have the drug.

6961. What, in your opinion, is the general feeling of the country with regard to the habit amongst the Shans?—I think there is universal condemnation.

6962. Although it is so common?—The universal condemnation of the opium habit by all respectable Shans, the loss of reputation of those who indulge in it, and the customary saying of the people in regard to one who having this habit is caught in some crime or fault, "oh, he is an opium-user," shows the sense of the people in regard to the moral deterioration which is considered to be attendant on the habit of using opium.

6963. That applies chiefly to the excessive use?—No, the condemnation of the habit does not apply to the excessive use, but the extreme use of it brings the most serious condemnation. The whole habit, as a habit, is condemned universally by the people. The use of opium *per se* is condemned by the people.

6964. I suppose every pious Buddhist must condemn it religiously?—Yes, if he adheres to his own religion.

6965. I suppose every conservative Burman or Shan who looks back with some regard to the old time of Church and State rule in Burma must also be prone to condemn it from those sorts of motives too?—That might be more with the Burmans than the Shans, because the Shans in the past days belonged to the Tributary States, and their emigration into Burma has been a more modern thing, and they have come in under English rule. I do not think in their own country the thing was possible to be prohibited. In the Southern Shan States it does not exist so much as it does further north, and yet it does exist to a certain extent. I have not found that feeling amongst them myself. With regard to the opium question, except that they get the idea from the Burmans, they do not seem to contrast it with what was the case under Burman rule; because they were not directly under Burman rule in their own country.

6966. In the time of Burman rule, prohibition was not extended to outsiders at all; was it?—I do not know that it was. As an example of how far the influence of the Burman prohibition extended to all parts of the Shan States, I may mention that in those States I went to a place where intoxicants were sold openly in the bazaar on the bazaar day. But the moment you crossed down from the plateau over the mountains into the Burman plain, it was rather a dangerous piece of business to sell intoxicants. I think the same idea will apply in regard to opium.

6967. I suppose under Burman rule, though the opium sale was prohibited, and it was a crime to eat or smoke it, there was a great deal of secret consumption; was there not?—Yes, no doubt. I remember coming late one night to a guard station, and being a white man they supposed I was accustomed to the use of intoxicants. A man came in the night and said to me that some intoxicants could be obtained if I wished it.

6968. (Mr. Pease.) That was rather evidence of the stringency of the law?—That was in one of the towns where there was Burman government.

6969. (Sir William Roberts.) Did you say that the priests among the Northern Shan States condemned the habit?—

Yes, those that I met in the proper opium country. I have never been in the Theinni country, but I have been in a small State beyond where the Shans are mixed up with the Kachins and some Chinese. I cannot say what the priests say, but I know that the priests from Theinni proper and southwards, as far as I have had any conversation with them, condemn the practice universally.

6970. You think that there is some religious basis for the sentiment of condemnation?—Yes, decidedly. One of the five great commands is not to use any intoxicant, and this would be classed essentially under the same head.

6971. The use of alcohol is put in the same category?—Yes, certainly; indeed, if I may be pardoned for stating it, here in Lower Burma some of our own men have been openly reproached by the Buddhist priests for allowing the use of opium and alcoholic drinks.

6972. Opium and bhang and alcoholic beverages all fall under this general religious condemnation?—Yes. As I understand, that is the opinion of the Buddhist priests.

6973. Have you found any opinion as to which is the most deleterious of these various intoxicants—opium, alcohol or bhang?—I do not know of bhang being used in the Shan States, unless it has been introduced by the natives of India. It may be used there, but I do not know. For myself I certainly should prefer to use alcoholic stimulants rather than opium. But I do not wish to express a liking for either.

6974. Your mental attitude is one of hostility?—Yes.

6975. (Mr. Pease.) Do you consider that the prohibition of opium arises simply from a religious feeling, and also disobedience to the law?—No. I think it arises primarily from the religious feeling, and, secondly, I think it arises very strongly from the results they see in the persons who use it.

6976. You said that the consumption of opium has given much trouble amongst the Christians?—Yes, that statement should be enlarged. Among the Shans, of course, the number of Shan Christians is comparatively small. In our own Shan Mission we have had a great deal of trouble with the Christians, and we have often traced the troubles in the churches to the secret use of the drug which seemed to destroy all sense of what I should consider honesty in their dealings with us as religious persons. I have known in the Burman villages quite a number of churches nearly destroyed by this habit.

6977. Do you retain persons as members of the church whom you know to be consumers of opium?—No.

6978. Is that the result of Missionary regulations, or is it because of the feeling of the Christian Church generally?—That is the result of our own regulations as missionaries, and that is reinforced by the feeling of the people about us. We should feel that we lost influence over the people if we allowed persons using opium to remain in the churches.

6979. (Mr. Mowbray.) Could you give me any idea of the proportion of the Shan population in Burma?—I could not. I have not examined the last census report. I know that ten years ago, when I had special reasons to look up the Shan population, there were over 20,000 within twenty miles of Rangoon. But it must have increased very much since then. The Shans are found in Pegu and Toungoo and other districts, and along the Prome railway. I have not examined the census in that respect.

6880. Could you tell us what proportion of Christians you have in Burma, and what your area of observation in that respect is?—Our Christians are principally in Lower Burma. According to the census we have adherents numbering nearly eighty thousand. We are more or less familiar with the state of the different missions, because we have our annual meetings, and all questions connected with these missions are discussed at those meetings. Besides that, almost all of us visit personally first and last nearly all the missions.

6981. What proportion of that seventy-nine or eighty thousand would be Burmans and what non-Burman?—I would rather give you the basis of the communicants. It is only from the census that we learn that the number of communicants is over thirty thousand. Among these, perhaps, there are two thousand Burmans. Then there are about twenty-seven thousand Karens. And the other thousand is divided amongst the Shans, the Kachins, and the different missions of a more recent date.

6982. The bulk of your converts are Karens?—Yes, the great bulk of them.

Rev. Dr.
Cushing.

12 Dec. 1893.

Rev. Dr.
Cushing.
12 Dec. 1893.

6983. In speaking of the opinion of the universal condemnation of the opium habit,—you are speaking both of Shans in the Shan States and the Shans in British Burma?—Yes, in both. It was only three or four days ago that I was out in one of the Shan villages near here; the headmen were together and spoke in a very strong manner about this opium habit.

6984. (*Mr. Pease.*) Headmen of what?—The headmen of the village spoke very strongly.

6985. (*Mr. Mowbray.*) I notice you say, "In no case have I ever seen such men abandon the habit"?—I never have; that there are persons who do abandon the habit I have no doubt.

6986. Could you form any opinion as to what would happen to these consumers if they were compelled to abandon the habit?—I fancy that would depend very much upon the stage of advance in the use of opium. I know of the case of a Shan who died in a very sad way. The man was employed by another missionary. He had been a slave caught by the Kachins and taken in his youth to the Kachin villages, where he became addicted to the use of opium. The man escaped and he was employed under the supervision of some missionaries for quite a while. He had no opium and he became violently insane—not hurtful to others, but violent in his movements. Finally, his friends were sent for and they said that it was simply because he had not his opium. It was a fact he had no opium for quite a little while. He was taken away, and he died the next morning, although opium was given to him. I cannot speak of these things from a medical point of view. I have known cases of Shans who had dysentery very badly who were accustomed to the use of opium, and the usual remedies in which opium is a part failed to have any effect upon them. As to abandoning the habit, I have never seen a case in which the Shans have abandoned it. And even those who profess to be Christians never can be persuaded to give it up.

6987. Could you not persuade people who become Christians to give up the habit?—We would never take them as Christians unless we supposed that they were not opium-users or had given up the habit. My experience in every case has been that where there was a real use of opium before they became Christians, they returned to the habit and finally adhered to it.

6988. (*Mr. Pease.*) Would you be in favour of extending the register which is to come into force on the 1st of January to the Shan residents in Burma?—I should hope not; I should certainly not desire to have it. Anything which would lead to its prohibition would be my idea of the thing. So far as Government measures are concerned, I do not feel prepared to speak about them.

6989. The proposal is that those who are consumers of twenty-five years of age should be allowed to register themselves; if on the other hand they are not placed upon the register, they are not treated as Burmans and will have full liberty to purchase opium?—Certainly that would be better than nothing, most decidedly.

6990. (*Chairman.*) You said you found a considerable use of the drug amongst the Karen Christians, which you say

destroys all honesty in their dealings with you?—I do not refer to Christians merely.

6991. Might not it be the secret use rather than the use of the drug which affects their honesty: secret use must involve incessant lying?—Yes, it is very easy to begin lying and go on with the principle of the thing afterwards. I do not see any occasion to recall what I have said with regard to the matter.

6992. Does not the concealment of the habit date from the old Burman rule?—I think the concealment is more from the disgrace of the thing than anything else. I have never heard any statement about concealing it in my experience with them on account of the Government at all. It has always been the disgrace that attaches to the use of the drug itself.

6993. By the new rules the use or possession of opium would be absolutely prohibited to Burmans: you are a gentleman of long experience in this country, and I should like to ask you whether you think that prohibition will be effectual; or do you think that the people will get opium all the same?—That is a hard question to answer. I should like to see it tried. I think there would be a good deal of illicit smuggling. But I think also it would cut off a good many who are not far advanced in the use of the drug in continuing its use. Young boys even are tricked into it, as I have occasion to know. It has also been stated in Government reports that men have been sent out by the opium vendors. If the thing were prohibited that would be stopped. Undoubtedly there would be smuggling and illicit trade, but I should like to see the thing tried.

6994. You recognise that there is a sort of counterbalance of evil in the thing,—that if extensive smuggling and extensive illicit clandestine consumption goes on—that itself is demoralizing?—I quite recognise that. Still I should like to see the other way tried and think if the evil would be less.

6995. There are a number of Chinese, are there not, in the Shan country?—In the Kengtung district there are a number, more or less scattered here and there in the Shan States; but the communities are not large. In my recent visit I found no large communities in the Shan States proper.

6996. With regard to the use of opium, is there any distinction between those Chinese and the Shans?—I could hardly say. I have never had much to do with them. I do not know much about them.

6997. As far as the Chinese who live in Lower Burma are concerned, is there any distinction in respect of the bad effect of opium on the Chinese and on the other people who surround them, as far as you can judge?—I have had very little to do with the Chinese here, and I dislike to give an opinion upon the matter, as I have had no connection at all with the Chinese here.

6998. (*Mr. Mowbray.*) Is there any Christian mission among the Chinese here?—There is one which is maintained in connection with the Presbyterian Church here. It is a small mission. It was de-signed more to look after the converts of that church in Swatow. There is a catechist there but he is under the charge of Mr. Moir of the Presbyterian Church.

6999. You do not mention any Chinese amongst your communicants?—No, we have no mission at all amongst the Chinese.

The witness withdrew.

Mr. Cheng
Taik.

Mr. CHENG TAIK called in and examined.

7000. (*Chairman.*) I believe you are a general merchant and holder of wholesale and retail liquor licenses in this town?—Yes.

7001. Will you tell us how far the consumption of opium prevails amongst the Chinese in Burma?—I am of opinion that the consumers of opium among the Chinese population in Burma, as far as I can judge, is from about 30 to 40 per cent.

7002. How long have you been in Burma?—Twenty-five years. I was born in the Penang Settlement—not in China.

7003. What effect do you think the habit of opium-smoking has upon the morals of the people who use it?—I may say that there are two classes of people who smoke. There are the rich men who can afford to smoke and afford to eat. I do not think it has any effect upon them. An opium-smoker after he smokes opium must have lots of tiffin or sweetmeats, and it does not affect him. With regard to the poor classes who smoke, if they smoke a little it does not affect them; but by-and-by they cannot sleep without smoking. If a man smokes one

day at 10 o'clock, he will have to smoke every day at 10 o'clock, and perhaps he smokes two or three times during the day. When the time comes for him to smoke he cannot stand it unless he does smoke: he must smoke something. If he is poor, he is obliged to go and get something for his pipe. That is what hurts the poor men.

7004. He does not feed himself?—No. He spends all his money and he commits petty thefts. When he sees anything, he wants to snatch it; or he may go to the pawn-broker.

7005. (*Mr. Pease.*) What time does it take for these smokers to smoke three times a day?—Some of them smoke about one grain at a time. Some smoke two times a day.

7006. How long does it take?—Some people take about a quarter of an hour to smoke. Sometimes people smoke lying on their beds and they might smoke three or four hours. He lies lazily and perhaps he has a friend to talk to. It is not like eating opium. The man who eats opium takes one pill and swallows it. It is not so with the Chinaman;

when he smokes he has a friend to talk with him and he spends hours over it.

7007. (*Chairman.*) Do many Chinamen eat opium and not smoke opium?—I think they all smoke. Some of the poor classes when they cannot afford to smoke buy *biunchi* and swallow it.

7008. Is the effect of swallowing the same as the effect of smoking?—I think it might be the same; but if he can smoke it is better. If he has no money to smoke he swallows it.

7009. Do many of the poorer classes go on smoking moderately for a long time or do they come to smoking in excess?—Sometimes the poor people have no money; but a man must smoke until he is satisfied; when he has money he can smoke as much as he can. When a man has not much money he can only smoke five pipes, but when he has more money he can smoke 10 or 20 pipes; but if they have no money they are obliged to have five pipes.

7010. There are foolish men and wise men among the poor; do the wise men smoke 20 pipes or only smoke a few pipes?—Some of the wise men only smoke five pipes, but some of the lazy men smoke 20 pipes. Some of the lazy men when they get money smoke until they have spent all their money. They like to smoke 20 pipes.

7011. Those men get unfit for work?—Yes.

7012. Out of a hundred poor men who smoke opium how many get unfit for work from smoking?—I should think about 60 per cent. cannot work.

7013. Do you mean out of a hundred poor smokers?—Yes; very poor smokers smoke plenty; they smoke 20 pipes. They can of course do daily work, but they cannot do very hard work.

7014. Taking a hundred men who smoke, some little, some much, how many become unfit to work?—I think about 30 per cent.

7015. How do they live in the end?—When they have no money they go and commit theft; snatch here a little and there a little. They can do no work. Nobody trusts a man like that; nobody would employ him; nobody will take those great smokers.

7016. Are not you yourself a smoker?—No.

7017. Have you never been a smoker?—No.

7018. Do many Chinamen drink shumshoo?—Not very many.

7019. What liquor do they drink?—Brandy, gin, beer. The poorer classes in the jungle cannot get any brandy; they are obliged to drink shumshoo.

7020. Do many become drunkards?—Some of them become drunkards.

7021. They become unfit for work too, I suppose?—I think when they are drunk they cannot work. Some of my friends drink very much; but when they have not got it they can stop one day, but they cannot stop opium for one day. One of my friends has stopped drink for ten days. He said, "I swear I will not have any more." As for opium, they cannot stand for two days without taking it.

7022. You yourself are a liquor dealer?—Yes.

7023. What sort of liquor do you deal in?—Every kind of liquor.

7024. Imported from England?—Yes.

7025. Do you think that the consumption of opium results in crime?—Opium causes no crime.

7026. (*Sir William Roberts.*) I understand that the Chinese community here are chiefly artisans, carpenters and shoe-makers?—Yes.

7027. (*Chairman.*) Are there any market gardeners?—Chinamen come into Burma, but I think most of them are dealers and merchants. I know what I speak is true. I think about 40 or 45 per cent. are merchants here, but some of them are carpenters, blacksmiths, shoe-makers and that sort of thing.

7028. As a matter of fact do many of these working men come to poverty?—No.

7029. Very few?—Very few.

7030. You say that 30 or 40 per cent. of these artisans use opium, yet very few as a matter of fact do come to poverty?—I should think about 30 per cent. out of 40 per cent. come to poverty.

7031. How much would that be?—About 12 out of 100.

7032. Do you say that about 12 per cent. of the artisan Chinamen come to poverty?—Yes, those who smoke a great deal.

7033. Do 10 per cent. of your countrymen who are artisans come to poverty here in Rangoon?—Yes, 10 per cent.

7034. From excessive opium-smoking?—Yes.

7035. I suppose that the majority of those who smoke opium, smoke it all their life-time in a moderate way—the vast mass of them smoke moderately and continue to smoke moderately?—I mean to say if they smoke at 10 o'clock, they must smoke at 10 o'clock every day.

7036. You say that if they are not poor they do not take any harm from it?—That is so.

7037. (*Mr. Pease.*) Have you known any of those who are well-to-do injure their health by smoking?—Yes, at last, but not in the beginning; at last they injure their health.

7038. Rich people?—Yes.

7039. In those cases does it not lead to their neglecting their business: have you known any cases in which the habit of opium-smoking has made them poor men?—Yes. They always neglect their business or trade. If a man wants to buy any goods at 10 o'clock, he will smoke and I think sometimes he neglects his business.

7040. (*Mr. Moubray.*) Have you any experience of any Chinamen who have ruined their health by drinking brandy and gin?—No.

7041. Not one?—Not any Chinamen and not any Burmans.

7042. Drinking is quite harmless here: it does not do the Chinamen any harm?—No.

7043. What becomes of all these Chinamen who are ruined by opium in Rangoon—where do they go, and where do they live?—They live in poverty-stricken places. Some of them are without any work. They must do something in some way to find money for their food and their pipe.

7044. What do they do?—Some of them do nothing.

7045. But they cannot live on doing nothing: what do they do?—They commit small thefts.

7046. Do you mean to say that about 10 per cent. of the Chinamen living in Rangoon, live on thieving?—They live in poverty; sometimes they live by thieving. If a man wants to get something for his pipe and has not got any money, he must go and snatch something. I do not mean to say he becomes a thief continually; but at the time he wants to smoke and cannot get it, he is obliged to go and snatch or to mortgage or sell for his pipe. What can they do when they have nothing? They cannot go and ask anybody they want a pipe.

7047. Suppose the Chinaman does not get his pipe, what happens to him then?—He goes and snatches something—a hat or a handkerchief. That is what is called petty theft.

7048. If the law said that no Chinaman was to have his pipe, what would he do then?—Of course he would do his best—take medicine and stop it; that is all.

7049. Have you ever known a Chinaman who has been in the habit of smoking and who has given it up?—There are some here.

7050. Do they do well without it?—They can do well without it. One of my friends got insolvent and he went to jail; the jail authorities would not allow him to smoke. When he came out in two years' time he looked very stout; he had not smoked. I do not know whether they give them some medicine inside the jail.

7051. Does he go back to his pipe?—Yes.

7052. Do you think it would be possible for the law to prevent Chinamen in Rangoon from smoking?—In one way they can prevent it.

7053. How?—Smokers smoke in their own houses. The opium-smoker ought not to be allowed to smoke except at the opium farm. A respectable Chinaman, I do not think, will go to the opium farm. He ought to be ashamed to mix up with bad characters.

7054. You want the law to prevent smoking as much as possible?—Yes.

7055. You think that not allowing people to smoke in these opium-houses has encouraged smoking?—If you allow men to smoke in their own houses that would encourage the smokers.

7056. (*Chairman.*) How can the law prevent a man doing what he likes in his own house?—That I cannot say.

7057. Must the policeman be allowed to go in and open the door of anybody's house and see if he is smoking?—There must be a spy. When men smoke they must have a pipe in their house and lamps, and everything like that. It

*Mr. Cheng
Taik.*

12 Dec. 1893.

Mr. Cheng Taik.
12 Dec. 1893. is not like eating opium. They can eat opium in any corner; but the smoker must have lamp and pipe and everything complete.

7058. The policeman must go in and search for the pipe?—When he heard there was smoking in the house, of course he might go there. If anybody went to buy any opium from the opium farms, they must not sell to them.

7059. (*Mr. Mowbray.*) Is this what you would like: you would like everybody to be forbidden to have opium except at these opium-houses?—Yes, if they want to smoke

let them go and smoke there. Of course some of the poor classes and bad characters might go there; but some are good men and have business, and they feel ashamed to mix up with these bad characters. They might feel ashamed of themselves and they ought to stop it. If a man takes medicine he can stop it.

7060. (*Chairman.*) When a man drinks too much brandy or gin and begins to become a drunkard, does not he ever begin to take opium to stop the drinking?—No; I think drinking will stop the smoking.

The witness withdrew.

Mr. Park Chan.

Mr. PARK CHAN called in and examined (through an interpreter).

7061. (*Chairman.*) I believe you are a holder of wholesale and retail liquor licenses and owner of a tannery in this town of Rangoon?—Yes.

7062. What have you to say with regard to the opium question?—I smoke opium. I have smoked it for the last ten years. I took to it because my health was bad. I smoke for ten or fifteen days and then give up the practice. If I feel ill I take to it again. I smoke in small quantities. I smoke about four annas' weight a day. About 6 per cent. of the Chinese in Burma smoke. Well-to-do people who smoke opium suffer no evil effects, because they are well nourished; but poor people who smoke opium to allay pain and cure their diseases often deprive themselves of food to get opium, and in consequence suffer from smoking. These people smoke as much as one rupee to one rupee eight annas' weight a day. Chinese working men sometimes eat a little opium while at work, not having time to smoke. They do this to stimulate their strength.

7063. You say you took to smoking opium because your health was bad; in what way was your health bad?—I was weak.

7064. From fever or anything else?—I am always unwell from weakness.

7065. What age were you when you took to it?—Thirty years of age.

7066. You say you smoke for ten or fifteen days and then give up the practice. Have you any difficulty in giving up the practice; can you stop easily?—I smoke for ten or fifteen days and I can cut it off.

7067. Is it difficult to cut off?—A Chinaman has some medicine pills, and I can take them and cut it off.

7068. Do you keep on eating those pills, or do you take those pills for two or three days and then stop it?—Sometimes for four or five days I take those pills, and sometimes I take them for ten or twelve days and I cut it off. After I take these pills I never smoke at all. My body becomes weak and I smoke again.

7069. For how long do you stop smoking altogether?—Sometimes for two or three months after taking the pills; sometimes about one or two years.

7070. You say about 6 per cent. of the Chinese smoke; the last witness said about 30 or 40 per cent.?—It is not certain. Sometimes the people come to Burma more sometimes they go back to China; so I cannot say for certain.

7071. You say 6 per cent. of Chinamen do you mean 6 per cent. of men women and children, or of men only?—Only the men.

The witness withdrew.

Mr. Ah Nam.

Mr. AH NAM called in and examined (through an interpreter).

7092. (*Chairman.*) You are a doctor, I believe, of Rangoon?—Yes.

7093. What have you to tell us with regard to the opium habit?—I smoke a little opium. I smoke from four to six annas' weight a day. I have smoked for about 12 years. I had to walk about a great deal in the exercise of my profession, and I took to opium to relieve my weariness. It did relieve my weariness. I suffer no evil effects. I smoke the same quantity every day. Opium-smoking has the effect of making the blood circulate better. I visit eight or ten Chinamen a day in the exercise of my profession. The non-smokers are more numerous than the smokers. I have not

7072. In a hundred grown-up men you think that only six smoke?—This 6 per cent. are real smokers.

7073. Do they smoke much?—Yes.

7074. How many small smokers are there?—About 20 per cent.

7075. Do many people eat and not smoke?—Amongst our Chinamen those who eat it are very few; the smokers are many.

7076. How many get quite ruined by smoking?—I cannot say.

7077. Of this 6 per cent. who smoke much, do any become thieves and beggars?—Those men who are rich never steal or thieve, but those who are poor do steal and thieve.

7078. You say you sell liquor?—Yes.

7079. Do many Chinamen drink much liquor?—Not very much.

7080. How many in a hundred?—About 70 per cent.

7081. Little or much?—Some take much and some take little.

7082. Do the same people who smoke opium also drink liquor?—Yes.

7083. Do they often do themselves harm by drinking liquor?—No; they do themselves no harm.

7084. If opium-smoking were stopped by the Government, would there be more liquor drunk?—I do not think so.

7085. If Government opium were stopped, do you think any other opium would come in?—I cannot say.

7086. (*Sir William Roberts.*) Are there many poor among the Chinese in Rangoon?—Yes, a good many.

7087. What makes them poor? Is it opium-smoking, or liquor drinking, or gambling, or ill-health?—It is their fortune, luck; it is fate; it is their bad luck—their *kismet*.

7088. There is a very large artisan population of Chinamen; do some of them come to poverty from gambling, or drinking, or opium-smoking or disease, or what?—It is their bad fortune. Their poverty cannot be attributed to any particular cause.

7089. (*Mr. Mowbray.*) Do you sell much brandy and gin to Chinamen?—I sell beer mostly.

7090. Do you sell beer to many Chinamen?—I sell to several kinds of men; I sell beer to Chinamen.

7091. Do you sell more to Chinamen or to other people who are not Chinamen?—I sell more to other races than to Chinamen.

found people suffering from excess of opium-smoking. I consider opium-smoking in moderation to be a good thing; opium-smoking in excess to be a bad thing. I consider anything over a rupee in weight excess. Chinamen generally smoke in moderation. Excess is rare. Opium taken in moderation strengthens men, allays pain, and cures disease.

7094. You say that non-smokers are more numerous than the smokers among the Chinese; in one hundred how many smoke and how many do not smoke?—Over 10 per cent. smoke.

7095. Do you mean that they smoke greatly?—I cannot say whether this 10 per cent. smoke much or little.

7096. Do you mean 90 per cent. never smoke at all?—I cannot say exactly. I never go out at all. I am always at my shop.

7097. You say that excessive smoking is rare, not common; do you know any men who have been quite ruined by smoking and who have become thieves and beggars?—No, I do not know any men who smoke who have become thieves.

7098. What diseases does opium cure among the Chinese?—It is a cure for headache and stomach-ache.

7099. Is it any good for fever?—No; it is not good for fever.

7100. Do not the country-people in some places think that it protects them from fever?—I cannot say.

7101. What shop is it that you stay to keep care of?—A Chinese medicine shop.

7102. Do you go about and visit sick people?—Yes; *Mr. Ah Nam*, sometimes I go to people having these diseases, and sometimes they come to me. 12 Dec. 1893.

7103. (*Mr. Pease*.) Would you advise those people who do not take opium to take it when they are quite well?—No; I would not advise them.

7104. Do you observe any difference in the effect of opium upon Chinese and Europeans?—I cannot say.

7105. (*Mr. Mowbray*.) Do you think that the Chinamen in Rangoon would like the Government to prohibit the use of opium; what would the Chinese who smoke opium in Burma think if Government stopped the sale of opium?—If the Government stopped the opium, the smokers are cut off.

7106. Would they wish opium to be cut off?—I do not know their wish.

The witness withdrew.

Mr. TAN KYU called in and examined (through an interpreter).

Mr. Tan Kyu

7107. (*Chairman*.) What are you?—A trader from Prome.

7108. Have you anything to tell us with regard to the consumption of opium?—I have been in Burma 28 years, and for 26 years have been a regular opium-smoker. Almost all the Chinese in Burma are regular opium-smokers. Some, however, only take it occasionally. Those Chinese who do not take opium are physically stronger than those who take opium. Mentally, I consider, opium-smokers are improved by taking opium. They are of more even temper. Chinese do not become criminals or vicious from taking opium. I take about three ticals of opium daily.

7109. How much is a tical?—A rupee weight.

7110. Is a tical the same as a tola?—Yes.

7111. You smoke three tolas of opium; do you?—Yes.

7112. How old were you when you first began to smoke opium?—Twenty-two years of age.

7113. Did you begin it because you were unwell; and if so, what was the matter with you?—I had a cough.

The witness withdrew.

7114. You say you think that opium-smoking makes men weaker in body, but it makes them quicker in mind; how does the quickness in mind show itself?—It makes them good-tempered—they are even-tempered.

7115. (*Sir William Roberts*.) When you say you take three ticals of opium daily, do you mean that you smoke it?—Yes.

7116. (*Mr. Pease*.) Do you think a man who does not take opium can do his business as well as a man who does take opium?—A man who does not take opium is much better than the opium-smoker.

7117. (*Mr. Mowbray*.) Do you wish the Government to stop the smoking?—I do not wish the Government to stop it.

7118. Are there many Chinamen in Prome?—There are one or two hundred there.

7119. Do you think the Chinamen in Prome wish the Government to stop opium-smoking?—I do not think the people there wish the Government to stop it.

Mr. SIT KAUNG called in and examined (through an interpreter).

Mr. Sit Kaung

7120. (*Chairman*.) What have you to tell us?—I am a trader from Prome. I have been in Burma some 35 years, and have been for the last 33 years a regular consumer. I consume about R3 weight of opium daily. I should say that not more than one-third of the Chinese in Burma are regular smokers. There is a slight advantage physically in favour of those who do not consume opium. I should say that opium-smokers are more thoughtful and careful and cleverer than those who do not consume opium. The Chinese do not become vicious or criminals from smoking opium.

7121. Did you come here from China, or from Penang, or from Singapore?—From China.

7122. What part of China did you live in?—Fokin.

7123. How old were you when you left China?—Twenty years of age.

7124. What were you trading in at Prome?—In cotton and cloth.

7125. You say you smoke R3 weight of opium daily; when did you begin to smoke as much as that?—Twenty years ago.

7126. When you first began did you smoke very little?—I smoked half a tola or three quarters of a tola before.

7127. Are those who do not smoke opium at all stronger than those who do smoke?—Yes.

7128. Are they more clever?—Opium-smokers are much more clever than non-opium smokers.

7129. How do they become more clever?—Opium smokers can consider how to trade better; they can meditate better.

7130. In Prome are there some Chinese who have become ruined and beggared from smoking opium too much?—The Chinese ruins his body of his own accord and it is not from the opium.

7131. Does the health of the poor man who smokes opium get ruined?—If he gets no money to smoke opium he must go and work for his livelihood.

7132. If Government stopped the sale of opium in Burma, what would the Chinese think of it?—It would be death to the smokers.

7133. Would the Chinese who do not smoke be pleased; would they think it a good or a bad thing?—If the Government objected to the Chinese smoking opium, they would run away to China, where they could get the opium.

7134. (*Sir William Roberts*.) Are you in good health?—As a rule I am well, but I am subject to headaches; otherwise my health is good—that is the only thing I suffer from.

7135. What is your age?—Fifty-eight.

7136. (*Mr. Pease*.) How much do you pay for this R3 weight of opium?—R2-12.

7137. How many pipes does that provide you with?—When I have leisure I smoke; I cannot count them.

7138. How many hours a day do you spend over smoking?—About four hours.

7139. When do you smoke? What time of the day do you smoke?—I commence after 8 o'clock and smoke till 9-30, and then I get up again. When my friends come I ask them to smoke.

7140. Do you work a great many hours a day at your business?—I have assistants to look after the shop. If my assistant has to sell goods, he comes and asks me. My work is not very hard.

7141. (*Chairman*.) Kindly tell us what you are and what you have to say with regard to this question?—I am a trader at Prome. I have been over 10 years in Burma. I am a regular opium-smoker and take about R2 weight of opium daily. Most Chinese in Burma smoke opium occa-

The witness withdrew.

Mr. Sit Hon.

12 Dec. 1893.

Mr. SIT HON called in and examined (through an interpreter).

sionally, but the number of regular opium-smokers is less than the number of those who take it occasionally. Chinese who do not take opium at all are a little stronger than those who take it, but not very much. I think the mind is improved by taking opium. Opium consumers are more thoughtful. The Chinese do not become criminals or vicious from taking opium.

7142. How old are you?—Fifty-eight.

7143. What is your trade?—I keep a miscellaneous goods shop.

7144. When did you come from China?—Ten years ago.

7145. From what part?—Fokin.

7146. You say you smoke R2 weight of opium daily; how long have you been smoking as much as that?—Seven or eight years.

7147. Before that I suppose you smoked less?—Yes; now my son is getting trade and I smoke more than I did before.

7148. If Government closes all the opium shops what will the opium-smokers do?—If the Government stops the

The witness withdrew.

Mr. Kun Loang.

Mr. KUN LOANG called in and examined (through an interpreter).

7155. (*Chairman.*) Please tell us what you are and what you have to say?—I am a shop-keeper in Rangoon. I smoke opium. I have smoked for twenty years. When I have little work I smoke from 8 to 12 annas' weight a day. When I have heavy work I smoke R1 to R1-8 weight a day. My health is not damaged. The effect on me is to make me feel brighter and to make me do my work better. I should say 5, 6, 8 per cent. of Chinamen smoke. Opium-smoking does no harm to well-to-do people. It does harm to poor people, because they have not enough food, and opium without food does harm.

7156. What sort of shop do you keep?—I have a Chinese sundry and miscellaneous shop.

7157. How old are you?—Fifty-three years of age.

7158. Was there any particular reason for your beginning to smoke opium?—There was no cause.

7159. You did not take it because you were ill?—No.

7160. Was it for pleasure?—Yes.

7161. You say you smoke from 8 to 12 annas' weight; do you mean 1-16th of a tola?—The half or three-fourths of a tola.

7162. Do many Chinamen eat opium and not smoke it?—Poor men eat it and do not smoke it. They have no money to buy the proper opium for smoking, so they eat the refuse opium.

7163. Do they make a pill of it; or how do they eat it?—They make a pill of it and swallow it.

7164. Does opium-smoking do most harm, or opium-eating, according to your idea?—Most harm is done to those who eat opium; it does not hurt those who smoke.

The witness withdrew.

Mr. Ah Chew.

Mr. AH CHEW called in and examined (through an interpreter).

7173. (*Chairman.*) What are you?—I am a shop-keeper.

7174. What have you to tell us with regard to the consumption of opium?—I have been smoking opium for the last 12 years. I generally smoke from twelve annas to one rupee weight daily. I formerly had a weak chest and spat blood and in consequence took to opium to give me relief. This has done me much good. I think that 8 to 10 per cent. of the Chinese community in Rangoon smoke opium. Poor people are in the habit of spending all their spare cash on opium and even curtail their food to procure the drug. The labouring classes when they feel fatigued eat a small piece of opium, which gives them relief.

7175. How old are you?—Thirty-eight.

7176. Were you born in China?—Yes.

7177. What part?—Canton.

7178. How long ago was it since you came here?—I came here 15 years ago.

7179. Then you began to smoke here?—Yes.

7180. Did you never smoke in China, or did you smoke occasionally?—I never smoked in China.

7181. If you stopped opium now, do you think the pain

The witness withdrew.

Adjourned till to-morrow morning at 11 o'clock.

opium shops, the smokers will be in a difficult and awkward position. The consequence of shutting the opium shops will be that in two days they will suffer in health. That will be the immediate effect.

7149. You used to smoke in China as well, I suppose?—Yes.

7150. Is opium cheaper in China than it is in Burma?—The price in Burma is a little higher than it is in China.

7151. Do all the Chinese in Frome come from China? Or are some of them born there?—They all come from China;—but some are born in Frome.

7152. Do as many Chinese smoke in China as in Burma?—It is just the same.

7153. Have you known any poor people who have been reduced to beggars and thieves from smoking opium?—Those who are poor people and have no money to smoke will borrow off their friends or turn thieves.

7154. (*Mr. Pease.*) Do you think it a good thing for a young man, who is quite well, to begin to smoke opium?—I cannot say.

7165. (*Mr. Pease.*) Do you mean the eating of crude opium or the eating of pipe ashes?—The Chinamen used to eat the refuse opium, not raw opium.

7166. (*Chairman.*) Does opium-smoking do more harm to the Burmese than it does to the Chinese; or is it the same?—Our Chinamen opium-smokers are all rich men, not like the Burmese.

7167. Do the Burmese smoke too much?—The Burman opium-smokers are not like our Chinamen opium-smokers. The system of consumption is different.

7168. (*Sir William Roberts.*) They smoke the best chandu; they do not smoke crude opium?—The Chinamen cannot stand the raw opium.

7169. (*Mr. Pease.*) Do you smoke *beinsi* or *beinchi*?—*Beinsi*.

7170. (*Chairman.*) Do you mean that the Chinaman is more prudent and wiser than the Burmese, or what is the difference? The Chinamen, the Consuls, and all used to smoke opium; the rich men used to smoke opium. The Burmese who smoke opium look rather bad.

7171. Is it because the Chinese know when they have had enough, and the Burmese do not know when they have had enough, that it has a better effect upon the Chinamen than upon the Burmese?—The Chinamen use opium for pleasure.

7172. The Chinaman smokes regularly, and the Burman smokes irregularly. The Burman takes it more than he ought to; is that so?—Some Chinamen take 3 or 4 tolas a day, and they know when they have had enough; but I do not know whether the Burmans know when they have had enough or not.

7173. The Burman smokes regularly, and the Burman smokes irregularly. The Burman takes it more than he ought to; is that so?—Some Chinamen take 3 or 4 tolas a day, and they know when they have had enough; but I do not know whether the Burmans know when they have had enough or not.

7182. Have you ever tried to stop smoking opium?—I stopped it for two months; then I coughed again and my chest pained me.

7183. You say that poor people spend all their spare cash on opium and even curtail their food to procure the drug; what sort of people are those?—They have no occupation; they are poor men.

7184. Have they no occupation because they smoke opium, or because of some other reason?—Some are lazy and some are getting diseased, so that they have no occupation.

7185. If Government stopped the opium shops what would the Chinese people say?—The opium smokers would not like it to be stopped; those who do not smoke opium have nothing to say.

7186. (*Mr. Mowbray.*) If Government stopped selling opium, do you think you would be able to get opium anywhere else?—How can I get the opium from anywhere if Government stops the opium? If Government stopped the opium I would run away to China.

At the New Government Buildings, Rangoon.

TWENTY-FIFTH DAY.

Wednesday, 13th December, 1893.

PRESENT :

SIR JAMES B. LYALL, G.C.I.E., K.C.S.I. (IN THE CHAIR).

SIR WILLIAM ROBERTS, M.D.
MR. R. G. C. MOWBRAY, M.P.

MR. ARTHUR PEASE.

MR. C. C. LEWIS, *Provisional Secretary*.

MR. P. M. MADOORAY PILLAY called in and examined.

7187. (*Chairman*.) I believe you are an Honorary Magistrate and a Municipal Commissioner in Rangoon?—Yes.

7188. How long have you been in Burma?—Twenty years.

7189. I suppose your experience has been almost entirely in Rangoon?—Yes.

7190. Please give us the opinions you have formed with regard to this opium question?—I am a merchant and a contractor for loading and unloading cargoes from vessels visiting this port. I am doing the largest trade in this line. Besides I used to work for the Public Works Department, rice mills, and railway, etc., and own a saw mill and several parcels of paddy-land in Rangoon, Hanthawaddy, and Pegu districts. Most of the men whom I employed to carry out these works are people who come from the Madras Presidency, in Ganjam and Godavery districts. I engage an average of 1,500 men daily. These men are commonly known as Coringhis; 90 per cent. of them are opium-eaters. They look healthy and are very hard-working men; they start their work at 6 in the morning and work till 1 P.M., and resume their work at 2 P.M. and continue till 6 P.M. Some of the carrying men are always busy in carrying rice bags, each weighing 220 to 230 lbs. on their shoulders; they take their meal at 4 A.M., and at 1 P.M., instead of a mid-day meal they generally eat a small pill of opium and drink water. As soon as their work is over they take another pill of opium, and they return to their houses for cooking, etc. Unless these opium-eaters have opium, they look like dead men and they cannot do their work. If they are suddenly stopped from taking opium, they are subject to severe sickness.

7191. Under what circumstances have you seen them stop getting opium?—When I was a passenger on board a steamer there were a large number of coolies coming across from the Madras Presidency here. Of course, they were very strict about carrying opium from one port to another, and all the opium was seized. Most of the men were very sick and never took a meal. Some of them were very dangerously ill, and I was obliged to ask the captain of that steamer to give them a little tincture of opium. After they had had it they got all right.

7192. It was not sea-sickness, but from not getting opium?—Yes. They are accustomed to come across in the season, and then go back to their country.

7193. Does the taking of opium seem to have any effect upon their moral or physical condition?—Not in the least. I can declare to the best of my knowledge and experience that eating of opium in no way affects their moral or physical condition. I have had great experience in travelling in Northern, Southern, and Western India, and have had the opportunity of seeing several countries, even in the North-West Provinces, say in Fyzabad, etc., where almost all the people eat opium, both men and women, and also give opium-water to infants. I know for certain that several

well-to-do native gentlemen working under the Government, holding high offices, and land-owners, are accustomed to eat opium. In Burma there are 75 per cent. of labourers from Northern India and the Madras Presidency, who are the largest majority of inhabitants in Burma, doing all sorts of labour work, who are opium-eaters.

7194. What is your opinion about discontinuing the sale of opium?—If it is discontinued it will be the ruination of those people who have been already accustomed to it; they will be subject to serious sickness, and we could not expect to get the work from them that we are getting now.

7195. Why?—The opium-eater requires a good deal of exercise. If he eats opium and does not eat his food properly, he is subject to sickness.

7196. The opium-eaters do not care to work, do they? Do not they become lazy from taking the opium?—No.

7197. In your opinion they do not?—They do not.

7198. (*Sir William Roberts*.) Have you ever had to discharge any of your workmen on account of their taking too much opium?—No, I have not.

7199. Have you had to discharge any on account of drink?—Yes, I have.

7200. Have you had to discharge any on account of eating hemp preparations?—I have never come across any of this hemp; it is not used here. Ganja-eaters are not fit persons to work.

7201. As far as your experience goes as an employer of labour, the habit of opium-eating amongst natives of India is not injurious?—No, it is not.

7202. (*Mr. Pease*.) How do you know that 90 per cent. of these men are opium-eaters?—Because I know them very well. Almost all these people eat opium. If I am not mistaken, I think I ought to have said 95 per cent.

7203. Do those who do not take opium do their work well?—Yes; but you have to consider the countries they come from.

7204. You say that unless these opium-eaters have their opium, they look like dead men and cannot do their work: tell us how they look?—I will explain it. If they have not got opium they are not so energetic, and do not work so well; they work so slowly; they do not care to work; and every now and then they sit. If they get opium they are cheerful and run very fast and work. You can get more work done from those who eat opium than from those who do not eat it.

7205. You say "in Burma there are 75 per cent. of labourers from Northern India and the Madras Presidency who are the largest majority of inhabitants in Burma"; do you think that there are as many as 75 per cent?—Yes, of the labouring class of men.

7206. What makes you think so?—The population are Coringhis and Hindustanis; there are not many Burman workmen at all.

*Mr. P. M.
Madooray
Pillay.*

13 Dec. 1893.

Mr. P. M.
Madooray
Pillay.
13 Dec. 1893.

7207. It is a larger proportion than other people?—The people in Southern India are the labouring classes here. On the railway, in buildings, and in the cultivations almost all the natives of India do the work. You cannot find any coolies among the Burmans. It is very seldom that you find Burmans on the railway or clearing jungle or cultivating.

7208. (*Chairman.*) Do you mean that 75 per cent. of them are opium-eaters?—Yes, of the labouring classes.

7209. Do you say that 90 per cent. of the Coringhis take opium?—Yes.

7210. And of the labourers from Northern India and Madras 75 per cent?—Yes, 75 per cent.

7211. (*Mr. Mowbray.*) Do your men go backwards and forwards between Madras and Burma?—Yes.

7212. Do you get the same men again?—Yes. They go in the months of July and August, and return in December and January.

7213. I suppose you have had some experience of these men working for you for some years?—Yes, for years and years.

7214. Do you find that it has affected their health; do you find they take more opium now than they did?—Opium-eating, I believe, is increasing largely.

7215. (*Chairman.*) Do you mean more people now eat opium than used to be the case?—I think so.

7216. Does the man who eats opium take a larger dose?—No, only the ordinary dose that they usually take.

7217. As far as you can judge from men that you have

known for some years coming backward and forwards, they do not get any the worse for eating, do they?—No.

7218. I suppose none of your men smoke opium?—No, they never smoke it.

7219. (*Sir William Roberts.*) At 1 p.m. they do not take a meal, do they, but take opium?—On boardship they do not take a meal.

7220. (*Chairman.*) They eat nothing at all?—No, nothing at all at 1 o'clock.

7221. (*Mr. Mowbray.*) But when they are working they take a meal at 1 o'clock, do they not?—No, never.

7222. (*Chairman.*) Do you know what the weight of opium is in the pill that they take?—I think it is as big as a peppercorn or a little larger.

7223. (*Sir William Roberts.*) About 2 grains?—Yes, I think so.

7224. (*Mr. Pease.*) How long have you been able to watch the health of any particular man?—I have had experience of men eating opium and working under me for the last 15 years.

7225. Have you had any one man who has worked with you for 15 years?—Not one man, there are hundreds of them.

7226. Have you been able to watch the health of one man for 15 years?—Yes.

7227. (*Chairman.*) Some of the men have worked under you the whole of the time?—Yes, almost all the time.

7228. (*Mr. Pease.*) Do you think they are really in as good health at the end of 15 years as they were before?—Yes, the same. I see the same men year after year.

The witness withdrew.

Maung Hpo
Hmyin,
K.S.M.

MAUNG HPO HMYIN, K.S.M., called in and examined.

7229. (*Chairman.*) I believe you are a Burmese?—Yes.

7230. A merchant and a native of Rangoon?—A native of Moulmein.

7231. What sort of merchandise do you deal in?—Timber, rice, and the general produce of the country.

7232. Will you please state what your experience is in regard to this opium question?—I have had experience amongst the Burmese and the Chinese in regard to the use of opium. In Burma mostly opium-smoking is prevalent. The habit is generally acquired amongst these people between their 15th and 20th years. As to motives, they are oftener led by the bad example set before them. They are generally advised to smoke opium when intoxicated with alcohol to take away its effects, as it is supposed that opium serves as an antidote against the indisposing effect of alcohol. This bad habit once formed is seldom relinquished. The opium-smokers would rather spend all their income than give up the habit contracted. They go on increasing the dose as they grow in years. They become the wrecks of their former selves, physically weak, mentally unable to think for themselves, morally degraded. The foregoing remarks apply to the Chinese as well as the Burmese. In Burma opium is not known to be protective against fever or to be of any use in malarious districts. Burmese do not believe opium to be a necessary element to enable working people to get through their daily toil; they look upon the habit as disgraceful—even worse than alcohol. I think the existing system of granting licenses for the sale of opium tends to the spread of the habit. As to the measure to give effect to the policy of discountenancing opium-smoking, I would say in Burma that total abolition would be the best thing to be done, as they have done in the case of ganja. It is desirable to prohibit the sale of opium. People of Burma would hail such measure with delight.

7233. Do you yourself think that the opium habit is worse than the drinking habit?—It is considered as a disgraceful thing. It is a very degrading thing to be considered an opium-smoker in Burma. A young man if he takes drink, but is not an habitual drunkard, is not considered as an outcast from society; but even a moderate smoker of opium is considered as an outcast.

7234. Both opium and alcohol are forbidden by the Buddhist religion: why is there greater degradation with regard to opium?—The general demeanour is very disreputable.

7235. Are opium saloons, the places where they smoke opium, supposed to be particularly bad places?—Yes, they are.

7236. Are there any places for drinking liquor?—There are liquor shops.

7237. Do people drink in liquor shops?—Only the low class of people drink in liquor shops. Burmese also, but very few in number.

7238. Is the same disgrace supposed to be attached to the habit of taking a pill of opium as it is to the smoking of opium?—Yes.

7239. The same?—Yes.

7240. Do you think the effect is as bad?—Yes, the effect is the same.

7241. The Coringhi coolies all take pills?—I have been employing Coringhi coolies myself, and I have found a great many of them were opium-eaters. It seems to me that they were very badly off for it. When once the opium consumer gets a disease, especially the opium-smoker, he gets worse. The disease is very liable to stick to the man who smokes.

7242. You say that opium is not supposed to be a protective against fever, or to be of any use in malarious districts?—Yes.

7243. Have you ever been in Arakan?—No; but I have been in timber forests where malarious fever is most prevalent.

7244. Did not the foresters take it?—No, none of them would take it to prevent fever.

7245. They have been reported by officers to say that they must have opium?—That is not my experience. I used to employ two or three hundred men at a time in the season. I found amongst them 10 per cent. who were smokers, and who brought their pipes with them to the forests.

7246. Were any opium-eaters?—Very few men in Burma eat opium.

7247. But it has been reported by Government officers who are opposed to opium that the foresters say that they must have opium when they are in the forest?—I only found 10 per cent. They are considered to be bad people, men who are of no consequence, and men who cannot work here properly. They joined the service in the forests. A man who could work and earn his living here would not join; but you generally find that men of very low habits join the forest work, and amongst them you find some opium-smokers.

7248. Is not opium much used as a domestic medicine in Burma?—No.

7249. For no disease?—No. If a patient is told that a dose of opium is given to him he will refuse to take it,

simply because he considers if once he takes opium his disease will be liable to be prolonged. If a man finds out that opium is the cause of his going to sleep, when the doctor gives him a sleeping dose he will not take it.

7250. You are speaking of pious, respectable Burmese?—Even an ordinary man. It is not on account of his religion, but it is on account of his belief that once he takes opium his disease, whatever it may be, will not go away from him easily.

7251. He will think it fixes the disease upon him?—He thinks it will become chronic: he considers opium is only good for a short time.

7252. He thinks it is possibly hurtful for medicinal purposes?—Yes.

7253. You say you think total abolition is the best thing?—Yes.

7254. Would not total prohibition be rather hard on the Chinese and Shans who are great opium-eaters?—As far as my experience goes, I do not think it would injure their health. They might suffer for a while and get weakened for a month or so, but after that they would get on all right without smoking opium. Many of my acquaintances, well-to-do Chinamen living in Rangoon, smoke opium. I have in my mind especially one man now in Rangoon. He smoked opium, and he used to get thin and weak. About two years ago he gave up smoking and he became healthy and went about his business. He has commenced to smoke again, and he is getting very thin and weak. I asked him why he commenced again, and he told me he could not give up the habit. His friends have enticed him to smoke and now he is getting bad and ill again.

7255. Is it not the case that in the Burmese King's time, when opium-smoking was severely punished, still a great deal of opium was brought into the country?—Not a great deal. It was smuggled by the Kachins and Chinese. They gave some young Burmese men opium and seduced them into bad habits.

7256. Was there much secret drinking in those days?—No, not at all.

7257. If total prohibition were ordered now, do you think there would be much smuggling or not?—So far as Upper Burma goes, the Chinese frontier smuggling could be prevented. I could not say as to seaports, however.

7258. Have you been along that country and Upper Burma?—Yes, I have travelled in that country.

7259. Do you think that smuggling could be easily prevented?—Yes.

7260. There is a great deal of opium amongst the Shans, Kachins and Chinese in the Yunnan district; it is a forest country and has a great many paths through it?—Yes, it is a forest country.

7261. How are you going to stop it?—It is a very hilly country, and there are roads and passes and country stations. I would prevent it in the same way as you prevent arms and ammunition from being imported from China. There is not a single gun imported.

7262. But a gun is rather a different thing to opium?—You prevent gunpowder.

7263. At present are there not a great many prosecutions for illicit possession of opium?—Seventy-five per cent. of the prosecutions are owing to more opium being sold by licensed farms than real smuggling; the opium found in the possession of a man who had more than he is legally entitled to is the same as opium issued from the Government treasury.

7264. He sends out people to sell it?—Yes.

7265. How is this opium discovered?—By Magistrates and others. I have known two or three instances in which the people concerned have told me. It is not my business to report it.

7266. How is it found?—The informer goes and tells that a certain man is in possession of so many tolas of opium, or so much more than he should possess. The police pounce upon him, and it is generally found in his house or in his possession.

7267. Who are these informers—what sort of people are they?—They are mostly men hanging about, having nothing to do.

7268. Is not there a danger that these people would put a little bit of opium into a man's house?—Yes, there is a danger of that. Such a case only comes up occasionally: it is not the general rule. I do not think people could afford to buy opium to put into another man's house.

7269. But if these men have nothing else to do, and make a profession of it, they would be likely to do that sooner or later?—Yes, perhaps so.

7270. These informers get rewards?—Yes.

7271. Do the police often let these people go—take a bribe from them?—There are some instances in which that is supposed to have taken place.

7272. Do not you think that is a great disadvantage: do you think that smuggling would be stopped?—The licensed farmers issue more opium than they are allowed to. There are informers, and the consequence is prosecutions go on.

7273. Under the new system it is proposed that opium shall only be sold to certificated Burmans who are habitual consumers, and to Chinese and to Shans, and that only so much opium shall be given to the opium vendors as is estimated to be required by these people: ought not that to prevent the system you talk about by which opium is sent out into the districts,—they will only have a certain amount now, and they will not be able to send out so much?—I do not know how this would work. I cannot say.

7274. Do you think it is necessary to suddenly stop the supplies to all habitual consumers, Burmans and Chinese and Shans?—Yes. So far as Burma is concerned, there would be no harm done by stopping the whole thing. You have suddenly stopped *ganja*, and there were a lot of *ganja* consumers here in Burma. No harm was done by suddenly stopping *ganja*, except that there might have been a little prosecution here and there. As time went on the people stopped smuggling, though they did attempt to smuggle it at first.

7275. Were not *ganja* smokers nearly all Indians?—There were a great many Burmans who were *ganja* smokers; in fact there were more *ganja* smokers than opium smokers. Since you stopped *ganja* I think people have commenced to smoke opium. Many men have told me that they contracted the habit of smoking opium through the alcohol habit.

7276. If you stop opium, will not these men, who are probably the most self-indulgent and least respectable men among their nation, take to alcohol if they can get alcohol and cannot get opium?—I cannot say exactly how far they would take to alcohol, because these are two opposite influences. Opium causes a man to be weakly and drowsy, and alcohol makes him excited. When a man could not get opium, I do not know whether he would take alcohol or not.

7277. A Burman generally likes being excited, does he not?—Yes, more or less he does.

7278. (Mr. Mowbray.) You said, I believe, that some of the coolies you employ smoked opium?—Not the natives of India, but Burmese coolies.

7279. Are there many Burmese coolies?—In Upper Burma we have mostly Burmese coolies.

7280. You were not speaking of the class of coolies employed in Rangoon in loading and unloading ships?—No.

7281. Have you any experience of them?—Yes.

7282. Are there any opium-smokers amongst them?—No.

7283. Is there a large number of opium-eaters?—Yes, nearly half the number of coolies I employ. I know more about the Burmese and Chinese, with whom I come in contact, more than I do about the natives of India.

7284. I rather thought that you were speaking of these classes of natives employed in loading and unloading ships in Rangoon; but now I understand you to say that you have no personal experience of them?—I have had experience of them, but I have not come so closely in contact with them as I have with Burmese and Chinese. I have employed them as coolies, and I have found, generally speaking, that about fifty per cent. of them were opium-eaters. I found them to be generally weakly and sickly, compared with the same class of men who are not opium-eaters.

7285. Did you ever make enquiries in order to get non-opium-eaters because they were better workmen?—It was impossible to get all non-opium eaters. When 100 coolies were engaged 40 or 50 would be found to be opium-eaters, and they would be sickly.

7286. Do you discharge them for being opium-eaters?—I only discharge them when they are sickly and lazy.

7287. I suppose you have found sickly men among opium-eaters and non-opium-eaters?—The majority have been opium-eaters.

7288. Your remarks apply to the Chinese as well as to the Burmans. You speak of the opium-smoking habit

Maung Hpo
Hmyin,
K. S. M.

Hmyin,
K.S.M.*

13 Dec. 1893.

being generally acquired amongst the people between the ages of 15 and 20: are you speaking then of Chinese?—Yes, Chinese boys in this country.

7289. Who are born here?—Yes, born in this country.

7290. How do you propose to meet the loss of revenue?—The loss of revenue resulting from prohibition could be best met by either re-imposing import duty on piece-goods or by raising salt duty in Burma.

7291. (*Mr. Pease.*) What is the amount of salt duty?—It is one rupee a maund here.

7292. What is it in India?—In India it is Rs. 2-8-0 a maund, if I am not mistaken. There is a vast difference between the duty charged in Burma and India.

7293. How far is the evidence you have given the view of the Burmese people generally?—I think they all agree with me; this is generally the opinion of the people I have consulted.

7294. Is it the opinion of people in your station of life?—I have taken some pains to enquire into this matter, and I have found that this is the prevailing opinion of the people.

7295. (*Mr. Mowbray.*) Have you consulted the Chinese as to their view?—Yes, I have.

7296. (*Mr. Pease.*) Tell us what you think the view of the Chinese is?—I have spoken to Chinese people before, and without exception they agreed with me.

7297. (*Mr. Mowbray.*) Why have they not come forward here?—I think some are coming here.

The witness withdrew.

*The Sawbwa
of Thibaw.*

The SAWBWA OF THIBAW called in and examined (through an interpreter).

7304. (*Chairman.*) Will you please tell us in what part of the Shan territory your State is?—In the Northern Shan States.

7305. Do you know what the size of it is?—It is the biggest of those States, is it not?—It is the largest of the four large States.

7306. What is the name of the State?—The State is called Thibaw.

7307. Is there much opium grown in that State?—Yes.

7308. Is the opium exported or used in the country?—It is imported from other countries and some is made in the country also.

7309. What is made in your country, is not some exported to China from your country?—No.

7310. Is it all used in the country?—No, it is sent to other Shan States.

7311. Does opium go from the other Shan States to China?—No.

7312. Are there Chinamen also in your State as well as Shans?—Yes.

7313. Many or few?—Very few. They come down once a year.

7314. Do not Chinamen live in the State?—Very few live in the State, but they come down in large parties every year to trade.

7315. How is the opium used?—It is smoked and eaten, but more people smoke it than eat it.

7316. What in your opinion is the effect of opium-smoking,—is it bad or good?—If they eat it it is bad, and if they smoke it, it is bad; both equally bad.

7317. How long has the custom of eating and smoking opium existed among the Shans?—For a very long time, about two or three hundred years.

7318. What do the common people think, do they say why they eat it?—They say it is very nice to smoke, and it makes them feel very happy thoughts.

7319. Do they think it is very good to keep them in health?—No, it is very bad. Those who take it have short lives.

7320. Do the common people think it is good for their health?—It is the common opinion that it is not good.

7321. Do they do it for pleasure, or is there any other reason?—They take it to rejoice their hearts; but their lives are short.

7322. Do they drink any liquor or spirit?—Yes they do.

7323. What kind of spirits?—Locally-made liquor, made from rice.

7298. (*Sir William Roberts.*) You are a merchant, and I suppose you have transactions with Chinese merchants?—Yes, I have.

7299. Are those with whom you have transactions mostly opium-smokers?—Half of them are opium-smokers.

7300. Would this description you give apply to that half,—that they are “physically weak, mentally unable to think for themselves, and morally degraded”?—I generally find that most of my Chinese friends who smoke leave the management of their business entirely in the hands of their managers and subordinates. Generally, they are sickly and complain of being ill, although they sometimes get on well. I have told them it was on account of their smoking opium. They have admitted that it was, but they say they cannot give it up.

7301. Do you suggest that half the Chinese merchants here who smoke opium are unable to attend to their business?—I say this in general. One of my Chinese friends who smokes opium admits himself that it is bad. He says, “I cannot give it up, because I contracted the habit when I was young.”—They all say it is very bad: not one defends himself.

7302. (*Chairman.*) It is also against their religion, too: most of them are Buddhists, I suppose; and according to the ideas of Buddha and Confucius, opium is a very bad thing, is it not?—Yes, it is.

7303. (*Mr. Pease.*) Are most of the Chinese you know Buddhists?—They are Buddhists by name, but not so much by practice.

7324. Is that as bad as opium?—It is not bad if you take it as medicine, but it is a very bad thing to drink for pleasure.

7325. Is opium ever used for medicine, and not for pleasure?—Very little.

7326. What sort of disease is opium used for as medicine?—It is taken for insomnia, diarrhoea, and internal pains.

7327. Has it been the custom among your family to smoke or to eat opium?—I tried when I was young, just a little bit, but I gave it up.

7328. Are you in favor of total prohibition of opium in your State?—Yes.

7329. How would you do it?—I would prevent the growing of it.

7330. Would not the people complain very much?—If they got enough opium to smoke for their lives, well and good: but I do not want any more eaten in future generations. The people who smoke opium never die when they have not got it. Thieves sometimes are put in prison and they are not allowed to smoke, and they get rid of the habit quite soon.

7331. But do not the people make a profit out of the cultivation of the poppy?—Yes, they do get a profit,—they get a revenue from opium.

7332. Who gets it?—The State.

7333. If the men who plant opium could no longer plant it, would they complain?—I do not think they ought to make complaints, because they can grow other things and trade in other ways.

7334. How long have you held the opinion that opium is a very bad thing?—Ever since I was quite young.

7335. Why do not you try to stop it in your own State?—Because the other States will not stop their trade, and if I tried to stop it, all the people would hate me.

7336. Would your own people dislike you if you tried to stop it?—I do not think the people in my own country would dislike me if I told them that it was not right for them, and that it was a bad thing for them.

7337. Why have you not done it then?—I cannot very well stop it, because the people sell it secretly sometimes.

7338. But you have never tried to stop the cultivation?—No, I have not tried to stop it.

7339. Do you think if you tried to stop it, the people would obey you?—They would do it, and they would not be angry.

7340. If they would do it and not be angry, why have you not done it?—I have looked upon it in much the same way as eating betel, and I do not think much of it. It slipped my memory.

7341. (*Sir William Roberts.*) How many amongst the men in your State smoke opium, 10, 20, or 50 in 100?—About five per cent.

7342. You say there are not many who use opium in your State?—No, not very many.

7343. Do any of the old people use opium?—They never live till they get old; they die. They have very short lives if they smoke opium. No old people eat it.

7344. (*Mr. Pease.*) Do you think the rules which are to stop the Burmese from buying opium ought also to apply to the Shans throughout your country?—Yes.

7345. Do you think that the other Shan Chiefs would agree to give up opium cultivation in their country, if you gave it up and the English Government wished it?—They would be willing to stop it.

The witness withdrew.

Surgeon-Lieutenant-Colonel HUGH JOHNSTONE, M.A., M.D., called in and examined.

7352. (*Chairman.*) I believe you are Senior Civil Surgeon in charge of the General Hospital, Rangoon?—Yes.

7353. Kindly tell us how long you have served?—I have been over 25 years in the service, most of my time having been spent in Burma with the exception of two years in the Medical College Hospital in Calcutta. I resided in Mandalay about six years, one year at Akyab, and the rest in Rangoon. The races I have come in contact with are the Burmese, Chinese, and natives of India.

7354. Will you tell us what personal knowledge you have of the use and abuse of opium amongst the natives of India and amongst the Burmans?—Of the use of opium among the natives of India I have not much personal knowledge. Although Resident Medical Officer in a large hospital, I saw little of its effects, either of its use or abuse, and although I have conducted more than 100 *post mortems* I never saw any pathological lesion that could be ascribed to the use of opium. Among the Burmese I have found the use of opium most extensive in Arakan, although the Burmese use it elsewhere. Among the prisoners in the Akyab Jail a good many were opium-eaters. Physically, they were healthy enough looking and had good enough constitutions—and the sudden deprivation of opium in the great proportion of them did not seem to have any bad effects beyond distress, especially in the young. Among the older and those who had continued the habit for a longer time and consumed greater quantities the process had to be more gradual. In the *post mortems* of those who had died from other diseases, but were known to be opium users, there was no lesion that could be ascribed to the effects of opium.

7355. Will you tell us what you have to say with regard to opium-eating among the Chinese?—It was at Mandalay that I came in contact chiefly with the Chinese opium-eaters. I was suddenly called one night to one of their gambling houses, where in a brawl a Chinaman was wounded, his abdomen being laid open to the extent of 7 inches with protrusion of the intestines. This man was an opium-eater and the one who did it a shumshoo (rice-spirit) drinker. The man recovered without a bad symptom, his wound healing up by first intention. These gambling houses are filled chiefly with opium-smokers and shumshoo-drinkers. Having been successful in this case I was often called in again on account of wounds received in these brawls, and it was almost invariably the rule that the disturbance arose from the shumshoo-drinkers and not the opium-smokers. In these gambling houses, though the class of Chinese were not the best, I could not say that I saw any ill-effects from the use of opium. They were physically in good health; it never interfered with the healing of their wounds or in the treatment of other diseases that I saw. In these places where there was so much to excite them they were not quarrelsome like the shumshoo-drinkers; neither did they seem to be morally debased. I enquired of many of them what led them to begin to use opium. Among many of them it seemed to be an acquired habit like smoking tobacco, and only thought of in that way; amongst others it seemed to relieve pain or cure illness; and all considered it a preventative of fevers, dysentery, diarrhoea, and cholera. Certainly, what I saw among these Chinese did not at all correspond with the accounts I had had heard of the awful ravages the use of opium caused to the health and morals of opium-consumers. I have seen a very few

7346. Can you tell me how many people there are living in your State?—About 100,000. *The Sawbwa of Thibaw.*

7347. (*Mr. Mowbray.*) How many years have you been at the head of your State?—Thirty years. *13 Dec. 1893.*

7348. You were head of your State when Thibaw was king in Mandalay in the old days, I believe?—I was at one time at the head of the State before the English went to Mandalay.

7349. At that time opium was forbidden in Mandalay, was it not?—Yes, I heard that orders were given not to sell any opium; but of course the rule was not properly enforced, as far as I know.

7350. You did not at that time forbid it in your State?—I did not say anything about it; I did not try to prevent it; I let matters be as they were.

7351. (*Mr. Pease.*) Did the Burmese King ever try to prevent the consumption of opium in the Shan States?—No, he did not.

old emaciated men suffering from chronic diarrhoea and dysentery, said to be the result of its abuse, but these were doubtful cases. All these races consider its use a prophylactic in malarious fevers and bowel-complaints.

7356. Have you ever employed it yourself?—I have often employed it myself in treating malarious fevers with good results, often staying off an ague fit if given an hour before its usual period of seizure, and at the least modifying its severity and adding greatly to the patient's comfort. Quinine and opium combined will often be successful when quinine alone fails. The value of opium in bowel-complaints is known to all these races. There is another class of cases which occurs in malarial districts, and which induces the use of opium, and that is malarial neuralgia. In malarial districts these racking pains in all parts of the body render the life of the individual miserable—sleepless at night, and unable to work during the day. Opium in this state has been found by the inhabitants of these districts to be a great boon, and I have no doubt is often the original cause of the habit, and these people will tell you if they had not opium they could not live there. The moderate use of opium has no baneful effect on the health and constitution, as far as my experience goes, and the effects of its abuse has come so little before me that I could give no particular lesion that it causes in the human economy.

7357. Have you formed any opinion of its effects upon morals?—Of its baneful effects on morals I have seen none, although it is said to lead to crime and insanity. During my charge (4 years) of the Lunatic Asylum in Rangoon a certain number of insanes were admitted with opium-eating as the alleged cause, and this as a cause I considered doubtful, and even if true they are not a large proportion. Opium is not such a great cause as *bhong* or Indian hemp. During the many years I have been in large hospitals in India it would be strange if the effects of the use of opium were so deleterious to the people consuming it, that no more cases, whose physical health should have failed, would have become inmates in the hospitals. In the Rangoon General Hospital there are no records of any one being admitted suffering from the effects of either the use or abuse of opium. There is no want of cases suffering from the use and abuse of alcohol, and I cannot say these are on the decrease.

7358. (*Sir William Roberts.*) You have just mentioned the Rangoon General Hospital; are you in medical charge of that hospital?—Yes.

7359. How many beds are there in it?—About 300 beds.

7360. Are these generally filled?—Yes, 280 or 285 is the general average, I think, daily.

7361. How long have you had charge of this place?—I have been in sole charge for four years; I was ten years Second Civil Surgeon in the hospital. Altogether I have been there since 1878—14 years. I have been nearly 18 months at home out of that.

7362. You are not as a medical man cognizant of the opium habit as a cause of disease?—No. No cases of opium abuse have come into the hospital, as far as I have seen in the records of the hospital.

7363. You spoke of a belief of many of the people amongst whom you have worked, that opium is a prophyl-

13 Dec. 1893.

lactic against the various conditions of ill-health in malarious districts?—Yes, they considered it as such, both the natives of India and Burmese.

7364. Did you gather that from conversation with them?—Yes.

7365. You are very positive about that?—Yes.

7366. Amongst the Burmans?—Yes, amongst the Burmans and the natives of India.

7367. Do they smoke or eat opium in malarious districts as a domestic remedy?—As far as I know, they do both.

7368. Have you the means of ascertaining that fact?—No, no means other than what they told me—their admission of it; I heard them state it.

7369. You have their direct testimony to that effect?—Yes, certainly.

7370. I presume you come in very close contact with those natives in the course of your professional work?—Yes.

7371. Did you have opportunities of ascertaining their sentiments?—Yes, by having conversation with them, certainly.

7372. (*Mr. Pease.*) Are natives here usually treated by doctors who treat them upon the Western system, or are they, usually under the care of their own medical men in Rangoon?—In Rangoon the natives of India are generally treated by Europeans in the hospital; the Chinese do not come very often to the hospital, but both Burmese and natives of India come to the hospital for treatment.

7373. I was referring to outside the hospital?—Yes, a great many of them are treated by myself outside the hospital, but there are more treated by the private practitioners outside: I mean not Government servants.

7374. Are there many native practitioners?—Yes, but a good many of them practise the European method.

7375. Do you think these opium consumers who come to the hospital while they have no special disease may not have the state of their general health considerably lowered by the practice of eating or smoking opium?—I have seen no occasion for saying that the health of those who come into the hospital has been lowered by the use of opium.

7376. Then it is a practice to which you see no objection?—Are there any reasons why persons should not take it?—I have never seen any ill-effects in those who take it.

7377. Would you recommend any young man in good health to commence the practice of eating or smoking opium?—No.

7378. Why not?—I would not recommend it any more than I would recommend a person to use anything in excess or needlessly.

7379. Moderately?—Moderately I do not see any objection to it at all, no more than a moderate use of alcohol.

The witness withdrew.

7380. Have you found that the habit of taking opium is exceedingly easy to give up?—I do not know that a man would find it more difficult to give it up than in the case of an alcohol drinker.

7381. You say, “the sudden deprivation of opium in the great proportion of them did not seem to have any bad effects beyond distress.” It did distress them?—Yes, it distressed them by the sudden deprivation of a thing they had been using.

7382. You do not mention anything with regard to the older ones?—According to the length of time and quantity of opium that made the process gradual.

7383. Why did you do that?—With the idea that probably it might interfere with their health in jail. These are with reference to those in the jail and not outside people.

7384. Was it to reduce their distress, or fear that it might be fatal?—To reduce their distress. I never saw a fatal case from its deprivation.

7385. (*Mr. Mowbray.*) With reference to your jail experience, I suppose the common practice is to cut off the supply of opium altogether?—Yes, when I was there it was the rule to cut it off immediately.

7386. How about exceptional cases?—In exceptional cases, if we found it was too much, we would knock it off gradually, and not suddenly.

7387. (*Mr. Pease.*) Have you met with any cases of Burmese objecting to take opium as a medicine for fear of acquiring the habit?—No, I never found them object to it.

7388. (*Mr. Mowbray.*) Is Arakana particularly malarious district?—Yes, it is a very malarious district.

7389. Do you attribute the more extensive use of opium among the Burmese of Arakana to the fact that it is a malarious district?—That is what I attribute it to.

7390. (*Chairman.*) When you were at Mandalay I believe opium was prohibited?—Yes.

7391. Have you any reason to believe that the consumption of it was carried on secretly by the Burmese?—Yes, it was.

7392. How did you ascertain that?—It was only by hearsay. I heard they used to smuggle it. I heard that bundles of opium were brought in secretly to Mandalay by steamers coming up from Rangoon. It was also said that it was brought across from India by Assam over land.

7393. (*Mr. Mowbray.*) Is any supposed to have come from China?—I have never heard of it coming from that direction.

7394. (*Chairman.*) Do you think if opium is prohibited in Burma that it will be smuggled in?—They would attempt to smuggle it in no doubt.

7395. Do you think the Government would be able to prevent it? Can you form any opinion about that?—I do not think I could give any opinion about that.

Mr. LEONG SHIAN TUCK called in and examined.

*Mr. Leong
Shian Tuck.*

7396. (*Chairman.*) I believe you are a Chinese catch merchant of Rangoon?—Yes.

7397. What is a catch merchant?—One who buys catch up-country and sells it here.

7398. What sort of things do you deal in?—Dyeing goods.

7399. Will you give us your opinion of what you have observed in Lower Burma with regard to the effects of opium?—I have lived in Lower Burma all my life, and have observed the effects of opium amongst Chinese and Burmese. Amongst the Chinese in Lower Burma about 20 per cent. of the men smoke opium, and very few women. I have never met a woman who smoked, but I know that there are some. The Chinese do not eat opium, except when they are unable to obtain it for smoking. Some begin at about 15 or 16 years of age, but most at about 20. They almost always begin amongst their friends, from seeing others smoke.

7400. What have you to say about the habit?—The habit can be given up without much difficulty when a person has not long been a smoker. I know of several who have had to give it up in prison. There is no clear difference between moderate and excessive opium-smoking. Those who take opium only occasionally do not suffer much, those

who take it regularly soon suffer greatly. If they cannot get opium at the usual time, they shiver and sweat and are quite unfit for work. They like more and more to smoke, and they cannot work like those who do not smoke.

7401. Does any crime ever arise from smoking?—Smokers who are poor and cannot get enough money to buy opium take to thieving and other bad practices. Those who are better off are not so much affected. A friend of mine who has tried to break off the habit several times has taken to it again, because friends have come and asked him to smoke with them. He says it is no benefit to him, only spending money; but he cannot give it up. He says it is a bad habit. Among Chinamen who do not smoke themselves the habit is always considered a disgraceful one. Its effects are also thought to be deadly poisonous. It will be a great mistake to attempt to prohibit the sale of opium to Burmans and not to Chinese; the Chinese will smuggle it and sell to the Burmans. The Chinese suffer as much as the Burmans from smoking opium, and it will be a kindness to the Chinese to prevent them from procuring the drug. The respectable merchants are all against the habit of smoking, though some of the smokers might object to being deprived of the drug.

7402. Were you born in China?—Yes.

7403. To what religion do you belong?—I am a Buddhist.

7404. Have any of your family ever smoked opium?—No, none of my family, but lots of my friends and others.

7405. You say it affects a man's health very much?—Yes.

7406. Does it generally affect his power of doing business?—Smoking will always affect him. He must waste his time.

7407. Is he less clear in his head?—It is only the smokers who tell about dreaming; they are always talking that they can get good sense from it, but when they are tight like a drunkard who has been drinking, they dream. I consider it a bad habit.

7408. Do many poor Chinamen become beggars, become quite ruined by opium?—It must be so: they spend money every day. They buy one tola's worth perhaps. They earn about Rs. 2, and they are obliged to give for opium Re. 1. They have not got sufficient for their own living, and they are compelled to do all kinds of mischief.

7409. Do they become beggars?—How do they live?—Several of them have become beggars and have asked for help. There is their own society and they go and stay there. I am speaking of those who are unable to work.

7410. The society supports them?—Yes.

7411. Does the society give them opium?—No, it would not give them opium. Some people help them.

7412. Out of 100 smokers how many do you think get ruined like that?—Gradually spending money must be ruining them. The man who smokes must be ruined gradually. He spends every day about half the income he gets and he must be ruined.

7413. Some rich men smoke?—It would affect their incomes very greatly.

7414. You mean that any poor man would be ruined?—The poor man would be greatly affected.

7415. I think you said that poor men eat opium?—When they are going on board steamers they are obliged to swallow it; but if they are in their own house or go to a friend's house they always smoke. They enjoy smoking more than eating. A friend of mine went to prison and he had to give it up because he could not get it there. When he came out of the jail, he was very stout and healthy. But a few months afterwards his friends asked him to smoke, and he began to smoke again.

7416. (*Mr. Pease.*) Did he keep up his health when he began to smoke again,—was he in as good health after he began to smoke again?—I have seen him myself getting thin, and he was not so stout as when he came out of jail.

7417. (*Sir William Roberts.*) I suppose smoking does not produce much effect among the Chinese who are in good circumstances?—The wealthy people smoke just to enjoy themselves, in order to pass the time. Lots of my friends have asked me to smoke, too. It would not injure rich people as quickly as it does the poor people.

7418. But you think that at length it does injure their health?—In the long run it must be injurious.

7419. Do you know as a matter of fact that it does?—Yes, I have seen it with my own eyes. I can instance the case of Park Chan, who gave evidence yesterday.

The witness withdrew.

Adjourned to Friday next at Mandalay.

At the Fort, Mandalay.

TWENTY-SIXTH DAY.

Friday, 15th December 1893.

PRESENT:

SIR JAMES B. LYALL, G.C.I.E., K.C.S.I. (IN THE CHAIR).

SIR WILLIAM ROBERTS, M.D.
MR. R. G. C. MOWBRAY, M.P.

MR. ARTHUR PEASE.

MR. C. C. LOWIS, *Provisional Secretary.*

Surgeon-Major DANTRA called in and examined.

7420. (*Chairman.*) I believe you are the Civil Surgeon at Mandalay?—Yes.

7421. Will you give us the result of your observations which you have made with regard to opium consumption in Burma?—The conclusions I have arrived at are the result of observations made during my long residence of nearly 20 years in India (chiefly in the Bombay Presidency) and over 15 years in Burma; and in the latter place being in charge of big jails for the last 13 years. The extent of the consumption of opium among the natives of India is just about the same as it was 20 years ago, but among the Burmans it is no doubt increasing. Taken in moderation it does not produce any ill-effect on the physical or mental health; if any thing, it improves the latter and affords greater staying power to the body. Excess, no doubt, impairs appetite, and the individual gets emaciated, but it never renders him so objectionable to society in general as excessive drink does.

7422. Have you observed anything with regard to the tendency to increase the opium habit?—In a few cases there is a tendency to increase the habit as in every thing else. Perhaps there is a tendency among a few of the Burmans to go to excess; but the natives of India use it in moderation. By using it in moderation their intellect becomes clear and they are better fitted to attend to their work, either physical or mental. In travelling and making long marches,

involving great fatigue and privation, they have found opium one of the most useful articles to possess, more especially when they have to march through malarious districts having a bad water-supply and scarcity of provisions. It is one of the most effectual prophylactics against malaria and bowel-complaints, and when attacked with these complaints it is a very good preventive.

7423. Do the observations you have just made apply to Burmese chiefly, or to Indians?—To both classes.

7424. You have been in charge of jails. What conclusion have you arrived at as to the effects of stopping the consumption of opium among opium consumers in jails?—Results of sudden complete cutting off of opium have never proved serious in my hands. In jails for years I have invariably stopped giving opium to all prisoners immediately they are admitted into the prison, and no doubt they have left off food for two or three days, have got diarrhoea, and complained of pains and aches all over the body, etc.; but these symptoms soon pass off and they do not feel any the worse for leaving it off; but I believe immediately they go out of jail and begin to experience the trials and troubles of this world, they again take to using it, and if they cannot get opium, they take to alcohol, which, in my opinion, works a hundred-fold greater mischief than any amount of opium.

Surgn.-Mxj. 7425. Where did you receive your medical education?—
Dantra. In Aberdeen and in London. I was also in Bombay for
15 Dec. 1893. about six months. I was three years in Aberdeen and two
years in London.

7426. You were only about 5 years in employ in Bombay, I understand?—I was not in employ at all in Bombay; I was simply brought up there. Until I went to England, all my life was spent in the Bombay Presidency.

7427. When you passed in England, where did you go?—I came to Calcutta for a very short time and then I came straight to Burma. I have been in Burma since 1877.

7428. When you say "the extent of the consumption of opium among the natives of India is just about the same as it was 20 years ago," you observed about the natives of India in Burma?—Natives of India in Burma as well as in India too.

7429. What natives use opium habitually?—The majority of the Mahomedans and Hindoos, but the Mahomedans use more than the Hindoos.

7430. In Burma?—Yes.

7431. Where do these Mahomedans come from; where is their home in India; do you know?—I could not very definitely say. They come from all the presidencies.

7432. The Coringhi coolies use it a great deal, do they not?—Yes, but not to the same extent as the Mahomedans do, as far as my observation goes.

7433. Are these Mahomedans traders, generally, or artisans?—Most of them are artisans; a few of them are traders.

7434. Do they smoke or eat opium?—The Mahomedans generally eat it; they smoke it too, but they generally eat it.

7435. Have you formed any opinion as to the relative effects of the eating habit and of the smoking habit?—It is a matter of degree, as far as my observation goes: smoking prolongs the pleasure, eating is finished in a short time. The smoking process goes on and the smoker spends more time over it.

7436. It is more a gregarious and social mode of consumption?—Yes.

7437. In your opinion, neither habit in moderation is prejudicial?—No.

7438. Is excess commoner amongst smokers or amongst eaters?—I think excess depends more upon the pecuniary circumstances of the individual. If the men have money there is a tendency to go to excess.

7439. Either way?—Yes.

7440. You say that in moderation you think it affords greater staying power to the body?—Yes.

7441. Is it a momentary effect?—A man after walking 10 or 12 miles feels tired and he takes a little opium, and he rests, say, for a half or a quarter of an hour, and then he will be able to go on another four or five miles further without feeling any discomfort; whereas if he had not taken any opium, he would quite collapse and he would not be able to go any further. I am speaking more especially now of those who have been in the habit of taking opium.

7442. You say that there is a tendency among a few of the Burmans to go to excess; why do you think that shows itself especially among the Burmans?—From my knowledge of the Burmese, they are a very impulsive sort of people: it is not only in eating and smoking opium alone, but there is a tendency to go to excess in everything they do.

7443. Does the same tendency show itself in drinking?—Yes; if anything, there is a greater tendency to go to excess in drinking than in taking opium.

7444. How long have you been in Upper Burma?—For the last three years.

7445. You did not visit Upper Burma in the King's time?—No. Another thing I have noticed is this: almost all the prisoners admitted into the jail, after committing most of the violent crimes, have been in the habit of drinking spirits. Prisoners who have been admitted for petty thefts have been opium-eaters.

7446. Except in this tendency to excess on the part of excessive consumers, have you noticed any other bad moral effects of the opium habit upon the character of these people?—No, I have not.

7447. With regard to men of business and traders, do you think it interferes with their intellectual capacity to do their business?—No.

7448. You say when opium is suddenly stopped, in the case of prisoners, you have noticed that they have diarrhoea,

and complain of pains and aches all over the body: is that the case also with moderate consumers, or is it the case only with excessive consumers?—Perceptible diarrhoea is apparent in even moderate consumers, but they do not leave off their food. I have to keep them on very light work. My remarks refer to those who go to excess. Moderate eaters or moderate smokers do not leave off their food, nor do they complain so much of pains and aches all over the body. But they do get diarrhoea: that is general.

7449. How long does the diarrhoea last?—It lasts two or three days. It is stopped by giving astringents.

7450. During that time you have to give them light work?—Yes.

7451. After that are they able to do the same work as the other people?—Yes.

7452. When they get out into the world from jail do they take to the habit again?—Yes. When they came back to jail I questioned them whether they went back to the opium habit after leaving jail, and they said "yes." I asked them why they took to it again. They said they felt happier and they did not feel the troubles and anxieties so much as before; very often they do go back to the habit again.

7453. Do they generally recognise that it is a bad habit?—Some do, and some do not. I have a prisoner now who says if he went out he could not devote his attention properly to his work unless he took opium. Others say they dislike it, but you cannot depend upon what they say. They know you do not like it, and they simply answer you so as to fall into your views.

7454. In the case of excessive opium consumers, have you ever had to allow them for a time to take a certain amount?—No. I have given them very small doses along with other astringents. About half a grain, or a grain, simply to help the action of the other astringents for diarrhoea.

7455. In the case of habitual excessive alcohol consumers do they feel much craving for drink when they cannot get it in jail?—They do.

7456. (*Sir William Roberts.*) Your experience has, I presume, been mostly among the Burmans?—Amongst the Burmans latterly, but in the commencement of my life I had experience amongst the natives of India.

7457. Are there a considerable number of them who consume opium in Burma?—I should say about 10 per cent.

7458. Adults?—Yes.

7459. Even now?—Yes; it was not so much before, but it is increasing at present.

7460. You have charge of jails: is there any hospital here?—Yes; I am in charge of the Civil Hospital, too.

7461. Have you noticed or have you had occasion to know whether these Burmans often find their way into jail owing to the opium habit?—Some find their way into jail through petty thefts.

7462. When they get poor they commit petty thefts to get opium?—Yes.

7463. Is that a more prominent feature amongst the poor who are opium smokers, or amongst the poor who are not opium smokers?—No; the thefts are quite as often amongst the poorer classes who do not use opium.

7464. So that you do not think, even when they become poor, it aggravates matters for them in that respect?—It is very difficult to say. The difference must be very inappreciable.

7465. You say they get thin when they take too much—they get emaciated?—Yes.

7466. Has your observation extended over a sufficient length of time in regard to the same individual, to enable you to form an opinion as to whether that emaciation is progressive?—It is progressive so long as they go on taking it.

7467. Do you mean to say that a man who takes opium to excess gets thinner and thinner to the end of the chapter?—If he stopped he would begin to put on flesh: it is not quite progressive.

7468. I presume you have no Burmans who have smoked or eaten opium for many years?—Yes.

7469. I suppose the emaciation gets to a certain point and then stops?—Yes; that is so.

7470. You are clear about that?—Yes.

7471. That is to say, they become spare, thin, wiry men?—That is what I mean.

7472. They do not deteriorate mentally, though they become thinner?—They do not suffer mentally. As far as they are mentally concerned, they make better overseers than men who do not consume opium; but as far as their physical strength is concerned, lifting heavy loads and doing manual physical work, perhaps they would not be up to those who do not take it. Mentally, as far as supervising and comprehending instructions which are given, they are better than others who do not take opium.

7473. They are sharper?—Yes, they are sharper.

7474. Do you think that perhaps it is the sharper fellows who do take opium, and that it may be accounted for in that way?—It is a conclusion to draw from the number of cases. There is a greater percentage among the opium-eaters who turn out to be very sharp.

7475. Have you known old men who are opium-eaters or consumers amongst the Burmans?—Yes.

7476. They do attain to old age?—Yes; I know a man now, he is a Jew, who is over 75 years of age; he is carrying on one of the largest businesses going.

7477. Does he smoke or eat?—He eats.

7478. How much?—I should say about 3 or 4 grains a day. He had to have his name registered, but he was rather ashamed of it. He was almost on the point of leaving Burma on account of the restriction, because he had to go and register his name in the Deputy Commissioner's Office. He said it was a great shame, and that he did not care to do it. He said that without taking it he could not carry on his business at all.

7479. Have you had any experience amongst Chinese or people from the Shan States?—I have had no experience of the people from the Shan States, but I have had experience amongst the Chinese.

7480. You do not know from your own experience anything of the consumption of opium amongst the inhabitants of the Shan States?—Only those few Shans who have come into jail.

7481. The Chinese smoke, do not they?—Yes.

7482. Is it your experience that they do not suffer in body or mind?—They do not.

7483. How have they come before you? As prisoners?—They have come before me in my private practice, and a few of them have come before me in jails.

7484. I presume that you have seen deterioration of health, due to the excessive use of opium?—Yes, I have.

7485. Apart from poverty, and apart from any associated disease, what symptoms would you bring home directly to the opium habit in excess?—The man's appetite fails, and the daily waste is not sufficiently replenished.

7486. The emaciation becomes progressive?—Yes, to a certain extent, and in the same way proportionately with the general body waste, the organs waste, the viscera. I have not come across any specific *post-mortem* appearance, no pathologic appearance, which I could attribute to opium, besides wasting.

7487. But do you think that the opium habit carried to excess can itself kill, as far as you know?—I do not think it would kill.

7488. But indirectly I presume it puts a man in peril. If a man eats or smokes opium to excess for a long time, I presume his life becomes precarious and more liable to other complaints?—If he does not take sufficient nourishment.

7489. I want to isolate, as far as possible, the opium habit. Suppose a man has command of all the food he wishes to have, and supposing he is an excessive user of opium, does he put his life in peril?—I do not think so.

7490. Not from inherent disease?—No; in fact it protects him to a certain extent from some of the diseases.

7491. You mentioned opium as being a prophylactic. We know that there is no absolute prophylactic against fever. You mean by that phrase that it assists and renders the attacks less frequent, or what do you mean?—I am in charge of the Military Police, Sikhs and others. When they are transferred from one place to another, when they have to march through malarious districts, I find that there is a smaller percentage who take disease among the opium-eaters than among non-opium-eaters. I am speaking of fever and diarrhoea, and more especially when there is a change of water.

7492. Some of the Sikhs do not use opium?—Some do and others do not.

7493. Both are Sikhs?—Yes.

7494. So that the comparison would be fair, because in one case opium was consumed, and in the other case opium was not?—Among those who eat opium the percentage of sickness is smaller than among those who do not use it.

7495. As far as your experience of Sikh soldiers goes what is the amount of opium they consume? Have you any idea?—Some of them consume from 4 annas worth a day.

7496. How many grains would that be?—About 8 or 10 grains a day.

7497. They take that probably in two doses?—Yes, in two doses.

7498. Have you in your medical practice used opium as a drug in malarial conditions?—Yes, with quinine very often, and I have found it answer better than increasing the dose of quinine alone.

7499. You have practised in India as well as in Burma: has it struck you that the malarial troubles are different here from those you encounter in India, or are they the same?—Nearly the same; I have not noticed any particular difference. In some districts it may be a matter of degree.

7500. (*Mr. Pease.*) You have had experience in England. Do you observe any difference in the effect produced by opium upon Europeans, Hindus, Chinamen and Burmans?—I cannot say that I have seen any at all among Europeans. Barring the tendency amongst the Burmans to go to excess, I have not noticed any difference in the effects on different races.

7501. Although you say taken in moderation it makes the intellect clearer and enables men to do their work better, I also gather from your evidence that you do not advise people to commence the habit?—No, I would not advise them to do so.

7502. I think you made a remark to the effect that these people know that you do not like it, or some such expression as that?—Yes.

7503. You say that the Burmans do not take to excess when they have not sufficient money. I suppose from that you mean that they spend all the money they can over it?—Proportionately speaking, if they have sufficient money to look after their wants they would go in for it; I do not think that they would deprive themselves of everything for the sake of opium.

7504. Is it not the cause of a great deal of poverty?—No, not in my experience.

7505. But there are cases in which there is poverty which leads to petty thefts?—Poverty in general leads to petty thefts.

7506. Did I understand you to say that for moderate consumers who are in jail you prescribe light work?—Yes, in the commencement.

7507. Do you find a man who has often taken opium in moderation is so much unfit for his work that he cannot do it?—For two or three days.

7508. (*Mr. Mowbray.*) Is that when you have knocked his opium off?—Yes. I knock it off entirely. When a man comes into jail, no matter how much he has been in the habit of taking opium, I knock it off at once.

7509. (*Mr. Pease.*) This case of the intellect being clearer is while the man remains under the influence of the dose?—I mean to say when I am talking to prisoners who are opium consumers, their intellect is clearer than others, even when they are not getting the drug. I can make better overseers from opium-eaters than I can from those who are non-opium-eaters: not in every case, but there is a greater percentage.

7510. When neither class are able to obtain opium?—Yes.

7511. (*Mr. Mowbray.*) Are you in charge of the jail here now?—Yes; I am in administrative charge, as well as medical charge.

7512. And you have been so for the last three years?—Yes; I have been in charge of these jails for the last thirteen years.

7513. Where have you been in charge of jails?—In Henzada.

7514. In which division is that?—In the Irrawaddy Division. I have also been in Bassein.

7515. Is that also in the Irrawaddy Division?—Yes.

7516. Where have you been besides?—In this jail here in Mandalay.

Surgn.-Maj.
Dandra.

15 Dec. 1893.

Surgn.-Maj. 7517. You have been in Mandalay for the last three years?—Yes.
Dantra.

15 Dec. 1893. 7518. Did you make any report to the Chief Commissioner two years ago when reports were asked for from Commissioners, Deputy Commissioners, Police Officers, and Superintendents of Jails?—I think I did.

7519. Do you know whether it has been published in this Blue Book?—I cannot say.

7520. I take it that the evidence you have given us to-day

The witness withdrew.

Mr. J. E.
Bridges.

Mr. J. E. BRIDGES called in and examined.

7523. (*Chairman.*) I believe you are Commissioner of the Eastern Division?—Yes.

7524. Please tell us how many years you have served in Burma?—I have been seventeen years in Burma. I was for three years doing ordinary magisterial work in the sub-division; after that I was for nearly six years on settlement work; and then I was for two years Revenue Secretary. I came up to Mandalay as Deputy Commissioner for 1½ years; then I was Chief Secretary for six months, next I was Deputy Commissioner again for five months, and then I was appointed Commissioner for three years.

7525. Can you give us any estimate as to the number of Burmans who use opium in Upper Burma?—The number is exceedingly small. From inquiries I have made I think it is about one in five thousand.

7526. Do you know the number in Lower Burma?—In Lower Burma the number is much larger.

7527. Was opium used at all by the Lower Burmans before the annexation?—Yes, where there were Chinamen the Burmans used opium.

7528. Are there many Shans in your district?—Not Shans proper: they are what are called Shan Danus. They are Shans who speak Burmese; they are partly Burmanized. They live in the territory between Burma and the Shan States proper.

7529. Was opium prohibited to these Shan Danus in the King's time?—It was nominally prohibited. But there was no real prohibition. They were allowed to go at it as much as they liked.

7530. The prohibition was actually with regard to the Burmans proper?—I think I may say it was.

7531. But not very effectually?—Not very effectually; they occasionally used to punish a man when they caught him, but many of them smoked who were never punished.

7532. Does the same rule apply to liquor?—Yes; only of course there were many more people who took liquor. A very large proportion of Upper Burmans took liquor when we came into the country. From what I heard I should think about 75 per cent. of them took liquor: not always, but at times, at their Nat festivals. It was the usual practice in the King's time to allow liquor to be manufactured, and liquor was drunk freely.

7533. Does this Nat worship prevail amongst the Buddhists?—It prevails a great deal in Upper Burma. It is their old religion and they keep it alongside of Buddhism. They have temples to the Nats, a few miles north of Mandalay and in the pagodas at Pagan. They offer liquor to the figures. In all irrigation works when the water is let out, offerings are made in spirit to the Nats. In fact, the Burmans have asked me at Meiktila to allow them to manufacture liquor. But it is forbidden now, and I told them they could not do it.

7534. In the King's time how was the liquor manufactured?—It was manufactured from jaggery or palm-tree sugar and from rice.

7535. Were the stills more or less concealed?—Yes, except at these Nat festivals, when it was done publicly. In Mandalay, in 1886, I saw a number of people drinking at these Nat festivals. On one occasion at the Amarapooa festival I saw three women drunk. I have never seen such a thing in Lower Burma; these women pushed up against me in the road. As a rule, Burmese women keep out of the way. I asked the people what was the matter with them, and I was told that they were drunk.

7536. Where did the opium come from that was obtained in those days?—From Yunnan, from the Chinese in Mandalay. There was a large colony of Chinese in China Street. They were allowed to use opium. The Burmese used to keep

is the result of your experience in the jails of Burma, both Lower and Upper?—Yes.

7521. I did not quite understand whether you said you thought the number of Burman smokers in Upper Burma was on the increase?—Not in Upper Burma only, but in Burma generally, Lower and Upper.

7522. Could you give us a percentage of what you think to be the number of opium-consuming Burmans in Upper Burma?—I should say about 10 per cent. in Lower Burma, and a little less in Upper Burma; but I cannot give you any definite information.

it from them. According to what the King's Ministers told me when we came into Mandalay, there were about 150 Burmans who used opium. That was their estimate of the number in Mandalay.

7537. Did they smoke or eat the opium?—Most of them ate it. They say only the richer people smoke it, as it is more expensive.

7538. What we call the Shan States were tributary to the Kings of Burma, were they not?—Yes, when we came in the King was trying to administer many of these territories. He had his ministers (Wuns) at the Courts of the Sawbwas. They had a Burmese military commander at Mobyè. Burmese armies were constantly going through the Shan States, attacking the different people.

7539. They did not interfere in internal administration much, I suppose?—They levied *Thathameda* or income-tax. It is a kind of modified income-tax. It is levied at a certain rate. It is fixed at R10 a house. If there are a 100 houses that means R1,000. It is divided according to the income of the different people.

7540. The Chinese were openly allowed to have opium?—Yes; Chinese and foreigners were allowed to continue their old custom, and to drink their liquor.

7541. What is your opinion as to the effect of opium on Chinamen, as far as you have seen?—The majority of Chinamen use opium and are not affected physically or morally by the use of the drug. They all work hard, and I have never seen a Chinaman in jail for an offence against the Indian Penal Code.

7542. How does it affect the Burmese?—I have seen opium smokers, but I cannot tell them from other people. I am unable to say that opium affects Burmans physically. In the jails in Lower Burma, the Burman opium-eaters or smokers whom I have seen did not appear inferior physically to non-opium-smokers. Burmans are, however, strongly affected morally by the use of opium. They become lazy, give up all work, and take to gambling and petty thieving. They do not commit any serious offences or crime on account of taking opium.

7543. You say they take to gambling?—Burmans are naturally gamblers, and the opium-eaters and opium-smokers go in more for gambling.

7544. I suppose the class that are criminals would naturally take to drinking and smoking?—Yes.

7545. The poor man who spends more than he could afford in smoking and drinking would naturally take to petty thieving?—Yes.

7546. Do you think there is any distinction in that respect between the man who spends more than he can afford in opium and the man who spends more than he can afford in liquor?—I do not think there is.

7547. What is your opinion as to the effect of opium consumption amongst the Shans?—I am unable to say, that there is any effect upon them. In 1887 I was up in the Shan States for three months. The Shans there were very hardy; they did long marches and carried heavy loads. From what I was told, many of them were either ganja-smokers or opium-smokers.

7548. Does ganja consumption prevail in the Shan States?—Yes; they say it can be found almost in every village. It is grown, but it does not grow wild; it is cultivated; they grow a few plants near the different houses.

7549. They collect the leaf?—Yes, I think they collect the leaf chiefly.

7550. They use it as a decoction in water, do they not?—They smoke it, too, in their cheroots. When the

Burmese troops went up there and were fighting against the Shans, they almost always used ganja too.

7551. Is it supposed to give them courage?—No. It is supposed to keep off chill and cold. When they smoke ganja they do not feel the cold. The Burmese commanders told me that their men regularly smoke ganja when they get up there.

7552. Have you ever asked the Shans why they took opium; have they given any reason for it?—No, I have not asked them.

7553. A note has been put in here with regard to the Excise establishments present and proposed. I see that it says: "In addition to the regular Police the village Police, and, in Lower Burma, the Thugyis, the Revenue Collectors, have duties in connection with the detection and suppression of offences against the opium law." How long has it been the case that the Village Police and Thugyis have had such duties?—I think for the last 2 or 3 years.

7554. Have they done anything?—Not so far as I have heard. No cases have been brought to light by them.

7555. Why do you think that they do not give any assistance?—I think the Burmans, not only in petty offences but in serious offences, are very much afraid of giving information against each other: they are afraid of revenge and people attacking them.

7556. Are these village headmen paid by Government?—They are paid by the *Thathameda*,—the land revenue.

7557. Are they hereditary headmen?—Generally they are.

7558. Are these Thugyis also Burmans?—Yes.

7559. Men of the villages?—Yes; the Thugyis in Upper Burma have many villages under them, but the Ywathugi has only one or two villages as a rule under him.

7560. In 1892 a special form was prescribed for the appointment of these officials to be Excise officers?—Yes.

7561. And on the back of those forms was written a short statement in popular language of their duties in connection with both liquor and opium?—Yes; we have given those out to every man in the Burmese language.

7562. I see they are giving much larger powers under this form of appointment?—Arresting, and seizing and searching houses: they have very small magisterial powers.

7563. Both the headman and the Thugyi have magisterial powers?—The headman is the Thugyi: it is a translation of the Burmese word for headman.

7564. What sort of magisterial powers has he?—He can try petty thefts up to the value of Rs. 5, and he can try small assault cases. He can fine up to Rs. 5.

7565. Have you heard of any case in your division in which they have entered a house in search of opium?—No; we have a special Excise establishment in my division. They do all this.

7566. Are these Thugyis people who would be likely to abuse their powers?—I think not: I think they are likely not to use them.

7567. Do you think when the use of opium is prohibited except to non-Burmans, it is likely that smuggling will take place?—I think a certain amount of smuggling will take place. We have smuggling now to a certain extent.

7568. Where does the smuggling come from?—From the Shan States. We have seized opium in the Meiktila district and in the Kyauksé district; the opium in those cases came from the Southern Shan States.

7569. Do you know the frontier of the Burmese districts and the Shan States; have you visited it?—No.

7570. Do you know whether it is a frontier where there are roads by which the hills can be crossed?—No, there are a number of bye-paths. There are three large trading routes into the Eastern division, and there are a number of bye-paths that go off the roads, and you can cut down into the plains at different places. These bye-paths are only passable by men on foot.

7571. So that smuggling in small quantities would be hard to stop?—It would be very hard to stop.

7572. I suppose one man might carry a great deal of opium?—Yes, he could carry several *viss* of opium without any difficulty.

7573. (*Sir William Roberts*.) You say the number of Upper Burmans who use opium is exceedingly small, being only about one in five thousand? Do you mean one in five

thousand of the total population?—Yes; that is from inquiries I have made.

7574. That would only mean about one in twelve hundred, or a thousand adults?—Yes. Mr. J. E. Bridges.
15 Dec. 1893.

7575. (*Mr. Pease*.) In your report which was given in on the 21st of January 1892, you say that out of 104 men in four villages the health and capacity of the majority had been affected by the use of the drug. Is that your experience generally?—No; that is taken from the reports of the Deputy Commissioner.

7576. It is embodied in your report?—It is taken from the report of the Deputy Commissioner.

7577. Do you think it is a fair statement to make that the majority who take opium have no capacity for work?—From my own personal experience I cannot say that they are affected. This is the opinion of the Deputy Commissioner, whose reports I was sending out. I made no inquiries myself.

7578. You further say nearly all have been affected by the use of the drug, and several have taken to crime?—That is petty crime.

7579. Do you think that probably that was rather an exaggerated statement?—Yes.

7580. You also say "opium consumers are said to be of weak physique and to live on the earnings of their wives." Do you think that is an exaggeration?—No.

7581. You say "I do not think that we can expect any co-operation from the people themselves in putting down the opium traffic:" during the time of the King, considerable assistance was obtained in the matter, was it not, from the heads of the Buddhist church?—I never heard of it.

7582. It was so stated in evidence in London?—Religiously all Burmans in theory are against both drink and opium; and the King repeatedly issued orders forbidding both drink and opium. That was only theory: the practice was quite different.

7583. (*Sir William Roberts*.) That was more in the shape of a pious opinion?—Yes; King Mindon Min constantly issued orders against drink and opium.

7584. (*Mr. Pease*.) Mr. Adams in giving evidence said, "The Buddhist Archbishop of the day (1876) showed me despatches in cipher which he was then sending to the Court at Mandalay, addressed personally to the King, detailing cases which had taken place, and various crimes committed, and the punishments inflicted by the Civil authorities. They always acted as spies upon the doings of the people, and anything contrary to Buddhist law, apart from the national law, was at once reported, and the priests themselves accused people to the Civil authorities."—All the older Burmans are using their opinion against it undoubtedly. When children take to the use of opium they reprove them and tell them not to.

7585. You say also "I am of opinion that the prohibition of the use of opium by Burmans in Upper Burma has been effectual." Is that your view at the present time?—I may qualify that a little by saying "except where there are a number of Chinese." Where the number of Chinese has increased, there they have introduced opium, that is, in larger towns.

7586. Do you think there will be any disposition on the part of the Shan Chiefs to co-operate in any movement for stopping the growth of the poppy in their States?—I think not: they may say they will, but they will not, I think.

7587. Do you think the consumption of opium in the Shan States is larger in the neighbourhood of the caravan routes, than it is in the other parts of the country?—All that I can say is that there is less consumption in the Southern Shan States than in the Northern Shan States, because opium is not grown in any quantity there: they consume ganja.

7588. The caravan routes are through the Southern portion?—Both the routes to Yunnan are through the Northern Shan States.

7589. (*Mr. Mowbray*.) You are aware that your view, that prohibition has been effectual in Upper Burma, is contrary to the opinions which have often been quoted from the Excise Report of 1890-91 to the effect that prohibition with regard to liquor and opium was nugatory?—With regard to liquor I do not think it has been effectual; but I think it has with regard to opium.

7590. Is it not the case that the rules themselves have been better enforced since the Excise Report of 1890-91 was

Mr. J. E. Bridges.
15 Dec. 1893. written, making not only sale, but also possession, punishable?—Yes.

7591. Do you think that has tended in any way to make the rules better enforced and more effectual?—I cannot say I think so. I think it is simply keeping opium away from them that prevents them taking to it. We have very few shops, and they have very little opportunity of getting it.

7592. How many shops have you in the Eastern Division?—There are three shops.

7593. Are those three shops supposed to be supplied exclusively with Government opium?—Yes.

7594. I suppose there is no restriction to selling in licensed shops opium that is imported so long as duty is paid?—No, and confiscated opium is sent to them for sale.

7595. So that in fact the preventive system which you now have to keep up in the Eastern District on the Shan frontier is intended not to prohibit the entry altogether, but to see that the opium which comes over is, as far as possible, made to pay duty?—Yes.

The witness withdrew.

Mr. Law Yan, K.S.M.

Mr. LAW YAN, K.S.M., called in and examined (through an interpreter).

7600. (*Chairman.*) I believe you are a merchant and Municipal Commissioner of Mandalay?—Yes.

7601. What have you to say with regard to this question?—I have lived in Mandalay for over 30 years. Not more than one in ten of the Yunnanese in Mandalay smoke opium, and few of the better class of merchants. The Fokinese and Cantonese smoke it to a great extent, but not universally. In the time of King Mindon Min the restrictions on the sale of opium were less stringently enforced than at present. I think it a bad thing to smoke opium. It is against the traditional precepts of my people, and it is also bad for the smoker's health. Most Kachins smoke opium, and as they live in a cold climate they are not so much affected by the practice as people who live in a hot climate.

7602. How long have you been a Municipal Commissioner?—Since 1888.

7603. Are you the only Yunnanese merchant who is a Municipal Commissioner?—Yes, I am the only one.

7604. Were you born in Yunnan?—Yes.

7605. You were quite a young man when you came here?—I am 48, and I have been here 31 years, in the time of King Mindon Min.

7606. Have you ever re-visited Yunnan?—I have never been back. All my people have died, and I have never gone back there.

7607. Have you ever tried smoking opium?—No, I have never tried it. I do not like it. My grandfather told me not to smoke it. We have never smoked it in our family.

7608. Does it commonly run in families to smoke or not to smoke, as the case may be?—I think there is about 50 per cent. who have not smoked from father to son.

7609. Do you think there is any difference in cleverness between the merchants who smoke and those who do not smoke?—I think it is the same thing whether a man smokes or not.

7610. In commercial honesty do you think there is any difference?—They are indolent in mind—the people who smoke opium. I do not think there is any difference in their honesty: some are good and some are bad.

7611. In King Mindon Min's time was there any restriction on the Chinese using opium?—All that the King used to issue orders about was not to sell opium to the Burmans, but the next day the Chinese would be selling to the Burmans. It was enforced one day and in a few days it was forgotten.

The witness withdrew.

Mr. Sidney Jennings.

Mr. SIDNEY JENNINGS called in and examined.

7622. (*Chairman.*) I believe you are an Inspector of Police?—Yes.

7623. How long have you served in Burma?—I joined in May 1888.

7596. If opium were totally prohibited and the shops were closed, would you then have to keep a much larger preventive force?—Yes, we should have to keep a much larger preventive force. All the Chinamen would leave the country, and our Military Police could not stay here. The Chinese are the chief traders in the Eastern Division. They have nearly all the catch trade in their hands. They have also some timber trade and all the cotton trade.

7597. I may take it as your opinion, as responsible for the division, that you do not wish to see any further restriction in the regulations recently put forth?—No, I do not.

7598. (*Chairman.*) Is Yunnan or Shan opium readily distinguishable from Government opium?—Yes.

7599. Is it of a different consistency?—I cannot say. Some people can tell you; but I do not know what the difference is myself.

7612. Did the Burmans use it as much in those days as they do now, or less?—They smoke less now than they did in the Burmese times.

7613. I suppose the Burmese only smoked in places like Mandalay?—They also smoked in the jungle, in the district outside Mandalay.

7614. Do you know of any opium-smokers who have died from smoking opium?—I have heard of men dying because they could not buy any opium and they had been in the habit of taking it; they died of dysentery or diarrhoea when the opium was stopped.

7615. (*Mr. Pease.*) Are there these three classes of Chinese,—Yunnanese, Fokinese, and Cantonese,—in Mandalay?—Yes.

7616. What proportion is there of Yunnanese?—Three-tenths Yunnanese and seven-tenths Cantonese.

7617. Would you be in favour of anything being done to prevent those smoking who have not yet begun to do so?—It would be better to prevent opium-smoking amongst those who have not yet begun.

7618. Would you be in favour of a register being made for present smokers, and that all others should be prevented from buying opium?—If people stay here for good it will be advisable to have the names of smokers registered; if they are only temporary persons who go about here and there, it would not be advisable to register them. It is in the discretion of the Government whether it would be advisable to have their names registered or not.

7619. Is that opinion the opinion of the Chinese generally: would the Chinese people agree with you in that?—The confirmed smokers will not like having their names registered unless those who do not smoke and do not eat opium like the registration of the smokers' names: the smokers would not like it.

7620. (*Mr. Mowbray.*) In the days of King Mindon Min, where did the opium come from that the people smoked?—From the Shan States, from the north, and from Bhamo. Yunnanese opium came from the Northern Shan States and from Bhamo.

7621. (*Chairman.*) When you lived in Yunnan as a young man, was the poppy much cultivated there?—The poppy was not grown much in the Yunnan country. There are wild tribes in a great part of Yunnan.

7624. Where have you served?—I served in the Thongwa district for about a year. In September 1889, I was transferred to Kamaing, the most northern British post in Burma.

7625. What people live in that district?—The Kachins.

7626. Are those Kachins independent?—They have drawn a line.

7627. I suppose those inside that line are under our administration, and we only have political relations with those outside that line?—Yes.

7628. Is there any distinction between the Kachins inside the line and those outside the line in character or in habits?—No, not at all.

7629. Is the habit of smoking common amongst the Kachins?—About 80 per cent. of them smoke.

7630. Do you know if they eat opium at all, or do they only smoke?—They eat opium, but they are not looked upon very highly if they do so. It is at night when they have finished their work that they bring out their opium pipes. The man who eats opium does it on the quiet.

7631. He is not thought a good fellow?—No.

7632. What do you think they take to it for?—They have very hard work all day. They are up at daybreak and work until nightfall. They have no leisure of any kind, and they have very bad food. Originally they copied the Chinese; and since the habit has been established, they cannot do without it: when they have no opium they at once go sick.

7633. You mean the men who have acquired the habit?—Yes.

7634. They go sick in what way?—They get fever and dysentery; many of them die if they do not get it. Being a Police officer I have had several men in the lock-up, who, as they got no opium, at once went sick. One of them died in Mandalay because he could not get opium.

7635. Do they suppose it is a preventive against disease?—They always say so. They say at once, "I shall get sick if you do not give it to me." I do not fancy they think much about it one way or the other.

7636. Beyond this liability to fall sick if they do not get it, do you know of any other bad results of the opium upon them?—No, I do not.

7637. I suppose some use it to excess?—Very few. The Kachins are not very rich, and they cannot afford to buy it in large quantities.

7638. Is the habit confined to the men?—No, the women smoke also.

7639. As much as the men do?—No, about 20 per cent. smoke on the Kamaing side where I am; on the Myitkyina side a good many women smoke.

7640. Do they grow much opium in that country?—On the Myitkyina side they do, and down by Indaw Lake.

7641. Do they grow enough in that way for their own consumption?—No.

7642. Where do they get it from?—It crosses the confluence of the Mlikha and the Maikha.

7643. Is it brought that way by the Chinese?—Yes, by the Chinese caravans. A good many Kachins cross the border and bring it over for themselves. I have myself met Kachins coming over, and have searched them and found opium.

7644. Is it crude opium?—It is in balls.

7645. Some few, I understand, do use it to excess?—Very few indeed.

7646. What is the result of those cases?—It is chiefly among the rich men; they never do any work, and they keep to their houses. There is no real bad effect but the men are not very strong.

7647. Would it be possible to stop the opium coming over?—Not at present. The force up there is quite incapable of dealing with it. There is over a hundred miles of Chinese boundary, and opium is grown just over the border. There are no roads; it is dense jungle. The Kachin paths are very numerous. It is quite impossible to deal with it now.

7648. How do you think the Kachins would like it if any measures were taken to stop it?—They would not like it at all.

7649. Do not they admit in talking that it is a bad thing?—No, they do not.

7650. What is their religion?—They worship Nats.

7651. (*Mr. Mowbray.*) Are your Police Military Police or Civil Police?—There is only one Civil Policeman in Kamaing, the rest are Military Police; they are called Gurkhas, but they are really Assamese.

7652. Are they opium consumers?—I have not noticed it amongst them. There is nowhere where they could get it. There is only one shop at Mogaung.

7653. Could they not buy it from the Kachins who grow it?—Yes, they could; but the Kachins will not bring it into Kamaing.

7654. Is Mogaung in the Bhamo district?—Yes.

7655. What does your district cover?—On the north there is no boundary at all; it is undefined: we do not know where it ends.

7656. Is it entirely in the Kachin country?—The Mogaung sub-division is in the Bhamo district.

7657. What is exactly the district over which you have authority as Police officer?—I was stationed at Kamaing: it includes the Jade mines and all below it.

7658. Is that in the Bhamo district?—Yes.

7659. It is something smaller than the Bhamo district?—Yes.

7660. I want to know what the area of your observation is?—It is called the Mogaung sub-division. I could not tell you what the area is. There are three sub-divisions in the Bhamo district—Mogaung, Myitkyina and Shwegu.

7661. Have you one of those three?—I had when I first went up; then I was sent to Kamaing as a sort of Civil Officer.

7662. (*Chairman.*) Is Kamaing in Mogaung?—It is in the sub-division: it is north of Mogaung.

7663. (*Mr. Mowbray.*) How many Inspectors of Police are there in the Northern Division? I want to know the area?—On the north it is undefined.

7664. On the south?—It goes down as far as Sinbo.

7665. Whereabouts is that?—To the north of Bhamo; that is the boundary of the sub-division; it is the Mogaung sub-division.

7666. (*Chairman.*) You also have charge of the Jade mines?—It goes up to the Jade mines.

7667. (*Mr. Mowbray.*) What class of people work in the Jade mines?—They come from Mandalay. There are Chinamen, Kachins, and Kadus.

7668. Do you know anything about the consumption of opium among the people working in the Jade mines?—No, merely from rumour. Last year 10,000 *viss* were supposed to have been brought to the mines.

7669. Is there a shop at the Jade mines?—There was two years ago, there is not now.

7670. (*Chairman.*) Where do the Kadus come from?—They are a small tribe living up in that part.

7671. (*Mr. Pease.*) How far is your district from here?—I could not tell you how far it is in miles. It takes three days by steamer from here to Bhamo, and from Bhamo it takes five days by boat.

7672. You said the death-rate would be enormous if the use of opium were prohibited: we have had a great deal of evidence to show that persons in jail and other places, though they suffer for a while, have not been permanently affected by it: can you tell us what has brought you to that conclusion?—The men that I have had in the lock-up have invariably gone sick, and two of them have died from not having opium.

7673. Under medical attention?—No, there is only an Assistant Apothecary up there.

7674. You come to your conclusions rather from your general experience than from statistics?—It is not extensive, because not many Kachins are locked up. It is the prevailing belief amongst themselves that they will die. Two of them did die in the lock-up when they had no opium. They invariably go sick when they do not have it.

7675. (*Sir William Roberts.*) I believe there is only one shop in your district?—At present there is one at Mogaung.

7676. The opium that comes from China comes in the crude state?—Yes.

7677. It is not the smoking extract?—No.

7678. Would that be made in the shop: they boil it there?—Yes.

7679. (*Chairman.*) Is the Kachiu country a malarious country?—Yes, very.

7680. Is the district of the Jade mines also very malarious?—Yes.

7681. Are the people allowed to get opium there?—They are not allowed, but we cannot stop it. If we could stop it, they would not be allowed to get it.

Mr. Sidney Jennings.

15 Dec. 1893.

Mr. Sidney Jennings. 7682. (*Sir William Roberts.*) Amongst the Kachins I suppose the adult males smoke opium the most?—Yes, about 80 per cent.

15 Dec. 1893.

7683. (*Mr. Mowbray.*) Are the Police responsible for carrying out these Excise laws?—Yes.

7684. When you say you cannot stop these people in the Jade mines, what efforts do you make?—The force up there is insufficient. Whenever we meet a caravan or anything of the sort we search it, and when we find opium it is confiscated. There are many small roads, and the jungles are so dense that nobody knows anything about them except the Kachins, and it is impossible to get at them.

7685. If any of your men find the people at the Jade mines using opium, do they investigate where the opium came from?—There is no Civil police up there; we have not got as far as that yet.

The witness withdrew.

Haji Shamshuddin.

Haji SHAMSHUDDIN called in and examined (through an interpreter).

7691. (*Chairman.*) What are you?—I am a Panthè merchant.

7692. What have you to say with regard to the opium question?—I have lived in Burma for 20 years and in Mandalay since the occupation. Panthès are forbidden to smoke opium, and as a rule do not smoke. Panthès who do smoke are men of rank. As regards the effect of opium on the health of the consumer, well-fed persons may smoke opium without ill-effects; whereas ill-nourished persons are harmed by it. About half the Yunnanese in Burma or in Yunnan smoke opium. Men of substance and position among the Yunnanese smoke opium; but there is some slight loss of reputation attached to the practice. The social stigma, such as it is, is slight. Very few Chinese eat opium, the majority of consumers smoke it. In the King's time opium was openly sold, without prohibition, by Chinese to Chinese. It was also sold secretly to Burmans. I have been to the Kachin country. There half the Kachins smoke opium, and are strong and healthy. I do not think they smoke to excess. I have heard that opium-smoking keeps off fever; but I do not know whether this is really the case.

7693. Where was your home originally?—South of Talifu.

7694. There are a good many Mahomedans in that part of the country, are there not?—There are many Chinese Mahomedans.

7695. Did you leave Yunnan after the rebellion?—Yes.

7696. When did you first settle in Burma?—First I

The witness withdrew.

7686. (*Chairman.*) Are your police Sikhs or what?—They are Gurkhas. They are called Gurkhas, but they are not really Gurkhas, they are Assamese. There are very few Gurkhas amongst them, the majority are Assamese.

7687. Do they consume opium?—No, I have never noticed it.

7688. If they do consume opium, do they eat it or smoke it?—I have never seen them smoking; if they eat it they eat it on the quiet. I have never noticed them.

7689. I believe that two Yunnanese have come in from Bhamo to give evidence?—Yes.

7690. How did they come forward to give evidence?—They came from Bhamo. As I came down, the Deputy Commissioner told me to bring them with me; beyond that I know nothing about them.

went to live in Rangoon and then from Rangoon I came to live in Mandalay.

7697. Were you here, in Upper Burma, in the King's time?—Yes, I was.

7698. For how long?—I had my residence in Rangoon, but I came here to trade. I sometimes stayed here eight months, and I went back and I got married. I was permanent here during the whole of King Thibaw's reign.

7699. You say that the Panthès are forbidden to smoke opium: is that a religious rule?—The Panthè religion forbids the smoking of opium.

7700. Panthès are Mahomedans, are they not?—Yes.

7701. Amongst the Mahomedans of India and Persia opium is not supposed to be forbidden; how is it that it is forbidden amongst the Panthès?—They think it is forbidden in the Koran. It is a religious injunction with them.

7702. When you were in Yunnan was there any poppy cultivation?—Yes, I saw a great deal grown in my own town.

7703. Was not the cultivation of the poppy supposed to be forbidden by the order of the Emperor of China in those days?—I heard once that the Emperor of China prohibited the cultivation of the poppy. I heard that in my childhood; but ever since I have known the country it has been cultivated freely.

7704. You say that some Panthè men of rank do smoke; I suppose those are people who have no work to do?—I heard that when there were Panthè Princes, they used to smoke opium; but I do not know it of my own knowledge.

MR. YANG FU and MR. SAN TU called in and examined (through an interpreter).

Mr. Yang Fu and Mr. San Tu.

7705. (*Chairman*) (to *Mr. Yang Fu*) I believe you are a Yunnanese of Bhamo?—Yes.

7706. How long have you been in Burma?—I have been in Burma now for over ten years.

7707. Before that where did you live?—In Moulmein and in Yunnan.

7708. Do you live still in Bhamo?—Yes.

7709. I presume you are a Buddhist?—No; I worship Chinese gods.

7710. Then I suppose you are a Confucian?—Yes.

7711. Do you smoke opium?—Yes.

7712. How many years have you smoked opium?—Thirty-two years.

7713. About how much a day do you smoke?—About half a tical of opium a day—8 annas' weight.

7714. For what reason have you taken to it?—Because I was suffering from sickness—on account of fever.

7715. Do you think it stops fever?—Yes.

7716. Is it the general opinion that opium is good for stopping fever?—Yes.

7717. If opium were stopped what would be the result?—The men who could not stop the practice would go back to the Chinese country, and others would suffer the orders of the Government.

7718. Of the Yunnanese who trade between China and Burma, how many smoke and how many do not smoke?—More than half.

7719. How is it that you come forward to give evidence?—The Deputy Commissioner called us.

7720. Was a meeting called, or did the Deputy Commissioner call you individually?—The Deputy Commissioner assembled the Chinese and told them the Government wanted them to send some Chinese gentlemen to represent them here. The Chinese chose six who went up to the Deputy Commissioner; and out of those six two were chosen; we two were chosen, and we have been sent down.

7721. (*Mr. Mowbray.*) How many Yunnanese are there in Bhamo—permanent residents?—About five or six hundred.

7722. Are there many who come and go?—Yes.

7723. How many?—A great many people come in the cold season; more than a thousand people come down in the cold weather.

7724. If the Government said that no Yunnanese should have opium unless their names were upon a list, do you think it would be possible to carry that out in Bhamo?—If I could not stand the order, I would go back to my country; I would think about it.

7725. Do you think if these temporary people who go to and fro trading were not allowed to have opium that it would stop their coming to trade?—Only the people who do not smoke would come; all the opium-smokers would stay at home.

7726. What do the people generally trade in?—From Yunnan they bring cloths, silk, cotton, fruits, walnuts, apples, pears, and they also bring salt pork. They also take back amber, jade and lac.

7727. (*Mr. Pease.*) Would you advise a young man in good health to take opium?—No, I would not advise any young man to smoke opium.

7728. Have you ever given up taking it yourself, and if so, for how long?—I have stopped opium five or six times and on one occasion I stopped it for one year. Sometimes I stop it for two or three months, and other times for five or six months.

7729. (*Chairman to Mr. San Tu.*) How long have you smoked opium?—Fifteen years.

7730. How much do you smoke?—I smoke ten or twelve aunas' weight of opium daily.

7731. Have you been settled in Bhamo for any time?—Three years.

7732. Where is your home in Yunnan?—In Molmein.

The witnesses withdrew.

The Reverend M. B. KIRKPATRICK, M.D., called in and examined.

7739. (*Chairman.*) Would you please tell us to what Church you belong?—I belong to the American Baptist Mission.

7740. You are a Medical Missionary?—Yes.

7741. How long have you been in Burma and in what districts have you been?—I was in Toungoo for two years; I have been living up in the Shan States for three years, and much of my time has been spent travelling in the Shan country. It is five years and six months since I came to Burma.

7742. Before that you were in India?—For ten years before I came here I was practising in Philadelphia in Medical Mission work.

7743. Will you give us an account of your experience in Toungoo?—Daily when living in Toungoo, in Lower Burma, I was interested in investigating the effects of opium-smoking on those who freely indulged in the drug. I visited some opium farms, as they are called, early in the evening, but I saw little of the drug consumed on the place. Many were buying in small quantities, to be used at home. One day the Inspector of Police told me that about midnight he was going to visit some dens to find a notorious thief who had just come to town. He asked me if I should like to see some of their work, and I told him I should be very glad to do so. We spent two or three hours in visiting several of these miserable dens. He found not only the man he wanted, but two other bad characters. He arrested the three men that night.

7744. What are these dens as you call them?—They are licensed opium farms. A signboard is in front, saying Opium Farm, number so and so.

7745. Are you speaking of Toungoo?—Yes, Toungoo, in Lower Burma.

7746. Is it a big town?—There are about 15 or 20,000 inhabitants.

7747. How many licensed shops do you suppose there are there?—I think there were three in China Street at that time. Several that we visited that night and on subsequent occasions were not licensed; they were illicit places. The Police knew them very well. The Police told me at that time that if they wanted bad characters they always looked first for them in the opium dens. In one place I saw about a hundred men and a few women taking the drug. Some were sleeping in a dull stupor, others were quietly smoking, and some were groaning with pain because they could not get the drug. There were several people about asking for pice. Several were outside and inside, and when they saw a white man they begged for pice that they might have a smoke. Those who had been several years taking the drug were in nearly every case thin in flesh, emaciated and nervous and haggard-looking. Those who had only recently acquired the habit, of course, were in a better condition. During the two years I was living in Toungoo I often made these late nocturnal visits and saw many physical as well as moral wrecks in these places. Many Burmans were pointed out to me as at one time holding positions of honour and responsibility, but becoming opium-smokers they had lost everything and were then miserable beggars, asking for a few pice that they might indulge in another smoke. Several men were pointed out to me as having been once clerks in the Courts

7733. Is poppy cultivated there?—Yes.

7734. Is there much poppy cultivated?—Poppy is grown on the hills. I have not seen the poppy cultivation, but I have heard that it is grown.

7735. Is it grown in the rice lands?—It is only grown on the hills.

7736. Are you a townsman?—I come from a village 2 miles from Molmein town.

7737. In other respects do you agree with the evidence given by Mr. Yang Fu?—Yes.

7738. Mr. Yang Fu said he would not advise a young man who had not taken opium to take opium; but supposing the young man had to go to the Jade mines or to go to a feverish place, would you then advise him to take opium pills, or to take opium in any shape, or not?—It would not concern me if a young man went to the Jade mines. I would not say anything. They could smoke if they liked. I would not like it if my son smoked.

*Mr. Yang Fu
and Mr.
San Tu.*

15 Dec. 1893.

or attached to the Deputy Commissioner's Office, and several men who had held important positions at some time or another were pointed out to me.

7748. I suppose your knowledge of the number of licensed places at that time was very vague, was it not?—It was simply from observation. I have seen the placards on the places.

7749. There are now twenty retail licensed shops in all Lower Burma, and there were in the time you mention, 1888-89, only sixteen in all Lower Burma; so there could hardly have been two in Toungoo; at the present moment there is only one?—I am sure from the placards I saw that there were two immediately opposite the Burman Chapel. Two of those placards were up—"Opium Farms." I visited several places with the Police on the night I have mentioned, but how many of them were licensed I could not say.

7750. You say that in one place you saw about a hundred men in the place. Was that a licensed shop?—That was a licensed shop. It was immediately opposite the Shan Burman Chapel, where we had services nearly every day in the week. We did not go into the other place that night where the placard was. I think it was in the adjoining building next door. I am not sure. I know two placards were there when I was leaving Toungoo.

7751. How many of those hundred people do you think were Burmese and how many Chinese?—There were very few Chinese. I could not say how many; they were mostly Burmese.

7752. How many Indians were there?—There were some natives of India: I do not remember seeing any Chinamen except those connected with the place. There were fifteen or twenty of them playing dominos or some thing of the sort, but I do not remember seeing a single Chinaman actually smoking.

7753. You say that some people were groaning. How many people were groaning? Do you recollect whether it was one man, or do you distinctly recollect seeing several groaning?—Several.

7754. How do you know they were groaning for want of opium? Might they not be suffering from some complaint?—I asked the Inspector of Police, and he told me they were groaning because of having pains; they said they hadn't opium enough and they hadn't any pice. They had terrible pains, and they could not get any opium.

7755. You mean the gnawing pain which the habitual opium consumer has?—Yes, that is what I inferred. I did not know the Burmese language very well; in fact, I do not know it now very well. This is what the Inspector of Police told me; he asked the question for me.

7756. Who was the Inspector?—His name was Young. I think he is up in the Karen hills now. I think he is in that district; he was, the last I heard of him.

7757. Are Karens common in the Toungoo district?—There are a good many Karens.

7758. Do they smoke much?—No; I have never seen any of them who were addicted to the habit.

7759. They are much addicted to drinking, are they not? What do they drink: is it rum made from jaggery, or is it rice spirit?—I think it is rice spirit; I have no doubt they drink jaggery spirit.

*The Rev.
M. B.
Kirkpatrick,
M.D.*

The Rev.
M.B.
Kirkpatrick,
M.D.
15 Dec. 1893.

7760. Are they put under discipline when they become converts, to prevent them drinking?—Certainly. They are immediately dismissed from the fellowship of the Church if they are known to get drunk. I was never connected with the Karen district; but I have travelled with some Missionaries and know it to be a fact that if a man is known to be drunk once, he is excluded from the Church. It is absolutely forbidden.

7761. It is managed on temperance principles?—Yes.

7762. You have travelled in the Shan States?—Yes, for four years.

7763. Have you been in the Southern Shan States?—I have been in almost all the Shan States, east and west of the Salween. I have not been across the Salween. I have been through the Southern Shan States and in nearly all of the Northern Shan states.

7764. The people of the Shan States are great consumers of opium, are they not?—My experience is they are not, especially in the middle of the Southern Shan States, except on the caravan routes and the main routes like this road running from Yunnan and Thibaw and the road from Meiktila to Fort Stedman and Moudè and the Southern Shan States.

7765. I believe there are some parts of the Southern Shan States where opium is largely cultivated?—Further north and east it is in the Chinese quarters.

7766. Have you been in these quarters?—I have never travelled in that part of the country. I have never seen any large poppy fields: I have seen small patches of the plant which were more for ornament. I have never seen it cultivated for commercial purposes or use: never in any of the places I have travelled.

7767. You say small patches: what size?—They would just be a few plants for the garden where the people would have their mustard leaves and a few flowers around their houses.

7768. You know that it is largely cultivated in some districts?—Yes, in certain districts; but, as far as I know, it is more north than east. There is not much raised in the Thibaw district and in the south at Theinni. It is not much cultivated, as far as I know. I have passed through at different times, and I have never seen it cultivated. I know they have opium for sale there, but it is not cultivated commercially.

7769. Your remark that it is mostly used near the caravan routes refers to that part of the country where there is no opium grown?—It refers to those who are going and coming on this main line of travel. In the jungle villages a little is used. The further you come this way, the more it is used. Much more is used now than was used four years ago when I first came over the road.

7770. How can you tell that?—I judge that from the number of coolies. When I first came there were very few coolies. Out of 30 or 40 coolies only 2 or 3 would be opium-smokers. I carefully avoided the opium-smokers. The last time I came from Meymyo I told my Shan man to avoid any opium-smokers. Out of 40 or 50 men he selected 20, and the first night I found 16 of them smoking opium.

7771. We know that opium has long been grown in the Shan States and in Yunnan, and that even in King Mindon Min's time its use was not prohibited, as far as Chinese or Shans were concerned. Have you any reason to give why the custom should be growing?—I only know what the people say: they say they learn it in Mandalay. They bring goods down here to sell and they get into the habit.

7772. Do you think that it is probable?—I think so; certainly it is the case in Thibaw. When I went there four years ago there were very few opium-smokers in the place.

7773. You are aware, I suppose, that the custom has prevailed extensively among the Shans for a long time?—Yes, the Sawbwa told me so when I was there.

7774. What Sawbwa?—The Thibaw Sawbwa who has recently been in England. He told me that amongst his own people in Thibaw there were very few who take opium, although I found it common amongst the coolies. He regrets very much that it has come into the place; it has given great trouble.

7775. Do many of these coolies you mention come into Mandalay from the Shan States?—Yes, a good many of them.

7776. How do they come?—They come on the road, carrying their loads with them. They are petty traders. Some carry loads for others. They get the leaves for mak-

ing the cheroots and various things up there, and bring them down to sell. They take back other goods in exchange and sell them on the road. You see hundreds of them in the course of a day's journey coming and going, especially during the rains. Now, in the cold weather, when carts can go, there are comparatively few of them: they are harvesting in the paddy fields and doing other work; but during the rains great quantities of them are going and coming.

7777. Is it more likely that the custom should spread into the Shan States from one or two licensed vendors in Upper Burma, rather than from the people of the Shan States and of Yüunan, who have been smoking for a long time and in large numbers?—In Thibaw and those adjacent places where, I know, the habit is springing up it comes from the Chinamen who send their agents down here. I think it is at least 18 months or two years since they have had a licensed shop in Maymyo.

7778. Which opium is mostly consumed in Shan States—Shan or Yunnan opium; have you no means of judging?—Crude opium comes down from China. The Chinese traders bring it down and sell it. These men come with their pack ponies and mules, and bring nuts and fruits and opium down. They sell the crude opium. In Thibaw I have seen them preparing the opium which is smoked. The Chinamen have agents down here who take it up there.

7779. Surely the crude opium which comes from there pays a duty on coming into British Burma; that is, passing out of the Shan States?—It should do.

7780. It then pays duty by passing through the vendor's hands, who has to pay a heavy duty to Government. When he turns it into smoking opium and sells it, it must be very dear; it would surely be much cheaper for these people to use opium which has not paid any duty in Shan States?—I should think so if they could get it.

7781. There is no obstruction to their getting it?—But the fact remains, as far as I know, that the opium used there comes from here. I know one man who takes frequent trips to get it. Some of these coolies bring opium down. They go away up to Kokang and get opium and bring it down this way. They buy it up there cheap and bring it down and sell it here.

7782. Every body knows that they bring it down in large quantities, but your assertion is that they export it back into Shan States; are you sure of that, or is that only your idea?—I am only speaking of what I know of the local consumption at Thibaw and other places with which I am acquainted; as far as trade is concerned, I know nothing about it.

7783. It goes back from Mandalay?—I only know what the people told me; at Thibaw I have seen Chinamen bringing opium down; I have seen them cooking it there. They said they were preparing it to smoke. They told me that the Sawbwa of Thibaw objected to it, and they could not come here unless they took out a license. The Sawbwa had said that it was making a great deal of trouble amongst the soldiers and people, and he tried to stop it. That was before he went home to England.

7784. He asked the Chinese opium vendors to take out licenses?—Yes. I think a man has recently gone there to try and work an opium farm or license; but he says there is a great deal of surreptitious opium which is sold by other parties without his knowledge and without a license, and it interferes with his sales. He was about to give up his license. He simply tried to see what he could do. He said it was not a success.

7785. Do you know at what rate the Sawbwa gave him a license?—I do not know whether it was a local license for Thibaw city or for the district.

7786. If so much came in like that, so that it was not worthwhile for a man to take a license, does not that make it very extraordinary that opium is re-exported back from Mandalay there?—The crude opium does not go back; it is only prepared smoking opium. The crude opium comes down this way, and prepared opium goes back to be used by the opium-smokers. I have frequently seen it.

7787. You said you believed it was made there to a certain extent?—I saw Chinamen trying to prepare it. They told me they were making it to smoke.

7788. In your hospital work have you seen anything of opium consumers?—Yes, a great many cases are coming there now. Last year I had more than I have had recently, because the Myosa of Ngokele came down with a large party of about 400 followers. He came down here on the border between Burma and the Shan country, just outside the Burmese district. His followers were largely Burmese;

he calls himself a Shan. His followers are nearly all opium-smokers, and I had a great many of them coming for treatment. When he was there I had four times as many smokers coming to the hospital as I have now.

7789. What did they come to the hospital for?—They came for various diseases and troubles. A good many came for medicine to cure them of the opium habit. They were slaves to the habit and they wanted to break themselves of it, and so they came for medicine. They heard that the white man had medicine which could make them sick of opium and loathe the habit.

7790. How did you treat them?—With those who came and took regular treatment, I stopped the opium gradually, gave them tonics and good food and kept them away from opium. Several of them kept from it for several months, and some have kept from it for eighteen months; not having touched it at all, at least that is what they say, and I have every reason to think that their statement is true. Others would come there and take medicine and tonics for a few days, and when they got a craving for opium, they would smoke just a little and then they would give way and smoke just as bad as ever. Unless they are taken from their surroundings, it is almost impossible for them to give up the habit.

7791. Do you think opium-smoking has any effect, physically or morally, when taken in moderation?—That would depend largely upon what you mean by moderation. Some men can smoke a comparatively large quantity, whilst a small quantity will almost destroy others.

7792. Do you think it ends in destroying life?—I have no doubt that it is the principal cause of death in many cases.

7793. By making them more susceptible to other diseases, or how?—I think it is directly due to the use of opium in many cases. I have had numerous cases come to the hospital: they complain of dysentery. Some of them have had it for six months. I ask them whether they are opium-smokers. Sometimes they deny it, but usually they will say, "yes." I ask them how much they smoke, and they say they smoke ten annas worth, or as much as they can get; that is generally their answer. I find dysentery very common among excessive opium-smokers, and I have known many of them to die from it. I do not know any other cause for it. They eat very little food.

7794. I suppose dysentery is a very common disease in the country, is it not?—Yes, at certain seasons. Some years there is a good deal of it, and some years there is very little.

7795. Do people often die of it? Do you think that this is a special form?—I think so. It occurs at any time of the year and without any exciting cause, as far as I am able to determine.

7796. Is the country very malarious?—Yes, all this part of the Shan country is malarious.

7797. I suppose many of the people are soaked full of malaria?—Yes. Take, for instance, Thibaw city. Two-thirds of the people in that city have malarious fever during the rains; it is very common. The rule is to have fever; every one expects to have more or less fever during the rains.

7798. Do people take opium to relieve them of the fever?—Amongst the Shans I have never known it to be done, but I have known it in Toungoo. I have asked Burmans why they used opium, and they gave that as an excuse. They said they had fever, and they took it to relieve the pains. They then get into the habit of it and cannot stop it. Opium is an anodyne: they say they have the fever just the same, but it relieves the pain.

7799. You do not think there is any idea in the country that it is a protection against fever?—It is only within the last few months that I have heard of it. I never heard it advanced by a native.

7800. I heard of it thirty years ago from the natives of India?—I have only had experience during the five years I have been here.

7801. You never heard of it before?—The first I heard of it was from those people in Toungoo who came to the hospital. I also heard it from the people I saw in the opium places there and the coolies and others who, I knew, were opium-smokers. It is an excuse frequently made by those who use opium. I have never heard from a native that it is used as a prophylactic: it is simply to relieve the pains when they have the fever.

7802. They are not in the habit of taking prophylactics of any kind, I suppose?—Many of them have come to me

saying, "I may be sick and I want something that will keep it from me." They want something to keep them from sickness.

7803. What are your views about the prohibition of opium?—I think it would be very desirable.

7804. For all classes?—Yes, I think it would be desirable to prevent its being consumed except for medicinal purposes.

7805. You think prohibition should apply to all classes?—I think so certainly. It would prevent others from acquiring the habit. Perhaps an exception might be made with the habitual opium-smokers. Of course it would be a great hardship to those who are thoroughly accustomed to it to break it off suddenly; still, I believe in most cases it would be a benefit. I have seen cases in jails and hospitals; there is no question that they suffer and that the craving is very great, but I have never known any bad results come from breaking it off suddenly when they had proper care and treatment.

7806. You say you would prohibit its use except for medicinal purposes. Is it not difficult to draw the line between medical use and the use for mere pleasure and comfort?—I think it would be safe to leave that to the physicians.

7807. Your exception would be when a man gets a medical prescription?—I think that would be very safe.

7808. Is that what you mean—is that how you would draw the line?—Yes, I think so. A man should have a prescription, or it could be done as it is in America, and, as I understand, it is in England; only those who are apothecaries should sell the drug.

7809. I do not know what the rules are in America, but in England there is nothing to prevent a druggist or an apothecary from selling to anybody who asks for the drug?—I thought there was.

7810. Do you know what the rule is in America?—Druggists are not supposed to dispense it except in the case of a physician's prescription. Take, for instance, the tincture opii. They give small quantities, or paregoric. The law prohibits it; yet they do dispense it.

7811. I have heard that opium-eating is very common in some parts of the Southern States of America?—I have never lived in the Southern States; but I know in our large cities the use of morphia is increasing and also the smoking of opium.

7812. Is that among native-born Americans?—Yes.

7813. There are no druggists or apothecaries in this country, except perhaps in towns like Mandalay, are there?—As far as I know, there are no shops of that kind. Almost always the medicines are dispensed through the hospital, through the Civil Surgeon.

7814. Hospitals and dispensaries are only in a few places?—They are in the larger towns and larger stations.

7815. They would hardly be able to supply the villages, would they? If a person could only get opium for medical purposes by going to a town, it would not be a satisfactory arrangement: he would sometimes have a very long distance to travel?—There is almost always some medical man, either a representative of Government, or someone else practising as a doctor in almost all large towns. There are many native physicians in the smaller towns—Burman doctors. I do not know whether they would be safe parties to handle a thing of that kind. They do not use it very largely in their medicines, so far as I know. They do not use medicine as we do. They make up their concoctions for all purposes. They have teas, pills, powders and broths. They take tiger's bones, hair, roots and herbs, and boil them and stew them. You can get a piece worth which, they say, will cure you of almost any disease. I have never known them to handle drugs, except roots and things they get from the jungle, and these charms.

7816. (Mr. Mowbray.) I should like to understand what Shan States you have been speaking of. Are these districts bordering on the Kachin territory?—I have seen very little of the Kachins. There are Kachins in North Theinni.

7817. Are these districts bordering on the Kachin territory?—Thibaw does. There are Kachins in the districts bordering on Thibaw. In north Theinni half the population are Kachins.

7818. I rather gathered from you that you thought that the consumption in these Shan States, of which you have been speaking, is a thing of modern growth?—Most Chinamen are opium-consumers, and you will find them all

The Rev. M. B. Kirkpatrick, M.D. through the district. The opium habit is known all over the Shan country. It is generally in the country districts and villages—what we call the jungle villages.

15 Dec. 1893. 7819. Dr. Cushing told us the other day at Rangoon that there was formerly a large consumption of opium in the Shan districts bordering on the Kachin territory. I suppose he was acquainted with the country before you were?—Certainly: he has been here twenty or thirty years.

7820. He said he could not speak of the condition of things recently: he spoke as to former times?—Even in North Theinni the Kachins raise opium on the hills. It is also raised in Taungbaing and by the Palaungs. They raise opium up in the hills, but round Thibaw none is raised.

7821. (*Chairman.*) The Thibaw Sawbwa in giving his evidence before us expressed a readiness to stop the cultivation of opium?—He would be very glad (at least he has always told me so) to prohibit it in his district as far as possible.

7822. Do you say you have seen no cultivation of opium in his country?—I have never seen it raised about Thibaw. On the hills where the Palaungs and the Kachins are, they raise opium.

7823. Is any raised in his country?—I do not know whether any is raised in his country. I cannot say; but I know there is not enough raised in Thibaw to make it an object in any way in the district. I have been almost all over the Thibaw State, and I have never seen it growing; but among the Kachins in North Theinni I know that it is raised. I have known men go from Thibaw to buy it. Most of it comes from away up towards the Kinnon Railway. The people always go up there to get their opium and bring it down: they do not get it in the immediate vicinity of Thibaw.

7824. (*Mr. Mowbray.*) Have you ever heard why the Sawbwa of Thibaw did not stop opium in his dominions when he expressed himself anxious to stop it?—He said, "There is a licensed shop at Maymyo just over the border; I cannot stop it." He always told me from the first time I talked to him about it, that he would be very glad to stop it if he could get co-operation, but it is impossible for one man to stop it alone: if they would unite with him he would be very glad.

7825. You have told us that the use of the habit is very strong amongst those people; in fact, that even if they do give it up, they go back to it again?—Yes; I have known them go back in nearly every case.

7826. Do you really think that the stopping of the one shop in Maymyo would counterbalance the strong habit which these people have acquired of using opium?—I do not suppose it would, so long as they can come to Mandalay to get as much as they want.

7827. Do you think if the shop at Mandalay were closed as well as the shop at Maymyo, that they would break the strong habit which you have described?—If that were done, the Thibaw Sawbwa would, as far as possible, prohibit it in his district and they could not get it. I think it would be a great help. If a man has a craving for the drug I do not suppose the closing of one or two shops, or any number of shops, would break his habit; but it would make it more difficult for him to get it, and it would prevent many others acquiring the habit.

7828. Do not you think that opium grown in the other Shan States would be perfectly certain to go into the Thibaw State if it were forbidden, and if they could not get any opium out of British Burma?—Not in large quantities; I do not think it would. Now it is sold in every bazaar. You can buy it the same as rice or catch or betel-nut.

7829. You say you have seen it coming up from Mandalay?—You can see it almost every day. The traders come down from here with prepared opium to sell.

7830. You see it in the Shan States; you do not mean to say you see it on the way up?—I have seen it brought to the bazaars.

7831. In the Shan States?—Yes; Chinamen come down and take it to the different villages a long way—wherever there is a bazaar. The custom in the Shan States is to have a bazaar every fifth day in the larger towns. The people come from all the surrounding country to the bazaar. The next day it will be in another village, and in another five days it will come round to the first village again. The traders come from down-country here. They bring things

they can sell, they go to the bazaars, and follow the bazaars round in that way. The people bring smoking opium to sell in the bazaars.

7832. This is what the traders themselves have told you?—Yes. The Chinamen come down with their goods. I have asked them where they got it from, and they said they got it from Mandalay.

7833. (*Chairman.*) It is against the rules in Mandalay to sell quantities of opium?—I do not know; I did not suppose it was against the rules. I supposed they could buy as much as they wanted.

7834. (*Sir William Roberts.*) Would it be the smoking extract that they took back?—Yes, not crude opium, but opium prepared in some way for smoking.

7835. Is it suggested that they had not sufficient skill in the Shan States to prepare opium after the same manner: is this a superior article prepared by superior skill?—I suppose that is the reason. I have never asked them. They get any quantity of crude opium in the bazaar, the same as alun or betel-nut. I have known them take opium and boil it in water, and they make some kind of preparation that they smoke.

7836. The valuable *chandu* is a highly artificial product?—It undergoes a sort of ripening like cheese, and varies in price according to the perfection of manufacture. I have seen Chinamen take it there and boil it with water all day. I do not know how long it takes to cook it.

7837. That is their own preparation?—I saw Chinamen doing this in Thibaw. That was the time when the Sawbwa made the trouble about it and forbade its being sold in the bazaar, and tried to exclude it. In a little while, however, I saw opium coming up from down here. The Sawbwa said it was no use trying to forbid it.

7838. (*Mr. Mowbray.*) You have not gone into the question of how much can be lawfully sold in Mandalay?—I have never investigated the question.

7839. If it be the case, as I believe it is, that the most which can be legally sold in Mandalay is limited in quantity, and if more than that quantity is taken into the Shan States, the failure is in enforcing the law which now exists?—I cannot say about that, as I have never investigated the matter.

7840. The point I wish to put to you is this. When we talk about the possibility of enforcing a general law of prohibition, is it not very material to consider whether it is possible to enforce the modified law of prohibition which is at present in force?—My idea is that the modified prohibition which you have now simply leaves these people a chance of getting round it.

7841. It leaves a chance to break the law?—If it were absolutely prohibited, then it would be a contraband article and it could be dealt with. Now they claim to get it in a proper way, and I supposed they do.

7842. (*Sir William Roberts.*) You said something about the action of opium in cases of dysentery. I think you said in the case of excessive opium-smoking you thought it could directly produce death?—I would diagnose the case as one of dysentery. They have dysenteric stools and low fever. It is a chronic condition that goes on for months. As a rule, these Shans and others who come to the hospital in that way are frightened. They call it the opium dysentery. When they get that they think nothing can save them. Their feet begin to swell and in a short time they die. Sometimes they live one, two, or three months.

7843. Has it been your own conclusion that dysentery was really produced by opium-smoking?—I have not been able to find that it came from any indiscretion of diet, or anything of that sort. I think it is purely caused by the drug, because so many opium-smokers are peculiarly subject to it.

7844. You have not called attention to the matter in any medical publication?—I have never published it.

7845. We have been enquiring all along these lines and failed absolutely to get any evidence that opium-smoking or opium-eating in themselves produce any organic trouble. Since we have been in India, that is the evidence we have had uniformly. The Surgeons in connection with the hospitals absolutely deny any knowledge of the opium habit causing organic disease, but they say it produces failure of appetite and loss of flesh?—I have had numerous cases within the last two years—no less than 25 cases of what I call opium dysentery. I cannot trace the disease to anything else.

7846. You said that dysentery is very common in those regions among all sorts of people: had you any marks by which you could distinguish those cases from ordinary dysentery?—The ordinary dysentery is acute.

7847. I mean dysentery among the people who took opium?—I have had many cases where a person had diarrhoea or dysentery and had taken opium ostensibly for the disease. They said they had heard that opium was good for it, and they had taken it in that way. Afterwards they had become addicted to the habit. The disease would only be of temporary duration. Those cases, however, which I spoke of as opium-dysentery are organic cases that last for months.

7848. Ordinary dysentery is a thing which lasts for many months?—That is true, but in the Shan States my experience with the people is that it is an acute disease. I have very seldom known it amongst those people run into a chronic stage.

7849. You could not point out any special diagnostic mark by which you could distinguish a case of opium dysentery from dysentery in an opium-smoker?—No: the disease is almost identical, except that the disease in the non-smoker sometimes would be acute; there is more pain with it and more fever, and very likely there would be nausea; whereas with these organic cases there is no nausea: it is simply slight, bloody stools occurring frequently night and day, and the patients finally lose control of the bowels, and when they get into that condition they consider themselves hopeless.

7850. Have you made any *post mortem* examination in such cases?—Several.

7851. Could you distinguish the local lesions from those in ordinary chronic dysentery?—No, I cannot say there would be anything different from what you would get in chronic cases of ordinary dysentery.

7852. Our difficulty, as doctors, is to distinguish between *post hoc* and *propter hoc*: are you satisfied in your own mind that opium was not a coincident but an etiological factor?—

I am inclined to believe that it is not a coincident. I am inclined to think that it was the cause of the disease. It causes more or less constipation, which, I think, is the prime cause of the disease.

*The Rev.
M. B.
Kirkpatrick.
M. D.*

15 Dec. 1893

7853. We have had this sort of evidence given us repeatedly, that the opium habit carried far tends to make those who carry it to excess more liable to dysentery?—Yes, and opium-diarrhoea is very common among these cases.

7854. Do you not think that the fact that people are reduced to poverty by opium-smoking and are thereby made more subject to dysentery would account for the cases you refer to?—That might be, but as a rule those cases yield to treatment in the hospital; but so far as I have seen in cases of opium-dysentery, it is almost useless to try any treatment.

7855. I suppose those are far advanced cases?—Yes, as a rule.

7856. Did I understand you to say that you do not admit opium smokers to Church fellowship?—We do not admit them. One man was dismissed from our Church. The only case of discipline we had last year was that of a man who became an opium-smoker since I baptized him in Thibaw.

7857. Do you adopt the same rule with regard to drinkers of alcohol?—In our Church covenant those are two points made.

7858. Your duty would be the same with regard to alcohol as with a opium?—It would, with reference to these natives in connection with Church fellowship.

7859. Of course you do not regard tobacco in the same light?—No.

7860. Is *bhong* looked upon in the same light?—It is not used in the Shan States generally. I have never come across it in my practice. I have never known a Shau to use it at all.

The witness withdrew.

Adjourned to to-morrow at 11 o'clock.

At the Fort, Mandalay.

TWENTY-SEVENTH DAY.

Saturday, 16th December 1893.

PRESENT:

SIR JAMES B. LYALL, G.C.I.E., K.C.S.I. (IN THE CHAIR).

SIR WILLIAM ROBERTS, M.D.
MR. R. G. C. MOWBRAY, M.P.

MR. ARTHUR PEASE.

MR. C. C. LEWIS, *Provisional Secretary*.

SAW MAUNG, ex-Sawbwa of Nyaunggywe, called in and examined (through an interpreter).

7861. (*Chairman*.) Will you please tell us what you have to say with regard to the matter now under our consideration?—I was born at Nyaunggywe. I came to the Burmese Court at Amarapura about four years before the capital was moved to Mandalay. I remained at Court as a page until I was 17. I then became Kyamaing, heir-apparent of Nyaunggywe, and went back there. My uncle was Sawbwa, and I succeeded him as Sawbwa in the Burmese year 1227, or 1867 A.D. Although I was Sawbwa at Nyaunggywe, I was constantly called to Mandalay by the King and employed by him on various missions. In the Burmese year 1231 I was sent with the Burmese and Shan army to reduce the city of Theinni, where San Hai had rebelled. I was 8 months there and I visited the Kachin territory of Tima Hopyet. In 1236 I went to Mobyè to reduce the Red Karens of Kyetpogyi. I remained at Mobyè four years, and I was in charge of all the Southern Shan States west of Mone. I remained in charge of all these States until the end of King Thibaw's

reign. I was employed also in working the lead mines at Pindaya. Since the annexation I have been employed for three years by Government as Regent of the Momeik State. There are about 1,500 Kachin houses in the Momeik State. They form about one-fourth of the population. I have visited the Kachin villages on many occasions. I give you a statement regarding the habits of drinking and smoking or eating opium of the different nations in the Shan States. The nations are Palaung, Palè, Taungu, Taungyo, Danu, Danaw, Kayin, Padaung, Zayem, Bye, Kachin, Lahwa, Gõdu, Moksi, Katkwe, and Kokaw. All these people have always been in the habit of manufacturing different kinds of liquor from rice and paddy and maize. They call these liquor Kazaw hlawza. After they become Buddhists they were told that it was sinful to drink, and they gave up the habit to a certain extent. Out of the people inhabiting the Shan States proper at the present time, half the number drink liquor. Of the remaining people, only about one-tenth

*Saw Maung,
ex-Sawbwa
of
Nyaunggywe.*

Saw Maung, ex-Sawbwa of Nyaunggywe.
16 Dec. 1893.

do not drink liquor : that is the wild tribes. It is not an indigenous custom of the Shans to smoke opium. It was introduced from China and first spread among the tribes inhabiting the borders of China. From there it has spread to Momeik, to Northern Theinni to Mainglingyi, east of the Salween Kyinlingyi, and Kyaington. From these States it has spread all over the remainder of the Shan States. In the Northern Shan States about half the people smoke opium. In the Southern Shan States about one-fourth of the adult males use opium. In the States to the east of the Salween about two-thirds of the adult males use opium. The wild tribes got the poppy seeds originally from China. The Palès cultivated the poppy and from there the cultivation spread into Mogaung, Theinni and the Lawa territory. They cultivate it there for trading purposes. It goes all over the Shan States and into Siam. Then it goes also east of the Mekong. The Palès living in the State of Maingkaing, Legya, Yatsauk, Pindaya, Ywangan, and Baw cultivated the poppy to a small extent. The opium grown by the Lawas is exported to Siam, Zimmi, and east of the Mekong. The Kachin method of smoking opium is to cut young plain-tain leaves into slices, dip them in opium, fry them, and then smoke them in a pipe. They also smoke the seed of the poppy plant. Some of them swallow opium. Some of them also dip betel leaves in opium and smoke the leaf. They also extract oil from the seed of the poppy plant and use it for cooking curry. Ganja is not extensively used in the Shan States. Small quantities of it are cooked with food to give an appetite, to keep off the cold, and give strength. People who smoke ganja to excess become very timid, and sometimes become mad. They cut the stem of the plant through : and they put a chatty over the top of the plant, cover it up, and then the leaves shrivel up underneath the chatty. The leaves are used as intoxicants. Nobody grows enough ganja for trading purposes. People who smoke ganja grow ten or fifteen plants near their houses. The wild tribes sometimes grow it in fields. They do not grow it for consumption, but to make clothes with. They also make the bags that the Shans carry of it. I have heard that the Siamese consume ganja to a large extent. The Manipuris have told me that the fishermen take it to keep off the cold.

7862. What reason do Shans give for taking opium, for pleasure or for health?—The Shans think it gives them pleasant sensations ; it also keeps off fever. People who are very bad tempered become better tempered by smoking opium.

7863. What is your own opinion : do you think the people do harm to their health?—They lose their strength by using opium, and their features become shrivelled up and they lose their beauty. Their mind becomes slow and indolent, and they are very apt to forget. Their lives are shortened. I have never seen an opium-smoker long-lived. I have never seen a man of 70 who smokes opium.

7864. Are you speaking of all of them or those who use a great deal of it?—I am talking of those who smoke in excess. Of course those who use less are affected least.

7865. What do you call much and what do you call little?—I call little the one-eighth part of two annas ; I call smoking a rupee or a rupee-and-a-half weight heavy smoking.

7866. Between that I suppose you call moderate?—I call a moderate smoker one who smokes about four annas. Above four annas is excessive smoking.

7867. Do you think that the moderate four annas worth hurts a man?—I think it is injurious.

The witness withdrew.

Kam Swe.

KAM SWE, Amatgyök of Southern Theinni, called in and examined (through an interpreter).

7886. (*Chairman.*) What is your age?—Fifty-six.

7887. I believe you are a Captain of Cavalry?—Yes.

7888. You fought the Burmese Government under the Sawbwa?—Yes, and then I lived ten years at Mogök. After the annexation I went back to the Shan States,—to Theinni.

7889. I believe you are now Minister of South Theinni?—Yes.

7890. Is the poppy much cultivated at Theinni?—There are three ranges of hills on which opium is cultivated.

7891. Who cultivates it?—The Palès and Chinese Shans and Lishaws.

7892. Do all those three sets of people eat or smoke opium?—Out of the people who cultivate the poppy very few consume opium ; or, if they do, they consume it in small quantities.

7868. Do many men continue to smoke moderately, or do they go on increasing?—Most of them increase the dose ; very few diminish the dose ; most men increase it.

7869. (*Sir William Roberts.*) Are you an opium-smoker yourself?—No ; I do not drink either.

7870. (*Chairman.*) You have often been with the armies into the jungles. I suppose a great many people get sick of fever. Do you notice any difference between getting sick of fever in the case of men who take opium, and those who do not take it?—When an opium-smoker becomes ill, he dies ; when a non-opium-smoker becomes ill, it is easier to cure him on those occasions. Medicine has no effect upon them when they are opium-smokers.

7871. I suppose you are a Buddhist?—Yes.

7872. The Kachins smoke opium : do not they?—I may say that almost all the adult male Kachins smoke opium. They do not smoke it to excess ; they smoke it with plantain leaves. They do not smoke large quantities of it ; they are moderate consumers.

7873. Are they strong and hardy people?—Yes.

7874. The Shans generally are strong people : are they not?—They are strong people, but if they smoke opium they become weak.

7875. Is opium used in your country as medicine in the families?—They use it to a small extent as medicine.

7876. For what sort of diseases?—Diarrhœa ; and they put it on wounds.

7877. Does the custom of opium-smoking come from Yunnan?—Yes.

7878. How long ago did it come in?—I can only say what I have heard. In the Northern Shan States opium came in about a hundred years ago, and in the Southern Shan States about 30 years ago. When I was first Sawbwa there was no opium in the Southern Shan States. Twenty years ago it was only used in very small quantities here and there in my cities.

7879. (*Mr. Pease.*) Is the use of it extending at the present time?—I think it is increasing year by year.

7880. (*Chairman.*) Where does the opium used in the Southern Shan States come from?—These people I have mentioned in the Theinni and Lawa territories.

7881. Where do they prepare it for smoking?—All smokers make it themselves.

7882. (*Mr. Mowbray.*) Do you think that they consume much opium from British territory?—The people who have been accustomed to use Yunnan opium and take to English opium die. The change is bad.

7883. (*Chairman.*) What is the difference?—Opium consumers have to be very careful. If they are accustomed to consume opium from a certain place and afterwards consume opium grown in another place they are apt to get ill from it. I can give you an example. If a man is in the habit of using Theinni opium, and takes to using Lawa opium, he gets diarrhœa.

7884. (*Mr. Mowbray.*) Do you think that many people use English opium in the Shan States : is much of the opium consumed in the Shan States brought out of the British territory?—As far as I know it is not used. If they use it, they become ill.

7885. (*Chairman.*) What is the difference in the price between the Government opium and Theinni opium?—I do not know.

7893. Where does this opium go to?—They do not go and sell it themselves, but people come and buy it from them.

7894. Who are those people?—The people come chiefly from the States east of the Salween. They consume it themselves, and they take it to China and to Siam.

7895. Is there a set of people called Lawas there?—The Lawas live east of the Salween, and they cultivate opium. It is their chief occupation.

7896. Do they smoke?—None of them smoke it or use it—neither men nor women.

7897. Is that a tribal custom?—They do not consume it because their forefathers have never consumed it. They think that if you consume opium you are unable to do any work ; therefore they do not consume it.

7898. In Northern Theinni about what proportion consume opium?—About half.

7899. How many in Central Theinni?—I think about one-tenth.

7900. In Maingnaung?—About one-third, I think.

7901. Have you seen much of the Kachins?—I have been four times in the Kachin territory.

7902. How many Kachin men smoke?—They all smoke, but they do not smoke to excess.

7903. Do the women smoke?—About half the women do; but they smoke still smaller quantities than the men.

7904. Do you perceive any bad effects upon the men and the women of the Kachins who smoke?—I have not seen any evil effects among them.

7905. Among the people of your own State, are the opium-smokers less strong than the non-opium-smokers?—The opium consumers are lazy men, and are no good.

7906. How do they live?—They do work off and on; they carry a load occasionally.

The witness withdrew.

MR. F. R. BAGLEY called in and examined.

7915. (*Chairman.*) I believe you are Engineer-in-Chief of the Mandalay and Kunlon Railway?—I have been an Engineer in the Public Works Department engaged in the construction of roads and railways for more than twenty-two years. Of this time I have spent two years and a-half in the Central Provinces, a year and-a-half in Bengal, and eighteen years in Burma. I have had throughout to deal with large numbers of workmen of many races, including Purbeahs, Sikhs, Pathans, Punjabi-Mahomedans, Tamils, Telugus, Uriyas, Burmans, Chinamen, Maingthas or Chinese Shans, and a few Shans and Kachins. I have not made any special study of the opium habit, but from long experience of workmen, and of their wants and customs, have gathered certain impressions on the subject.

7916. Will you tell us what your impressions are with regard to the effects of opium?—I have found that the effects of opium, and the estimation in which the habit is held, differ widely among different races and in different localities. The Purbeahs (North-Western Provinces and Oudh), the workmen in the Central Provinces and in Bengal did not, to my knowledge, use opium to any appreciable extent. It was in those localities considered a disreputable habit, and a known opium-eater was seldom met with. In Burma so far as I know, amongst the Burmans the opium habit is also considered disreputable; and the general impression amongst officials of experience is that the Burman lacks self-control in this direction, and when he takes to either opium or alcohol is very likely to fall into habits of excess. On the other hand, the Chinamen, Sikhs, and Punjabi-Mahomedans, who are our best skilled workmen, use opium habitually and almost universally. They keep in exceptionally good health in a very malarious country, and cases of excess are practically unknown. The Chinese Shans (Maingthas), who are employed to a large extent in Upper Burma as unskilled labourers, universally take opium and cannot do without it. With it they are hardy and good workmen, keeping good health in a malarious country. Deprived of it, they are unfit for work and appear to fall an easy prey to disease of all kinds.

7917. Who are the Sikhs you mention?—They are carpenters and smiths.

7918. You used the word "smoke:" were you referring to the Chinese?—The Chinese smoke and the Indians eat. I have had nearly two thousand Chinese Shans working in our district, and nearly all of them smoked opium.

7919. (*Sir William Roberts.*) Are they Northern Shans or Southern Shans?—They are Chinese Shans. They come from the borders of Yunnan—in between the Northern Shans States and the Chinese. As long as they get their opium, they keep in excellent health and do an exceptional amount of work—twice the work of an ordinary Burman cooly. On some occasions when they have not been able to obtain opium for a time, they get sick. They get fever, dysentery, and diarrhoea. They are liable to diseases of the country if they cannot get their opium. We have sometimes had to supply them with it. They keep extremely well, and work very hard. They earn double what the ordinary man earns.

7907. Have you ever been an opium-smoker?—No.

7908. Is there much liquor drunk in your own State?—Liquor is very dear. They have not got much money; they cannot buy much liquor; half the people would like to buy liquor, but I cannot say how many actually drink liquor. It is more difficult to tell with regard to liquor than opium because the men do not take it regularly. They go and drink it occasionally, and you cannot tell whether they are drinking or not. I think most of them would like to drink if they had the money.

7909. Do they make the liquor themselves?—The Chinese and Kachins make the liquor and sell it to them.

7910. Have the Sawbwas ever tried to put a tax upon liquor in any way?—Never.

7911. Has opium also been free?—They are all Buddhists, and it is wrong for them to take it.

7912. (*Mr. Pease.*) What is the price of opium in your State of Theinni?—R10 or 12 a viss.

7913. Crude opium?—Yes.

7914. (*Mr. William Roberts.*) They cultivate it, but they do not smoke it?—Some of them do.

Kam Swr.

13 Dec. 1893.

*Mr. F. R.
Bagley.*

7920. Do you pay them by piece-work?—Yes. They earn about a rupee a day. I have known Uriyas do nearly as much work. They do not take opium. They eat an enormous quantity of food. They eat as much rice as they hold four times a day.

7921. (*Mr. Mowbray.*) They come from Orissa?—Yes. The other classes of coolies, common Coringhis and Tamils, use opium to a large extent. They are amongst the best of our skilled labourers. They are chiefly employed in Rangoon. They also earn large wages—a rupee a day in the season in unloading work, which is extremely heavy. They use opium a good deal.

7922. (*Chairman.*) Do you say that Chinese Shans can earn double as much as Burmese or Indian coolies?—The average coolie can earn about eight annas a day. The Chinese Shans and Coringhis in Rangoon earn about one rupee a day. They are both opium users to a large extent.

7923. You have not been able to discriminate between the Shans who do use opium and those who do not use opium; you merely know that the majority of them do use it?—Yes.

7924. (*Sir William Roberts.*) How much will they take?—They are supposed to take from four to six annas' weight a day—that is, the weight in silver. That is the average amongst those Chinese Shans.

7925. For smoking?—Yes. They smoke it. It is always considered to be its weight in silver. The imported opium from across the border is one-twelfth of the price of the Indian imported opium. The retail price for Indian opium is R14 per viss; and the price of opium coming in from across the border before it pays duty is only R12 a viss. One reason they prefer it is because it is cheaper.

7926. (*Mr. Mowbray.*) You do not know anything about the amount of this native-grown opium which does not pay duty?—I have had occasion to go into statistics from Maymyo on the trade with the Northern Shan States. The last return shows that R30,000 worth of opium came in from that direction and had duty levied on it.

7927. As far as you can judge, does that amount to anything like the quantity of native-grown opium which is consumed within the British border?—It would be extremely difficult to say. I have been a good deal in the borders. I know every Kachin village grows its own opium. All the villages have their poppy gardens. Of course we cannot keep much control over this opium, and it would be an enormous field for smuggling if anything like further restrictions were imposed on Indian-grown opium.

7928. (*Chairman.*) Where were these works of yours in which you employ the Chinese Shans?—In the Katha District, right in the north. It is the other side of the river on the right bank of the Irrawaddy. It is to the extreme north of Burma.

7929. I suppose in that part of the country the opium consumption is really under no control: those men of yours who were consuming opium were probably consuming opium which had paid no duty?—When their supply ran short we occasionally had to get them opium. We had to send to Katha to get it from the Government Treasury.

Mr. F. R. Bagley.
16 Dec. 1893.

7930. (*Mr. Pease.*) You found that the men could not work without it?—They cannot work without it; they will not work without it. If their supply of opium runs short, they simply drop work until they get some.

7931. (*Sir William Roberts.*) I suppose amongst them those who do not consume opium would be the exception?—I should say there would be from 20 to 30 per cent. exceptions.

7932. Those exceptions would do their work as well as the others?—If the opium ran short, the whole lot stopped work, both opium-smokers and non-opium-smokers. Opium-smokers would be in the majority.

7933. (*Mr. Mowbray.*) When you supply opium to your workmen in that way, how do you manage to get from the Government shop a sufficient supply?—We get special sanction from the Government to have more than the ordinary quantity.

7934. Whom do you get that special sanction from?—We get it direct from the Deputy Commissioner of the District, but it goes for sanction eventually to the Local Government.

7935. Under that sanction you obtain from the treasury as much as you require?—Yes, as much as we require, up to a certain limit.

7936. (*Sir William Roberts.*) You sell it to the men?—We sell it to the men at cost price.

7937. (*Mr. Mowbray.*) When you spoke of Indian coolies, did you include the Punjabi-Mahomedans and Sikhs in that comparison?—They are comparatively few. They are skilled labourers, carpenters and smiths. They would not come under the heading of coolies exactly: they are a better class of workmen.

7938. Therefore the comparison you were drawing did not apply to them?—No; they do earn high wages of course.

7939. (*Sir William Roberts.*) Have you had any

The witness withdrew.

knowledge of some of these Coringhis or semi-Chinese, extending over a period of several years?—They are a migratory lot. I have known some Madrassis and Coringhis for years in succession.

7940. Do you notice them deteriorate?—No; I do not notice it.

7941. You never heard that these opium-eating Chinamen although they live pretty well for some time, deteriorate afterwards?—I have not heard such an opinion, and I have not noticed it either.

7942. You seemed to have been very much impressed with the different re-actions on different races with regard to opium?—That is one of the particular points that has come to my notice. It acts entirely differently on different races.

7943. Have you thought that was due to what we call a purely race difference, or through an acquired difference from the growth of the habit?—As far as I know, I think one of the points about the races that take opium is that they come from a cold climate and they take it to warm themselves; that is almost universal. The Indians who come from the Punjab, for instance, where there is very cold weather, are not well clothed, and they take opium almost universally.

7944. The Coringhis come from the south?—They are an exception. They are hill tribes and the climate is cold; they have insufficient clothing and they take opium to warm themselves.

7945. They take it to increase their power of resistance?—Yes, they take it to increase their power of resisting the cold.

7946. We heard the other day from an employer of these Coringhis that a dose of opium appeared to take the place of a meal: have you noticed that?—I have not noticed it.

Mr. H. S. Guinness.

MR. H. S. GUINNESS called in and examined.

7947. (*Chairman.*) I believe you are the Executive Engineer of the Mu Valley Railway?—Yes.

7948. How long have you served in Burma?—Twelve years.

7949. In both Upper and Lower Burma?—Yes.

7950. The Mu Valley Railway I believe is in the extreme north?—No; it is about 130 miles north of Mandalay.

7951. Will you give us your opinion on the consumption of opium amongst your labourers?—The consumption of opium among labourers working on the 4th Division of the Mu Valley Railway is restricted entirely to Maingtha or Shan Talok coolies imported by contractors from Bhamo and the Ruby Mines Districts. During the working season 1892-93 there were nearly 500 of these men employed on the Theehaug Gorge Section, and were principally engaged in quarrying and blasting operations. Being powerful and active men, they were found more efficient than the ordinary Burmese and Indian coolies. The daily rate of pay for the Maingtha coolie is one rupee, that for a Burman eight annas.

7952. Is that piece-work or daily labour?—Daily labour. About one-third of the total number of Maingtha coolies employed were smokers of opium, the drug being first cooked and then smoked by them. The average consumption is between 3 and 5 tolas weight per man per week. When food was in abundance, and the men strong and in good condition, the consumption of opium was greater than when food was scarce. If consumers did not receive opium they were unable to work, and were liable to fever and bowel-complaints. The coolies generally smoked twice a day: early in the morning before proceeding on work, and in the evening on return to their huts. They worked best when they had had a full smoke in the morning before proceeding on work. There is not the slightest doubt of the effect of the drug on the physical condition of this class of opium-consumers; it acts as a powerful stimulant, without which they are unable to work. On more than one occasion when the supply of the drug had run short, the men have stopped work until the opium had arrived and been distributed to them.

7953. Did you observe any moral effect?—None. Beyond the fact that no crime was reported from this section of the Railway during the period when these coolies were working, I am unable to offer any additional evidence on the effect of opium consumption on their moral condition.

7954. The other coolies employed were mostly Burmans, I suppose?—They were mainly Burman coolies: we had a few Indians, but they were not in any great number.

7955. Did the Burmese take any stimulant while they were at work; did they drink liquor?—Not to any great extent as far as I am aware. In large works like ours there is always a certain amount of liquor going, but no great amount.

7956. You did not see any great amount of drunkenness?—No; no drunkenness.

7957. Did you ever see any of these Shan coolies temporarily intoxicated with opium?—No, never.

7958. (*Sir William Roberts.*) You say about thirty per cent. consumed opium?—About one-third.

7959. They did not do their work any better than the coolies who did not smoke opium?—No, I cannot say that the opium-smokers worked any better than the other men. At the same time if the opium consumers did not get their opium they stopped work. There was always a great wish amongst those who had control of the coolies—the chief men—to be able to have a supply of opium to issue to the men. In fact, on several occasions they have brought it in illegally without it being issued to them.

7960. Would it not be desirable that you should exclude opium-smokers when you hire men?—It was quite impossible to exclude them. If we excluded opium-smokers, we would have excluded the whole of this class of coolies as far as I am aware. I never tried the experiment; but my impression is that if we had attempted to exclude opium-smokers (which would have been a very difficult thing to do in a gang of coolies), it would have meant that all the men would have been driven away. I tried on one occasion to stop opium, but the result was that the men stopped work.

7961. They would not go on without their pipes?—No, I had been having opium then from the licensee without the sanction of the Local Government, but I found I had been acting illegally; therefore I sent and stopped any further issue of opium until I obtained the permission. The men threatened to strike work at once if the opium was stopped. The Local Government then sanctioned my holding for the purpose of issue to these coolies a larger quantity of opium than the law permits to one person.

7962. (*Mr. Mowbray.*) These Maingtha coolies are the same coolies?—They are the same description of coolies which Mr. Bagley referred to.

7963. (*Mr. Pease.*) Why do you think the Burmese are inferior as coolies?—They are not as powerful men. These Maingtha coolies are much stronger men.

7964. (*Mr. Mowbray.*) Who are the Indian coolies you are making comparison with?—The Indian coolies, such as we have, are very few. We have Purbeah coolies, and we have Coringhi coolies and Telugu coolies, men from Orissa; but in Upper Burma and in the parts we have been working

on lately, they have been in very small numbers.

7965. Are the Kachin coolies opium-consumers?—I cannot say, I believe some of them are.

7966. But you draw a comparison between these Chinese coolies and the Indian coolies. I want to know whether you would attribute any superiority to those who take opium?—No, not at all.

Mr. H. S. Guinness.

16 Dec. 1893.

The witness withdrew.

MOUNG AUNG MIN called in and examined.

7967. (*Chairman.*) What are you?—I am a trader in jade now.

7968. In the King's time did you live at the Jade Mines?—I was the Collector of Customs in Mandalay, but I went occasionally to the Jade Mines. I did not live there permanently.

7969. Who live at the Jade Mines, and what races?—Puns, Shans, Kadus, Kanans, Kachins, Theinbaws, Samparaws, and Burmans.

7970. Did the habit of smoking or eating opium prevail amongst all these people?—Some of them used it; and some did not use it.

7971. All the tribes?—The Samparaws were the only people who all consumed opium. Of the others, one-third or one-half use opium.

7972. (*Sir William Roberts.*) Are you speaking of eating or smoking opium?—Some smoked and some ate it.

7973. (*Chairman.*) What sort of opium did they use?—Some of it they get in balls from Yunnan, and some of it they grow in their fields.

7974. In King Mindon Min's time the prohibition of

opium did not extend to the Jade Mines?—Formerly there was no prohibition, there is now.

7975. There was a prohibition in Mandalay, but there was not at the Jade Mines: why was that?—The Jade Mines are amongst the wild people.

7976. Have you ever heard amongst those tribes when smoking began?—They told me they had always used opium.

7977. (*Sir William Roberts.*) Always smoked opium?—Both smoked and ate it?—That is only hearsay.

7978. (*Chairman.*) Did they smoke pure opium, did they smoke like the Kachins?—They cut up the tender leaves of a plant, chopped them up into bits, dried them, and got a spoonful of opium and poured it over it and smoked it.

7979. Did you observe in those former days any ill-effects of opium amongst those people working in the mines?—When they smoke opium they become lazy, and when they cannot get any more opium they are apt to die: their stomach pains them. It is a habit that has no advantage.

7980. You are not a smoker yourself?—I once tried it. I gave a basket of paddy for some opium, and I tried it. The house went all round me and I did not know where I was.

Moung Aung Min.

The witness withdrew.

Adjourned to Tuesday next, at Rangoon.

At Government House, Rangoon.

TWENTY-EIGHTH DAY.

Tuesday, 19th December 1893.

PRESENT:

SIR JAMES B. LYALL, G.C.I.E., K.C.S.I. (IN THE CHAIR).

SIR WILLIAM ROBERTS, M.D.

MR. R. G. C. MOWBRAY, M.P.

MR. ARTHUR PEASE.

MR. C. C. LEWIS, *Provisional Secretary.*

MR. D. M. SMEATON, Financial Commissioner of Burma, called in and examined.

Mr. D. M. Smeaton.

7981. (*Chairman.*) How many years have you been in service in Burma and what appointments have you held?—I have been about eleven years in Burma. I have been Secretary to the Chief Commissioner and Director of Land Records at the same time; Chief Secretary; Commissioner of a division; and Financial Commissioner.

7982. Of what division were you Commissioner?—The Central Division of Upper Burma.

7983. Will you tell us what your opinion is as to the effects of the opium habit amongst the Burmans, and what is the general opinion of respectable Burmese people with regard to it?—I am of opinion that the use of opium by Burmans is injurious to them both physically, mentally, and morally. I am aware that the very large majority of the Burmese people (of adult age) regard the use of opium as an offence against their religion, as very dangerous to the well-being of their race, and as destructive to the unity and happiness of families.

7984. Is your own opinion as to these effects based upon your personal observation of many individual cases of physical, mental, and moral deterioration due to the habit, or upon the general opinion which you have mentioned?—I have seen a considerable number of instances of what appeared to me to be physical wreck. Of moral wreck I cannot speak from personal observation inasmuch as I have never actually detected a man committing an offence, knowing that he was an opium consumer. I have, however, seen cases of the physical wrecking of men.

7985. You are aware that some officers of experience say that they have failed to find men physically wrecked: for example, Sir Charles Bernard reported to that effect, and also Major Grey: what conclusion do you draw from that?—It is very hard to draw a conclusion from the reports of these two gentlemen. I can only say what I have seen with my own eyes. In Thayetmyo and Toungoo and Kyauk Pyu, and other places, I can quote cases of a number of men that I have

19 Dec. 1893.

Mr. D. M.
Smeaton.
19 Dec. 1893.

seen,—their age, and where I saw them taking their opium, and what I heard from their own lips with regard to the kind of life they led.

7986. Did you take any pains to find out whether these men had any other physical complaints which would cause their condition, besides the opium habit?—No, I did not ask them if there had been any anterior disease or illness. I certainly took it for granted after hearing what they told me of the continuance of the habit for years, that their miserable physical condition was most probably the result of the habit,—emaciation, laziness and indolence, and want of power to exert themselves. In the Thayetmyo, and Rangoon, and Mandalay jails I have seen instances of Burmese whose emaciation was distinctly stated by the medical officers to be the result of opium.

7987. Emaciation is not necessarily of itself what we may call physical wreck, is it?—Not exactly perhaps: but it surely indicates weakness or decay, and it appeared from the evidence that I had before me in Thayetmyo, to be accompanied by great laziness and powerlessness to exert.

7988. Physical powerlessness?—Yes. With regard to your other question as to the moral wrecking, the only evidence I can give as to that is the evidence of what I have seen in jails, and the evidence of a considerable number of Burmese elders who told me of the results which opium had upon the members of their own families.

7989. The great majority of respectable Burmese equally condemn the use of alcohol, do they not?—They condemn it, but it is not, I understand, condemned with such vehemence as the use of opium. If you will allow me, I should like to call your attention to a communication made to me by a resident of Arakan whom I consulted on the matter some time ago. I should like to be permitted to read this statement by Saw Hla Pru, an Arakanese gentleman.

7990. Is he an official or a non-official?—He is an official. He states, "I am a native of Arakan, was born and bred in Akyab, and had served in the districts of Kyauk Pyn and Sandoway as a Magistrate and Revenue Officer. The use of opium is spreading. I think about 2 per cent. of the population of Arakan are opium consumers. The drug takes possession insidiously and keeps its hold firmly. I know only a few cases of radical cure. It has in every case within my knowledge undermined the constitution, ruined the health and shortened the life of the consumer. It gradually induces indolent and filthy habits of life. Employers therefore object to have them (*i.e.*, consumers). It is one of the primary sources of crime, and fills the jails with them. They lose their repute and descend in their social life. Children of a confirmed consumer are feeble and sickly. The Arakanese say that it is a far greater mischief than drink."

7991. Do the Burmese attribute to the British Government any special responsibility for the existence of the opium habit: do you think they are right, and if so, how?—It is rather difficult to answer the question; but so far as historical evidence goes, I think there can be no doubt about it. I will read a few extracts, if you will permit me, from some official papers. Take the typical district where opium is admittedly very largely consumed, Kyauk Pyu. It is in evidence by independent observers that opium was almost non-existent before 1832. It was not known to Mr. Hind who has lived there since 1832. He declared that opium was not known before that time, in fact until the influx of Bengalis when the habit became common in Kyauk Pyu in consequence of contact with the Bengalis by the Arakanese. That is his statement in this case. Of course I am unable to verify it, but he said so, and it is on official record. Equally it was reported to me officially by the Deputy Commissioner of Sandoway that the respectable elders of his district declared that the habit was entirely, or almost entirely, contracted since the introduction of licensed opium-vendors into the district.

7992. (Sir William Roberts.) What year was that?—1891. I will read the extract. Mr. Haughton, who is the Deputy Commissioner of Sandoway, says:—"It is the common and apparently well-founded opinion in this district, that most of the present opium-eaters contracted this vice during the time when there were opium shops at Sandoway, Toungup, and Ywa."

7993. What date does that refer to, when these opium shops were opened?—I cannot tell you exactly when they were opened; but shops were opened within ten years after the assumption of authority in Arakan.—I should think about 1840; but I cannot say for certain as I do not know.

7994. That is about fifty years ago?—I think so; certainly it was in Akyab, and I should imagine that it must have been at the same time in Sandoway.

7995. (Chairman.) But is there no evidence that there was considerable illicit use of opium by Burmans in Lower

and Upper Burma under the King's rule, in spite of the King's edicts,—see Mr. Norton's letter and Mr. Carter's letter, and in the enquiries of 1878, I think it was mentioned by some of the native members that there was considerable consumption of opium even under the King's rule in Lower Burma?—It is difficult to say that. I cannot tell you. There is no doubt about it that opium has always been secretly consumed by a few since contact with India; but the evidence, as far as I can judge of independent witnesses, goes to show that it was insignificant before the increased intercourse with India caused by facilities of communication.

7996. Does not Mr. Scott mention in his book that the first English traveller who came to Burma found opium one of the articles of trade?—It might have been so, but I am unable to say. In Upper Burma in Mindon Min's time, it was absolutely prohibited.

7997. It was prohibited to Burmans?—Yes, only to Burmans. It was not prohibited to Chinese or Indians; but it was prohibited to Burmans and punished when it was discovered.

7998. (Chairman.) I understand it was prohibited in Lower Burma, but in spite of that I think Mr. Carter says that it was procurable easily enough?—There is the evidence of Mr. Hind whom I have quoted already. In a matter of this sort I cannot do better than quote the evidence of a man of this kind who has resided in the district where opium has been consumed more than in any part of Lower Burma. Here is what Mr. Hind says:—"The use of opium amongst the Arakanese was unknown throughout this district, and its consumption up to about 1835 was confined to the natives of Bengal and Upper India only. By that time, however, the close intimacy which had sprung up between the natives of Bengal and the male relatives of the Arakanese women, whom they had in the meantime married, had begun its evil influence upon those Arakanese, and their respect for their religion and their priesthood began to decline and with it their self-respect; and they gradually took to both toddy and eventually to opium also. In the course of years the vice of opium-smoking, or taken in the shape of pills, has spread to such an extent as to have long since called for the most active interference of the Government to stop the daily increasing evil."

7999. (Sir William Roberts.) Opium-smoking?—Opium-smoking and eating, apparently.

8000. (Mr. Mowbray.) What is the date?—18th January 1879.

8001. I do not see how they could have contracted the habit of opium-smoking from Bengal. I thought that the Bengalis only used opium by way of eating?—I suppose he meant the Indians. I have seen them taking their *chandu* constantly in the north of India, which is exactly the same as *beinsi* here.

8002. But I think *chandu*-smoking is quite a modern thing in India?—Yes, I believe, for about twenty years.

8003. (Chairman.) Mr. Norton writing as Commissioner says against the evidence of Mr. Hind: "In the Burmese times, the use of opium was absolutely prohibited, and it was proclaimed through the streets of Henzada that to use opium was an offence punishable with death. All the same, opium was then easily procurable at twelve annas a tola. But the Government now is stronger than it was then." Then Mr. Carter, Deputy Commissioner of Toungoo, writing to the Commissioner of the Tennasserin division, 26th October 1891, says—"From my own personal knowledge I know that a large proportion of the population in Upper Burma were addicted to opium where we annexed the country. In Mandalay in 1883 I found enormous stores of opium amongst Chinese population, and they admitted that they sold largely to Burmans."?—Yes, that is so.

8004. In the early enquiries of 1878 I remember that some of the native Myoaks, who were consulted, said the same thing, that though it was severely punished, the habit of eating or smoking opium and drinking liquor did prevail?—Yes, that is perfectly true. Mindon Min kept a firm hand over his people, but the moment he disappeared, anarchy commenced and continued during Thibaw's reign, and even the priesthood took to habits which were condemned as far as the laity were concerned. In the time of Thibaw they took to alcohol, which they dared not touch or even look at in Mindon's time. King Mindon Min vehemently prohibited its use, and I believe he saw that his prohibition was enforced as far as possible. It is reported that in his time at least, the habit was very much suppressed. On the accession of King Thibaw, the habit revived.

8005. (*Mr. Mowbray.*) Do you know whether there was prohibition before King Mindon Min's time?—I think not, I am not aware of any royal prohibition.

8006. (*Chairman.*) At the time when we annexed Arakan, if that was the case the prohibition was simply a religious one?—Yes, and a social one also.

8007. Considering that Arakan joins on to Chittagong, and that the people have always had a great inter-communication, do you think it is likely that the habit of opium-eating, in a malarious country like Arakan, would not have spread before annexation more or less from Chittagong to Arakan? Do you think Mr. Hind is a safe authority on these points?—I think very likely the habit had become common there. I certainly consider that Mr. Hind is an authority on these points.

8008. You are aware that we annexed Assam at the time of the first Burmese war?—Yes.

8009. And we found opium-eating universal, and poppy cultivation free? The Burmese Government had not interfered with it apparently?—It was almost beyond their jurisdiction altogether; it was a nominal subordination to Burma altogether.

8010. Hardly that; when we annexed the country the Burmese officials brought away a great number of the Assamese people?—So they did in the Kachin country; but the Kachins also cultivated and used opium. The Burmese Government had hardly any control except by a sudden inroad upon them, taken unawares.

8011. You say that the Burmese attribute the blame to the British Government: do not you think that they naturally, out of a patriotic sort of prejudice and regard for the old church and State rules of the kings, are likely to attribute it to us?—I think there is a good deal in that; I think that may influence what they say.

8012. Is it not the case that the Methodist Mission Churches, and I believe many other Mission Churches in Burma and India, bring their converts under discipline in respect to the use of intoxicants,—that they excommunicate and cast out any man who uses opium or alcohol?—I think that is so, but I cannot speak of the Methodist: I cannot remember exactly. I am aware that the American Baptists do. I believe that after disciplinary ordeal and condonation a certain number of times they excommunicate the incorrigible; and so do the Burmese.

8013. Was not the hierarchy of Buddhist priests a great co-ordinate power in the State in the days of the kings of Burma; and through their influence was not the use of opium and alcohol made not only a sin but also a crime for the Burmese?—Mindon Min was an exceedingly religious man and he was very much under the influence of the priesthood. It is believed that it was chiefly owing to their pressure that he promulgated his severe edicts against opium.

8014. We are now about to attempt to enforce a British law making the use and possession of opium by the Burmese a crime; but we are not attempting to prevent the use of liquor: is not this a one-side arrangement and somewhat inconsistent?—It may be; but I think it is a matter of expediency. I do not believe that it is practicable to forbid them to take any kind of sedative or stimulant. They must have something. Everybody as a rule likes something of the kind. I do not believe that it would be possible.

8015. Are not we Europeans perhaps unduly prejudiced against opium as a stimulant relatively to liquor?—Apparently the effect of opium upon different classes of people varies. Some people appear to come under the influence of it in an extraordinary degree.

8016. (*Sir William Roberts.*) Are you alluding to race difference?—Yes, I mean that to a race like the Burmese, opium in moderation appears to be almost as injurious as opium in excess. On the other hand, I have never seen a drunken Burman. I have had just as many chances of seeing drunken Burmans, as opium consuming Burmans: I have seen them take their liquor, but I have never seen them drunk by which I mean intoxicated and incapable.

8017. You have never seen them drunk upon opium?—I have seen a Burman opium-consumer who was not drunk but was undoubtedly unfit to do anything at all, even to rise from his bench; but I have never seen a man drunk and incapable from liquor.

8018. (*Chairman.*) If we succeed in stopping the use of opium, will not the reckless, self-indulgent Burmese who now use it to excess, be the sort of people who will take to the use of native liquor or of European wines and spirits, and exceed in their use also?—I have spoken to the Bur-

mans themselves about this. At Thayetmyo I actually went into an opium shop and sat there for three hours, followed the Burmans out, and asked them how they contracted the habit and why they took to it. The majority of them told me that they took to opium chiefly on account of the soothing pleasurable sensation which it gave, the feeling of perfect quiet and the absence of all worry and care. It was the pleasurable sensation which their neighbours told them opium caused, which made them take to the habit. Liquor, on the other hand, has the reverse effect. It has the effect of causing an excited feeling at first, followed by reaction afterwards. The pleasure which one man would have in taking opium, and another in taking liquor, would be quite opposite.

8019. Would not a Burmese or Chinese opium-consumer say with some truth that we let the alcohol habit alone, and prohibited the use of opium because it is not a European habit?—That might be said. The Burmese would like to see liquor interdicted. The impression seems to be that if there is to be one or other left, let opium go, and if you must have one, let liquor stay.

8020. Is it not a serious question as to where we are to stop if we are to treat intemperance of indulgence in anything as a crime to be made penal by law, not to be left to prudence or conscience or to religious or moral teaching?—I admit that, that is a serious question.

8021. Do the new rules which are to come in force, in January, in Lower and Upper Burma, constitute in your opinion as large a measure of reform as it is expedient to attempt to enforce; or would you go further, and, if so, in what particulars and to what extent?—I am of opinion that the existence of shops for the sale of opium is likely to render restrictive measures much less effectual than they otherwise would be, because the licensed vendors naturally expect high profits, which licit sales are not likely to afford them, and will certainly, as now, use their licenses, and their licensed premises, and their servants, as means and screens for sale of the smuggled drug. I therefore consider that if the restrictive measures now about to be set on foot are to be really effectual, Government should undertake, through its officers, such sales of opium as are necessary to registered habitual consumers of the drug. That is the opinion I have formed. I am of opinion that the extension of the coming restrictive measures to non-Burmans is expedient because the non-Burman population is already large and on the increase, and if they are permitted the free use of opium (subject to the maximum quantity allowed by law to be possessed at any one time) they will find it to their profit to hoard and sell to Burmans. The object of the restrictive measures is to stop the consumption of opium by Burmans, and therefore all channels of supply which can lawfully and in reason be closed should be closed.

8022. The pith of that is that you would close all shops, sell through Government officers only to registered habitual consumers, non-Burmans as well as Burmans?—If as a matter of public policy it is intended that opium shall be stopped as far as Burmans are concerned, and that the habit shall not be allowed to continue, I am of opinion that there is nothing for it but to adopt these measures; but if it is not intended so, the thing may slide; that is all. I do not say that by adopting those proposals we will cure the existing consumer: I believe he will get his opium still to a large extent, but what I do think is that the younger generation of Burmans who are now in their teens, from 18 to 20, are not nearly so likely to take to it, seeing the restrictions are so severe as they would do were the rules as they are at present, with licensed shops and free consumption.

8023. In selling through Government officers, what officers would you use?—I should be inclined to have the drug sold as other drugs are dispensed at dispensaries, and to prove to the people who are at the present moment inclined to doubt our *bona-fides*, that we really are in good faith. When they see licensed shops staring them in the face for which a high price has been paid, it is a little difficult for respectable Burmans to understand that the Government intends to discourage the use of opium. They do doubt the *bona-fides* of the Government naturally, as Mr. Carter has said in his report.

8024. You would use the dispensary?—I think so. The sale by township officers was suggested by certain officers; it was not my suggestion.

8025. These dispensary officers would get no profit or pay to remunerate them?—No profit, but they would of course receive pay.

8026. Is there not some risk of demoralizing them?—I do not see that it would any more than the sale of other drugs which are equally expensive.

Mr. D. M. Smeaton.
19 Dec. 1893.

- Mr. D. M. Smeaton. 8027. There is not the same demand for other drugs?—There is a very large demand among Indians for *ganja*.
- 19 Dec. 1893. 8028. But they are not allowed to sell *ganja*?—I do not know whether they are allowed to sell it at dispensaries, but I suppose the result would be just the same if they were allowed to sell *ganja*.
8029. I believe they are not allowed to sell *ganja*; would your opium sellers be assistant apothecaries?—Yes, men of the rank of apothecaries.
8030. Would you give them small pay?—I should pay them from R60 to R100 a month.
8031. Would you give them extra pay?—Yes.
8032. Is there anything to prevent their adding smuggled opium to their store, or selling to unregistered persons?—I do not think it is likely.
8033. Experience has shown us how the Chinese vendors are endeavouring to spread the taste for the drug. Would there be any check on the price your official vendors could demand?—The price would be fixed.
8034. How would you practically fix it?—The only way would be to have a very strong inspecting agency. I do not see any way out of it. We would have to resort to a certain kind of *espionage* to start with anyhow. I do not deny that the difficulties would be very great indeed. I quite admit it.
8035. Would not the direct sale by Government officers to excessive consumers have a bad appearance. You are anxious to save appearances, I suppose?—I think if it were sold as a drug in a dispensary, and if it were limited to registered men, the appearances would be in favour of the Government. The people would see that it was sold in the way that other things of the same kind are sold,—as a medicinal drug.
8036. You have said that the sale would be limited to officers in charge of dispensaries; are the dispensaries numerous enough in Burma to be a sufficient machinery for supplying to the country what I believe is a common domestic medicine in Burma and elsewhere?—I think so.
8037. There are only dispensaries in large towns, are there?—As far as I know, the dispensary would be a more convenient distributing agency than the present licensed vendors are. For instance, there are two dispensaries in the Akyab district, whereas there would be one licensed vendor of opium. There is one dispensary in Kyauk Pyu and one in Sandoway.
8038. There are no opium shops there?—No; the result is that opium is smuggled in from Chittagong and from Kyauk Pyu into Sandoway, or across from Prome. In Rangoon there is one dispensary; in Pegu there are two dispensaries, and there is one shop. In Tharrawaddy there are six dispensaries, and there is no shop; in Prome there are three dispensaries and one shop; in Thougwa there are three dispensaries and one shop; in Bassein two dispensaries and one shop; in Henzada two dispensaries and one shop; in Thayetmyo two dispensaries and one shop; in Amherst there are four dispensaries, and I think three shops in Moulmein. It is an opium farm, and the man has three shops. In Tavoy, one dispensary and no shop; in Mergui one dispensary and three shops; in Shwegyin three dispensaries and no shop; in Toungoo one dispensary and one shop. That is the distribution.
8039. In saying that we should be in a better position to check smuggling by doing away with all non-official licensed vendors, do you not overlook the fact that licensed vendors having a monopoly, were the only class in the country personally interested in checking smuggling?—The old licensed vendors might be tempted to connive at smuggling, so as to add to their stores at cheaper rates than Government would supply to them; but they must have known that their gain in this respect was small, and that for every seer they got in this way, many seers must have reached private hands from the smugglers and have gone into consumption to the detriment of their monopolies?—As a matter of fact the licensed vendors are the greatest smugglers.
8040. In what sense are they smugglers?—They get British opium illicitly and sell it illicitly.
8041. From Government?—No, but they get it from Bengal. It is sent by post and by steamer. It is sent to agents who supply them. We have had cases of it.
8042. What differences are there between the rate at which Government supplies them with this opium, and the rate at which they can purchase it elsewhere?—That I can not say. It is uncommonly difficult ever to get a conviction. You never can get hold of the men; it is exceedingly difficult to find them.
8043. They must get this opium from Government stores?—Yes.
8044. The difference per seer is only a few rupees?—At Akyab we permit the opium to be sold from the Treasury to licensed vendors at R28 a seer; in Bengal it is cheaper: it is R23 or R24.
8045. The profit then to them is only about R4 a seer, and they have to pay the smugglers and run the risk: is it possible that they would find it pay them to smuggle in that sense, largely?—As a matter of fact they do; I suppose it must pay them.
8046. How do you know they do?—You know that in breach of the rules, they do not sell only at their shops, but send out opium to out-stations; that is not smuggling, but illicit sale?—Yes; but when their daily sales are tallied up by whichever officer inspects, they are never found minus any quantity which they ought to have in consideration of their sales.
8047. But you cannot check that, because they can write out fictitious sales?—The opium is always weighed.
8048. They can write out fictitious sales at the counter as much as they like?—True enough they can, but they ought properly speaking to have less opium. If they had not got opium from outside to send out through the agents, and if they had to indent on their licit store, they would have a great deal less opium than they ought to have when inspected.
8049. How?—Because what they send out would be a deduction from their licit store.
8050. It is only a surmise of yours as to the amount which they send out?—It is the only way of getting at the truth.
8051. It is only a surmise that the consumption for instance in Sandoway and Kyauk Pyu is from the shop at Akyab, and not from smuggling direct from Chittagong?—No; men have been caught bringing opium across from Prome to Toungoo.
8052. I was talking of Akyab?—It comes to the same thing. The opium would come to the best market. The smugglers know where the market is to be found.
8053. Is it not a fact that it is important to have a class interested in a monopoly in opium in order to prevent smuggling?—Of course if you could prevent them getting higher profits than they ought to get, I admit that would be the best motive to endeavour to instil into them; but as a matter of fact, the larger the field of sale, whether licit or illicit, the better for the Chinaman. He will not scruple at anything.
8054. If it is his own smuggling only, but how can he prevent other people from smuggling? If he smuggles himself, is it not certain that a number of other people would smuggle?—Where there is a licensed vendor, he will smuggle himself, and will do what he can himself to prevent other people from smuggling.
8055. If he smuggles himself, he will hardly have the courage to inform against other people?—It is quite certain that if he hears of anybody trying to do the same thing he will stop him.
8056. How?—He will inform against him.
8057. Is it not a dangerous thing for a man engaged in that smuggling trade to inform against people carrying on the same trade?—He has got his own myrmidons whom he can trust. As a matter of fact, it is not conjecture. It is a fact which has been proved in several cases; they have informed while at the same time they are smugglers—that is, they are illicit salesmen.
8058. Illicit selling outside his shop by a licensed vendor is a very minor thing compared with his smuggling in illicit opium by all sorts of people from outside the country. It has been the experience for a long time in India that the monopolist farmers were almost the only aid to checking smuggling. I should have thought the same would apply in Burma?—It is not the opinion of officers who have had much experience.
8059. It has been asserted that we have succeeded under the old system in almost entirely excluding Yunnan and Shan opium from Lower Burma: was it not mainly by the help of the licensed vendors?—No; Yunnan opium is not

nearly so popular a drug as British opium. It is much harsher in its taste, so I am told. It is more bitter and not so powerful. That is what I have been led to understand.

8060. If under the new system you have no monopolists personally interested, and rely only on the official services of your police, your excise preventive men and informers, is it not likely that for every man prosecuted by their assistance ten men will bribe them to abstain from true or false accusations?—That is a very difficult matter indeed to speak upon. We have never given the higher classes of Burmans a chance to help us in the matter of preventing opium consumption.

8061. My question is rather as to what the excise preventive men, police, and informers will do. Is it not likely that for every man prosecuted by their assistance, ten men will bribe them to abstain from true or false accusations?—Unless we get the better class of the Burmese elders to co-operate with us, which we can only do, in my opinion, by abolishing the licensed shops. In my opinion we will not get much assistance because we are not believed in.

8062. Is it not likely that for every man prosecuted by their assistance, ten men will bribe them to abstain from true or false accusations?—It is not likely in my opinion, at least in the proportion you name.

I think the Burmese elders said something of the same kind to Mr. Wilson, Deputy Commissioner of Shwegyin, and to Mr. Fraser, Deputy Commissioner of Pegu. Mr. Wilson writes "the Burman elders are apprehensive of "Police extortion if the proposed prohibition is put in "force. There is no doubt the mischief thereby occasioned "would go far to counteract and even prevent any good "likely to be done by the prohibition. Any checks on the "Police action, however, would go far to render the prohibition nugatory." If we have not the co-operation of these village elders, the proportion will probably be something like what you have named.

8063. Mr. Fraser said something of the same kind. He says "there should be no distinction between Burmans and "Chinese, Shans, and cognate races. If such a distinction "is made, the Burmans will purchase opium more illicitly "than ever, and the people of the country will be more than "ever harassed by the Police and other Excise officers?"—Exactly so, that is to say, if you prohibited the Burmans and not the others, you will have harassment by the Police.

8064. So far as you have observed, are the bad effects of the indulgence in the opium habit, the same in the case of Chinese or Indians in Burma, as in the case of Burmans, or different?—In Burma I cannot say that I have ever seen either a Chinaman or Indian the worse for opium; in fact I have never seen an Indian opium consumer in Burma at all.

8065. Not to your knowledge?—Not to my knowledge.

8066. You are aware that a good many do consume opium?—I am aware that certain classes do. I have seen a number of Chinamen who have risen from smoking opium and from eating opium too, but I have never seen a Chinaman whose appearance was in any way damaged by the drug. I have never noticed it. I have seen Chinamen rise from their smoking and go away exactly the same as before smoking, without any apparent difference whatever.

8067. I should like to ask you one or two questions on Sir Alexander Mackenzie's note of the 30th April 1892. I do not know whether you will be able to answer them or not, but as it is an important document and will be very much quoted at home, and as we have not got him here, perhaps you may be able to answer for him. Am I right in understanding from paragraph 14 of Sir Alexander Mackenzie's note, that he meant to treat only the Chinese exceptionally; they were to be forced to take out a ten-rupee annual license to consume opium, but could do so without a medical certificate. Habitual consumers of all other races, Burmans and non-Burmans including the 200,000 adult Indians, Shans, Kachins, and others, were not even to be allowed a ten-rupee license to consume except on medical certificate that habitual consumption was necessary for their health. That is what he proposed, is it not?—Yes, that is what he proposed.

8068. And opium was also to be sold at R5 per tola only which, except to very rich people, is a prohibitive price?—Yes, that was his proposal. He says "the selling price of "opium at the dispensary I would make R5 a tola, quintuple the present average price, and the amount to be "given at one time I would keep as at present at 3 tolas."

8069. The evidence in former reports, and that now taken by us, shows that the habit of opium-eating has long prevailed among Indians, and has always been prevalent among

certain important classes of them, such as the Coringhis, and the Sikhs in the Military police and in the army regiments; it is also very prevalent and of old standing among Shans, Kachins, and some other similar Northern tribes: do you not think that such a system as Sir Alexander Mackenzie proposed would be very arbitrary and would have caused justifiable discontent amongst various classes of non-Burmans?—It would have produced irritation undoubtedly. I admit that, but I do not quite see when you want a drastic remedy that you can avoid that.

8070. In paragraph 4 of his note, Sir Alexander Mackenzie writes:—"As regards the Shans and Kachins, I find that "those officers acquainted with them hold that opium is "nearly as deleterious to them as to Burmans." In his Secretary's letter of February 1891 to the Government of India, he used these words:—"Chinese, Shans, and others "consumed opium without ill-effects, or even with beneficial results." Do you know (I suppose you were in frequent communication with Sir Alexander Mackenzie at the time) who the officers acquainted with the Shans and Kachins are, upon whose report Sir Alexander Mackenzie changed his views? Can you refer us to their reports?—No, I am unable to refer you to them.

8071. Do you happen to know who the officers were that he refers to as being acquainted with them, who said that opium was nearly as deleterious to them as to the Burmans?—I am not able to give a definite answer, but I should imagine it was Mr. Hildebrand with whom I know he was in communication.

8072. Who are the officers best acquainted with the Northern Shans and Kachins?—The acquaintance with the Kachins is of very recent date, and it is uncommonly difficult to find anyone who knows anything about them. I should say Mr. Shaw, Deputy Commissioner of Shwabo, Mr. George, the present Deputy Commissioner of Bhamo, and Major Adamson, the Commissioner of the Central Division; and most of all I think Colonel Cooke, who in the old times was resident of Bhamo, would know most about the Kachins. Colonel Cooke travelled through the country before its annexation.

8073. I suppose Mr. Jennings who gave evidence before us the other day, knows a great deal about them too?—He has only been there a short time, and he cannot know much about them. He has only been there about 15 months or so. I should think Colonel Cooke would probably know more about them than anyone else. He has also seen them since the annexation. He has been Deputy Commissioner and Commissioner of the Northern Division.

8074. As to the Shans, who knows them best?—I think on the whole, the man most competent to give an opinion about them is Mr. Hildebrand. He has been all over the Southern and Northern Shan States.

8075. (Mr. Mowbray.) Where is Mr. Hildebrand?—At Fort Stedman.

8076. (Chairman.) What about Mr. Scott?—Yes, I should place Mr. Scott next to Mr. Hildebrand. But Mr. Hildebrand has been there from the earliest times. He is now with them. He has been in charge of the entire Shan country.

8077. (Chairman.) I believe we are going to get a statement from Mr. Scott who is now at Bangkok, and I think we might also have a statement from Mr. Hildebrand.

In your note upon which Sir Alexander Mackenzie's minute was based, you did propose that Burmese doctors and hakims should be supplied with stocks of opium for sale?—Yes.

8078. Sir Alexander Mackenzie in his minute did not notice that: apparently his intention was that the demand for medical use should only be supplied from dispensaries; do you think that was intentional, or was it an oversight?—I should think that very likely it was an oversight.

8079. In paragraph 6, Sir Alexander Mackenzie uses these words: "Insist on the police doing their duty;" and I notice that Mr. Houghton, one of the Deputy Commissioners, uses the phrase "strong and unremitting pressure on the police;" or as he calls it elsewhere, "resolute insistence on their showing a fair outturn of work in detection of illicit use and possession of opium;" do you think that in dealing with an artificial crime like this, of use and possession of opium, such a policy is safe with oriental police?—No, I admit I should have very considerable apprehensions if it was pushed to the extent indicated by these words, that is to say, "strong and unremitting pressure". With oriental police I should hesitate to put such pressure upon them.

Mr. D. M.
Smeeth.

19 Dec. 1893.

Mr. D. M.
Smeaton.
19 Dec. 1893.

8080. (*Chairman.*) Before putting more questions, I wish to explain that I myself, and I believe all the other members of the Commission present, have a great deal of sympathy with you in your wish to bring our law in the matter of opium, in conformity with the opinion of respectable Burmese people, and we have no intention of going behind, as it were, what has been decided by the Government of India, and by the Government of Burma, in regard to the prohibition of the use and possession of opium by the Burmese. We all hope that that policy may prove a success; at the same time I wish to cross-examine you upon your printed note of 27th April 1892, because it is an exceedingly strongly worded document, and one which when it comes into the possession of a certain part of the English public, will be much used and much relied upon. I must say that after carefully reading it, it seems to me particularly for an official paper, to be exaggerated and sensational in tone. I therefore think that it is right to cross-examine you to a certain extent upon it. We will take first the tabular form of consumption, and its effects for the Arakan Division, given in para. 4 of the note, which, you write, refers entirely to Burmese. How did you eliminate other races in preparing this table? You say elsewhere in the note that "only one Deputy Commissioner gave separate statistics?"—That refers to the effects, not to the number of opium-consumers. That is the meaning of that clause.

8081. Do you not think that the heading "Physically or morally wrecked" is sensational?—It is the heading prescribed by the Chief Commissioner.

8082. Does not Major Parrott say in his report appended to your note that it was not understood?—I am perfectly sure that he understood it.

8083. But how about the Luyis and Myooks?—I have not the slightest doubt that it was perfectly well understood.

8084. Is it not rather a hard thing to draw the line as to what is physical wrecking or moral wrecking?—When the people were asked the reason, they did not scruple to tell all their secrets; but no man likes to have his child's name published in connection with a thing that he considers to be a heinous sin. He will however tell you in private. Major Parrott has perhaps the largest experience of Burmans, of any officer.

8085. He says that it was not understood?—I am perfectly certain that it was quite understood. I think he referred to the officers who examined, and not to the Burmans themselves. I do not think he refers to the Burmans to whom the question was put, but to the officers to whom the matter was remitted.

8086. (*Chairman.*) If English officers did not understand it, you could hardly expect the Myooks and Luyis to understand it. Major Parrott says, "it is very difficult to distinguish between 'physically wrecked' and 'morally wrecked'" and that in fact many of the officers have not understood the question?—Yes, but I am of opinion that the intention of the question was understood.

8087. (*Sir William Roberts.*) It struck me that the term "physically wrecked" was altogether wanting in precision, a question that is not precise, cannot be precisely answered.

8088. (*Chairman.*) The figures given by the Myooks and Luyis imply that the terms were misunderstood in some cases. If you look through the figures you will see that nearly every one was returned as "physically wrecked"?—From conversations I have had with many Burmans and from the documents I have read at the beginning of this sitting, I think the Burman regards a man who has begun to touch opium, as *ipso facto* bad. I believe the effect of that opinion itself reacts upon the man and makes him what opium might not make him: it makes him go from bad to worse. The moment a Burman lad is known to be habitually eating or smoking opium, he is excommunicated from his family. If he does not reform, he runs a poor chance of getting back into his family.

8089. That would hardly physically wreck him?—The Luyis and Myooks and the men who were consulted used the word *beinsa*. That is a convertible term with thief. When a Burman lad comes back to his home after he has been known to have contracted the habit, he is looked upon as a man who comes back really to thieve. That is a proverb really among the people,—that a son who has left his family and contracted the habit, comes back to thieve.

8090. As to moral wrecking, is it not obvious that in a country like Burma, particularly where the sentiment of all religious law-abiding people has always been against opium, law-breaking, and vicious and self-indulgent people, in

other words, the mass from which the criminal class is mainly recruited everywhere, who have always taken to opium, either licitly or illicitly, and presumably to excess? In a country like Burma, is it not they who would naturally take to opium consumption?—The evidence rather shows the other way. What you call the effect is the cause. It is after a man has taken to opium that he takes to crime. That is the evidence that has come before me. My evidence is chiefly hearsay. I had not the means of personal observation except in one or two cases in Upper Burma.

8091. You assume in these statistics and tables that every man who is found to be an opium-consumer, and has been suspected or convicted of crime has come to it through opium. Is not that a most extravagant assumption?—That is the burden of it.

8092. Do not you think that it is a most extravagant assumption? May it not be the other way as Major Grey and other officers have said?—The other way would be distinctly against the weight of Burmese evidence. I can give hardly any personal experience myself, but the weight of Burmese evidence is exactly the other way, namely, that the crime is the effect of the consumption of opium, and not the cause. There is the evidence given before Major Parrott of 26 young men in Arakan whose careers are shown to have become criminal owing to opium.

8093. It might be from opium or anything else, if they are self-indulgent people?—Yes, but it is a little difficult to go behind the evidence of the fathers which is very clear in establishing opium as the cause.

8094. We know in India that drinking is a constant cause of crime, and so it is in Europe?—Yes, of violent crime, but not so much I think of petty crime.

8095. It leads to petty theft in England?—The opium-smoking Burman never takes to violent crime, but he takes to petty crime, petty thefts from his own father's or mother's or mother-in-law's house; reaping crops from other people's paddy fields, and doing things among his own people which would hardly come within the cognisance of a criminal court at all. That is what the Burmans refer to when they schedule them as "morally wrecked." The cases do not come out in criminal courts. They are petty thefts, robbing from stacks and taking clothes and food. That is the kind of offence that the Burmans understand when they call the subject "morally wrecked."

8096. Again as to physical wrecking, is it not a well-known fact that in all countries where the opium habit prevails, a great many take to it to relieve chronic pains, such as those from malaria and syphilis and affection of the lungs, and disorders of the stomach, etc.?—I have been told so.

8097. Could you rely upon your Myooks and Luyis to discriminate between cases where the physical wrecking was due to opium, and where it was due to these other disorders?—The census which was taken was a census of well-known habitual users of opium, and I should doubt whether the Luyis and Myooks had included men who would casually take it as medicine. It may be that the effect of some of these figures might perhaps appear greater than it ought to owing to the inclusion of cases of that kind,—that is to say, of cases of people who are habitual invalids and who therefore habitually take opium for its soothing effects.

8098. One of your officers who is an anti-opium man, says that the statistics represented the Luyis' feelings as well as the facts. How are you to decide except through men of that kind?—You get the opinion of a Luyi upon a man's character and he informs you of his opinion about him, and there is an end of it.

8099. You give in this table in separate columns "physically or morally wrecked," and then you total them?—Yes.

8100. Does not this exaggerate the total number of injured, one way or the other; many people are apparently returned by reporting officers as physically injured, and also in the other column the same person is morally wrecked, *i.e.*, convicted or suspected of crime: you have totalled them, and that would seem therefore to exaggerate the number?—In the Arakan division we find the total number of consumers physically or morally wrecked as 5,759. That is the total of the third column. Then there is the total number of consumers, 8,668. The percentage is 66.

8101. But I see that in certain of these statements where details for each man are given there are many cases where the same man is put down as physically wrecked, and he is

also put down as being convicted or suspected of crime?—I do not think it will be found that the same individual is repeated.

8102. (*Mr. Pease.*) Take No. 7, for instance, in the Toungoo District list in the appendix to your note. In making up your statistics was he put down in both columns?—No; he was not included in both columns. No individual, that I am aware of, was doubled. It may have been the case, but I do not think so.

8103. (*Chairman.*) Would not the Myooks put the man in both columns? Would not the officer naturally count them in both columns?—There was a check.

8104. Are you aware that any check was used?—You see that there are two columns which show the numbers. You cannot repeat the man's name as a smoker and also as an eater, because they are kept separately. The total of these two columns of smokers and eaters ought to agree with the total consumers. I should think an obvious check would be used by totalling the two and comparing them with the other two.

8105. In some cases you could not give the total of the opium-smokers and opium-eaters separately?—No.

8106. The people had to report to you everybody under both heads?—Yes.

8107. And unless special precautions were taken, naturally the returns would double the man?—They might have done so in the absence of precautions in checking.

8108. You would not get the information you asked for correctly unless they did double them?—In my own returns I remember that where a man was morally wrecked, I held that to be the greater evil and kept him from the "physically wrecked."

8109. Did you make up these figures yourself?—I suppose you used clerks to do it?—I made every calculation myself from the district figures.

8110. You could not have done it accurately. The Deputy Commissioners sent in their tables and they put in so many morally wrecked and so many physically wrecked as they were bound to do; and they were bound to put a man in both columns, if he was both morally and physically wrecked, and presumably a great many would be put in both columns?—The figures in these statements, which were in my note, were calculated from the district returns by myself without the assistance of any clerks.

8111. But if the Deputy Commissioner did not check it, you could not do it?—Of course, I could not check their enumerations; I accepted these; but every calculation based on them was made by myself.

8112. I understand no Deputy Commissioner did it?—Except the Toungoo Deputy Commissioner.

8113. That leaves it very uncertain whether the table is correct,—I mean to say whether it does not exaggerate the number of people in the two columns?—I would not like to say positively. There is no doubt it is possible that the aggregate of these two columns may be larger than it ought to be, owing to the inclusion of a man, who was both physically and morally wrecked, twice. It is possible.

8114. I should think it is very likely. It stands to reason. You yourself say that the criminal effect of opium is to make a man a petty thief; that is the particular form of crime?—Yes, it is possible that some names may have been included twice.

8115. The men, as we all know, who take to that petty thieving are the excessive consumers who become incapacitated for honest work, and naturally the same man, if he were an excessive consumer, would ordinarily appear in both columns according to your view of the habit?—Yes; but I do not think the Deputy Commissioner would have permitted a statement to appear, which was supposed to be a census of two classes of consumers, without checking them with the total number of consumers.

8116. He had not to draw up this percentage column which shows proportion of physically and morally wrecked to total consumers?—To carry what you say to its logical conclusion, the result would have been that you would have shown the result of these two columns larger than the total number of consumers, which is hardly possible. If what you say is likely to have been true, namely, that most or all had been twice included, the total would have been larger than the number of consumers.

8117. No, that does not follow, but it does seem to me, judging from the general evidence, that the percentage of consumers physically and morally wrecked is very much larger than one would have anticipated from evidence elsewhere,—that in fact, it is likely that this mistake has been

made in these tables?—The eighty per cent. of habitual criminals now in confinement are addicted to opium.

8118. (*Mr. Pease.*) The result would be that if anybody had made a mistake, it would bring the percentage down from 66 to 50: because we take the physical as 3,969, and we must add to that 196 of which there is no statement, which would make 4,165: we know that there is no mistake about Toungoo, and some other district. That would bring the number to 4,165 out of 8,868, which would be nearly fifty per cent.?—That is so.

8119. (*Chairman.*) How did you get the figures of the physically wrecked for Akyab?—These are the totals given. The numbers are given for Akyab sub-division and Pauktan township.

8120. From the tables in the Deputy Commissioner's report given in the appendix, I see some were returned as injured, but without detail as to moral or physical, and so were put between the two columns?—Yes.

8121. Were they put in your table into "physically wrecked"? The number of "physically wrecked" in the Arakan table with regard to Akyab is very large?—1,969.

8122. Did you attach no importance to the fact that Major Grey, Deputy Commissioner, Mr. Grant-Brown, Sub-Divisional Officer, and Mr. Wadman, Excise Officer in that district, all said that they themselves had seen no cases of persons physically wrecked in Akyab?—These are Major Grey's words: "The Excise Inspector, Mr. C. Wadman, informs me that he has not seen any cases of persons 'physically wrecked by the use of opium, and personally I have seen none either. Cases of great emaciation are 'common among opium-eaters.'—That seems rather to modify it. If a man is greatly emaciated, I think he is on the way to something like physical wreck."

8123. (*Sir William Roberts.*) A man may be spare?—I do not think emaciation is the same thing as being spare.

8124. (*Chairman.*) Major Grey also says that Mr. Grant-Brown had made enquiries and that he stated, "there is a sprinkling of opium-eaters and smokers in nearly every village. The habit is disliked and feared by the Lugyis, but in no case were they able to say that it had done any actual harm. The use of opium, according to these villagers, had not resulted in crime or even in idleness." In those cases the figures were not included in the "physically wrecked," so that they were not included in the percentage.

8125. In preparing a statement with such an extraordinarily strong heading as "physically or morally wrecked," would not you be inclined to hesitate when you found that an officer of experience like Major Grey, backed by two officers below him, said that they had not seen anything of cases of what could be called physical wrecking?—Major Grey submitted statistics under the columns which were prescribed. If he considered that the instances given in those columns were not instances of physical injury, then he ought to have excluded them. When he presented these figures to me as coming under the head prescribed by Sir Alexander Mackenzie as physically wrecked, those were figures for which he was to vouch and for which he did vouch.

8126. He did not vouch for it?—When a man gets a figured statement to prepare, and he signs that statement, I think he does vouch for it.

8127. They were called for in a hurry: he had to prepare them through these Lugyis and Myooks?—If he discredited the Lugyis' opinion, he ought to have said so. He says in his opinion he had never seen any: whether he went to verify the cases which he included in his statement, I cannot say; but if he was so convinced of the fact that people were not injured, I should have thought the best plan would have been to verify the instances themselves. If he did not do so, and includes them in his statement, I think he must be held to vouch for it.

8128. Major Grey states that the Sub-Divisional Officer, Mr. Grant-Brown, had made enquiries in eight villages in the Akyab township, and that in no case were they able to say it had done any actual harm, but that he submitted no statistics. Afterwards statistics were called for by the Commissioner for these eight villages and were submitted by Mr. Irwin, and nearly the whole number of opium-smokers and opium-eaters are reported as physically and morally wrecked: is that not a strange contradiction?—If you look at Mr. Irwin's subsequent letter, reporting on this very sub-division, you will see that in sending statistics, he quotes part of the Sub-Divisional Officer's report on the subject, which states, "I examined 15 opium-smokers (or 'eaters') at Ywathitke, which is said to be the worst village in Akyab township (outside the town) in this respect. In 'most of them the effect of opium was apparent in their 'discoloured skin and shrunken appearance, but only one 'could be said to look at all bad. All of them, however, with 'but one exception admitted that they had lost strength

Mr. D. M. Smeaton.

19 Dec. 1893.

Mr. D. M. Smeaton. 19 Dec. 1893. "through the use of opium. Two men I found had actually given it up within the year, and these were not the only efforts which I discovered at reformation. Nearly all the men had at least reached middle age, and several, whom I asked, had grown-up sons who had not taken to opium." The Deputy Commissioner, Mr. Irwin, adds:—"In conclusion I beg to state that it is the opinion of all the officers, whom I have directed to report on this matter after personal investigation, that the ill-effects of opium on the Arakanese are apparent on all those whom they have examined, but that with perhaps a few exceptions the use of the drug has not either physically or morally affected the non-Burmans." These remarks appear to modify the statement made by Mr. Grant-Brown.

8129. With regard to the Kyauk Pyn district, you rely for figures of "physically wrecked" on a rough two-thirds estimate based on Mr. Leeds' opinion that the majority of opium-smokers are physically wrecked, or on the road to it?—In paragraph 3 he states, "I have interviewed the opium-smoking community at Cheduba and Kyaukaimau, and as many as I have been able to get hold of in Kyauk Pyn. It is very difficult for any but an expert to distinguish between persons who may be said to be physically wrecked and those to whom such a term would scarcely apply. The reports of Civil Surgeons will clear up this point, but I think that in the case of every opium-consumer Government has lost a good citizen, and that any loss in the opium revenue would be made up by the taking up of additional land for cultivation and the substitution of honest tillers of the soil for the degraded beings that form so large an element in the villages of many districts. I endorse the Civil Surgeon's opinion and think the majority of the persons who have taken to the drug may be considered to be physically wrecked or on the fair road to become so. The number, some 913, who are calculated to have taken to crime, speaks for itself?—It must have been an estimate. The total consumers are 3,832. I imagine I took a little over one-half. That is the majority. The 913 are reported to have taken to crime. That is not my estimate at all. That is a statistic of crime.

8130. Convicted or suspected?—Yes. The 2,000 estimate is only those who are physically wrecked.

8131. (Chairman.) Mr. Leeds I think says that he based his opinion, that the majority of opium-smokers were physically wrecked, not on facts apparent to himself, but on the opinion of Mr. Bhattacharji, a Bengali gentleman, who is Civil Surgeon there, does not he?—He says, "I have interviewed the opium-smoking community at Cheduba and Kyaukaimau, and as many as I have been able to get hold of in Kyauk Pyn." He does not confine his opinion to the opinion expressed by the medical officer.

8132. (Chairman.) He does refer afterwards to the medical officer's reports. He says, "the reports of Civil Surgeons will clear up this point, but I think that in the case of every opium-consumer, Government has lost a good citizen, and that any loss in the opium revenue would be made up I endorse the Civil Surgeon's opinion and think the majority of the persons who have taken to the drug may be considered to be physically wrecked or on the fair road to become so."?—You will notice that he seems not to have confined his enquiries to the Civil Surgeons at all, but to have gone to the chief smoking community which is at Cheduba.

8133. As to the Sandoway district figures I see that 169 out of 294 are returned as having taken to crime. It is the case, is it not, that 103 of these are only commonly suspected and not convicted?—Yes, that is so: "number commonly supposed to be petty thieves."

8134. Do you think the Burmese officials, like the Lugvis' and Myooks, estimate in such matters, would be reliable? Do not you think their estimate is likely to be exaggerated?—No, I do not.

8135. Coming to paragraph 5, you say, "It must be noted that only notorious consumers of opium of Burmese race have been enumerated by the District Officers." That is apparently based upon Mr. Leeds' remark to that effect, is it not?—No; the census was taken of the men by Thugyis chiefly. The whole census was made by the Thugyis.

8136. Mr. Leeds is the only officer who said anything to that effect? Major Grey says nothing to that effect. The other Deputy Commissioner, Mr. Houghton, says something which is contrary: "Only a few secret consumers could have been omitted?"—I think that the words are justified. The number of users of opium was taken as any statistics of the kind would be taken by the local officer of the village.

8137. Looking to the well-known sentiment of the Burmese elders, is not the enumeration likely to be full?—I think that every father who had an opium-smoking son would conceal it if he could.

8138. It is not a matter of concealment; they returned only the numbers?—The Thugyis made an actual counting of beads, they actually counted the men.

8139. They counted the men, but they would not give the names to make them in any way public?—No; but it was liable to be made public. I cannot say that I think it is likely the list would bear scrutiny in that way. A Burman would be the last man to admit if he could avoid it, that he had anyone in his house who consumed opium habitually. That is still the opinion of the District Officers. In 1893 the recorded number is very much less than the number really is. I think that the number of consumers in certain districts in reality is very much larger than is shown here.

8140. That is a surmise?—Yes.

8141. (Mr. Pease.) Founded on conversation with District Officers?—Yes, and with the Burmese. I may say in a report received ten days ago, the Deputy Commissioner or another of the local officers of Kyauk Pyn was of opinion that in certain parts of the district 50 per cent. of the adult male population consumed opium.

8142. (Chairman.) Who is the present Deputy Commissioner?—Mr. Wilson. If I remember rightly, it was a very large percentage, I think 50 of the male adult population consumed opium in a certain part of his district of Kyauk Pyn.

8143. (Mr. Mcwbray.) You would not take that as the average of the whole district?—Certainly not.

8144. (Chairman.) Part of the district?—Yes, I took pains to verify the matter about which you are asking, namely, as to whether those villages or tracts in which the census of opium-users in 1891 was taken was typical of the rest of the district.

8145. Your description in paragraph 6 of the physical deterioration caused by the opium habit on Burmans observed by medical officers in charge of the Arakan jails is really taken, is it not almost literally, from Dr. Bhattacharji's report?—Yes, and if I recollect aright, I consulted Dr. Dalzell.

8146. It is almost literally taken from his, Dr. Bhattacharji's, report?—Very likely.

8147. Is it not a very extreme one; ought it to be taken as you have taken it to represent all the medical officers in charge of the Arakan jails?—The words you use in paragraph 6 of your note before giving Dr. Bhattacharji's description are: "The physical deterioration in Burmans observed in charge of these jails must be described as follows." There is no other description given as far as I know but this one.

8148. You took it because it was the only one?—Yes: I do not think there is any other description given by any other medical man, and this man had apparently made a study of the physical condition of opium-users.

8149. I do not think in the whole of these appended reports on which you have based your note, that there is any other medical opinion given at length?—The medical officers sent in statistics in a similar form and as showing the results of opinions on the physical condition: they sent in reports which are not printed here of the population of jails who were opium-eaters and opium-smokers, and in these statements they made remarks about the condition of the people.

8150. Do any give a further report?—I think nearly all give symptoms,—not in the aggregate such as these,—but all give symptoms of which some are in this description, that is to say, some say one symptom was more predominant, and another said another. I did not receive reports.

8151. You say in paragraph 8, "The localities and populations examined were selected more or less at random and are typical of the rest of the districts to which they refer." Is it not almost certain that the native officers would be sure to select villages where they knew opium-smoking more or less prevailed?—I will read you the answers made to references by myself on that point. I asked the question in the case of these areas selected for examination,—was there any selection on account of the habit of opium being found there, or was it at random? Akyab says "the villages were selected which were most notorious as centres of opium consumption." Kyauk Pyn says "no selection was made; there are 72 circles in the district. Every Thugyi was ordered to send in a list of consumers in his district. Fifteen failed to send." Sandoway, nineteen villages selected as being large villages only.

8152. The Sandoway Deputy Commissioner also says in his report that in his large villages, there is more opium

smoking than in other villages, and therefore that his statistics are likely to be in excess of the true average for the district?—His answer to me is that 19 villages were selected solely as being large.

8153. (*Mr. Mowbray.*) In his report he uses the same expression: "It is well known that consumers of the drug are more frequent in the large villages, such as those enumerated, than in the smaller and less civilized ones?"—Yes. And he goes on to say, "so that the proportion of opium-smokers throughout the district is, making all due allowances, less than that stated above."

8154. (*Chairman.*) You say "the localities and population examined were selected more or less at random and are probably typical." That statement is not justified by what you yourself say, because in Akyab the Deputy Commissioner says he did select. Mr. Houghton, the Deputy Commissioner of Sandoway, says "the figures would be in excess and there is only one district in which there is no selection?"—It may be so. As far as the Deputy Commissioner of Sandoway is concerned, he seems to say that these numbers are not typical of the whole district. But you will find that in the majority of the districts the localities in which the enumeration was made were typical of the whole district.

8155. You rely a great deal upon Major Parrott's estimate in raising the proportion from 3 to 4 per cent.?—Yes, I do.

8156. You say in justification of that that he has taken pains in the enquiry. I see no evidence of that in his report. Upon what do you base the assumption?—He was the first to raise the question with regard to the opium dens. I had considerable communication with him on the subject and he told me that he was making these enquiries.

8157. You remark that no Buddhist will own to the habit unless cornered; but that seems no ground for raising the Myook's estimate, does it? I presume they return from the Lugyi's verbal information as they did in the case of men suspected of crime?—Yes, no doubt. The father of a son who has taken to opium will not admit it, unless some one tells him that he has been seen. I am speaking from personal acquaintance with the Burmese.

8158. Are you certain that the names were written down by the Lugyis in their reports? I should think it improbable?—You see what was done in Toungoo. The names were given there. If they were not written down they must have been spoken. When the Thugyi wanted to make his census of opium-consumers, he summoned the Lugyi and he said "look here, here is a *bein-sa* and there is a *bein-sa*"; they are named and recorded.

8159. That argument of a father naming his son would not apply there?—The Lugyi's would only name those people who they knew and whom everyone knew were opium-smokers. If they knew that they were not suspected, or notorious, they would avoid naming them.

8160. Fathers might in the case of their own son?—No; they might name their own sons, but they would not name other persons' sons.

8161. You have raised the percentage in this way to 4 per cent. of the total population which is calculated to be equal to 22 per cent. of the adult male population?—Yes.

8162. Supposing this to be true, ought you to assume that they are all heads of families; are single men unknown, particularly among the criminal classes?—No, but a very large majority are married.

8163. Would not a father and son in one family indulge together or avoid together?—Yes; and they might live in the same house.

8164. Is not this, paragraph 8 of your note, rather a sensational paragraph?—I do not deny that it puts the case strongly as the figures before me justify. You see yourself what the opinion was of the officer in charge of the division. He held that the percentage was 5 per cent. of the adult population. That is what he says. He has travelled more in Arakan than any other Commissioner has done before or since, and he probably knows more of the people than any man in Burma. I think I was bound not to ignore his opinion after the long series of tours he has made over the place. He says 5 per cent. He is an officer accustomed to statistics, and I adopted the percentage of 4. I do not say that it is correct; but I do not think it is over the mark.

8165. Now we come to the Pegu division. The percentage of consumers of the total population I see you put for Pegu District as 2, and the ascertained percentage of the whole division as 1.2?—Yes.

8166. Can you explain how you obtained the figure of 884 consumers for Pegu? Deputy Commissioner Fraser's

report gives 154 consumers for the six villages selected, and an estimate of from 200 to 400 consumers for Pegu town, the total at the outside being 554?—I cannot recall that. If I remember rightly, the figures were supplemented by enquiries made by myself from the Deputy Commissioner. There are two or three hundred besides that. If I remember rightly I asked for further statistics demi-officially, which do not appear apparently in these printed papers. I may here state that I consider the percentage for Pegu may probably be wrong. The Deputy Commissioner reported on my reference; he was the same Deputy Commissioner who took the census, and he said, "the villages were selected as the notorious centres of opium consumption." That was not reported at the time.

8167. The district or division?—The district.

8168. (*Mr. Mowbray.*) I understand that the general statement with regard to the villages being notorious centres applies not to the Pegu district with its 884 consumers, but to the whole Pegu division?—Only to the Pegu district. The Pegu division has four districts excluding Rangoon. In the Pegu district the villages in which the opium-consuming census was taken were selected as notoriously consuming centres, and therefore it cannot be held that the percentage yielded by these seven villages applies to these four districts. In Hanthawaddy the number of consumers was ascertained by "actually counting heads" in each village; in Tharrawaddy four villages were selected and taken quite at random and are typical of the entire district. In Prome villages were selected at random and are typical of the entire district.

8169. (*Chairman.*) You have made rather a broad rise from the percentage, 1.2, which includes those Pegu District figures, to 2 per cent., have you not?—I have; and I think, considering the case of Pegu, it is quite possible that it may be excessive.

8170. You yourself say that it is admitted that people either take to crime because they take to opium, or that they take to opium because they are bad characters, so that the jail population naturally has a much higher percentage than the free population: by taking 2 per cent. you take practically what is the jail figure for the whole division?—I am not quite prepared to admit what you say. The kind of crime as I have said is petty crime: you will rarely see an opium-smoker take to anything but petty crime. It is a quantity that you could hardly reckon. It will be very difficult to say what the kind of offenders were who formed the total population of the jail at the time. If you took all the petty offenders and then the opium-smokers, I admit it would be wrong to assume such percentage as that. I do not think that there is necessarily any great discrepancy.

8171. (*Mr. Mowbray.*) Are the figures of the Superintendent of the Jail at Rangoon published in the appendix? I see you do not agree with them. I do not know whether we could have the opportunity of seeing them?—No, they are not published. I think they were included as they are. I do not think the reports of the Superintendent of the Jail are here. The fact is the reports of the Inspector General of Jails came in very late indeed, when the other reports were ready and printed. His report is not here.

8172. I believe he is a European?—Yes, he is always a European.

8173. (*Chairman.*) I notice that the statistics furnished by the police for Rangoon town give a much smaller percentage of consumers and of those who have taken to crime, than that adopted by the Deputy Commissioner, and given by the Excise Establishment: ought not the police to know best as to crime?—Yes.

8174. With regard to the Irrawaddy division I understand that your estimate of the percentage of consumers in this division was a guess based on statements made by the Deputy Commissioner of Henzada and the two District Superintendents of Police?—Yes; that is to say, 2 per cent.

8175. You rely considerably on the concluding paragraph of Major Butler's statement, which is to the effect that the jail statistics show that between 1882 and 1890 there had been a very large increase in the opium habit: is it not a fact that in 1882 there were no specific orders requiring the maintenance of statistics of opium-smokers in jails?—That I cannot say; I should think most medical officers in charge of the jail would, generally speaking, make such a schedule whether there are orders or not.

8176. Is it not the case that after 1882, specific orders were given that they should be careful in preparing these opium-smoking statistics?—I really cannot say.

Mr. D. M.
Smeaton.
19 Dec. 1893.

Mr. D. M.
Smeaton.
—
19 Dec. 1893.

8177. If specific orders to be careful in recording statistics were issued after 1882, the percentage difference between 1882 and 1890 would be misleading, would it not? I am informed that orders were issued from 1883?—I should think that most medical men in charge of a jail would schedule their opium-consumers whether there were orders or not.

8178. You say in paragraph 15: "In Henzada, 1,348 persons, or 38 per cent. of the ascertained consumers of opium were convicted criminals. Applying this percentage we arrive at a total of 11,200 victims of opium in the Irrawaddy division, who have either taken to crime or are on the road to it." Why do you assume that there are no statistics other than from Henzada?—It is an entire district. The district was taken as a whole. It is no better and not much worse than any other part of the division. It is in the centre of the division.

8179. Is it not the case that statistics from 96 Thayetmyo villages show that the proportion of consumers who have taken to crime is less than 13 per cent; that is a pretty large area too?—I do not think it is a large area. I suppose in Thayetmyo there are three or four hundred villages.

8180. Those 96 villages ought to be fairly typical. Ought you to disregard the 13 per cent. of this area and to assume for the whole division the 38 per cent. in Henzada?—The whole area of Henzada was taken; "good, bad and indifferent" were put in one, and the percentage taken.

8181. Is there anything to show the nature of the offences for which the 1,348 consumers in Henzada have been in jail; may not some of the offences have been against the Opium Act and Rules?—Judging by the convictions they must be very few. I do not know whether these are excluded or not, but they must be very few.

8182. Did not the Commissioner of the Irrawaddy division say in his report that the statistics furnished would not bear close examination; that they reflected the opinions of the Luyis who supplied them, in addition to actual facts?—Yes. He says "the Deputy Commissioner of Thongwa writes that his figures show that 52 per cent. of the opium-consumers in his district have been ruined by its use. My own opinion is that these statistics reflect the opinions of the Luyis who supplied them as well as the actual facts."

8183. Did not he say that the figures would not bear examination?—He said, "the statistics collected through headmen and Luyis of the number of Burmans who have taken to the use of opium and the number of such who have been physically wrecked thereby, or have taken to crime, scarcely bear close examination. For instance, the figures for the 12 large villages selected in Yardoan and Donuhyu show that opium-eating and opium-smoking has had a deleterious effect on all who use the drug. On the other hand, in Thayetmyo, excluding Minhla, only three persons appear to have suffered physically or mentally from among 363 opium-eaters and smokers, of whom 50 had taken to crime. The figures for Minhla show that out of a total of 41 opium-consumers, one has taken to crime, while 25 have been physically ruined thereby. Upon this point the following information taken from the second report of Major Butler, Deputy Commissioner of Henzada, is interesting."—What he means is that in one case the figures may be very much understated, and in other cases that they may be very much overstated. On the subject of the typical or non-typical character of the villages selected for the census of the Irrawaddy division, the following are the reports: In Thongwa all the places in which a census was taken of opium-consumers were selected at random except three towns; in Bassein the places selected were selected as being large villages; in Henzada there was no selection; a census was taken in every village; in Thayetmyo the villages taken were at random, and typical of the entire district. Such is the report of the Deputy Commissioner.

8184. With regard to the Tenasserim division I see that the Tavoy and Mergui district officers all notice the use of opium without apparent bad effect by fishermen and foresters; and the belief of these classes in its necessity as protection against chills and fever. I notice further that this is confirmed by a remark to the same effect by the Deputy Commissioner of Shwegyin in Upper Burma as regards fishermen. I fancy from the reports that in these cases the habit is one of eating and usually in moderation like the Indian habit in many places. I should like to ask you whether you do not think that some special relaxation ought to be made in these cases to meet the wants of these people and in toleration of their belief, which may probably be correct, that it is necessary for them in the exercise of their profession?—I do think so.

8185. Have you thought at all how it could be provided?—The particular cases to which you refer are the

Salons who are a fishing class in the south of Mergui, and the foresters, men who are in the forests during the rainy season chiefly; these men are liable to fever from constant exposure to rain.

8186. According to the reports, it is not confined to the Salons?—I think it is chiefly Salons. "A good many Burmans, other than fishermen, are addicted to the bad habit, and I regret to say that some Karens and most of the Salons of the Archipelago have been inoculated with a liking for the drug by the Chinese who trade amongst them." That is the way he speaks of it. Major Jenkins says, "I would propose that these men should be granted free passes once in six months by a magistrate or village headman and that opium farmers be directed to keep a daily register of persons to whom they sell opium, and the quantity sold to them, and that they sell only to persons holding passes, and that passes be not granted to any new opium-smoker under 30 years of age."

8187. You have no particular suggestion to make, but you think that some arrangement should be made?—Yes, and I think it could be made well enough. With regard to the effects of opium as being a prophylactic against malaria, I believe there is great doubt as to whether it is or not. The opinion is divided. I know some of the foresters do think that opium is a prophylactic. I think in those cases it would be well to make an exception for them and I think it could be done well enough.

8188. (Mr. Moubray.) I do not know whether you could refer me to the special reports of Deputy Commissioners to prove that the consumption is just as popular in the interior as in the towns?—The proof is in the fact that in the census the villages were taken at random in the interior. In the present registration of opium-consumers in Hantawaddy and Henzada, from which we have got actually the names of the villages and the numbers of the opium-consumers, we find that the number of consumers is proportionately as large in rural villages as in the towns or in the large villages.

8189. I notice in the cases you referred to that the percentage in Henzada, which is all village, is 1.3, and the percentage in Thayetmyo, which is one town and the rest villages, is 2.5, or nearly twice as much. I am referring to paragraph 19 of your note. You say "The tenor of their reports goes to show that the drug is just as popular in the interior as in the towns?"—Mr. Houghton said the larger villages consumed more than the smaller ones.

8190. I do not know whether you could refer me to the reports upon which that paragraph was based?—It is taken from the tenor of the reports as I have said. Except I think in two or three districts the places taken as samples are typical of the whole. One man says that it appears in one place to be just as popular as in another; in the division of Irrawaddy, Thongwa, all except three towns were selected at random; in Henzada there was no selection: the census was taken in every village; in Thayetmyo every village was taken at random; in Amherst the villages were selected at random; in Shwegyin the villages were selected at random, and typical of the whole district; in Toungoo some places were selected because they were large villages, and the rest were selected at random. The tenor of the report generally is that the taste for opium is just as pronounced in the interior as it is in the main centres of population.

8191. (Chairman.) We now come to paragraph 20. You have arrived at the conclusion that 85,600 adult males are confirmed opium-smokers or opium-eaters?—In all probability.

8192. I see you have altered your opinion a good deal since you wrote your note of the 5th January 1892. There you put the number of opium-consumers in Burma at 200,000 I do not suppose you meant that there were 115,000 non-Burman consumers, did you?—That note was written on the 5th January 1892. That was four months before the statistics came. The one case is a guess, and is reported as such: the other case is an inference from statistics.

8193. Not a statistical result, but an inference?—Yes, until the contrary is proved.

8194. As another statistical result, how many Burmans are now registering themselves?—Between 7,000 and 8,000 I think out of 85,600 estimated.

8195. What do you think that shows,—that your estimate was excessive, or that the people refused to register themselves?—The opinion of the Deputy Commissioners is that they refused to register. There has been a very strong

expression of opinion indeed. People who were known to be consumers of opium will not register. That has been stated in the reports.

8196. Looking to the loose foundation of these inferences from statistics, do not you think the wording of clauses 4, 5 and 6 of paragraph 20 is very sensational for an official report?—No, certainly not. I do not think those clauses are sensational.

8197. Do you know if the jail population of Burma has been abnormally large since order has been restored, compared with other parts of India?—I think it is. There is a considerable number of Burmese prisoners in the Andaman Islands and some in Indian jails.

8198. Most of those are political offenders, are they not?—Yes, most of the Indian (Burmese) prisoners are I believe; but there is a large proportion of criminals who are convicted of heinous offences in the Andaman Islands; but I do not know what the proportion is.

8199. In the 11th clause of paragraph 20 you suggest that the small percentage of increase of population shown by the census of the Arakan division, as compared with the other divisions, particularly with the Pegu and Tenasserim divisions, may be due to opium having hindered the growth of the population: is it not the fact that there has been a very large immigration into Pegu and Irrawaddy between the two censuses?—No doubt there has been immigration.

8200. I believe it has been a very large immigration, has it not?—I do not know that the immigration is very large: the coming and going is extensive. The residue remains undoubtedly, but there is a very large number of people who come and go.

8201. In paragraph 21 you use very striking language. You say "A more grave indictment than that contained in the thirteen clauses of the preceding paragraph could hardly be drawn against any civilized Government. These clauses appear to me to point to only one conclusion, which is that by permitting the free use of opium in Lower Burma the British Government has already gone some way towards ruining the Burmese people physically and morally, and may be directly aiding in the eventual extinction of the race."—Now I would ask you whether what I am about to say is not a brief account of what the British Government has done in Lower Burma in the matter of opium. It found when it annexed the country that the consumption of opium and liquor was a crime according to the Buddhist religion, and made penal by the edicts of King Mindon Min?—Mindon Min was not in existence when Lower Burma was annexed.

8202. Do you think it was not a crime before his time?—I am not able to say that. Judging by the opinions of the elder Burmans I should say it was.

8203. I assumed that it was?—It may be so.

8204. To go on with my account of the policy of the British Government, it also found both liquor and opium more or less used openly by foreigners and secretly by some Burmans?—That I doubt. I do not think that is accurate with regard to Lower Burma. I think it was brought in by the foreigners after the annexation of Lower Burma. The first annexation was Arakan. The evidence I have is hearsay. Arakan was near the Chittagong province. The evidence of Mr. Hind I have read to you is the opinion of the oldest resident in that district. It is *quantum valeat*. He says he is aware from personal experience that there was no opium until the English officers came from Chittagong. Therefore I should question the accuracy of that part of your account.

8205. To go on with my account, it was contradictory to our notions of criminal legislation and policy to make indulgence in liquor punishable as a crime or to prohibit all import and manufacture; so we thought that a restricted and heavily taxed supply must be allowed for the demand which existed: is not that the case?—I question that opinion, judging by the evidence given by Colonel Stover. He thought it worth while to insert as you saw that he had been told that opium at the commencement of our assumption of authority in Arakan was hawked about publicly in the streets. That does not look as if the Government intended at that time to strictly regulate the consumption of opium.

8206. No such hawking of opium has ever been done in any other part of India?—I can read the evidence on the point.

8207. He does not vouch for it, and it is merely a hearsay remark by a native gentleman, and it is not worth noting?—Perhaps I may be allowed to read it. He says, "Arakan was annexed in 1826 or thereabouts, and

"I was informed by an old resident there that immediately following the annexation Government opium was hawked about the streets."

Mr. D. M.
Smeaton.

19 Dec 1893.

8208. As far as any reliable records you have seen are concerned, was it not the policy at the beginning of our rule in Burma to have a few shops only in places where there were consumers at big sea-ports?—The shops were allowed to be put down at large centres. The issues were unlimited.

8209. I have seen Sir Arthur Phayre's and other people's notes, and I have read through the enquiries of 1878-79, and certainly I think you will admit that the policy of those early British officers was to allow a few shops only in big sea-port towns where there were Indian, Chinese, and other opium-consuming populations?—I admit that.

8210. We have no reliable evidence that there ever was any other than that system since the British came in?—I can only quote what I have done with regard to that matter. I know nothing more than that.

8211. Are not the words, "permitting the free use of opium," rather a misleading expression in describing the system of a very few shops where heavily taxed opium is allowed to be sold?—The only qualification I think which ought to be made would be "free use of opium subject to the maximum amount which can be possessed under the law." That is the only way in which to qualify the expression—that is to say, subject to the maximum limit of possession of 3 tolas.

8212. And subject to a very heavy tax?—Yes, that is the price of opium. It does not restrict its freedom of use. Any man who can buy it can have it.

8213. By your own account is it not the Chinese vendors who have really pushed the trade illicitly?—Yes; certainly they have.

8214. And it has been found exceedingly difficult to check that?—Yes.

8215. The number of shops in Burma has generally been much less than that in India, has it not?—I cannot remember how many shops there are in India. I think there are three shops in Cawnpore and four in Lucknow.

8216. Here there would be only one in a division or in a district; in India there would be at least four or five in a district?—It varies very much. In the Amherst District there are five shops, whereas in districts like Kyauk Pyu and Sandoway, there are no shops at all. It varies very much.

8217. It is the case, is it not, that short of making the use or possession of opium a crime as we are now proposing to do, there was nothing for it but to allow a very few shops and to put a heavy tax upon the opium: there was no other means of dealing with the question, was there?—Or to sell it at such a rate that it would be a very difficult commodity to purchase.

8218. It is sold at Rs. 50 a seer; it is sold at its weight in silver now; and naturally it is a cheap product?—It is sold by Government to licensed vendors at Rs. 32 a seer.

8219. It is sold to the public by the vendors who have to pay heavily for their licenses at its weight in silver?—Yes.

8220. There is no other alternative, is there, between the system of a few shops selling it very dear, and the policy which has now been adopted of making the use and possession of it a crime: there is no half-way measure?—Except making it a great deal dearer than it has been. That would be the middle course.

8221. That would involve an immense risk of making the system break down through excessive smuggling, would it not?—Unless the price were raised elsewhere too.

8222. But you could hardly prevent opium from coming in from the bordering countries which produce opium like the Shan States and Yunnan, could you, if there were very strong inducements for it?—It is not from the Shan States and Yunnan that we have much apprehension of smuggling. The Lower Burman people do not care for that opium.

8223. I suppose if you prevented them from taking any other, they would take to that?—They might.

8224. That being the case, that the number of shops in Burma has always been very few, that the price for opium has been high, and that there was no alternative between a system of prohibition and making the use a criminal offence, and the system that was adopted, do not you think that your paragraph 21 is objectionably strong?—I am not disposed to modify it.

Mr. D. M.
Smeaton.
19 Dec. 1893.

8225. Do you consider that it is true to say that the Burmese people are being to some extent already physically or morally ruined?—The evidence I have given shows exactly what I think in the matter.

8226. The statistics of the growth of the population of the Burmese people afforded by the census give no evidence of sterility?—I pointed out one district: it was a suggestion merely.

8227. Paragraph 21 is general?—What affected one district would probably affect another. I have heard, with what truth I do not know, that in India it is not an uncommon thing to hear it said (I have not heard it said in Burma except by medical men), that the effect of opium after a long period of consumption is impotence.

8228. The statistics of the growth of the population afforded by the census give no indication of sterility, do they?—Except in Kyauk Pyn, where there is a very marked disproportion of increase of population.

8229. But even in that district there is a fair increase of population for ten years?—True, if it were altogether a natural growth of population, but probably it is not. In all probability there has been a considerable immigration in Kyauk Pyn; there has been in Akyab.

8230. Coming to paragraph 22 you say, "There is one very important difference between opium consumption in India proper and in Burma which is apt to be lost sight of because to many it is not known. In India proper the use of the drug is almost entirely confined to the large towns. The agricultural classes may be said to be total abstainers. Desire for the drug has not penetrated into the interior." What part of India are you speaking of?—The North-West Provinces.

8231. Are you aware that in the Central Provinces and Rajputana and the Punjab the agricultural classes are to a very large extent consumers of opium?—I know in the North-West Provinces they are not.

8232. In other provinces?—I do not know. Speaking of India proper I meant Hindustan.

8233. That is the North-West Provinces?—Yes.

8234. Hindustan includes part of the Punjab if it does not include the rest?—Yes, the south-eastern part of the Punjab.

8235. In paragraph 24 you say "the almost universal opinion and my own experience show that so long as the outward and visible signs of Government sanction to indulgence in the drug, namely, licensed opium shops, exist, Burmans will assuredly retain an inclination already acquired, or acquire an inclination for the drug, and will just as certainly find the means of indulging in it." Do you think that the amount of Government approval involved in the system of licensed shops would have such an effect upon the Burmans as that?—The Deputy Commissioners of Prome and Toungoo say so.

8236. I ask your opinion, will the mere fact of Government having or not having licensed shops affect the consumption or non-consumption of opium?—I think it will affect the matter in this way: when the people see shops paying a high revenue to the Government, they will consider it impossible that Government can entirely disapprove of the thing that is sold in those shops. They did say so in Prome and Toungoo.

8237. The Emperor of China's edict has not prevented the spread of the habit in China, nor did King Mindon Min's edicts prevent it existing to a certain extent under his nose in Mandalay or Ava or wherever he was?—He did not license shops.

8238. Do you think that the approval or disapproval of the British Government will have much effect either way?—If it is clearly shown that the Government entirely disapproves of it, I think we shall have behind us the support of the better class of the people.

8239. You say "the presence in their midst of staring opium shops, with conspicuous signboards and often attractive in appearance (particularly at night), has been too much for the Burmans." In many districts there are no shops at all, and in one division there is only one shop. Is that a fair description?—I think so; I have seen it.

8240. In what way are they staring or attractive?—They are like gin shops in London at night. They are brightly lit up, and Chinamen and Burmans sit outside. I saw it in one town particularly where there was every appearance of a desire to invite others to come in. The place was more brightly lit up than a liquor shop.

8241. There are hundreds of Burmese restaurants where people sit in every town?—Not hundreds of them, there are a great number.

8242. They are as attractive I suppose as one of these shops?—I saw one particular place at Mōnywa, and I also noticed one at Thayetmyo.

8243. Was that a smoking saloon?—It was a shop for sale.

8244. In what way was it attractive?—It was lit up. There were lights in the street immediately in front of it. The shop itself was lit with several lamps. People were talking at the door of the shop. The place was one that must have been noticed by passers-by, and one would ask "what is it, and what is done there?" I noticed it at Thayetmyo and Toungoo. I have seen them all at night.

8245. In paragraph 27 you mention the township officer, I should like to know what the township office is?—It resembles in India the Tehsildar's office. He is a civil as well as a revenue officer.

8246. It is a smaller circle than a Tehsildar's in area, I suppose?—In population it is smaller, but not in area.

8247. In paragraph 28 you say "of course it would be necessary to continue registration of non-Burmans who applied to be permitted to use opium." I suppose that is intended to apply to new immigrants only?—That was the intention.

8248. In clause 1 of paragraph 29 I see you propose to appoint a special preventive officer for each township?—For each township and sub-division.

8249. You say "he will, if watched and encouraged, soon find means of keeping himself informed of any opium traffic." Is there not considerable danger that he would become a sort of tyrant?—We have not had any instance of that yet.

8250. You have not got officers to each township yet, have you?—No, we have officers in several districts though.

8251. What sort of pay would your preventive officers in each township get?—I should give him much the same as a junior township officer, Rs. 100 or Rs. 150 a month. I should be inclined to think that a sub-divisional officer would be sufficient, not necessarily a township officer?—A sub-division generally includes two or more townships.

8252. In clause 11 of paragraph 29 you say "insist on the punishment of imprisonment being inflicted, with or without fine according to circumstances, on all offenders against the prohibition." Is not that rather a ferocious spirit of temperance, do you still recommend that?—The law is there and the point is to get the law obeyed. That is my opinion. If a law is made for the benefit of the people, those who offend against it ought to be punished.

8253. You say in clause 4 of paragraph 29 "to enlist, by special means, the priests as *collaborateurs*." Do you think the priests will undertake that work, and, if they do, will it not spoil them?—The priests as a matter of fact do lecture their people.

8254. Yes, lecture, but it is another thing for them to act as *collaborateurs* in preventing and detecting possession of opium?—In Upper Burma the priests more than once when the people have been harassed a great deal by a dacoit have been the means of inducing the villagers to find him out.

8255. You further suggest that whole villages might be fined for not giving information?—I mean in any glaring case. That would require to be worked with very great discretion. If it were found that the law was being habitually broken by a number of people using and trafficking in opium in a village, and that it was or ought to have been very well known, they ought to suffer for it.

8256. I suppose you will admit that if we have to back up this temperance crusade by such measures as this, it is a question upon which opinions may very well differ as to which is the greatest evil?—Quite so. I do not deny that the evils of a tyrannical suppression of it might be very great indeed.

8257. (Mr. Mowbray.) With regard to Upper Burma I understand the present proposal under the new Rules is to assimilate the law in Lower Burma to what it has been for the last two years in Upper Burma?—The reform began on those lines.

8258. Is not that the practical effect of the new Rules?—Hardly.

8259. Kindly explain what the difference is?—In Upper Burma the possession of opium by Burmans is absolutely prohibited; in Lower Burma it is prohibited except to those who have registered themselves now, or may within the next six months register themselves. That is the important difference.

8260. There is no power for Burman consumers in Upper Burma to register themselves under the new Rules?—No.

8261. No doubt you have seen the last memorial of the Anti-Opium Society?—No, I have not.

8262. In the last memorial (I am quoting from a despatch from the Government of India to the Secretary of State), there is this sentence,—“the memorialists urge that a permission granted to non-Burma inhabitants to buy and possess opium freely is sure to be used as a means of illicit sale to the Burmans themselves, and they represent that their apprehensions are confirmed by the experience gained in Upper Burma where the attempt to enforce a measure of prohibition to Burmese only accompanied by free sale to Chinese and other non-Burmese residents has already been made and has completely failed.” I believe that the last clause of that sentence, “where the attempt to enforce a measure of prohibition to Burmese only accompanied by free sale to Chinese and other non-Burmese residents has already been made, and completely failed,” is founded upon a paragraph in your Excise Report for 1890-91; “the sale of either liquor (except tari) or opium to Burmans is prohibited by law. But there can be no doubt that the prohibition is in practice inoperative?”—I stated “there is considerable difference of opinion among officers as to whether a taste for opium and liquor is spreading among the Burmans or not. The licenses for the sale of opium and liquor are intended for the convenience of the non-Burman population of Upper Burma, and the sale of either liquor (except tari) or opium to Burmans is prohibited by law.”

8263. Was that statement which you made in your Excise Report of 1890-91 the result of your own personal knowledge, or was it founded on the reports made to you by district officers?—So far as I can remember, it was founded on reports made by the district officers.

8264. Are you of the same opinion at the present time—that the prohibition of sale to, and possession by, Burmans, is practically inoperative?—It is a very difficult question to answer, but if I may be allowed to give my impression, it is this: I do not think that the habit from all I can hear is getting many recruits, but I doubt whether there is much reduction in the numbers of those who actually did, and do now, consume; I do not think there is much increase in the number of new consumers.

8265. Do you attribute the fact that there is no increase in new consumers to the existence of these Rules?—I do.

8266. Then the Rules are operative?—So far they are operative.

8267. That, I believe, is the opinion of each of the Commissioners, founded on their experience of the four divisions of Upper Burma?—I doubt that.

8268. You are aware that the Chief Commissioner, Sir Alexander Mackenzie, in August 1891, directed an enquiry into the working of the Opium Rules then existing?—He did.

8269. One of the questions he asked in paragraph 5 was, “How far the prohibition of the use of opium by Burmans in Upper Burma has been, or (now that the rules are amended) promises to be effectual?” It is the answer to that question I wish to get. I do not know whether Mr. Burgess, the Commissioner for the Northern Division, directly answers that question; but I think he practically answers it by stating, “It is certain that the number of pure Burmans in this part of the province who use opium is altogether insignificant, and there can be no real difficulty in restricting the consumption of opium among this class of the population;” and with regard to the other point which you mention as to reducing the consumption he further says in another paragraph, “the difficulties which have been placed in the way of obtaining opium and the enhancement of its price have unquestionably reduced consumption.”—That is so.

8270. I do not know whether you would wish to make any remark upon that statement by Mr. Burgess?—He informed me of the occasion upon which this was observed. Owing to the presence of a ring among the bidders for the opium license in Mandalay it was thought that the highest bid for the license was very inadequate, and the Commissioner himself advised that the sale should be suspended. During the suspension, which I think lasted for three months, of course no opium could be licitly sold in Mandalay, and during that time, practically speaking, any man found in possession of opium would have been probably arrested, for he could only have obtained the opium from a long distance, and the presumption would have been that he had got it illicitly—there being no shop in

Mandalay. Mr. Burgess informed me that the fear of prosecution was such that a considerable number of opium-smokers and opium-eaters gave up the habit.

Mr. D. M.
Smeaton.

19 Dec. 1893.

8271. That is not quite what he records here. He says “it was ascertained that among the Chinese residents of Mandalay a considerable number who were accustomed to take opium in moderate quantities gave up the habit in consequence of the stringency with which the law was enforced, and if such was the case among the Chinese, it may be imagined that the Burman opium-consumer would be still more affected.”—They were Yunnanese Chinamen.

8272. Have you any reason to doubt that the conclusion which I have read from Mr. Burgess is substantially supported by the reports of the Deputy Commissioners in the Northern Division? I am speaking of this special enquiry directed by the Chief Commissioner upon this particular point?—I think what you say is correct. The opinions of the Deputy Commissioners are pretty much in accordance with that.

8273. I do not say universally but generally?—I think so.

8274. With regard to the Central Division, Major Adamson, the Commissioner, states, “The result shows after careful enquiries, it has been found out that the use of opium is most uncommon among Burmese in this division. I was aware that the use of the drug was not common in the plains of the Central Division, but I had no idea that it was so singularly absent. The statistics have been carefully collected, and though I do not believe them to be absolutely correct, yet they do show that opium is not used to any extent by the Burmese population in this division; that it is the duty of Government to do everything in its power to prevent its use spreading; and also if it does spread, it will be owing to the action of our Government in respect to its sale.” May I take it that in the opinion of Major Adamson, as representing the Central Division, the Rules have been effective in preventing the spread of the consumption of opium amongst Burmans in Upper Burma?—I think so.

8275. I would ask you the same question with regard to that, whether you believe that that opinion of Major Adamson is supported by the District Officers of the Central Division?—Yes, I think so. I think that the opinion expressed by the Commissioner is in accordance with the opinions of the other Deputy Commissioners.

8276. We will now turn to the report of Mr. Coplestone, Commissioner of the Southern Division. He gives a definite opinion in answer to the Chief Commissioner's question?—Yes, he does.

8277. Will you read it?—He says at paragraph 4, “The Deputy Commissioner, Myingyan, says, consumers in Kyaukadanung and Pagan sub-divisions now find it almost impossible to procure opium, and he appears to think the existing rules likely to be successful. The Deputy Commissioner, Pakokku, offers no opinion. The Deputy Commissioner of Mambu considers that the rules as in force heretofore have merely raised the price of opium, and that a Burman can obtain opium through Chinamen and other foreigners as easily as before the annexation. The recent alteration in the Rules will, the Deputy Commissioner considers, only throw the Burmans more completely into the hands of the alien go-betweens. He would restrict the supply of opium issued to licensed vendors to the quantity really required to supply legitimate wants which can be calculated.”

8278. I believe that last suggestion of the Deputy Commissioner has been carried out in the new Rules?—Yes. “The Deputy Commissioner, Magwe, thinks the Rules have not yet been successful, but that, if properly worked, they will put a stop to opium-eating, smoking, and smuggling.”

8279. Will you now give us Mr. Coplestone's own opinion?—“In my opinion the Rules as worked hitherto have had a considerable measure of success in Upper Burma. There would be vastly more opium-consumers if Burmans had been able to purchase opium openly. There has, it may be, been an increase of opium-eating since the annexation, though this is not certain, but it has not been by any means proportionate to the increase of trade, facilities of communication, etc. The Rules, as they now stand, will have a further effect; but I have no doubt that the supplies to licensed vendors should be strictly limited if shops are still kept open at all in the places where they now are.”

8280. “The Rules, as they now stand,” mean the Rules which made possession illegal as well as sale?—Yes, that is so. The limitation of issues has now been decided. The issues are strictly limited. The issues were not limited at that time.

Mr. D. M.
Smeaton.
19 Dec. 1893.

8281. Then with regard to the Eastern Division, there is the opinion of Mr. Bridges, the Commissioner?—Yes. He says, "I am of opinion that the prohibition of the use of opium by Burmans in Upper Burma has been effectual. It is difficult to give accurate figures on the subject, but the figures supplied by the Deputy Commissioners show that the number of Burmese opium-consumers is exceedingly small, and if there has been any increase in opium-consumers since our occupation, it is very small. It must be remembered that Burmans were not aware of any defect in our Opium Rules, and that many Burmans were convicted by Magistrates for transporting opium. The people then generally believed that the possession of opium by Burmans was contrary to our Rules. I have no doubt that the restrictions imposed upon the consumption of opium by Upper Burmans can be effectually enforced, and they will prevent the spread of opium consumption to any great extent."

8282. Have you any reason to doubt that that opinion of Mr. Bridges is substantially confirmed by the reports of his District Officers?—No, I have no reason to doubt it at all.

8283. Looking at the expression of opinion by the District officers in Upper Burma in answer to that question of the Chief Commissioner, and at the fact that since you wrote that Excise Report of 1890-91, the law with regard to the possession of opium has been made more stringent, and looking to the further fact that under the new Rules the amount of opium to be issued to the shops will be limited, have you any reason to doubt that the Rules so modified can be effectually enforced to prevent the consumption of opium by Burmese in Upper Burma?—I have said here, "there is thus good ground for hoping that the measures adopted in Upper Burma have so far succeeded, and that at least the course of opium is not rapidly spreading."

8284. Then you are not disposed to go beyond that?—I should be inclined to say that the law has been so enforced in Upper Burma that indulgence in the habit of opium has increased to a very small extent indeed.

8285. That the law has been, in fact, successfully enforced?—I should be inclined to say that.

8286. I suppose you would admit that any law which was passed on the subject could not be expected to be enforced absolutely?—Quite so. I fully admit that it never could be expected to be enforced absolutely.

8287. Have you any reason to doubt, or do you still doubt that the enforcement of practically the same Rules in Lower Burma would be practically efficient?—Of course there is a difference in the law in Upper Burma. The two wings of Lower Burma have had seventy years' experience of opium. Pretty well half that time it has been almost free, and latterly there has not been much restriction. It has been the same in the Pegu division the last 30 or 40 years. There is that difference between the conditions of the two provinces as regards restrictions on opium. Colonel Stover uses the words, "educated to the use of opium;" whereas we began in Upper Burma by banishing it.

8288. Do you think it is an accurate statement to say that "we have educated all classes to the taste of opium" and that "people have been afforded every facility for the purchase and consumption of opium," when, as a matter of fact, the price has been very considerably raised beyond what it would have been if Government had never interfered at all?—The price was raised as far as the auction was concerned at least in the latter part of our period of administration of the province, not in the earlier part.

8289. Not only in the price paid for the license, but in the price at which the Government supplied opium to the vendor surely?—Thirty-two rupees a seer would be nearly six annas a tola, and a daily dole is supposed to be not more than $\frac{1}{4}$ of a tola, so that the price to the opium vendor would be $1\frac{1}{2}$ anna per $\frac{1}{4}$ tola. If he sold that at 2 annas, he would make 33 per cent.

8290. (Chairman.) He practically sold it at nearly double that?—He did, but he need not unless he liked to.

8291. But the auction bid ran him up?—No doubt it did; but rings often were formed which kept the bids far down.

8292. (Mr. Mowbray.) What would have happened if Government had not interfered at all? Do you think it fair to say that Government had afforded every facility: I think you stated it is an exaggerated expression?—I think it is somewhat.

8293. The price of the Government opium as supplied to the vendor is Rs. 32 a seer?—In the three divisions in Arakan it is Rs. 28.

8294. According to the statement which has been put in here opium can be bought from the producers in the Northern Shan States at from Rs. 15 to Rs. 20 *viss*. I will read the statement put in. In his Report for 1891 on the administration of the Shan States, the Superintendent, Mr. Daly, says: "The quantity of opium produced in Theinni and in the Trans-Salween tracts which I visited last season is enormous, and, although by far the greater part is exported to China, or consumed locally, there can be little doubt that large quantities find a way to Burma. As the opium can be bought from the producers for from Rs. 15 to Rs. 20 the *viss*, and is of proverbially excellent quality, the temptation to smuggle is very great." The *viss* compared with the seer is, roughly speaking, $3\frac{1}{2}$ to 2. I take the *viss* to be 3.65 lbs. and the seer is about 2 lbs. If the price of Government opium is Rs. 32 per seer, that will be about Rs. 16 per lb. Avoidupois?—Yes.

8295. This native opium as bought from the producer taking the highest price mentioned here, Rs. 20 per *viss*, will be something about Rs. 5 per lb.?—Yes,
